clansmen for food and lodging whenever their duties took them away from home. The decay of the dun system can, perhaps, best be seen in the disappearance of several of these offices and restrictions placed on others. By the seventeenth century, after failing in a scheme to integrate the Hebrides by the extirpation of the rude, barbarous, and uncivil peoples, the crown succeeded in forcing the chiefs to give up their bards, to assume full responsibility for the obedience of their followers to the laws of the kingdom, and to limit their armed retinue to a small personal bodyguard.[38] Clan warfare ceased and the chiefs henceforth gave unwavering support to the Stuart kings, at least against the English.

The Chiefs of the Clan. Below the chief of the larger clans ranked the ceann-tighe, (literally the head of the house). They were the brothers of the chief and stood in relation to the sept as the chief stood to the clan. In the MacDonalds of Sleat the eldest brother usually held the lands in North Uist.[39] In the MacLeods of Dunvegan the eldest brother received the farm of Talisker.[40] As senior cadets, the eldest brothers led the clan on marches and held the principle post of honor in battle. They served as stewards, collecting the revenues of the estate and fulfilling the duties of the chief during his

absence or incapacity. The senior cadets also acted as tutors of the heir to the chiefship, and if the heir succeeded while a minor, as guardians. The cadets bore the surname of the clan and/or a territorial title, for example, MacLeod of Talisker or simply Talisker.

The Gentry of the Clan. The next lower level in the hierarchy consisted of the daoin'-uaisle (literally the high people). The chief established his younger brothers, sons, and other near relatives, those within the derbfine, on the land. They held farms by what amounted to be leases for a term of lives. At first the leases were typically for three lifetimes, but by the seventeenth century they had been reduced to the individual's life plus a number of years to begin on the decease of the holder in favor of his son.[41] At the expiration of the lease, a nearer relative was commonly favored with the farm. The former holder either sought a military career abroad, in Holland or France, or extorted a living by gentle begging.[42] Some obtained land on wadsett, a mortgage contract under which the lender of money received possession of the land until the debt was repaid.[43] Most of his descendants passed into the body of the clan.

The gentry, also known as tacksmen (leaseholders), were

the local representatives of the nuclear derbfine. They were the leading men of the clan in each district. Although they were appointed by the chief, their recognition depended on the willingness of the clansmen to form a following rather than on title or a right of succession. This following determined how many men the chief could bring into battle and how many officers of dignity he could support from their contributions.

The most important function of this group, all of whom could trace descent within the central family, was their bridging the cleavage which ran through all clans. They formed a ministry to the chief and were the councilors of the clansmen. The bond with the former was proven kinship, with the latter, a sense of kinship. They were the mainstay of the system. When the chiefs fell into debt, a frequent occurrence, the tacksmen came to their aid by pledging themselves to preserve the family and the estates, to reduce the debt.[44] They were also the local merchants, an important function in an area with only semi-annual markets and sparse money.[45]

The Clansmen. The clanna (literally the children) included all within the jurisdiction of the clan chief. Their relationship was real or fictitious kinship, tenancy, or contract. To the Lowlanders and the English, their relationship seemed to be a

[44]Cf. Ibid, pp. 65, 73-74. See also MacLeod, The Book of Dunvegan, Vol. I, pp. 16-19.

[45]Gartmore, loc. cit.

servile and abject obedience approaching despotism.[46] Still, the early travelers never ceased to be astonished at the familiarity with which the chiefs treated their people, upset at the chief's partaking of the people's diversions, and astounded that the chief would shake them by the hand whenever he met them.[47] At the bottom, the system was equalitarian. Every man had the right to address his chief and call upon him for support in times of adversity.

The clansmen were continuously recruited by natural increase, adoption, and the gradual subsidence of the younger members of the nuclear derbfine into the body of the clan. The downward mobility of the remote collateral relatives of the chief was of paramount importance. It reinforced the belief in kinship of the clansmen and the chief. The feeling of kinship was further reinforced by the institution of fosterage, a practice common to pre-Feudal Scotland, Ireland, and Wales.[48] Under fosterage children were exchanged between families of equal status or the son, often the heir, of the chief or tacksman was given to one of the clan to be raised and educated. Fosterage served to form mutual alliances between families and clans, to ensure the loyalty of the people for their chief, strengthen the attachment of the chief for his followers, and bind the

[48]John Cameron, op. cit., pp. 62-68.

members of the clan to each other.[49] Strong attachments were formed between the foster brothers. Often the foster brother later acted as the henchman of the future chief.[50]

The clansmen were given land as joint-tenants of the chief or as subtenants or cottars of the tacksmen and joint tenants. In return for the land, the subtenants owed their superior the duties of cain, a fixed payment in kind, convaith, a contribution of food for the maintainence of the chief and his retinue, feasgh, an obligation to follow the chief in offensive war, and aluaraid, an obligation to attend the chief for defense.[51] These burdens were shared by tribal Scotland and Ireland.[52] When a chief gave a farm to a tenant, whether for one or more years, it was customary to give the tenant a stick of wood and some straw.[53] This was immediately returned to the master. Both parties were then obliged to fulfil their respective conditions as if they had signed a lease or deed. There were additional duties on the land.[54] Upon the death of

a tenant, the chief was entitled to the best horse or cow as payment for the continuation of the tenant's family on the land. The tenants were also required to give hospitality to the chief's bodyguard.

In this group, the clanna, was found the essence of the clan system and the basic principal of the territorial tie and the bond of affection of kinship by consanguinity and affinity. The soil was not the mere means of subsistence; it was the ancestral home. Much to the annoyance of the crown, the clansmen frequently emphasized the tribal tie.[55] When clan lands were declared forfeit, the clansmen continued to support their landless chief, even when placed under a feudal overlord. The belief in kinship conflicted with the obligations of mere tenantry. Thus, the MacLeods held Trotternish by charter, but the MacDonalds held it by tribal custom and manpower. As territorial power made inroads in the Highlands, some proprietors were able to bring out their tenants for national defense, but they could never be sure whether or not the people would suddenly throw over the claims of their feudal superior in favor of their landless chief, who could not be diverted of his hereditary privileges as a patriarch.

Not a great deal is known of the kinship system among the clansmen. Undoubtedly, the people were grouped into a derbfine organization. The senior member of the derbfine, I assume, had patriarchial authority over his kinsmen and represented them in clan affairs just as the flath had in the pre-Feudal period.[56]

CONTINUED ON NEXT FICHE

286 Make smooth and even the warp of my loom
288 And grant thy blessing, God, on me,
On all who here find shelter and room
539 And dwelling . . .

Thine arm be round each woman here
Who waulks this web of mine,
O aid her in her hour of need . . .

Keep the flock that we may win
Sweet and nourishing milk to drink
And wool to give, to weans and kin,
For wear!

Even now in Harris or the Lews, a brief good wish may be uttered—a "Health and strength to the wearers!" as the perspiring women end the waulking; but in the past the web was finally consecrated. Each of the family who was to wear a portion of it was named by the weaver herself, who led the consecration (*Carmina*, No. 113).

May the well-loved wearer of my web
Never be wounded . . .
May the sanctuary shield of the Lord be his. . . .

286 The significance of this gift of hard-won cloth can now
532 be seen, first for the family but next for the neighbourly
614 team. We can understand how each 'set' or pattern of
93] tartan stood for the spirit of the family and the group of
621] kin and homeland, the clan. We conceive what it meant
91] to the Gael when the tartan, with "the Highland dress . . . or any part of it whatsoever", was forbidden "to any man or boy" in the Highlands. Women were still allowed to wear it, it was true, but the dress ceased to be a symbol of community when its wear was confined to
714] one sex. As a single exception, the Highland dress was
75] retained for soldiers, but the militarisation of the tartan—though it seized upon one strand of clanship, that of

286 warfare—destroyed its intimate tie with the home, with
532 peace. The web the women had dyed, spun, woven and
614 waulked together ceased to be a sacrament when the tartan
714 was proscribed to men except when worn as a uniform with
[178] "England's cruel red".
[648] The framers of this law, which stood on the statute
175 book for over forty years, took full cognisance of what they
648 did. Appended to the Act of 1747 was an oath which
286 reversed every benediction said by the women at their
291 work: "I . . . do swear, as I shall answer to God at
782 the great day of judgment, I have not, nor shall have, any
641 gun, sword, pistol or arm whatever, and never use tartan, plaid or any part of the Highland garb; and if I do, may I be cursed in my undertaking, family and property—may I never see my wife and children, father, mother, relations—may I be killed in battle as a coward and be without Christian burial in a strange land, far from the graves of my forebears and kindred; may this come across me if I break my oath". This Act, as law and symbol, struck full at the sacramental life of family, neighbour-team and clan community, in which labour and prayer had been indissolubly bound.[1]

(c) WORSHIP, CONGREGATIONAL AND PERSONAL: THE BOOK AND THE WORD

178 Little remains of the tradition of worship in the tiny
771 oratories, chapels or 'temples' whose ruins stud the shores

[1] The collaboration of friends in Lewis may allow mention of the Gaelic
346 version of A. Geddes, *The Spirit of the Tartan, a Song Drama* (English
172 Version); *Souvenir Programme and Book of Songs* (Outlook Tower, Edinburgh, 1932). In this the spirit of this labour sequence embodied in its
[113] songs and runes is dramatised in its setting of custom and history. The Gaelic version was prepared by the generous labours of James Thomson, M.A., Bayble, and the late Duncan Macdonald, M.A., Sandwick, Lewis.

888 of the Old Testament made itself felt, as in Lewis-and-
771 Harris in the nineteenth century, this narrower patriarchal
562 example hardly affected thought.[1] Rooted in a wider form
[184] of family than a patriarchate, and reverencing a Holy Family
[773] and all fellowship, Gaelic society honoured age and parent-
[177] hood for their inheritance, and childhood and youth for
[175] their promise.

Such ideals of human relationship led to the veneration of the Saints of the Gospels and of later history, and also of those of legend, especially Bride. Dedications to Bride
773 or 'Bridget' are widespread from Wales to the Lews;
776 yet her memory has been all but lost in Britain, except in the Isles. Carmichael wrote that "Bride and her services" are dear to the hearts of the people. She is called "Bride of the white feet . . . of calmness . . . of the kine; woman-comrade . . . and woman-helper . . ." "I am in the keeping of my Saint Mary: My companion beloved is Bride" (*Carmina*, Nos. 70-71; 263-264). As joy, steadfastness and attainment are generally linked to one notable stage in the life of each 'holy companion', the example, aid and fellowship of each saint in turn was especially sought, at a corresponding stage or crisis of one's own life.

776 The Gael's veneration for saintly men and women was
171 shared by Catholic peasantry throughout Christendom;
174 but its special quality seems to have been closeness of

[1] Clanship has repeatedly been said to be 'patriarchal', as an ideal and
[614] a system. A different conclusion, that community is the root of clanship (even in its political forms), may come as a surprise. The English or Lowland reader has had access only to the writings of strangers such as Burt. Not knowing Gaelic, these derived their information from Highland speakers of English who, deliberately or unconsciously, were biased by ranking as
[621] chief or gentry, and not unnaturally explained their position as patriarchal. Thus strangers ignored the co-parental life of farm-groups and townships, economically humble but spiritually rich, as the root of a clan-community.

192 The circular, corbelled stone "beehive" huts, some still in good repair, are of uncertain date. The best preserved are on the Morsgail Deer Forest, in remote situations which make it almost certain that they were only occupied seasonally; those on the Garynahine common pasture are associated with assymmetrically ridged, curving, lazybeds. This, however, need not imply permanent occupation of the site, nor does it solve the problem of age; such lazy-beds are certainly old, possibly pre-potato (c. 1790 here) - but the huts do not decay with age and may be very much older.

175 422 228 Early in the eighteenth century the present area of the parish of Uig was held from the Seaforth clan chief by 26 tacksmen, whose names are recorded in the judicial-rental of 1718, (Fig. 4). They, presumably, had sub-tenants but of these there is no record. Elsewhere in Lewis the same rental records many small tenants holding direct off the chief but in Uig, apparently, the tacksman and sub-tenant system remained intact. Although we cannot be certain of their precise extent, the distribution of the tacks coincides fairly well with that of the better agricultural ground (Fig. 2).* Five of them cluster round Uig bay, four were in the Valtos-Reef area, and three around the strait of Little Bernera. All these districts have machair; together they accounted for three quarters of the meal and more than half the sheep and money rents. What is more, these rents represented 27% of the total rental of Lewis, whereas by 1887 Uig yielded only 17% of the rental and by 1901 the proportion was reduced to 14%. The relative decline of Uig is largely due to the growth of Stornoway; this shift in the centre of gravity of Lewis has tended to exaggerate the remoteness and isolation of Uig in the present century.

[241] [178] [369]

161 175 422 407 490 600 By the end of the eighteenth century the tacksmen seem to have disappeared; at any rate they are not mentioned in the remarkably detailed account of the parish given in the Old Statistical Account, 1792. Meanwhile the small tenants had multiplied: whereas in 1755 the old parish * had supported 1,312 persons, in 1792 the minister recorded 1,698. At this time there was neither plough nor cart in the parish. The minister was cultivating potatoes and his family were eating them

TABLE 3

AVERAGE STOCK HELD BY EACH FAMILY

162 178 233 422

	1792	1959
Cattle and calves	9.2	2.1
Sheep	13	37
Horses	1.8	-
Goats	0.8	-
No. of families	387	450

Note: the figures for both dates refer to the area of the old parish.

[632] * The old parish of Uig excluded the Loch Carloway district, from Kirivick north; this area lay in Lochs parish until 1891. Unless the old parish is specified figures quoted have been corrected to conform with the modern boundaries.

1. [See p. 2--Analyst]

The minister was cultivating potatoes and his family were eating them as an example to the crofters who were still reluctant to adopt the new crop. Some 70 boats were fishing; this was mainly in Loch Roag for they were small open boats greatly outnumbered in good herring seasons by boats from other parts of the kingdom. To encourage curing, particularly of white fish, the proprietor had set up two storehouses to supply salt; he, or his agents, were probably the only buyers - indeed John Knox, who visited Lewis about 1786, tells us that the estate factor held a monopoly for trading in cattle, dried fish and other products. The absolute power of the clan chieftain seems to have survived in Lewis until impending bankruptcy forced the sale of the estate in 1844. But it was kelp, more than fishing, that helped to support the people of Uig in the late eighteenth and early nineteenth centuries. Lewis made little kelp compared with the Uists, but the Loch Roag kelp was of particularly good quality and commanded more than the average price. Further, many people from Uig migrated seasonally to make kelp in Harris and Uist. Thus even at this time, the intrinsic resources of the parish appear to have been inadequate to support the population. In this connection it is worth noting the change in the average stock held by each family since 1792 as shown in table 3.

175 [243] 228 [251] 441 [614] 175 [232] [221] [233] 162 [178]

Clearance and Congestion.

175 228 Even after the end of the tremendous boom in kelp, brought about throughout the Hebrides by the Napoleonic wars, some production continued in Uig. In 1825, when the land rent of the old parish was £1,862, the proceeds of kelp, after deducting expenses, yielded £1,010 to the proprietor. Thereafter it failed. Meanwhile Seaforth was attempting industrial developments and agricultural improvements. The former included short-lived distilleries in Stornoway, the latter involved the removal of some small tenants in order to introduce mainland farmers. For these Uig was particularly attractive, the extensive mountain pasture offering good prospects for sheep graziers. The exact dates of the formation of the earliest farms are not remembered nor are they precisely recorded, but at least as early as 1826 Alexander Macrae of Kintail had the tack of Scalisclro, with the extensive grazings (now partly occupied by Bernera summer pastures) east of Little Loch Roag. About 1823 the small tenants of Mealasta and Breanish were deprived of Mealasta Island, which suggests that a sheep farmer was already installed in that district. About 1838 all the small tenants were cleared out of Mealasta, six families being put into Breanish; the remainder are said to have been sent to America.

175 233 166 427 [274]

175 427 In Bernera island, Kirkibost was cleared about 1822, having been lotted in individual crofts some years earlier. Thereafter Kirkibost formed part of the large farm of Linshader. Little Bernera, too, formed part of this farm. On the mainland, opposite Bernera, small tenants were cleared from the shores of Loch Roag (e.g. Stroma and Drovernish) in the early nineteenth century, and a tacksman was installed at west Earshader. Further east the small tenantry were cleared from Ceanhulavaig and Linshader.

175 By 1844 the kelp shores were almost valueless to the proprietor (though seaweed as fertilizer remained a vital necessity to the small cultivators, often working the same land year after year). In 1861 the Chamberlain of the Lews suggested to the Select Committee on Emigration that some 6,000 persons should emigrate because the land was inadequate to support them. In 1844, of necessity, Seaforth sold the island. The population of Lewis was then 17,000 (Uig 3,316); little did the Chamberlain imagine that in the following ten years it would increase by 16%, and that by the turn of the century would reach almost 30,000, (Uig 4,463 Figure 8).* [162]

1. [See p. 18--Analyst]

* 175 186 the Scottish kings against the demands of the English Parliament, would have restricted English influence to a negligible role until the final Highland uprising was crushed in 1745.

Social and Political Organization

* 175 602 614 618 The characteristic unit of the social and political organization of the Isle of Skye during the Feudal period of Scottish history was the clan. All who have theorized about the clan agree that it was a social, political and economic entity. There is, however, no simple, universally accented interpretation of the nature of the clan. Unfortunately, interest in its structure and function is late. Many assertions suffer from the prejudices and sympathies of the authors toward the Highlands at the time of the eighteenth century rebellions or the nineteenth century land clearances. Lacking Scottish sources, historians turned to the Irish codes of law and imposed them on the clan system without asking whether or not four centuries of Norse domination might have resulted in at least a partial assimilation of the old Celtic tribal organization with the Norse political organization. Nor has allowance always been made for internal development during the five centuries in which the clan was the distinctive organizational unit. Today historians are almost apologetic about the Highland clan system. The subject has become the province of amateur antiquarians.

Anthropologists apparently look upon the clan as a social unit hardly worthy of comment. As far as I know,

ONTINUED
FROM
PRECEDING
FICHE

It is by no means insignificant that despite a large degree of Norse influence in political and economic life, there is only a little vague evidence of a linguistic nature for Norse influence on family life.[57] There are very few words pertaining to the family which can be traced to a Norse derivation. In battle the clansmen stood by extended families, brothers and their sons fighting together. The importance of the *dorbhine* as a social unit can be judged from the following statement: in an argument between two men, if one were to swear by the father of his adversary, it was a great indignity; but if one were to cast a reflection on the father and the grandfather of the other man, the next word would be accompanied by a blow.[58] He would have been named after his grandfather for the *slanna* used genealogical strings.

175*
602
618
618

Summary. The clan was a composite organization. From the old tribal organization it took the *dorbhine*, four generation extended family, the territorial tie of the group, and the mutual, reciprocal obligations of service, support, and defence. Under the Norse, collateral descent as a system of inheritance of the title and land of the tribe disappeared but the tribal principle of *gavelkind*, by which the land was divided among the members of the *dorbhine* who in turn divided the land among their real and fictitious kinsmen, persisted. Scottish nonmanorial feudalism

[57] George Henderson, The Norse Influence on Celtic Scotland (Glasgow: James Maclehose and Sons, 1910), pp. 49, 131-133, 136-137, 185.

[58] Martin, op. cit., p. 179.

provided the framework within which the functions of the tribal leader and the spirit of the clan brotherhood could be preserved and extended. The family possessions could be secured by law and the clan system could be stabilized. At the same time, however, the tribal tie remained paramount in the local system. The general will of the clan backed the chief as the patriarch, and kinship, however unreal, conflicted with the obligations of mere tenantry.

175*
602
618
618

The chief was the living representative of the common ancestor of the group. He gave the clan coherence and endurance; his leadership was almost independent of royal authority. Backed by a resolute body of supporters, he governed by custom and general consent. His jurisdiction flowed from his patriarchial position and depended on the recognition and cooperation of the clan. To secure his position and maintain the belief in common kinship, the chief planted his collateral and lineal descendants on the land. These men, either cadets of the clan or tacksmen, held their land by lease. They were the local representatives of the central family. Their most important function was bridging the cleavage which ran through the clan by forming a ministry to the chief and supporting his dignity and by being the counsellors of the people. The gradual subsidence of the members of the central *dorbhine* through the tacksmen into the body of the clan reinforced the belief in kinship. The belief was further strengthened by the custom of fosterage, the custom of giving a son to one of the clan to be raised and educated. The clansmen were the embodiment of the clan system. They were given land as joint-tenants of the chief or as subtenants

of the tacksmen. Here was the essence of the clan system, the common tie of territory and kinship. The land was not the sole means of subsistence, it was the ancestral home.

175*
602
618
618

The clan was strongly patrilineal. The father of the individual family stood to his children as the senior member of the *dorbhine* to his kinsmen, the tacksmen to his followers, and the chief to the body of the clan. The fundamental underlying principle was mutual, reciprocal devotion. The system was equalitarian. Although the chief was the landowner, and the tacksmen received their land on lease, for which they owed the chief the duties of service and a rent just as their tenants owed the tacksmen, the land had no commercial value. Rent was an ill defined and secondary consideration. The dignity of the clan depended on the number of supporters, who could be maintained on the land under the system of land use.

175*
241
421
427

Economic Activities

The principles of land use and tenure on the Isle of Skye up to the early years of the eighteenth century were similar to those prevailing all over Scotland.[59] The land was used under a system of runrig agriculture. The word runrig appears to be a modification of the Gaelic roinn-muith, a parallel or running division. The bulk of the population, as tenants of the land

[59] Henry Grey Graham, The Social Life of Scotland in the Eighteenth Century (3rd ed., London: Adam and Charles Black, 1906), pp. 154-160; Malcolm Gray, "The Abolition of Runrig in the Highlands of Scotland," The Economic History Review, Vol. V, No. 1 (1952), pp. 46-57; and Henry G. Graham, Scottish Farming in the Eighteenth Century (London: Faber and Faber, Ltd., 1952), pp. 34-73, 91-106.

sufficiently to make age controls an irresistible force, the prestige status of the small number of the "elect," those who had experienced a saving change, and, in particular, the elders gave them complete control over all social and religious activity. In a later chapter I shall have more to say about these facts. The important fact which I want to emphasize now is that the religious patterns provided a framework in which the culture could find continuity and through which the society could achieve a reintegration. The abhorrence of pagan-like customs resulted in a change of content, but there were positive results as well. Above all, there was a change in focus for the culture and society. The decadent belief in clan brotherhood was replaced by a sense of belonging to a known religious brotherhood.

175
178
427
423

Summary. The third period of the modern phase of Skye's culture history saw the culmination of the process of commercialization of the land. All the influences necessary for the conversion of the subsistence economy, albeit a much deteriorated economy, had begun to function. Sheep farming, on a commercial scale, formed the basis for the new economy.

233

167
184
34
42

Newcomers with the incentive and ability to introduce improved methods of land utilization were replacing the conservative and impoverished crofters and cottars. As the commercial farmers consolidated their holdings, the communal townships were being obliterated. The concept of individual possession of the land was replacing the customary rights of the small tenants, and a clearly defined social hierarchy, based on

559

Additional modifications have been found in the division of labor. Although no Skyeman has shown a disposition to assume responsibility for domestic work, unless he lives alone, the women of Skye are expected to function in roles which once were filled exclusively by men. Old men and women for many years now have continued to perform tasks which formerly were their duties as youths and young adults. These changes, like those we have previous, are partially traceable to an incomplete adjustment to the contractual, commercial world. This has led to striking alterations in the age structure of the population for it is the youth who forsake the island and the aged who yearn to return. Nevertheless, there have been no observable changes in the status system of the rural neighborhoods. Primitive democracy, distinguished from our form of democracy by the principle of unanimous consent rather than majority rule, continues to operate in the townships. The existence of such an institution implies a maximum of equality co-existing with a minimum of authority. The continued ability of the crofters to maintain primitive democracy in a nation like Great Britain is possible only because there is a high degree of social integration. The simple system of ranking, on the basis of age and sex, has persisted. Men are the social superiors of women; old men are the social superiors of their juniors. I believe we shall understand how continuity of status has been preserved if we turn to a consideration of the role of religion on the island.

178

[561]

[562]

If I am right in asserting that a belief in clan brotherhood was an all pervading cultural pattern in bygone days and

178
182
614

that the clan ceased to provide a focus for the culture almost two centuries ago, the reader may ask how can a culture without a focus find continuity, how can a culture without a central theme, something around which to orient itself, achieve integration? Religion provides the answer. Congregational religion has taken the place of the clan.

178
182
614

[771]

The acceptance of the new religious focus curtailed many traits and complexes characteristic of the old culture. This is why the older folktales, songs and superstitions, the festive celebrations held at times of birth, baptism, marriage, and death, the traditional social patterns of visiting, and all frivolous activities were abandoned or modified. In a time of acute distress the *Sgriatanach* turned to religion as a means of consolation. His religion required circumspect behavior. Perhaps, the sheer impossibility of supporting the traditional forms of social interaction had forced a change in cultural content when the religious leaders placed these forms under censure. I have suggested that religion did no more than sanction poverty. This much is certain: religion provided the means for the culture to maintain its continued distinctiveness. The Scots of the Presbyterian image of the days of Knox, of the times of the Covenanters, and the year of the Glorious Revolution continue to exert their influence on the *Sgriatanach*. While the ministers and the venerable old men of the laity stamped out all practices which they considered pagan or Catholic, as well as modifying the social aspect of the culture, the process was not completely negative. The religious expression

The Scottish kings against the demands of the English Parliament, 1754
would have restricted English influence to a negligible role 602
until the final Highland uprising was crushed in 1745. 618

Social and Political Organization

The characteristic unit of the social and political organ- 1754
ization of the Isle of Skye during the Feudal period of Scottish 602
history was the clan. All who have theorized about the clan 618
agree that it was a social, political and economic entity.
There is, however, no simple, universally accepted interpretation of the nature of the clan. Unfortunately, interest in its structure and function is late. Many assertions suffer from the prejudices and sympathies of the authors toward the Highlands at the time of the eighteenth century rebellions or the nineteenth century land clearances. Lacking Scottish sources, historians turned to the Irish codes of law and imposed them on the clan system without asking whether or not four centuries of Norse domination might have resulted in at least a partial assimilation of the old Celtic tribal organization with the Norse political organization. Nor has allowance always been made for internal development during the five centuries in which the clan was the distinctive organizational unit. Today historians are almost apologetic about the Highland clan system. The subject has become the province of amateur antiquarians.

Anthropologists apparently look upon the clan as a social unit hardly worthy of comment. As far as I know,

Morgan stands alone in believing the clan to have been a true 1754
gens in organization and spirit.[15] He saw in it the typical 602
features of gentile society, vitality of gens life over the 618
members in moulding individual character, feuds and blood revenge, localization by clans, common use of the land, fidelity to the chief and each other, and descent in the male line. Rivers viewed the clan as more nearly a tribe.[16] Piddington denies the Highland clan the status of a true clan because, although patrilineal, it has never been shown to have been exogamous.[17] I have no doubt that most anthropologists would agree with Piddington on similar grounds. Linton has recently compared the Polynesian tribe with the Highland clan.[18] It seemed to some Rivers's view, saying the clan was localized by territory and was normally endogamous.

The Clans of Skye

Although some historians, probably reasoning from pre-Norman Celtic organization, believe the clan was inherent in the Celtic tribal system,[19] most date the origin of the Highland

clan as not earlier than the reign of David I.[20] It appeared 1754
after the introduction of feudalism, and, as we shall see, it 602
disintegrated as the feudal order decayed. 618

Had the kinship and principle prevailed under the Norse, there was no room for them in a feudal polity.[21] On the other hand, there was no opportunity to assimilate the remote Highlands and, especially, the Islands with the Lowland half of the kingdom. For over four hundred years no king, Scottish or British, was able to secure an unflinching vassalage of the Highlanders. Whatever course events took, the mormaer, once chief of the earldom, the toiseach, the old chief of the kindh, and the mosr, a subordinate chieftain, were gone. In place of the tribal arrangement there appeared a host of distinct communities of fate. On the Isle of Skye the most important of these were the Siol Torquil (MacLeods of Lewis), Siol Tormod (MacLeods of Dunvegan), Clann Donald (MacKinnons), Clann Thorkill (Nicolsons), and Clann Uisgein (MacDonalds of Sleat).[22]

Clan Membership. The clan was a means of administration and security.[23] The nucleus was a derbfhin, a four generation

In the evolution of Scottish society, Scottish alliance treaties concluded were: Treaty Anent the Marches (1249); Treaty of Perth (1266); Band of Bot Kennaird and Lochindorb (1290-92); Treaty of Edinburgh (1357); Treaty of Ardtalnaig (1426); Treaty of Lochgarbh (1462); Treaty of Lochgilphead (1493); Treaty of Ardchattan (1501); Treaty of Ardchattan (1523); Bond of Kilchurn (1523); Bond of Ardchattan (1527); Bond of Ardchattan (1529); Bond of Ardchattan (1531); Bond of Ardchattan (1533); Bond of Ardchattan (1537); Bond of Ardchattan (1538); Bond of Ardchattan (1539); Bond of Ardchattan (1540); Bond of Ardchattan (1541); Bond of Ardchattan (1542); Bond of Ardchattan (1543); Bond of Ardchattan (1544); Bond of Ardchattan (1545); Bond of Ardchattan (1546); Bond of Ardchattan

clansmen for food and lodging whenever their duties took them away from home. The decay of the clan system can, perhaps, best be seen in the disappearance of several of these offices and restrictions placed on others. By the seventeenth century, after failing in a scheme to integrate the Hebrides by the extirpation of the rude, barbarous, and uncivil peoples, the crown succeeded in forcing the chiefs to give up their bards, to assume full responsibility for the obedience of their followers to the laws of the kingdom, and to limit their armed retinue to a small personal bodyguard.[38] Clan warfare ceased and the chiefs henceforth gave unwavering support to the Stuart kings, at least against the English.

The Cadets of the Clan. Below the chief of the larger clans ranked the ceann-tighe, (literally the head of the house). They were the brothers of the chief and stood in relation to the sept as the chief stood to the clan. In the MacDonalds of Sleat the eldest brother usually held the lands in North Uist.[39] In the MacLeods of Dunvegan the eldest brother received the farm of Talisker.[40] As senior cadets, the eldest brothers led the clan on marches and held the principle post of honor in battle. They served as stewards, collecting the revenues of the estate and fulfilling the duties of the chief during his

the local representatives of the nuclear derbfine. they were 175
the leading men of the clan in each district. Although they 602
were appointed by the chief, their recognition depended on the 614
willingness of the clansmen to form a following rather than 618
on title or a right of succession. This following determined how many men the chief could bring into battle and how many officers of dignity he could support from their contributions.

The most important function of this group, all of whom could trace descent within the central family, was their bridging the cleavage which ran through all clans. They formed a ministry to the chief and were the councilors of the clansmen. The bond with the former was proven kinship, with the latter, a sense of kinship. They were the mainstay of the system. When the chiefs fell into debt, a frequent occurrence, the tacksmen came to their aid by pledging themselves to preserve the family and the estates, to reduce the debt.[44] They were also the local merchants, an important function in an area with only semi-annual markets and sparse money.[45]

The Clansmen. The clanna (literally the children) included all within the jurisdiction of the clan chief. Their relationship was real or fictitious kinship, tenancy, or contract. To the Lowlanders and the English, their relationship seemed to be a

familiarity with which the chiefs treated their people, aghast at the chief's partaking of the people's diversions, and astou that the chief would shake them by the hand whenever he met them.[47] At the bottom, the system was equalitarian. Every man had the right to address his chief and call upon him for suppo in times of adversity.

The clansmen were continuously recruited by natural increase, adoption, and the gradual subsidence of the younger members of the nuclear derbfine into the body of the clan. The downward mobility of the remote collateral relatives of the chief was of paramount importance. It reinforced the belief in kinship of the clansmen and the chief. The feeling of kinship was further reinforced by the institution of fostera a practice common to pre-Feudal Scotland, Ireland, and Wales.[48] Under fosterage children were exchanged between families of equal status or the son, often the heir, of the chief or tacksm was given to one of the clan to be raised and educated. Fostera served to form mutual alliances between families and clans, to ensure the loyalty of the people for their chief, strengthen the attachment of the chief for his followers, and bind the

y no means insignificant that despite a large degree of 175*
nfluence in political and economic life, there is only 602
e vague evidence of a linguistic nature for Norse influence 614
ly life.[57] There are very few words pertaining to the 618
which can be traced to a Norse derivation. In battle the
n stood by extended families, brothers and their sons
z together. The importance of the derbfine as a social
n be judged from the following statement: in an argument
two men, if one were to swear by the father of his
ry, it was a great indignity; but if one were to cast a
ion on the father and the grandfather of the other man,
: word would be accompanied by a blow.[58] He would have
ed after his grandfather for the clanna used genealogical

The clan was a composite organization. From the old
rganization it took the derbfine, four generation
family, the territorial tie of the group, and the mutual,
al obligations of service, support, and defence. Under
e, collateral descent as a system of inheritance of the
d land of the tribe disappeared but the tribal principle
kind, by which the land was divided among the members
erbfine who in turn divided the land among their real
itious kinsmen, persisted. Scottish nonmanorial feudalism

George Henderson, The Norse Influence on Celtic Scotland
James Maclehose and Sons, 1910), pp. 49, 131-133,
185.

Martin, op. cit., p. 179.

provided the framework within which the functions of the tribal 175*
leader and the spirit of the clan brotherhood could be preserved 602
and extended. The family possessions could be secured by law 614
and the clan system could be stabilized. At the same time, how- 618
ever, the tribal tie remained paramount in the local system.
The general will of the clan backed the chief as the patriarch,
and kinship, however unreal, conflicted with the obligations
of mere tenantry.

The chief was the living representative of the common
ancestor of the group. He gave the clan coherence and endurance;
his leadership was almost independent of royal authority.
Backed by a resolute body of supporters, he governed by custom
and general consent. His jurisdiction flowed from his patriarchial
position and depended on the recognition and cooperation of
the clan. To secure his position and maintain the belief in
common kinship, the chief planted his collateral and lineal
descendants on the land. These men, either cadets of the clan
or tacksmen, held their land by lease. They were the local
representatives of the central family. Their most important
function was bridging the cleavage which ran through the clan
by forming a ministry to the chief and supporting his dignity
and by being the councilors of the people. The gradual subsidence
of the members of the central derbfine through the tacksmen
into the body of the clan reinforced the belief in kinship.
The belief was further strengthened by the custom of fosterage,
the custom of giving a son to one of the clan to be raised and
educated. The clansmen were the embodiment of the clan system.
They were given land as joint-tenants of the chief or as subtenants

of the tacksmen. Here was the essence of the clan system, the 175*
common tie of territory and kinship. The land was not the mere 602
means of subsistence, it was the ancestral home. 614
618

The clan was strongly patrilineal. The father of the
individual family stood to his children as the senior member
of the derbfine to his kinsmen, the tacksmen to his followers,
and the chief to the body of the clan. The fundamental under-
lying principle was mutual, reciprocal devotion. The system
was equalitarian. Although the chief was the landowner, and
the tacksmen received their land on lease, for which they owed
the chief the duties of service and a rent just as their
tenants owed the tacksmen, the land had no commercial value.
Rent was an ill defined and secondary consideration. The dignity
of the clan depended on the number of supporters, who could
be maintained on the land under the system of land use.

Economic Activities

The principles of land use and tenure on the Isle of Skye
up to the early years of the eighteenth century were similar to
those prevailing all over Scotland.[59] The land was used under a
system of runrig agriculture. The word runrig appears to be a
modification of the Gaelic roinn-ruith, a parallel or running
division. The bulk of the population, as tenants of the land

Clans 618

Hundreds
103 of place names are known to the villagers
[193] which are not marked on any map. These place names constitute part of the oral tradition of a population which has lived in a confined geographical area for generations.

In most of Lewis, village and township coincide.
632 621 311 423 [363] The village of Shawbost is composed of two townships, South Shawbost in which the crofts splay outward like a fan from roads which curve over an uneven landscape, and North Shawbost which is composed of linear streets (see Map C), to which the crofts are perpendicular. Each township has its own common grazing land, and its own grazing committee. All of South Shawbost and part of North Shawbost belong to one private estate (which includes other townships to the southwest), and most of North Shawbost belongs to an estate which extends to Barvas. Beyond the fact that non-crofters in South Shawbost have found it easier to acquire crofting status, little difference between the two townships appears to be due to their belonging to different estates. As
[427] [529] elsewhere in crofting regions, the landlords of the two estates are concerned mainly with the sporting potential of their land.

632 The two townships are themselves divided into named neighborhoods (cf. Vallee 1955 for a discussion of "natural neighborhoods" in crofting areas).

288 463 [424] finished lengths of tweed. For a tweed to be classified as "Harris Tweed," it must be hand-woven by Outer Hebrideans in their own homes, but the weavers are
288 essentially employees of the mill. All the large Harris Tweed mills in Lewis, except the one in Shawbost, are located in Stornoway. A few smaller businesses, which design and market tweeds but have no elaborate machinery to process the tweed further, are scattered throughout the island.

621 162 [429] The village of Shawbost is composed of 169 households, of which 110 are headed by "crofters," persons recognized as legal tenants of a croft. Of the remaining 59
[361] households, 16 rent houses which were built and are maintained by the County (called "council houses"), 11 have erected houses on the crofts of relatives, and
463 241 32 have built homes on the common grazing lands. Non-crofters participate in the agricultural activities of the township. It would not be unusual, for example, for a non-crofter to serve as the clerk of a grazings committee.

342 166 In North Shawbost, one croft house and two non-croft houses are used only when the owner returns to Shawbost from the mainland for a holiday. The school-
[875] [193] master lives in a house adjoining the school, and the minister in a manse located between Shawbost and the neighboring village of Bragar.

463 One of his
322 apprentices was his sister's son, who built another
[374] [604] smithy not far away. "This was the center of gossip. People gathered there while he shoed horses that came
[521] from Barvas to Carloway."

444 A number of shops were established in Shawbost
178 that sold clothing, cooking ware and groceries. At
[494] one time they numbered six altogether. These shops also ran the first buses between the village and
[477] [443] Stornoway. Gradually these businesses disappeared because of competition with larger companies. Mobile grocery vans and butcher shops and bakers began coming in the late 50's, and gradually took over the trade in large parts of the island, undercutting the local busi-
178 43 571 621 nesses. Income from weaving had already weakened self-sufficiency derived from the intensive use of land and sea and also weakened the formerly heavy reliance on local ties and mutual aid. Today an army of town-
44 463 178 dwelling entrepreneurs and employees constitute a major proportion of the traffic on the island roads. Grocers,
[472] [484] fish dealers, bakers, sellers of soft drinks, garbage collectors, insurance salesmen, mobile banks, coal dealers and others extend goods and services from centralized sources to a market which has money to pay for them. The island's participation in this extensive market system is affected by its marginality to the

121 128 of the township with the larger society, and examines the effect of geographical and social marginality on the boundedness of the township network. Chapter 6 discusses two important networks of social relations within the township.

B. Township as Social Boundary System

632 178 621 The township constitutes a relatively firmly bounded system, although its boundaries are weaker than formerly when the township was relatively self-sufficient
[476] economically. Township members worked together in small fishing crews, and families relied on each other for help when members of the family were away from the island "at the fishing."

621 476 602 [539] [605] Relatives were expected to give priority to helping each other. According to one proverb, "A relative is your best friend." First and second cousins were considered especially close, but knowledge of one's kinsmen extended to at least the fourth generation.

602 576 585 764 [539] Ties of kinship became evident in ceremonies such as funerals and weddings. One Gaelic proverb says, "You know who your relatives are at weddings and funerals." At weddings the onus was on the members of the bridal party to remember their relatives. "You have to sit and calculate who is closely related, and all those

A 60-year-old woman remembers that it was a
621 common practice, when she was young, for children from
537 large families to live for as long as six weeks with
476 other families who were relatively better off. They
would help harvest the hay or the potatoes or bring
in the peat in return for food, lodging and perhaps
some clothing. "They usually ate better than they did
at home." The children were not necessarily relatives
of the families with whom they boarded.

Strong friendship, that is, the kind of friendship
621 associated with mobile urban life in which persons
578 confide in each other and share secrets and build up
an individual relationship based on extensive knowledge
[602] of one another, was nonexistent. A "friend" was a
relative, or someone who gave aid when it was needed.

Today it is sometimes said, "It used to be that
621 your relatives were your best friends; now your best
178 friends are better than your relatives." An old man
592 will meet another on the road and say, "I used to see
187 more of you when you needed me." Neighbors used to
[602] share sheep that were killed; now households kill and
[821] consume their own sheep, and freeze the meat which they
[851] cannot use immediately. Groups that walked out together
to the peat to finish the job in a single day are being
[464] replaced by individual family units that can motor out
000 and do the job in stages. People prefer to give money

181 People prefer to give money
• 621 in exchange for car rides or other help, including peat-
178 cutting, because "than you're independent." Friendships
187 are still weak, relative to friendships in urban
592 settings. Most information which is shared between
821 individuals rapidly enters the pool of communal gossip.
[369] Although many persons emphasize the importance of mutual
[521] aid in defining a friend, some emphasize the ability to
[476] confide and keep secrets.

621 Today many of the younger villagers do not know
178 their relatives to the extent that their elders did.
602 In one family, a girl who was about to get married had
[685] to ask her brother, who was the only one of the siblings
[596] interested in kinship connections, whom to invite to the
wedding. It is still useful to retain an inventory of
602 one's relatives. "I have cousins in Glasgow and
424 Australia that I've never seen, but if I ever go there
I'll have a place to stay." With the increase in
[178] transportation and income, more islanders are taking
brief trips away from the island. During these trips,
they almost always stay with relatives.

It is frequently said that children are now "cheekier,"
369 less inclined to run errands and obey orders meekly, and
570 that they prefer to watch television or read books by
821 themselves to playing with each other.
178

• 621 Despite these tendencies, an individual is still
571 enmeshed in familial and village ties. Villagers walk
in and out of each others' houses without knocking;
[426] only a "stranger" knocks. Goods such as tape recorders,
binoculars and books are passed around the village;
people even borrow each others' reading glasses.

Children are "borrowed" as well. They are loaned
858 out to relatives and neighbors to run errands, or may
865 even live with them. They are scolded as often by a
861 neighbor or other villager as by a parent. A child
621 might be told, "When someone (any adults) tells you to do
something, you do it, no matter who that person is."
The parents of one household are criticised for taking
their children's side against other children and other
parents. "He's teaching his children not to mix with
others. One child is as good as another. They may be
good one day, but they're likely to be bad the next."
A child or adult who enjoys spending time by himself is
[156] still considered extremely odd. An important criterion
by which someone's mental health or general personality
597 is evaluated is whether or not he "mixes" well. It is
621 fairly common for childless households to "adopt" a
child of neighbors or relatives; that is, the child
spends a great deal of time with them. They may go to
the child's house to put him to bed at night, or the

597 child may come to spend nights or longer periods of time
• 621 with them.

To some extent villagers are still dependent on
476 each other for various kinds of help. It is considered
621 extremely bad manners to refuse labor, a tool, or food
[576] to anyone who requests them. If someone refuses to aid
another, people say, "What will he do when he needs
[443] help?" This attitude has made the island a paradise
for the few salesmen who, in the last few prosperous
years, have started to visit its communities; villagers
find it difficult to say no to anyone who comes to their
door with a request, including the request that they
buy something.

621 A woman in childbirth was formerly attended by a
579 local midwife, and kept in bed for two or three weeks.
844 "Other women, both relatives and friends, came and stayed
with them at night, fixing them warm tea and milk,
whispering bhronag bochd (poor soul), how awful you look..."
Just as today the neighbors gather at times of illness
and death. It is more difficult for neighbors to come
to the bedsides of young mothers of today, who are all
[178] taken to the hospital in Stornoway to have their babies;
[743] but the neighbors manage to visit the hospital, which has
no choice but to ignore its rule of only two visitors
per bed at a time.

• 621 The first thing that is said when for some reason
513 a woman is left alone in the house is, "Who's going to
358 go and sleep with her?" Often a child will be sent from
a neighboring family, not always relatives, to stay with
621 her at night. As in the past, it is not uncommon for
572 a childless elderly couple or single person alone on a
888 croft to take in a young, homeless couple, to whom they
may or may not be related. The young couple cares for
the old person or persons, and inherits the croft when
they die.

602 "Keeping up the relation" is the process by which
476 relatives sustain interaction and expectations of mutual
aid even though their relatedness becomes more distant
605 with succeeding generations. "I've got cousins in Ness
that I stay with at the Communions. They're getting on
into the third generation now." A cousin is a cousin
even to the 42nd degree (Williams 1963: 142), as long
as there is reason to sustain the relationship. "I know
we're related, but I can't quite place it." "We're a
bit related. I think she was a MacPhail before she
married." "I don't quite know how we're related, but
my mother and his mother considered it a close relation-
ship, and he has kept it up."

621 Every villager has a vast amount of information
621 about other villagers and their families, which may be
582

• 621 used on different occasions, for example, to discourage
621 deviant behavior or certain marital alliances. Any sign
582 of physical or emotional disability in someone planning
to get married invites an attempt by other villagers to
discourage an alliance. According to a Gaelic proverb,
[539] "If you want to be praised, die; if you want to be
criticised, marry (Ma tha thu airson do mholadh, bamaich;
ma tha thu airson do chaineadh, pos)." The villagers
621 consider not only the behavior of the person but of his
626 ancestors. The individual is perceived as belonging to
582 a family unit which through many generations has manifested
821 certain physical and behavioral traits. Traits of behavior
such as shyness, heavy drinking, stealing and tight-
fistedness are interpreted as hereditary traits. "It's in
the blood (Tha e anns an t'fhuil)." "It's in the people."
Particular occupations are also associated with families.
[463] Stornoway, which is not so "urban" as to have a constant
turnover of population, contains many examples of
occupations passed down through generations.

632 In Chapter 3 I mentioned the development of several
578 groups in the crofting township which seem to be in conflict
with the township as a strongly bounded system. People
who keep only sheep have come to blows with those who keep
both sheep and cattle; and a distinction between crofters
and non-crofters may be seen. Many persons have preferred

764 the deceased or the remaining family assist in preparing
574 endless cups of tea, using the provisions that are
brought by the visitors. The newcomers enter, exchange
greetings, memories, sighs and moral judgements in
rapid whispers. "Oich, oich... that should teach us,
we're all going to go. That's how it was meant to be.
It makes you wonder why we live at all, well, well."
They recall other deaths. "That was a bad death. His
liver was bad, and he turned yellow, then all black...."
[152] They weep, circumspectly observe the appearance of the
[197] room and its occupants, and speak only in Gaelic, the
language of hearth and heart.

764 The minister usually attends a prayer meeting which
193 is held in the sigh fhaire around midnight of the night
before the funeral, but his presence is not necessary.
The prayer meeting may be conducted by the elders. The
elders may also hold the service which precedes the
burial. The minister may walk for a short distance in
the funeral procession or speak a brief few words at
the graveside, but his role in the community drama is
minimal.

764 At least one person from all households within the
• 621 village is expected to go to the sigh fhaire of someone
592 who has died within the village, "to show respect." The
male head of the household is expected to attend the

764 521 [519] funeral procession in which the coffin is carried for about half a mile from the house to the waiting hearse. Over 100 men usually walk in these processions. The more well-known the person or unexpected the death, the larger the procession is likely to be. Relatives [602] of the deceased walk at the head of the procession, at the head and foot of the coffin, while other villagers take turns carrying the bier. The pallbearers serve in relays. Eight men carry the coffin, four on each side, and are replaced frequently by pairs of men who assume the rear positions. The two who have been displaced at the head of the coffin stand outside the line, facing outward, until the procession has filed past them, whereupon they join the end of the procession.

764 178 273 In the past, coffins were carried for miles from the house to the cemetery. The procession rested periodically, and the men usually carried an earthenware jug of whiskey (piggy uisge beatha) "to ward off the cold." The custom of giving a glass of whiskey to men as they left the house to carry the coffin was still recently followed in Skye; and in some areas a funeral is still evaluated by the amount of whiskey available for consumption ("That was a good funeral"). Tales are told of coffins buried without bodies.

166 2. The Exiles: An important source which supplies this sense of contrast is the large number of persons settled away from the island, often in "ghettoes" or neighborhoods in cities in which village ties are main- [521] tained. It is said that gossip about Shawbost travels more quickly in the district called Partick Hill in 166 Glasgow than it does within Shawbost itself. It may be • 621 argued that the "exiles," with their Lewis and Harris Societies and pilgrimages back to the village during the holidays, do a great deal to sustain the strong boundedness of the village as a sociocultural system. They and non-Gaelic-speaking outsiders (the Eminent Person writing his inevitable book in the romantic solitude of an isolated manse) help to maintain a feeling of worthwhileness in a place rife with feelings of ambivalence and negative comparison with the larger society.

181 621 [195] Within the village, especially during the long, dark winter, complaints are often heard of the "sameness" of things. A common phrase, almost a greeting, is, "Anything fresh?"--implying that the usual mode of 621 20 929 existence is stale, sour, exhausted, and mucky with overuse. Although the villagers have access to the range of information available to all Britishers through forms of mass media such as newspapers, radios and television sets, very little of this information is considered relevant to village life, and thus is not attended to.

183 181 [521] The generally low level of stimulation derives in part from values which restrict opportunities for self-expression. People are ready to gossip, i.e., to partici- [626] pate vicariously in the escapades of others, but are less eager to act. Stories concerning mad-cap adventures of some villagers do not belie the existence of constraints [166] imposed on expressiveness. One of the major reasons given by young villagers for wanting to leave the island, and by emigrants for why they left, is that, "There is nothing to do. The place is dead."

156 181 183 • 621 In the everyday life of the village, a style of indirectness and restricted communication is encouraged. A man might be praised in an obituary by the phrase, "His voice was never heard in the community." The encouragement of a "low profile" of behavior is characteristic of communities in which people meet each other frequently and know they will continue to meet and ask things of each other for a long time to come. Indirectness avoids conflict arising from divergent expectations, and embarrassment from changes in plans.

155 861 A major feature of practices of child-rearing on the island is inconsistency, which develops a style of guarded watchfulness and hesitance to act or express oneself. Children are teased by being offered things which are then snatched away. Punishment is inconsistent.

155 861 577 [673] Lies are frequently told. "Every other sentence my father says is a lie. If you believe half of what he says, you're a fool. If you believe a quarter of what he says, you're getting near the truth. If you believe an eighth of what he says, it's probably the wrong eighth."

156 • 621 Villagers engage with each other in constant, quiet game-playing. They are dependent on each other for many things, but try to minimize the control that others have over them while improving their own positions. If someone brings plants or shrubs as a gift, the response is likely to be, "She was probably pruning her garden and needed to get rid of the leftover garbage." Such negativism releases the person from feeling obligated. (See Emmett 1964: 16-17, for a description of a similar situation in Wales.) A man who is asked about his new tractor replies, "Its faults will come out later." If he were to say it was all right and then it broke down, he would have lost points. In discussing the mental health of a villager recently returned from Craig Dunain (a mental hospital near Inverness), someone observed, "He's better than the doctor who let him out." If another breakdown were to occur soon, someone would be sure to comment, "And so-and-so said he looked all right."

156 572 Such training allows little room for the development of close friendships in which the individuals involved are

166 484 823 204 [533] The image of the island as spiritual home is fostered by The Stornoway Gazette, and by nostalgic songs, most of which were written by islanders who emigrated to Canada in the first quarter of the century.

632 241 The crofting township as a strongly bounded network continues to exist, although crofting as a socioeconomic pattern which evolved in a situation of limited social and geographical mobility, low cash reserves, and the restriction of a large population to a region of limited resources, is very different from crofting as defined by an office in Inverness. As far as the crofter is concerned, to be defined as a crofter by the Crofters Commission and other government agencies is to have access to resources which affect the environment in which he makes his choices.

241 288 The individual is faced with the semi-security of crofting and weaving, in contrast with the exciting but risk-laden opportunities offered by the dominant urban- [654] industrial mainland. Crofting and Harris Tweed have been protected by government legislation. Various subsidies [745] and loans are available. In times of unemployment, social security is available. Extremely important as contributers • 621 156 to boundedness are the non-economic incentives: the individual has a place in a human community; he is given

• 621 156 character traits just by virtue of his belonging to a particular family; he is protected from the "out" [570] world even though he may have broken its rules. The [574] village provides a colorful arena of recreation in the form of ceilidh, the character, and holidays such as New Year's.

781 194 A major system of order and meaning is provided by religion, and by the opportunity to belong to a tightly- [181] knit religious clique. Lewis is sometimes called Tir an a-moisgeul, Land of the Scriptures, in contrast with 571 the decadent outer world. The male drinking fraternity 223 [521] constitutes a second important group. And for everyone there is the cinema of their neighbors' activities, which are placed in a vast human calendar that includes the behavior of many generations.

121 From prehistory to the present day, these geographic
178 zones have played their parts as factors in evolution,
174 although the border-lines have changed at different historic
182 crises, and have been modified by economic and social
184 phase. At times the Hebrides have been more closely linked to Ulster or to Norway than to Central Scotland. In viewing these zones, we shall not find simultaneity in historic events, but comparability in stage and transition, even at differing periods. From the evolutionary point of view, the revealing character of Island life lies not only in static survivals, in what Sir Arthur Mitchell found in the Isles and vividly described as " the Past in the Present ". Island life is characterised still more by the dynamic strength of its continuity—notably of early or primitive Christianity—and also by the late occurrence of changes when, at last, they came.

18 The social consequences of these regional differences
• 621 in evolution are profound. In the ' Plain ', to the south-
174 east of the Severn-Tees line, large village communities
[423] with ' common fields ' prevailed, forming the later manor villages. To the north and west, the more varied, hillier
[192] lands encouraged the continuance of hamlets. These hamlets housed close-knit groups of families, often of no more than four or five to a dozen relations or ' friends '—
—in Scots even today (much as in Gaelic) the word
[462] ' friend ' frequently implies kinship. Each small group formed a team. Together the men ploughed their mingled
[476] rigs (or ridges) and herded their stock in common, and
[241] on the coast they rowed their boat as its crew. The women, too, did much together, as when they spun their
[286] yarn, and fulled or ' waulked ' the cloth that one of them
[423] had woven, helping by turn in childbirth and child-care. Usually several of these teams were linked in a larger

18 pastoral group, the germ (in the Hebrides) of the present
• 621 township with its common grazing. Hamlets and town-
174 ship formed circles of cultural and religious life in common.
[423] These ' sociable hamlets ', or ' little commonwealths ', as they were called by understanding writers on the Highlands, lived on in the Hebrides almost until a century ago. Features of their form and life have long been known, but their life has not yet been envisaged in its full dynamic significance.

127 The homesteads, informally grouped in these small
36 hamlets, have been mistakenly described as solitary or
174 ' dispersed ' by scholars accustomed to larger and more compact grouping. The mistake was made by geographers
[423] of the nineteenth century, such as Meitzen with reference to the hamlets of Brittany. Similarly, because of the
[476] small number composing a typical joint team, the vital fact of team-work and joint holding has frequently been overlooked; yet a fundamental mistake is made when such close-knit team-work and joint tenure are described as
174 ' individualistic '. Moreover, these teams were linked to-
621 gether in larger, more loosely bound pastoral communities
631 of township and district. In Scotland and elsewhere, it is true, such hamlets came historically to be split up in various
[241] ways, into smaller farms and scattered cottages. The larger link of common life was also superseded by the
[178] proprietor's estate. Indeed, the twofold revolution involved caused a fundamental regional cleavage within ' the North and West '.

[182] Partly as a result of their small size, the tenure of farm-
[184] hamlets was frequently informal. In northern England, the hamlets and their lands were not entered in Domesday
[178] Book; still less are early entries complete in Scotland. For this and other reasons, jurist and historian may fail

174 to notice the absorption or suppression of rights held in
• 621 common in ' the North and West ', together with the
631 abolition of the duties of fellow-workers to one another. Too frequently they have not troubled to enquire into the
178 former existence of common rights and fellowship duties,
184 the observances of which have so much to teach. Yet to judge from the completeness of the Hebridean evidence, and from wider evidence to be touched upon with reference to Norse and Lowland conditions, suppression caused a profound social and moral revolution.

178 Indeed, the profound character of that revolution makes
184 it hard to recognise the common origin of features which may differ greatly today. To choose four examples, the
[428] long succession from father to son, found from end to end
[166] of an Island township, contrasts with a restless movement of farm servants, and even tenant-farmers, all too common until 1939 in Lowland Scotland and parts of Northern
[181] England. The ideals held by fellow-workers in Gaelic tradition, of kindly and courteous co-operation, contrast with the avowals of rugged individualism made on many a farm even of the southern Highlands today, and certainly of
[291] the Scottish Lowlands and Northern England. Languages have changed as English has advanced during 1500 years: the Lewis crofters' children still speak Gaelic, but children in Stornoway ceased to do so forty or fifty years ago.
[771] And in the recorded religious life of Gaelic hamlets far from any priest (or later, minister), the part of revered men and women is very different from the part played in Calvinism by the Minister and the male Elders of the Kirk. All these four contrasts are due to revolutionary changes in home, work, language and religion. Such changes, of which all trace may be lost elsewhere, are traceable from the fullest evidence among the Gael.

184 Comparisons at the present day are most illuminating.
[791] In the Hebrides one may pass from Calvinist Lewis-and-Harris to Catholic Barra, through South Uist, where Presbyterian and Roman Catholic dwell, side by side, in mutual respect. Although their home life, economy and language are the same, the influence of a comparatively
[121] recent divergence in religion is marked. Such Island evidence, present and past, forces one to re-examine conclusions upon life in the Lowlands accepted until recently, and to seek for the truth upon earlier forms of life in common and for their meaning today throughout ' the North and West '.

175 Ancient elements of unity, and later ways in which
423 these were broken, adapted or remade, region by region,
427 are being unravelled. The Old Estate Plans, made at the outset of the agricultural revolution, show these immedi-
• 621 ately before the re-planning of fields and farms (*circa* 1750–90). These plans also reveal the existence of still
178 earlier types, not otherwise recognisable even on the spot.
[184] With their rentals (when available) they reveal the ways in which old joint farms were placed under a single tenant, as in Lothian, or were split up among several tenants, as in Ayrshire.[1] From such geographical data, both the economic and the deeper social aspects of rural life emerge with new clarity. Such data may be linked to Planning Surveys of land and rural life for tomorrow.

621 Now, although so fundamentally equalitarian within
427 themselves, these hamlet communities of the Gael were subjected to the overlordship of a chief or laird, either directly or through an intermediate gentleman-tenant, a
[174] ' tacksman '. History, with archaeology read in history's
[172]
[113]

[1] For Lothian, see Arthur Geddes (1938 and 1951); for Ayrshire, see J. H. G. Lebon, *Scot. Geog. Mag.*, Vols. 62, 1945 (pp. 7-13); 63, 1946 (pp. 100-110). Further references in Bibliography.

621 light, suggests that such lordship goes back to early con-
427 quests of self-supporting agricultural and pastoral com-
174 munities by well-armed raiders of many races, including
the Celtic-speaking swordsmen of the Iron Age. The last
[172] and most notable of these conquering raiders were the
Norsemen. Their influence was profound, whether, sailing
direct from the Scandinavian forest settlements and fjords,
they raided and settled as heathen Viking crews, or, at a
later stage, they invaded England from Normandy—that
fertile province which they had made theirs in fact and
name—under the panoply of civilisation and with Papal
benediction. A generation after the Conquest they com-
menced the penetration of Scotland.

183 The paradox of loyalty to one's fellows with loyalty
181 to a lord, of stoutly equalitarian thinking bound up with
fervid admiration for an aristocracy, is nowhere more
[614] marked than among the Gael. They sought to reconcile
these conflicting loyalties by claiming common ancestry for
chief and people, as the children (*clann*) of a hero of
history or myth. The years 1945-47, which marked a
centenary of the last of the desperate Jacobite Risings,
stood at the close of the latest of many wars in which fame
has been won for the symbol of clanship—the tartan, long
proscribed (by the Act of 1747) 'to every man and boy
in the Highlands'. At such a time, the Gaels' loyalty to
the death cannot be forgotten although old kings, old
[121] chiefs have gone. But its paradox must not only be re-
[182] membered but understood, from its roots in communal
life and environment through history. Not until this is
[184] done can important phases of our own time be under-
stood, such as the failure of Lord Leverhulme's seven
years' endeavour in Lewis; nor can the present oppor-
tunity of Highland renewal be grasped by the help of

121 And region by region, a fairer balance must be struck
185 between country and town. In Lewis, the part of Storno-
way town, with its population nearing 5000 (in 1951), is
[162] important. Its port, its fisheries, its spinning mills for the
[184] crofters' hand-loom weaving, its merchants' shops, and its
local, administrative and professional services, are essential
to the Island. Its economic and social evolution, too, are
[162] interesting. Stornoway's plans for the future are active
and ambitious, and these, it is realised, depend upon the
prosperity of the 19,000 crofting people of Lewis proper.

121 But the subject of this book is primarily rural. It is to
128 see with fresh eyes what, from our Harris mountain-top,
we viewed as a unit at the core of 'the North and West'.
After the island has been described in terms of its physical
and human geography (Part One), the endeavour (in Part
Two) will be to give a completer account than may yet
have been given of the nature of Gaelic community, with
[621] its temporal duties and its spiritual sanctions. The three
concentric circles of community are described: the family,
the farm team and boat's crew, and the larger township
groups. The relations of this threefold grouping of livelihood and society to Chiefs and Church are studied, and
followed out in later evolution, until today. Elsewhere
I have endeavoured to show how the Island can worthily
maintain itself, and thereby find a new freedom. The final
chapter returns to the broader aspects of society and region
touched on here.

If this intensive study of a single isle and community
can throw fresh light upon certain essential characters of
the less-understood region of the British Isles—that lying
outside the south-eastern 'Plain'—it may help to con-
121 tribute to more than economic reorientation. The significance of the Island life—not so much for the past, which

182 Let us begin with the economic and the social signi-
184 ficance of the Highlands and Isles with which we are
concerned. Economically the crofters' 'living space' is
311 the narrow interrupted belt of improved land (shown black)
[241] which is generally fronted by the sea and its inshore waters,
and is backed by the Crofters' Grazings (enclosed by line
[427] C on the map). Some 700 crofting townships or com-
[361] munities are found in Zetland, the North-west mainland
and the Western Isles, each with its Common Grazing;
the line C also encloses a small area devoted to other
grazings. Deer forests predominate on the eastern, main-
land, side of the line. On the remainder of the hill country
are to be found the hill-sheep farms, with other small farms
and small-holdings.

174 In the past the fishing crew at sea and the joint labour-
621 team on land formed the communal units contained within

Key to use of Land and Sea
(Highland, Island and Urban Areas)

1. The dotted line C .... C encloses the Crofters' Grazings, mainly 'Commons'.
2. Black areas: strips of 'Isolated Arable' within the rough pastures of the Highlands and Southern Uplands (left blank).
3. Horizontal ruling: open sea, outside the 'three-mile' belt of 'inshore fishing' (left blank).
4. Vertical ruling: urban and industrial regions.

Key to Size of Labour-Teams of Farms and Small-Holdings
(in the Lowlands)

The symbols show the average number of employees per team in each county.

(1 symbol = 100 teams)

(a) Per Mixed and Dairy Farm
— 2·2 to 3·8 (3·1)
◆ 4·1 to 5·6 (4·9)
■ 6·4 to 8·2 (7·1)

(b) Per Full-time Small Holding
● 0·7 to 1·0 (0·85)

(The numbers in brackets are the averages for Scotland.)

174 the township; and to each were allotted the rights of the
226 common grazing and the fishing grounds. For more than
241 a century the croft has been held individually, though in
423 the townships the common grazing is still held in common.
621 Beyond these 'homely' limits lie wider horizons, in the
632 past those of seafaring and of droving or the chase, and
[178] today of fishing and gillieing at home, or of ocean journeys,
urban occupations or colonisation.

In the Lowland regions each symbol represents 100
182 holdings. For (A), 'mixed and dairy farming', the par-
184 ticular type of symbol shows the average number of workers
241 employed on a farm-holding in each county. On each
farm the employed workers form what may be called the
'Labour-Team'. A team may be 'small', 'medium' or
'large'. The Scottish averages of these three types (indi-
cated in the inset key to the map) are roughly three, five
and seven workers per team. Four 'casual' workers are
counted as equivalent to one 'permanent' worker, but
farmers' wives are excluded. Under (B), for the same
Lowland counties and areas, full-time small-holdings are
[593] shown separately. The Scottish average of less than one
full-time worker employed, most often a son or daughter
of the small-holder, is typical of all the counties.

241 As to the relative importance of the different classes of
[162] farms and small-holdings in Scotland, true agricultural
land-holders number 68,000, of which fully one-third hold
part-time holdings (like the Island crofters), one-third
'full-time farms', and rather fewer (one-fifth) hold 'full-
time small-holdings'. The remainder accounts for other
types of less importance. The farms predominate in terms
of improved land, full-time employment, and of course of
[311] production. As to area, farms cover 80 per cent of agri-
[464] cultural land. The farmers employ nearly 90,000 workers,
[162] [refer to map p. 16 .. analyst]

before 1883 but now serves as a school museum. When it closed, most of the members changed to the Free Church.

The present congregation includes many families from the neighboring village of Bragar, who come to church for the morning service and usually attend a prayer meeting in their own village in the evening. Once a month the minister gives an evening sermon in Bragar. The left side of the church, where most of the Bragar people sit, is called "the Bragar side."

Lay officers of the church, called elders and deacons, are elected by the communicants, those members of the congregation who have taken Communion. Both elders and deacons sit in special seats at the front of the church beneath the pulpit. Deacons, who are concerned with material matters such as collections and church property, sit in the "wee seats" slightly lower than the partitioned seats of the elders, the "big seats." The deacons meet in a deacons' court which the elders may attend. A meeting is held once a year at which the congregation is told matters such as how the church money was spent. Kirk sessions are limited to elders, who decide who will be baptised or take Communion.

Each street or neighborhood within the village has its own deacon and elder, to whom members of the street bring various matters that concern church organization, such as plans for baptism.

794 621 2. The Township as Religious Network: The religious sphere has two distinguishable social networks, one of which coincides in personnel with the village network. Most households within the village feel obligated to "make an appearance" during at least one of the two 796 851 Sunday services. Most children are sent to Sunday school, and all are baptised. In baptism, fathers stand with the children, promise to raise them in the church, and to set a good example for them. Baptism must precede Communion, the ceremony by which a person becomes a full member of the church. Baptism signifies membership in the community, the village-qua-congregation. "Somehow you're not really legal until you've been baptised." Some feel that the child's soul may be endangered if he should die without baptism, although this idea is discouraged by the church. [199] According to the Calvinistic ideas of predestination, the fate of one's soul has already been decided.

796 851 626 848 The pressure to have children baptised enables the village-as-congregation to exert social control over deviant individuals. If a child is conceived out of wedlock, the parents of the child (if they have gotten married) or the unwed mother alone must stand in front of the congregation and be lectured by the minister before the child may be baptised. A woman who has married a man known not to be the father of her child must also stand by herself. A

The 105 241 654 [311] [671] fact that crofting townships are located on marginal land is one reason that the larger society is not motivat to exploit the land. The Crofters Holding Act of 1886 and subsequent legislation ensured protection of and incentives for continued maintenance of crofting and the crofting township.

Protective government legislation, grants and loans for housing, subsidies for rearing livestock, relatively low taxes, and the economic protection provided by a socialistic government in times of crisis have helped to maintain a core of crofting families for many generations. 105 162 632 166 434 584 The predominance of older persons in the township is striking, but many of the younger people who have left the island to work on the mainland return frequently, contribute part of their salary to the remaining family members, and plan eventually to marry and settle down in the village or to retire there. Long-term residence of [621] kin-linked families in a small area has in itself contrib to the boundedness of the township network.

105 241 654 632 The policy of the government, through developmental agencies such as the Highlands and Islands Development Board, has been to support economic strategies that complement rather than interfere with the functioning of the crofting township with its small holdings and communal 000 practices. The Harris Tweed industry is lauded as an

105 The Harris Tweed industry is lauded as an
241 industry which is compatible with crofting. Because
188 weavers are self-employed, they can set their own schedule
632 of work and thus continue to participate in croft work
and fulfill various township obligations. The effects
[121] of this industry on the township as a social boundary
[434] system were investigated. The income available from
[463] weaving is unpredictable, which encourages the retention
of crofting practices and other patterns of behavior,
such as "occupational pluralism," that were found to be
[476] adaptive in the past. Such strategies also strengthen
[082] township boundaries; for example, they encourage mutual
[434] aid and communal township practices. But weaving also
[407] offers a high level of income; and some weavers, preferring
to spend most of their time weaving, have neglected
crofting, or have invested in tractors or other motorized
transport which enables them to harvest crops, cut peat
and perform other activities independent of other township
members.

105 The fundamentalist Free Church constitutes an important
•621 boundary-maintaining mechanism, serving to exclude various
795 external influences of the larger society from the township.
632 However, a smaller network of persons engaged in the
184 religious sphere of social activity, a subsystem within
105 the township system, also exists which has the appearance
794 of a firmly bounded system. These are members of the clique
621
632
184

105 of the converted, who occasionally neglect township and
794 neighborly duties in favor of religious activities. The
•621 increase in private transportation during the past 25 years
632 has facilitated the maintenance of closer ties within the
184 clique. The existence of such a strongly bounded subsystem
[444] is an example of a trend toward the weakening of the
township as a social boundary system, but this trend is
countered by other factors that strengthen or help preserve
the township as a bounded system.

105 People come and go from the township, but this appears
632 to maintain rather than weaken township boundaries because
621 behavior different from that prescribed within the township
166 can be performed outside it, and conformist behavior
184 reassumed upon reentry. Those unable to conform with
standards of behavior prescribed within the township are
not likely to return.

[528] Township members who have settled away from the island
come back periodically for recreation and a sense of
[829] belonging. They increase the value of the township and
its way of life in the eyes of the inhabitants, and provide
them with subject matter for conversation until the next
holiday season, when the exiles again return.

105 The boundedness of the township is thus a qualified
632 boundedness that, over the past 100 years and especially
621 since the second world war, has decreased in strength but
184 is nevertheless strong today.
[178]

105 is nevertheless strong today. The relatively strong
632 boundedness derives from a number of factors. Important
•621 among these are economic adaptations to modern conditions,
184 which consist in part of the retention in modified form
of traditional economic activities in response to various
constraints and incentives presented by larger British
society. Also important are institutionalized bonds of
affect, particularly of kinship and community, and ties
of religious affiliation and identification. These ties
continue to be functionally important in part because of
the geographical and social marginality of the crofting
township. This combination of factors has resulted in
the persistence of a relatively strongly bounded system
which retains distinctive features in an extensively
urbanized and industrialized nation.

B. Theoretical Considerations

121 In the United States, the concept of "peasant" has
provided the main conceptual tool by which rural communi-
ties which are structurally integrated with the larger
nation-state may be studied (cf. Foster 1967, Wolf 1966).
[632] The Scottish crofting township has some of the character-
[621] istics of a closed corporate peasant community (Wolf 1957),
but it is difficult to apply the word "peasant" to such a
000 community. Cultivation for subsistence is minimal, and in

AGRICULTURE AND FISHING

THE CROFTER

The pursuit of agricultural processes, their growth, development and improvement, to establish a foundation for a secure society has never been easy on the island. The unyielding nature of the base rock, Archaean gneiss, its hardness, its non-porous property, have all contributed to the resultant pattern and character of society which emerged. Though one is tempted to define crofting as an agricultural activity, it is also something much more intangible: a way of life. To quote the Napier Report on *The condition of the crofters and cottars in the Highlands and Islands of Scotland* (1884): 'Habit and local affection bear so great a sway in the actions of mankind, that Highlanders will be found who would rather be proprietors in the mountains of Skye, or the wastes of Lewis, than on the fertile plains of Manitoba.' 'There is the Island of Lewis, with poor, peaty soil covering the Archaean gneiss, but with a crowded, lively, vivid community,' said the Taylor commision in 1955 (Commission of Inquiry into Crofting Holdings).

The Highland crofter is the subject of an extensive literature. A special authority, the Crofters Commission, exists solely for the purpose of caring for his needs. He has special rights and privileges which are safeguarded by the Land Court. Crofters' unions have formed themselves into a strong federated wall for the system's defence.

Socially, the term 'crofter' means, on the island at any rate, a landholder who cultivates his own (arable) holding, his croft. He shares the common pastures with his fellow-crofters, each of whom has a right to carry a sum of so much stock, the 'souming'. These common pastures or grazings are a social link of some considerable significance, forming the basis for the crofting township, as distinct from the communities set up under the influence of some agricultural land use such as hamlet or village, where there are both small-holders and true farms, and the only communal land is the village green or common. For instance, outside the crofting counties area the main unit of Scots life in the country is the farm, with its tied cottages. Then come the full-time small-holdings important in the north-east and the southern Highlands.

7 THE PEOPLE

THOUGH there are a number of large island communities in the British Isles, Harris and Lewis have in particular retained their individual characteristics, mainly because the Minch has acted as a buffer against effective infiltration of alien influences. The relative insularity of the north-west Highlands has enhanced this isolation, to preserve what is probably one of the oldest forms of communal life in Britain. It has some unique characteristics which are evident even in these days of sophisticated civilisation. The basis of life, although today the individual is beginning to show face, is a communal spirit, based on team-work. Work undertaken with the willing help of others is easier, lighter and quicker done: livestock is easier handled in a large controlled flock; boats are best rowed with a crew. And the women, with the same inborn communal spirit, once spun yarn together; waulked or fulled the cloth together; and helped each other in childbirth, child-care and the deaths which affected the community.

Several of these teams eventually merged to form what is now called the crofting township. And, though a township may nowadays number 1,000 people, to keep, if not pull, together is still a priority if the social structure is not to fail. Townships have been called in the past, by understanding writers, 'sociable hamlets' and 'little commonwealths'. Though these are of long standing historically, they are still a dynamic form of social integration of the kind found elsewhere only in working-class districts of cities such as Glasgow and Manchester. This is not to say that one must be 'poor' in order to participate in such a society. In the material world, to be poor is to be without money; in a crofting society, lack of money, although this commodity has tended in recent years to assume for itself an out-of-proportion standing and status, does not necessarily mean destitution; for help to keep the body together is always to hand, though the donor may never be seen or known.

A HARRIS VIGNETTE

2,620 ft); grouped around this are the lesser peaks staring stark 631
and treeless to the skies. At the feet of these hills are the small 133
villages straggled along the shores of West Loch Tarbert. Much of this area is owned by the proprietors of Amhuinnsuidh Castle, a magnificent structure built by the Earl of Dunmore in the last century; the hills lying north of it are rich in red deer. The road [491]
past the castle trundles on until it peters out at the far-east village of Hushinish, beside a glorious scimitar-like curve of silver sand. Beyond Hushinish is the Island of Scarp.

The road along the shores of East Loch Tarbert ends at the 631
village of Kyles Scalpay which overlooks Scalpay island. The [491]
Bays of Harris hold in their crevices the scattered groups of houses [361]
here and there, where an inlet of the rocky coast affords some [133]
anchorage and where a patch of ground is suitable for cultivation. Tortuous, winding footpaths have been gradually replaced by [487]
narrow roads connecting the townships. Lack of sufficient re- [161]
munerative employment has led to considerable depopulation. [162]
Fifty years ago the population of the area was just over 5,400; it is now about 2,900.

The south of Harris is better known for its association with Lord Leverhulme. Obbe, later Leverburgh, became the centre of his schemes. He built a large pier, huge kippering sheds, houses for the workers, roads and lighthouses, and blasted away underwater rocks which hindered free navigation. The bulk of this work was complete in 1924, but when he died (in 1925) his successors, in the cold light of economics, decided to close down the embryo industry and realise its assets. The harbour works had cost £250,000; they were sold for £5,000 to a demolition company. Leverhulme's memorials are still to be seen. The west coast of Harris is now becoming known for the long stretches of shell sand and the green machar-land beside it, a true delight for the tourist seeking isolation.

Tarbert is the central village in Harris, with a population of 631
about 400. It is a thriving community, nestling at the foot of 621
Beinn an Teanga and at the head of the sheltered anchorage of East Loch Tarbert—sheltered from the prevailing south-westerly winds and from the Atlantic storms. The car ferries give direct [505]
contact with the Scottish mainland, via Skye, and Tarbert also

A HARRIS VIGNETTE

has direct or indirect communication with Glasgow, Stornoway and North Uist. In summer a thrice-daily bus runs to Stornoway, and once a day a bus makes the round trip of East and West Harris. The township, linear in pattern, east to west, includes sixteen shops which cater for most of the needs of the population within reasonable travelling distance; it also has two cafés, a post office, a licensed hotel, a hall for social functions, a masonic hall and two churches. The Sir E. Scott School here is the only secondary school in Harris with an academic stream. Most of the working population is employed in the service industries, the professions and the tweed industry. Tarbert was a fishing port of some significance in the past, and is now a refuelling point for ships.

The absence of organised industry on a large scale, such as Lewis has, is a factor which tends to bring nearer to reality any desire on the part of Harris natives to leave their native soil. There are small pockets of industry, but these are only dabs of easing ointment on the excessive unemployment sore of 27 per cent. The main occupation is of course crofting, the income from it being augmented from a variety of sources. Some crofters concentrate on the production of Harris Tweed, perhaps using the wool from their own sheep; the natural dyes from the lichens which grow on the rocks and from other plants are still used occasionally. Others specialise in knitwear. Recently shell-craft and wood-turning have been added to the traditional crafts, with a view to the tourist market. Fishing, of course, plays a part in the economy in some communities. The interest of such organisations as the Scottish Country Industries Development Trust has been concentrated on the potential in shell-fish processing, and the production of knitwear on a larger scale than exists at present. Roadwork gives employment to about thirty men, but is of course seasonal.

An apparently bright light on the employment horizon showed itself in 1965, with the opening of a quarry at Lingerbay. The mineral quarried was anorthosite, a white granite used as an abrasive in cleaning products. A 99-year lease was taken out by a subsidiary company of William Robertson (Shipowners) Limited, Glasgow. But the quarry was closed in 1967 due to lack of orders.

vision of adequate educational facilities in remote spots becomes increasingly difficult.

In its time Scarp has contributed more per head of population to the professions than has any other community of similar size. The last of the native Scarp population left the island in November 1971 : two families totalling seven people. The island has now attracted the attentions of a hippie community.

Scalpay

Scalpay Island, on the east side of Harris, was formerly occupied by two or three tacksmen in succession before being 'crofted out'. About 1843 the Harris factor settled twenty crofting families who managed to make a fair living there, but five years later another twenty families were added; some had been evicted from the island of Pabbay in the Sound of Harris. This led to some subdivision of the available land. The 1861 population was 388, but the figure rose to a peak of 624 in 1921; in 1951 it had declined to 541. It is now in the region of 450.

Island Scalpay is in fact one of the few places in the Highlands and Islands area in which the normal trends associated with remote regions are operating in reverse. The island despite its smallness—it is a mere 3 miles long and 1½ miles across—supports a thriving and dynamic community and is the envy of its neighbours. Scalpay is retaining its young folk; and it boasts some of the finest homes in the Hebrides. From the agricultural point of view it is not greatly different from other islands in the Hebrides. Its forty crofts produce a good crop of oats; but less than 20 acres of the land are re-seeded.

The land being as poor as it is, the men of Scalpay have turned their faces to the sea—for a living, not for emigration. Scalpay has the largest number of full-time fishermen and a total of thirty-three boats, twelve of which are ringnetters of over 40 ft. Native enterprise is also shown in the ship-owning firm whose vessels carry freight and passengers to many parts of Scotland and on occasion to the Continent. A Harbour Association was formed on the island in 1966 to work for local amenities for fishermen and

vis and Harris, see category 423, pp. 230-234;

195 693 473 (241) (311) (184) (224) (823) 195 361 (511)

on the Highland fringe, Lowland and Highland alike, outlying reclainable patch of arable, lying near distant, little-used pasture, frequently gave a single family the chance of a living. Such a site meant solitary toil for the man and his family; but there might be advantages such as an occasional deer from the forest, or a post as hunting 'forester' such as was held by many a Gaelic hunter-bard. In the Eastern Highlands such a high-lying croft was known as *Ruigh* (anglicised to Ry-). Traditions of poverty with individuality in isolation were handed down, for example, from one of my forebears who held such a *ruigh*, Rycorrach, one of several strung out along the 1250-feet contour in a small, high valley off Strath Spey; the last of them was abandoned only recently. Such a *ruigh* may have originally been a summer shieling, only occupied when shortage of corn-land below, coupled with new possibilities of a little profit from sheep-shearing, led to settlement there.

198 361 224 233 621 184

At the fringe of the Island's deer 'forests' of North Harris and Park, stalkers are still found in lonely lodges and dwellings, individuals often of character and worth, as they need to be; and a few isolated shepherds, such as one finds on mainland sheep farms, dwell on small islets. But in the Isles, isolated, high-lying spots for single crofts are rare. And the clearest distinction must be drawn between the true solitude of a single, isolated cottage or croft and the sociability of a group of four or five, or even two or three, crofts, such as those of lobster fishers; for even a few families form the germ of a community, in work and in leisure.

195 198 654 496 241

The potentialities of co-operative practice were overlooked by agricultural reformers, excusably enough. For when new methods were required, run-rig kept back the pace to that of the slowest, virtually arresting reform. Soon

233 473 (632)

reach their shielings. From Point district (Eye Peninsula) the cattle are still brought inland to the moors south-west of Stornoway. And from Brenera on the west the cattle are swum to the hills of the main island, just as they once were swum from Bute to the hill-pastures of Cowal in Argyllshire across the Kyle at the 'Strait of the Swimming', Colintraive (Caol-an-t-snaimh). Nothing could be more natural, indeed inevitable, than pasture in common where large, open moors were to be found. The number of animals allowed to each holding was duly apportioned and then, as now, was known as the summing or 'souming', still checked at the annual gathering (*cosgoradh*).

473 621 433 (195) (198)

Thus a cluster of conjoint farms shared "the grass on the Ben and the tillage on the machar" (*Fiar air beinn agus paighinn air machair*). Along the shore, sea-ware, drift-wood and the like were allotted, too. And, as Carmichael put it, there was even "run-rig at sea", for the fishing banks were allotted among the available crews. Most of these rights are still shared by the members of a township. But any crew can now fish freely where they choose, and no township can legally keep away strange boats, nor even steamers beyond the three-mile limit. This loss of communal rights stands in the way of remunerative fish-farming and its promise.

621 473 (593) (241) (496) (232)

Profound social implications distinguished these three concentric circles of community: the family; the farm-team and boat's crew; and the larger, township group. These implications concerned labour, duty and right. The labour of reclamation gave a 'right' to the land thus won from the moor; and the duty of labour together, for fruits equally shared, gave the farm-team and fishing crew cohesion on land or sea—team and crew working for a common purpose. On the other hand, as individual sharers in the common

621 473

pastures of machar and moor, each man had not so much a 'common interest' or duty as, individually, a 'like interest' or right. As now, each unit, whether team or individual, would tend to desire a maximum stock for itself, perhaps hoping it would have "the luck to rear" a little more than its apportioned souming, at the risk of the over-stocking which results in common loss. But though need, greed or rivalry offered temptations, morality invited careful sharing and was enforced by common interest.

473 497 (10) 632

The chief distinction between team and township was that the tasks of the farm-team were constructive and, like that of the boat's crew, active and co-operative. It is true that in the township certain tasks were co-operative, such as the wolf scaring of old times or the fox 'hunting' or shooting on mainland moors today. The modern gathering of sheep is also done together. But no constructive effort was involved in the allotment of shares on the machar or of stock on the moor, which were—and remain—matters merely for communal control, not communal effort.

511

Now, the quality of a group alters with its quantity. The intimate cohesion of a very small group of no more than half a dozen members, diminishes with an increase in number; but increase brings a compensating gain in diversity. Ten or a dozen people tend to break up into sub-groups, whether for small jobs or to enjoy conversation. The smallness of a group limits the number of relationships; an increase in number multiplies sub-groups, and life is enriched. After living long with fewer than half a dozen acquaintances, the same subjects keep cropping up in talk, the same tales are re-told, too often, and people cannot get away from one another's idiosyncrasies! A very small addition turns the scale by renewing variety. Here lay the social value of a township and neighbourhood,

621 496 (632) 198 461 496 621

embracing several hamlets. Yet the strength of community life sprang from co-operation in the farm-team and in the boat's crew.

With the passing of the joint farm the greatest disciplinary factor for work in common passed away from agriculture. The fact that fishing still remained as a social discipline, and actually developed in importance as the farm-team declined and was abolished, was to prove all the more significant to the vitality of social life until 1914 and even to the present.

(9) THE COMMUNITY ORGANISED: STEERSMAN AND CONSTABLE

621 (22)

As small groups of two to half a dozen men could manage their agricultural affairs informally, by common consent, no official was formally chosen to manage the affairs of the fellow-workers on a farm. Where prompt decisions are needed, however, even a small group should be led: a boat's crew therefore choose their helmsman-skipper and obey him at sea. And where several farm-groups made up a township, more formal deliberations were required, and to carry out their decisions they chose a responsible man, the constable.

195 621 (181) 195 622 (882)

Of the crofters' manner of deciding communal affairs in Uist, Carmichael wrote, in 1884, that these meetings "were highly interesting, as showing the ability of the people, their logical and legal acumen, their readiness of resources and, I can happily add, their invariable courtesy towards one another. There was one regular official known to us as the constable on whom there lay the chief executive responsibility. When a crofter is elected constable of his town-land, he takes off his shoes and stockings and, taking

195 (631) 632 621 (191) 621

lordly rank: a working, equalitarian democracy dominated by an aristocracy proudly refusing to work. The fascination of Gaelic community is, first, that its elements stand out so clearly, and, secondly, that links were forged in clanship which made its living chain, though heavy, a thing that shone with pride, and beauty too.

(10) CLANSHIP, COMMON DESCENT AND CLAN-HELP ('CUIDEACHY')

621 192 621 197

To what extent is it now possible to disentangle the two contrasted elements of the lord or chief and the farm-teams and townships? Prehistory is hard to unravel; but the successive waves of conquest flung upon the Island shores have left their jetsam, unmistakably. The circle of huts found near a broch or commanding site recalls the tensants' village grouped close to the castle of a chief, from early history down to the 'Forty-five, and suggests a primitive form of feudalism or of clanship. Traditions add their part. In Uist one may still hear the ancient heroic lays traditionally ascribed to Ossian, Oisean, son of Fionn or Fingal—lays of which Macpherson's sonorous prose gave free rendering. The Fingalian tales differ from the lays, being frankly fantastic. Lewis had its own cycle of Fingalian tales; examples are given by W. C. Mackenzie (1919). Both lays and legends tell of an aristocracy or warrior class, the Feinians, of their enjoyment of the chase, and of their relative comfort, with wealth in gold and silver, in banners and flowing mantles. The chase combined with riches implies the existence of a community to feed and clothe the huntsmen. The traditions of the Cuchulainn cycle, with closer approximation to historical and archaeological truth, tell the same tale. Historically, in-

173 177 621 631 (191) 192 621

coming Viking chiefs, who often intermarried with women of the older aristocracy, seem to have retained some elements of a pre-existing order, as did their successors, the Scoto-Norman lords.

So, from history back to 'proto-history', there is increasingly discerned the stages of superimposition, in the Isles as elsewhere. In Central Europe archaeology has recapitulated the stages by which peasant-villagers were raided, then conquered by desperate herdsmen, on horseback or bearing better arms, who had ridden in from the drying grasslands further east. In the Isles the later conquerors were the fierce raiders from the sea, sailing in from the fjords of the North. An unbroken chain of tradition from Viking to Gael is vividly conveyed in the stirring saga of the Lords of Dunvegan of Clanranald, composed only a year or two before the 'Forty-five (epitomised, Chapter VI (9)).

173 622 631

When the conqueror had won the submission of the conquered and secured his livelihood, comfort and leisure by their work, he came in time to bring their interests nearer to his own. Yet whenever the ambitions of two rival chiefs conflicted, the essential predatory attitude remained and either might bring fire and sword against the other's harmless people. Through time, the successive tides of emigration and storms of conquest bridged the contrast of extremes. Not two orders of chiefs and people, but successive strata, with intermixture of blood and of tradition, must be sought in the Isles as elsewhere. Traditional life in so difficult an environment tended to be diversified and to encourage all-round aptitudes in people and chief, their characters having much in common. As to blood, the history of Island Norsemen records the marriage of the new-coming chiefs with heiresses

(197)

173 622 631 (197) (171) 173 621 193 621 614 824 539 173 622 631 193 621 614 824 (551)

from the old chiefs' families, as in the genealogies of MacDonald of the Isles and the MacLeods. A special feature contrasting with English history is that claims to differences of descent, instead of being maintained—as between the Saxon and the conqueror of Norman blood—were fused. Even when the ancestor of the chief was alien to the locality, the people and the chiefs ultimately claimed to be of one and the same descent. Neighbourhood softened the impositions of the hunting herdsman upon his human herd, and the feeling of kinship brought reconciliation.

How far, then, can the Gaelic tradition, which proclaims every 'son' and 'daughter' of Leod to be of the *clann*, the 'children' of the first Leod, really broaden a blood tie? Both the differences of race to be found in clanship and the ties it formed are well brought out in a tale of Highland pride, still told with Highland laughter across the Minch in Kintail. A French skipper (an importer of claret) touching at Kintail three hundred years ago, met a short, dark man and asked him of whose clan he was. "The Clan Rae," was the reply, "but we are of two kinds, the tall, fair MacRaes and" (a little pityingly) "the short, dark MacRaes." "And which are you?" "I," said the wee, black fellow, drawing himself up, "am one of the tall, fair MacRaes!" "Then God help the short, dark MacRaes!" said the skipper. Even one link with the blood of the chief—and that not necessarily legitimate—was enough for a man to found a claim to kinship, not merely as a MacRae, but with the tall, fair chief through

* In Gaelic, as a man is called MacLeod (son of Leod), so a woman is NicLeòd (daughter), and the clan, *Clann Leòd*. The absurd addition of 'son' to a woman's name (as in English surnames such as 'Johnson') is unthinkable in Gaelic, in which a woman would be named 'John's daughter', *NicIoain*.

173 his near kin. Again, much as in the medieval *gester* of
621 France, fosterage or an heir by a clanswoman formed the
614 closest possible tie to at least one family of the people
829 from ancient to recent times. For it linked the heir by
[171] sympathy—though not by equal obligation—to elders
and playmates in childhood and his contemporaries in later
565 life.

To re-state this 'contradiction' of equality and privi-
leges, we have thus a hierarchy of 'class' imposed upon
a 'classless' society. For the joint farms and the township
were essentially classless. The two classes, the lord and
the people, were primarily opposed, war having placed the
conqueror above those who fed him. This state of things
was not active 'class-war', for the armistice could endure
indefinitely by means of the bargain made between the
classes for some exchange of services; none the less, it
was built upon class conquest.

That all should ultimately claim the lineage of their
175 chief was a remarkable solution to the hereditary opposition
526 of class. A man who knew the Islanders well, John Lane
614 Buchanan (1793), noted how in conditions of the utmost
622 poverty the poorest addressed each other as 'lady and
[574] gentleman', *bean-uasal* and *daire-uasal*, a courtesy not lost
today. And every clansman had a right to shake the hand
of his chief, as Edmund Burt observed in his vivid *Letters*
[577] *from the North* (written after 1721). Indeed the sense
of mutual obligation implicit in Gaelic society is well
illustrated by the homely word *cair*, usually translated
'right'; it is equally used for right's correlative, duty—as
when a Scots or Irish crofter may say "You've a right (a
duty) to help your mother." And for a 'right' (privilege)
to shake the chief's hand. An English equivalent would
be duty-privilege, or duty-right. Similarly, the same

175 womanhood a prey to prostitution. The licence of a chief
585 among young women was preferable to this; but evils were
inherent in the fact of lordship.

(c) TWO ISLAND BARDS: MARY MACLEOD AND THE BLIND HARPER

175 While in Lewis the continuity of clanship was sorely
63 shaken by the fall of the chiefs, the Torquil-MacLeods,
621 in Harris it was maintained in the family of the Norman-
MacLeods of Dunvegan in Skye. The family of Dunvegan
is famed for chivalry and gentleness, not only in the songs
of the past but in the speech of Skyemen to the present day.
Harris did not suffer the bloodshed endured in Lewis from
the death of Torquil until after the accession of MacKenzie
in 1611; and Harris was not involved, like Lewis, in the
troubles of 1715. MacLeod of Dunvegan retained Harris
until the end of the eighteenth century, when it was pur-
chased by a cadet of the family who had made his fortune
in the East; and it only passed out of MacLeod hands half
a century later. Hence it is that while in Lewis there is still
talk of the 'give and take' between the lesser laird and people,
in Harris there is more. In "the hereditary Hall of
MacLeod" of Dunvegan, two Island bards gave birth to
immortal song. Together, the tales of Lewis and the songs
of Harris and Skye give us an authentic record of clanship
in fact and feeling, linked with community today.

[628] In spite of the break in continuity, ease and warmth of
feeling could spring up between a MacKenzie of Seaforth
and the Lewiaman, though Seaforth was a peer of the realm,
and of a mainland name, not a MacLeod by direct descent.
Playful rhyming, chaffing contests between tilled laird and
small tenant, are recorded by A. Carmichael and W. C.

175 Mackenzie. For all that, in 1900 a crofter said: "We called
613 the old proprietor Seaforth, but I believe he right name
621 was the Prince of Welsh". To him the Earls were royal!
[829] Freedom of intercourse is embodied in the language
to this day. With 'a stranger', a little spoken Gaelic
197 lessens 'strangeness' and quickens intimacy, because
565 Gaelic conveys essential human relationships as English
576 rarely can—even the English of the 'democratic' Low-
lands. For instance, a well-disposed stranger, though
young, is usually addressed in English as 'sir' by a senior
crofter, and, just as in the South, without the expectation
of 'sir' or 'ma'am' in return. In English, that is, respect
is given to class. In Gaelic, age receives respect: *ît* is the
stranger, if the younger, who adopts the respectful 'you'
(the second person plural, *sibh*), while the crofter, if the
older, uses the familiar (and respectful) 'thou' (*thou*). If they
are of equal age, and neither is elderly, 'thou' would be
[562] used by both. Similarly, respect is given to womanhood;
and an older woman who would say 'Sir' in English will
say 'My dear' in Gaelic.[1]
614 It is not only by daily contacts that we may understand
the relationship of people to chief, but by the height of
feeling it may attain, of which the beauty of utter expression.
[175] Among the finest of the short-lived songs of praise to Gaelic
[533] clanship and its chiefs are those composed by two Island
bards, a woman of Harris and a man of the Lews. Mary
MacLeod, *Mairi Nighean Alasdair Ruaidh*, was a kinswoman
of the MacLeods of Dunvegan and Harris, and a beloved

[123] [1] Calling on the sub-postmistress in a Highland place where I was known to be a friend of the laird, I was addressed as "Sir". But hardly had we passed to Gaelic when this woman, my elder and a person of culture, laughingly used an expression then strange to me. Halted, and suddenly shy at being forced to translate, she said at last, "When thou want a *dump* (just a boy!) '*mair the the cup*!" But rightly, she would have been slightly shocked had I said 'thou' to her.

(d) TACKSMEN AND SUBTENANTRY, FACTOR AND LORD: 1611–1800

175 We saw that in the Rent-roll of Lewis in 1718 the first
421 sixty-four entries, signed personally, recorded comparatively large holdings (tacks), the annual rentals of which were
614 from £3:6:8 to over £10, the occupant of one (or more)
621 of which would be styled Tacksman or 'Man of the Farm-town' (*Fear Baile*). While one or two tacks were shared, a few tacksmen may have held more than one tack—though one cannot be sure, owing to the recurrence of the same
[551] Christian names in each clan. It is striking that half the tacks—though mostly small ones—were held by men of undoubted mainland names, of which there were twenty-two MacKenzies, four MacLennans and three Matheisons.
[166] These were doubtless the descendants of gentlemen from
the mainland who in 1611 had helped to win and hold the
[551] Island for MacKenzie of Kintail, later Lord Seaforth. Of native Lewis names the principal are MacAulay, Morison and perhaps MacIver.[1] Only three small tacks were held by MacLeods, who may have been of Island stock. Lochs and Eye on the east coast had largely been granted in tack to the new-comers; on the south-west and west coast MacAulays and MacIvers held much of Uig and a few farms in Cladach; but more of Cladach and most of Ness (in the north) were still held by joint tenants. Stornoway was held by burghers, of whom perhaps two-thirds bore mainland names. The peasantry remained as unnamed subtenants on these holdings, of which the total rents show

[114] [1] The writers of the Brend Report (1901) assumed that MacIver is a native name. This would seem to be borne out by its frequency as a surname today, in contrast to MacKenzie, Matheson or MacLennan, though W. C. Mackenzie (1919, p. 92) thought the MacIver tacksmen arrived with Seaforth.

175 they were composed of at least one to four or five hamlet-
421 farms. The tacksmen also had quarters for service.
614 Thus in Lewis a special reason, the accession of Sea-
621 forth, had led to the granting of many tacks to his own
clansmen and to natives. Elsewhere in the Highlands the
175 procedure is noteworthy during the sixteenth, seventeenth
427 and eighteenth centuries, for the collection of rents from
614 the peasantry by means of large tenants had financial
advantages for the greater landlords (T. F. Grant, 1930).
184 The tacksman's continuance in tenant depended on his
paying regularly, for the lease was not a hereditary grant.
[661] A tack could also provide for a lord's younger sons or
[565] immediate relations, such as formed the gentry of the clan.
Along with smaller lairds, these furnished the cadres of
officers who led the clan regiments down to the 'Forty-
five, and later the Highland Regiments to the line and
422 the Peninsular and Waterloo. Like MacKenzie, other
great chiefs such as Argyle or Breadalbane leased tacks
when they acquired the status of peers and took possession of
fresh lands with Royal support, after vain resistance from
native chiefs and their followers. In Lewis, the fiscal
status of tacksmen was applied both to MacKenzie's sup-
porters from the mainland and to those with ancient roots
in the north-west. Many of these may have thought a
mere lease a poor substitute for hereditary tenure, though
a legal compromise necessary if their possession was to be
[166] continued. The lack of permanent tenure ultimately led
to the departure of their descendants.
175 From the families of these tacksmen have sprung most
621 of those of Lewis birth or descent who achieved fame
614 before the twentieth century. Of the MacAulays, we saw
Zacharias was Chamberlain during and after the 'Fifteen.
554 Thomas Babington Macaulay came of the same line, as

175 did another Zacharias, closer than Thomas to the Lewis
554 tree, who worked nobly with Wilberforce for the emanci-
344 pation of the slaves.[1] Still another connection was a
621 Canadian emigrant, grandfather of the late T. B. Macaulay,
[662] LL.D. Alexander Mackenzie, the explorer of the Mac-
kenzie River, was a descendant of Lewis tacksmen.
MacIvers and Morisons also distinguished themselves.
[198] But the sons and daughters of crofters had to await the
[871] provision of education in English before they could rise
in trade, learning or war; hence few Lewismen of the
greatest Lewis name, MacLeod, achieved eminence until
the twentieth century.

175 As for the peasantry, the interposition of a new or
554 enlarged class of tenantry between themselves and the
562 superior must have meant that they had to labour on the
427 tacksman's home farm, and no doubt pay more in produce
184 or cash. Hence the Gaelic saying that if the position of
the small (joint) tenants was bad, that of the subtenants
was worse, "the Evil One itself". Following the long
fight with Fife Adventurers, hardship may have been
greatest where mainland tacksmen were placed above the
joint tenants; but even under MacAulays and MacIvers
rents may have been raised and some of the joint freedom
lost which was still enjoyed in Ness. Whatever adjust-
ments were made in an earlier period had to be re-made
with the beginning of Seaforth's new order.

In the following generations, contradictory accounts of
lairds, factors and tacksmen are given by contemporary
observers. Certain of these insisted that, given the poverty
of the lands as a whole, the chiefs and landlords, factors
and tacksmen, were the saviours of their people. Yet even
among those who supported authority in general, there was

[113] [1] Charles Booth, *Zachary Macaulay*, 1934.

175 the last of these in outlying villages after 1918. When
554 the fishery industry in the Lewis, the fishing
565 most fishermen could speak and write English, the local
421 curers were best fitted to take action not only in marketing
228 but in approaching the Government to aid the construction of piers and harbours. On the whole, their long ties with place and people, coupled with education, made them useful leaders of community in which leaders were needed to adapt life to a changing economy. Here and there one or two small farmers survive, a little apart from the main townships. Aided by a long cultural tradition, they meet changing times by combining with their inheritance a sane selection of new elements.

Looking beyond the Island to the mainland, the time is
175 approaching for a development to be made of the historic
621 parts of chief and landlord, factor and tacksman. Not only
622 is there an enlarging body of documentation, but a growing
427 understanding of communal strands in tradition and of
184 changing social economy seen in relation to geographic
factors of place and region. And in the Gaeldom, condi-
[178] tions varied greatly between bordering areas from Mar to
[182] Kintail, and from the heartland of tradition in the Hebrides. In the Island, one must remember the fundamental opposition, yet the recurrent readjustments of chiefs and people. These, and not only individual differences in character and conduct, explain the differences of experience and opinion
[829] quoted above. The people's belief, so frequently given to me thirty years ago, that it was bad factors, not the landlord, who taxed and harried them unjustly, expressed an idealistic faith in a chief, rather than the facts of economy
[565] and history. For lordship begins with the imposition of

[113] [1] A. McKerral, *Stat. Hist. Rev.*, 1947.

175 621 622 427 184 565

rents, and its end is in sight when these cease to provide for the lord's desires.

(E) STORM AND GALLEY; BATTLEFIELD AND REGIMENT

174 614 577 [501] [726]

The peaceful round of daily life formed the most enduring test of the mutual loyalty uniting the commoners of the clan, and linking chief to people. Yet the tensest ordeals came in hours of danger faced together, whether at sea in a small fishing boat or a many-oared galley, or in war in a clan company. The Gaels' own records must speak for them. Many a song of the Isles conveys the team-spirit of the crew though without describing its men.

174 614 501 538

And although Mary MacLeod's song of MacLeod's Galley be irretrievably lost, there survives one epic poem portraying the ship, the storm and, man by man, the crew who warred against the waves and won. Alexander Macdonald's *Birlinn of Clanranald* is unmatched in Gaelic, and probably in English, verse for its portraits of the crew in action, from steersman to 'look-out'. The flowing metrical translation by Pattison with Hugh MacDiarmid's vivid prose helps to give the English reader some vision of a crew of Gaelic freemen at their best.[1]

174 614 501 539 577

The poem opens in slow traditional rhythm with "the Blessing of the Ship", the arms and the crew. Then the bard, speaking for the stately skipper, "incites the sixteen oarsmen to row" out of the bay, and they row to a rousing shanty, a *Iorram*. Next, in readiness for the voyage and

Macleod (Ed.), *Sar Orain: Three Gaelic Poems*, Glasgow, 1933. The different themes of its sections, each in its own metre, have been published separately, in *The Songs of the Hebrides*, and elsewhere.

175 701 [614]

Such are the mingled traditions of the Highland regiments which served in so many wars, for right or for wrong. Of all the desperate alternatives before the Gael —famine at home, semi-slavery in the factory towns, death-stricken sea voyages, pioneering in the forested hills of Eastern North America, or war, it was this last which offered the men not only the trappings and glamour of clanship but continuing fellowship. In the regiment a Gael was among friends. Modern civilisation offered him no other life promising social continuity and the hope of a return to croft and township, "if death should spare him".

175 701 565 554 [703]

It would be wrong to suggest that only the gentry could rise to command, for as English and literacy were acquired, the sons of small tenants received commissions. British military discipline has too often driven a breach between the men and the non-commissioned officers, spoiling the latter's fitness for higher leadership. But among Highlanders "the bond of faith and affection" led naturally to commissioned rank. For generations, historic precedent

[178] [871]

was carried on in living tradition.[1] Given education, the sons of Island crofters have risen to command on land and sea; but education came late.

CONCLUSION

175 621 631 577 614

Thus in the 'little commonwealths' of the farm-hamlets grouped within the township, personal right and equal shares were balanced by common duty, summed up in the principle of duty-right or coir.

[1] The tradition of leadership calls for review but here one can only cite examples. For instance, descendants of his neighbours in Strath Spey told me that my paternal grandfather, as a penniless lad speaking Gaelic and English (in which he was literate), enlisted in the Black Watch about 1829. He was known as a N.C.O. for his power of quiet, reasoning discipline. He thrice refused the offer of a commission, which was then given to others, of whom more than one rose to high command in the battalion.

175 614 577 621 principle of duty-right or *coir*. Further, in so far as chief and people claimed unity as the children, the clan, of one ancestor, they had crystallised a fair ideal, realised by an exchange of services ('cuideachy'). Gaelic clanship was not without its Lowland counterpart in 'kindness' which linked those of one 'kind'—'kinsfolk' and neighbours—to their ferm-toun and parish, to one another, and to the laird. Tyranny and betrayal by chief and laird make one share the bitterness of grief once felt as competition for scarce land broke up 'kindness'. Yet the people's endeavour and attainment in the past give hope for the future.

175 614 621 622 All have heard of the hereditary Highland chief and many have read of the gentlemen-farmers, but too few have heard of team and crew, and township-parliament. It is time we learned not only of the aristocratic chief but of the chosen helmsman and the democratic constable. So long as the fallacy is repeated that the Highlanders "never co-operated, and could not act together except under the orders of a chief", so long will it be easy to add, "and they never will"! Historic truth may have much to teach [642] for the renewal of leadership for life together. And beyond the Highlands, the example of this aristo-democracy, at its worst and its best, may contribute to new concepts of community.

CHAPTER VII

THE SPIRITUAL LIFE OF THE COMMUNITY

INTRODUCTION

771 [221] [796] As in every form of religion rooted in communal life, the sacraments and prayers of the Gael were linked to labour and to the phases of life's cycle. While some of the 'runes' or prayers were essentially personal and others were breathed only in the closest intimacy, many were shared by a group of families: the tried team of the men or women of a joint farm, the people of a [621] neighbourhood and township or wider group. The communities being so small and isolated, their members depended greatly upon themselves and upon one another. [794] As in worship in common, so in healing of body or spirit and in the invocation of grace upon youth, now one, now another might lead in praise and prayer. So, too, the leader of a little team would lead in the dedication of their work, and, when it was completed, be 'the consecrator' of its fruit.

771 794 Where no clergy were at hand, neighbours, perforce, practised the saying of one they called their 'foster-brother': that if no more than "two of you agree on earth about anything you pray for, it will be done for you by my Father in heaven. For where two or three have gathered in my name, I am there among them" (Matt

and with the addition of 10,000 workers on full-time small-holdings, these constitute a labour force of nearly 100,000. Nevertheless, there are more crofts than farms in Scotland, and more small (part-time) crofters than farmers, besides 'full-time small-holders', of whom so many are crofters, north of the Highland line. Thus the number of crofter families forms an important item of Scotland's rural population. Of these, the families of Lewis-and-Harris form fully one-fifth, owing to the remarkable growth of population until 1925. Even in the little burgh of Stornoway many families hold a plot of land, and at heart they may be almost as much 'crofters' as townsmen.

Socially, what is meant in the Island by the term 'crofters'? Although each Island crofter cultivates his own arable holding (his croft), he shares the common pastures with fellow-crofters, each having a right to a 'sum' of so much stock, 'his souming'. Open, sandy land by the shore, if any, may also be shared. These common grazings, shared together by the crofters of one community—a hamlet, a village or township—form a social link of great significance. They distinguish what we shall call 'township crofting' from individual holding, whether of part-time or full-time small-holdings, or of true farms. The common grazings, enclosed by line C (Fig. 2), thus form an important social index. About 75 per cent of the area included forms Common (or other Crofters') Grazings. The close dots of the dotted line divide the 'Commons' from Deer Forests, as in the Island and inland from the north-western coasts. Widely spaced dots divide the Commons from the Sheep Farms and other mixed holdings further south.

Outside the tract of 'township crofting' in the north and west, the chief unit of Scots rural life is the farm,

[see p. 16 -- analyst]

CHAPTER V

FAMILY, FARM GROUP AND TOWNSHIP: THE CONTINUING COMMUNITY AND ITS SOCIAL ECONOMY TO 1815

INTRODUCTION (TO CHAPTERS V AND VI)

121 593 476 632 621 THE family, the 'conjoint' or 'farm group' of four or five families, and the larger group clustered in a glen or along a shoreland, are, in ascending order, the three concentric units whose mutual relationships we must visualise to understand the past. Enduring elements of life in family and neighbourhood today, with their own special qualities and limitations, can only be understood in terms of past needs and the relationships they evoked.

121 613 621 [171] Having seen their relationships in family, team and township, we can next turn to the reciprocal relations of the people to their chief or lord, whose position dominates European, indeed world, history and prehistory. Here our concern must be the meaning of 'clanship' to the chiefs, the joint farm-groups (or 'small tenantry') and, latterly, the tacksmen placed above them.

121 174 178 [184] We may find, throughout this study, that features and functions which at first sight seem peculiar to the Island are really local variants, more perfectly crystallised, of forms which we know existed at earlier periods in Scotland and in much of northern and western Britain. In the Isles,

by help of oral tradition and of the living witness of continuing usage, we can reconstitute Gaelic life from the view-points of both people and chief. Elsewhere, even in Scotland, only fragments of early life are recorded, in parchments written by the lawyers of landlord and king, and almost always from the privileged side. History is indebted to modern lawyers who have deciphered and published the faded documents of their predecessors. But the very training as solicitor-factors which fitted them for this specialised task, in no way prepared them to view life as seen, experienced and felt by the men and women of the past, or even by the elders or youth of the townships today, with whom they have rarely laboured and whose mother tongue they rarely understand.

(A) THE LABOURS OF MAN AND WIFE, AND THE REWARD

We have seen that until the nineteenth century the township in the main was self-contained. Its people grew, reared or caught their food, and also found the raw materials for their clothing; they built their own shelter, and cut their own firing. As a result, both men and women had each to develop "a wide range of simple skills", in the apt phrase of a Lewisman, Mr. Donald MacLean, M.A. Beyond the co-operative effort within a family, a farm group, or a body of 'fellow-townsmen'—in which each was competent to take a share according to sex and age—aptitude and family tradition initiated some local division of labour. The resident smith and the 'caird' (usually a wandering craftsman or tinker) appear in the oldest tales and in the first rent-rolls. In addition there were honorary tasks. The smith might act as the village surgeon, ready

539

Make smooth and even the warp of my loom
And grant thy blessing, God, on me,
On all who here find shelter and room
And dwelling . . .

Thine arm be round each woman here
Who waulks this web of mine,
O aid her in her hour of need . . .

Keep the flock that we may win
Sweet and nourishing milk to drink
And wool to give, to weans and kin,
For wear!

Even now in Harris or the Lews, a brief good wish may be uttered—a "Health and strength to the wearers!" as the perspiring women end the waulking; but in the past the web was finally consecrated. Each of the family who was to wear a portion of it was named by the weaver herself, who led the consecration (*Carmina*, No. 113).

May the well-loved wearer of my web
Never be wounded . . .
May the sanctuary shield of the Lord be his. . . .

86

91]
14]
15]

The significance of this gift of hard-won cloth can now be seen, first for the family but next for the neighbourly team. We can understand how each 'set' or pattern of tartan stood for the spirit of the family and the group of kin and homeland, the clan. We conceive what it meant to the Gael when the tartan, with "the Highland dress . . . or any part of it whatsoever", was forbidden "to any man or boy" in the Highlands. Women were still allowed to wear it, it was true, but the dress ceased to be a symbol of community when its wear was confined to one sex. As a single exception, the Highland dress was retained for soldiers, but the militarisation of the tartan—though it seized upon one strand of clanship, that of

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

of the Old Testament made itself felt, as in Lewis-and-Harris in the nineteenth century, this narrower patriarchal example hardly affected thought.[1] Rooted in a wider form of family than a patriarchate, and reverencing a Holy Family and all fellowship, Gaelic society honoured age and parenthood for their inheritance, and childhood and youth for their promise.

Such ideals of human relationship led to the veneration of the Saints of the Gospels and of later history, and also of those of legend, especially Bride. Dedications to Bride or 'Bridget' are widespread from Wales to the Lews; yet her memory has been all but lost in Britain, except in the Isles. Carmichael wrote that "Bride and her services" are dear to the hearts of the people. She is called "Bride of the white feet . . . of calmness . . . of the kine; woman-comrade . . . and woman-helper . . ." "I am in the keeping of my Saint Mary: My companion beloved is Bride" (*Carmina*, Nos. 70-71; 263-264). As joy, steadfastness and attainment are generally linked to one notable stage in the life of each 'holy companion', the example, aid and fellowship of each saint in turn was especially sought, at a corresponding stage or crisis of one's own life.

The Gael's veneration for saintly men and women was shared by Catholic peasantry throughout Christendom; but its special quality seems to have been closeness of

[1] Clanship has repeatedly been said to be 'patriarchal', as an ideal and a system. A different conclusion, that community is the root of clanship (even in its political forms), may come as a surprise. The English or Lowland reader has had access only to the writings of strangers such as Burt. Not knowing Gaelic, these derived their information from Highland speakers of English who, deliberately or unconsciously, were biased by ranking as chief or gentry, and not unnaturally explained their position as patriarchal. Thus strangers ignored the co-parental life of farm-groups and townships, economically humble but spiritually rich, as the root of a clan-community.

"The Iona Community is a Brotherhood of men within the Church of Scotland seeking to find the implications of the Kingdom of God for modern society. During the summer months they worship, work and live together on Iona, rebuilding the ruined Abbey on a co-operative basis. Half the Brotherhood are young clergy pledged to work for two years in the difficult places of the cities (after three months in Iona), emphasising the place of the Church in the New Community that is emerging in the world. The other half are skilled artisans who desire to express their labour as a ministry within the Priesthood of all Believers and create—in the building—a microcosmic witness of how labouring is transformed when seen as a Sacrament. The Brotherhood is based on Reformation principles. Several members of the Community are married. At present the artisans return to the ordinary labour market in the winter time." [1]

In the Iona Community, theology is linked to communal labour and the re-shaping of society; and its symbolic centre, Iona, is more than a literary name, or a historic ruin, to those who have set about rebuilding its cathedral tower, cloister and surrounding dwellings. Continuity is exemplified in its leader, the Rev. George F. Macleod, a descendant of Dr. Norman Macleod, the friend of McLeod Campbell. The significance of this Community to the theme of this chapter lies in the endeavour of its members to learn, by help of ancient native ways, new ways of Christian life in their own land. The attempt to link industrial Scotland, and lands beyond, to the Gaelic West, is a notable recognition of what Celtic Christianity, maintained and renewed by communal tradition, has yet to give the world.

[1] From the magazine of the Iona Community, *The Coracle*.

CHAPTER IX

ECONOMIC CHANGES: 1750–1919

(A) TRANSITION: MIGRATION, FISHING AND KELP-MAKING

175 433 [621] [427] [794] [437] UNTIL the 'Forty-five the township had lived an almost self-contained life. Its traditional economy was self-sufficient except for two indispensable commodities—salt for the housewife and iron for the smith. Beyond this, the chief demand for payment was the rent to the lord, with tithes for the kirk. For these needs and demands a step towards production for exchange was required, the more so that what was exported might include the very necessities of life in 'bad years'. The rent was paid largely by the sale of a surplus steer or two, and 175 317 436 [435] drovers called for the cattle. By 1790, if not before, two or three open boats set out annually from Uig, for instance, for Glasgow, laden with salt beef and dried salt fish. Although salt seems of little account today, it once bulked large in the Budget, its price being heightened by duty, especially after 1707: "as dear as salt", was a saying, *cho* [251] *daor ris an t-salluinn.* Salt was needed to preserve the carcase of a 'cattle-beast' or sheep killed in autumn, and 175 433 for cod and herring curing. Wrecks were valuable, as on all infertile undeveloped coastlands, both for their timber and their iron. Cairds or tinkers occasionally brought [326] metal goods; or a packman called, as strange a figure then [443]

COMMUNITY FROM PAST TO PRESENT PT. II

175 511 (433) small savings, if any, have been put to the purchase of fishing gear and boats, for fishing, too, was summer work. By 1833 the poverty of the Outer Islesfolk and the bankruptcy of the landlords were such that Parliamentary attention was called to the state of the Hebrides. Poverty continued to be extreme, but need turned the people to fishing. (433) The loss of revenue to the lairds led to their making sheep farms—somewhat unwillingly—with local evictions: in Lewis chiefly from Park and from north of Stornoway, and in Harris notably from the western Machars to the eastern (423) Bays. In spite of this, it also brought about the sale of (621) Harris by Macleod, and finally of Lewis by Seaforth in 1844.[1]

(B) NEW OWNERSHIP AND CAPITAL IN LEWIS: 1844–78

175 Lewis was bought by Mr. James Matheson, a gentleman 423 of Highland family, whose fortune had been made in China. Sir James (as he became) put much capital, effort and goodwill into the management and improvement of the Island. Of the amounts expended we may distinguish, so far as possible, what he spent as a rich man for his private (131) pleasure from what he spent for the people. No sooner had Matheson bought the Island than the 'potato famine' of 1845–46 broke out. The terrible loss of life in Ireland, and the depopulation of that country which followed, would have been equalled in the Isles but for the action of landowners like Matheson—who were the descendants of 'kinsmen', not of alien conquerors—and also of subscribers

[1] A sketch map of Harris showing the areas cleared (1816–54) and areas settled as a result, together with those re-settled by government help after 1900, is given by J. B. Caird, *Scot. Geog. Mag.*, vol. 67, 2, 1951, p. 94.

175 429 311 a well cultivated small farm, a striking example of what can be done with this unpromising terrain. It is probably true that one of the objects of forming farms was to introduce improved methods and so set an example to the small tenants. The contrast, today, between Garynahine Farm and the nearby crofts, suggests that more than example is required.

161 162 115

TABLE 4

POPULATION CHANGES 1841-1851

District	1841	1851	Change	(%)
Carloway	554	659	+105	(+19)
E. L. Roag	581	717	+136	(+23)
Barnera	670	676	+6(1)	(+1)
L. L. Roag	217	259	+42	(+19)
Valtos etc.	711	484	-227(2)	(-32)
Uig Bay	520	426	-94(3)	(-18)
South	384	348	-36	(-9)

Notes: (1) Vuamore - 46 (-100%). Kirkibost, Linshader, etc. had already been cleared.
(2) Reef -180 (-96%).
(3) Carnish - 60 (-36%) - but completely cleared before 1861.
(Township figures are not available before 1841).

The birth of the crofting landscape.

175 429 37 638 A further mid-nineteenth century attempt to improve the productivity of the small-tenants' holdings was the lotting of runrig lands to form individual crofts. In a report to Seaforth c. 1800, the Rev. Headwick had recommended the abolition of runrig* and some lotting of crofts took place about 1811** about which time runrig was being abolished in North and South Uist - but many townships in Uig, as elsewhere in Lewis, escaped this lotting. In Barnera, Kirkibost was probably lotted at this time and the crofts fenced; in 1853, despite clearance, the first Ordnance surveyors were able to record the old fences (which were used as the croft divisions when Kirkibost was re-settled in 1878). The now much divided crofts of Kneep (see also fig.22) are probably of the same date. Reef appears, also, to have been lotted early, for the remnants of fences recorded by the Ordnance Surveyors in 1850-1852, (Reef was cleared in 1850), show crofts of the same general form as those of Kirkibost, and quite unlike those of the 1850 lotting. Consequently, in many townships until this date, the houses remained huddled together in tight little groups, often inter-communicating one with another. The groups, or clachans, were usually set in the midst of the arable land. The runrig system had certain disadvantages, but, as a basic agricultural structure for small holders, it had two considerable advantages which may be relevant to modern conditions. Firstly, it was flexible: within it the individual's holdings varied in size and rent and it was possible, at the periodic re-allocation, to adjust the size according to family needs. An elderly person did not need to be burdened with a holding larger than he required, or was able, to cultivate; a young man with a

[621]

[113] ** Report .... on the Condition of the Cottar Population of the Lewis. (C.5265), 1888, p.37

* The essence of runrig was that any individual's arable land was in many pieces, scattered promiscuously amongst those of his neighbours. Periodic re-allocation of pieces was usual, but the period varied and in some cases was infrequent.

[TEXT CONTINUED ON PAGE 15]

511 (46) (288) It is obvious that crofting no longer affords a livelihood in Aird; the only two families without ancillary occupations are those where all the members are elderly. Of the others with members in the working age-groups, five have one or more members employed in a civilian capacity at the R.A.F. station and there are five regular weavers.

621 178 Aird used to be a self-contained community; the land was fully cultivated and a certain amount of fishing was carried on in spite of the difficulty of drawing up the boats over the rocky beach. Now it is prosperous, but very much dependent on the R.A.F. station, and if this should ever close down, most of the younger people would have to leave in search of other employment.

CHAPTER SEVEN

VALTOS, KNEEP AND REEF

by

David G. Symes.

131 133 On the eastern side of the Aird peninsula, facing east to Loch Roag is a secondary peninsula of more moderate, but none-the-less broken relief. This, together with an adjacent area of the main peninsula, the islands of Pabay, Vacsay, Vuia Mor and several smaller islands, comprises the territorial limits of the townships of Valtos, Kneep and Reef.

133 This secondary peninsula is accidented in the extreme, with outcrops of bare rock and steeply angled small hills. The relief is greater in the west (summit 450') than in the east (summit 275'). Relatively level land is to be found only on the machairs of Reef and 133 Cliff (the latter only poorly developed) and on the glebe at Uigean. The Reef machair, 134 about 180 acres, consists of a succession landwards of tidal sands, a belt of sand dunes (c. 20' O.D.) and a sandy plain sloping gently inland towards a reed filled lagoon. The machair at Cliff is approximately 40 acres in extent; here there are fixed dunes and, in addition, the sand has been blown inland to at least 100 ft. O.D. Except where the machair sand has drifted upslope to produce a "brown machair" of mixed sand and peat, the thin epis of the Valtos peninsula are predominantly peaty. Although the length of the peninsula faces north the extremes of Atlantic weather are moderated by the protection afforded by the Aird peninsula and the islands of Pabay and Vacsay.

175 In the period before the lotting of crofts the whole peninsula was occupied by some five 429 clachans - Valtos, Cliff, Kneep, Uigean and Reef - some of which shared common pastures. 34 During the early part of the nineteenth century and earlier, apparently, than the 1850 lotting 638 carried out in most of Lewis, crofts were allotted in each of the clachan areas: Valtos and Cliff shared a common pasture and so became one township; similarly Kneep and Uigean were combined.

175 In Kneep it seems that the croft boundaries were not accepted by the crofters. Certain 311 basic divisions between groups of crofts (usually three in number) are discernable today, 427 and within these basic divisions a certain regularity of distribution of strips persists, but

[Eshost]

134 Drift is found near the shore and laps round the three hills nearly up to the road, predominantly heavy clay with small boulders; this is replaced above the road by peaty loam on rock. At one time, bere was grown on the heavy drift. There is peat accumulation on the flat land near the road to a depth of about six feet and there are one or two peat banks.
137 Vegetation is poor; there is no bracken or cover and within the crofts, moorland grasses and sedges predominate on rough land, though there are many lazy-beds sown down to clover and cock's foot. On the hills heather predominates.

175 Habost is the oldest township in Park. In 1843 Maclennan came from Shiddernish and took what are now Nos. 9, 10, 11, 12 and 13 and Aileen Tailear came from Tarasnay, Harris, 652 to No. 7. By 1886 there were thirteen crofts; in 1957 four cottars were created, there being 621 there before 1886; in 1957, No. 11 which had been shared between two brothers since 1906, became legally 11A and 11B making fourteen crofts. There are also fourteen operative units although two are worked from Kershader, both as 'hay and grazing' units, and two are worked as one unit within the township, for there are three non-crofting units.

261 Only sixteen lazy-beds are dug by spade, the rest have been drained with stone drains and 607 ploughed by tractor owned by one crofter who loans it out to Habost and Kershader. There are three 'Crofimasters' (hand-tractors) in the township but these are only heavy enough for 293 bringing in peats, hay and similar light work. The progressive Habost community has fenced off part of the common grazing, to keep the weaned lambs off the croft from August till November and so save fodder for winter when the croft land is open to grazing.

[204] Oats and potatoes alternate in the rotation, with a little sown grass for hay, sown in enclosed 546 parks of about one acre. The tendency now is to increase the number of parks, cut the hay in 291 June and build up the lambs on the new grass. Shell-sand is used to fertilise the parks but 629 elsewhere artificials, such as superphosphates, 'potato manure', potash, nitro-chalk and lime are used in addition to dung and, near the shore, seaweed. Most of the hay is taken from old lazy-beds.

251 The land is heavily overstocked: the soum is equivalent to 79 cow units, and actual stock is 255 141, whilst the figures for sheep are 191 and 618 respectively, including the sheep stocked in 652 Park Deer Forest by seven of the Habost tenants. Sales of ewes are held at Garyvard in November [262] and May and sheep and lambs are sold in Stornoway. Lambing was poor in 1958, 50-75 per cent being general, but many breeding ewes and other sheep have died.

241 The only cultivation on the common land belongs to the unofficial holdings. Behind Craigeal, however, there are some old lazy-beds, a well and ruins of a hut, which has not been used since 312 before 1882. There used to be shielings on the north side of the common on Beinn Bhuidhe and 224 below Loch na Ciste but these have not been used since 1886. Habost is one of the agricultural 292 townships and fishing is only for domestic use; looms are to be found on only four crofts and 293 trade is slack. One crofter has a lorry for contracting, carrying peats, fertilisers and stock to market and two have butcher's rounds in Loche. There are two small stores.

561 Settlement is scattered, always on elevated ground, and in many cases the new house has 572 been built in close proximity to the old house site. All have piped water either from the well or 654 from a main tank. Drinking water being carried in the latter case. Grants from the Crofting Commission are enabling new building and improvements to be carried out.

871 799 793 178 the children might not receive proper religious instruction.

"Family worship" is considered an important part 771 of daily life. Prayers should be said before meals 782 and teas, and the head of the household should read 593 passages from the Bible to the assembled members of the household every morning and evening. The practice of [178] "reading the books" prevails in households headed by [592] older men, but is less common among families headed by younger men.

794 632 621 3. The Clique of the Converted: The second network within the religious sphere is a special religious in-group, the clique of the converted (curamach). This clique constitutes a relatively strongly bounded system which to some extent competes with the township boundary system. Owen (Rees 1960) has noted that as persons become more involved with religion in the Protestant Hebrides, they tend to remove themselves from community l

Intense involvement with the church sometimes confli with township activities since people may attend Communic at times when a fank is planned, leaving the work to be done by others. When elders of the church are present at activities, such as fanks, which are otherwise usually boisterous and full of humor, behavior tends to be "properly" restrained.

Chapter 7

Conclusions:

Summary and Theoretical Considerations

A. Summary

105 [131] [484] Crofting townships of the Highlands and Islands of Scotland are within a few hours' travel of the major cities of Britain. An extremely high percentage of the young [873] people in the crofting counties attend universities and other institutions of higher education. Politically, [641] administratively, economically and in other ways, the crofting population participates in the larger urban-industrial society of Britain.

105 632 62 [121] Despite this participation, the township-qua-village-community is a relatively strongly bounded system. This thesis investigates factors contributing to the strong boundedness. From a relatively self-sufficient economic 105 178 632 241 unit using agricultural practices suited to the extensive cultivation of marginal land by smallholders, the township has during recent decades changed to one dependent on goods and services provided by the larger society.

105 241 654 Crofting activities nevertheless persist, in part because of the incentives offered by government bodies such as the Crofters Commission and the Department of Agriculture. The

101 161 162 more recent to the west, and in the industrial area of the Great Glen the trend is reversing itself. To the north and south depopulation has been more serious. To the east the general trend has been similar to that of Skye. We need not be troubled by statistics at this time, but for convenience [178] the population figures are given in Table 1. The Outer Hebrideans have preserved more of the social aspect of the old culture than the Skye people while the Mainlander has felt the effects of the processes of acculturation with more obvious results than the people of Skye. In short, the Highlands are not a homogeneous region. They represent a great diversity of conditions.

101 115 My information on the contemporary culture of the Isle of Skye was provided by the residents of three communities, the villagers of Portree and the crofters of Glendale and 101 621 Kilmuir. Portree is a small nucleated village with a population of a thousand. It is important to the study because [368] in many ways it represents an alien way of life. Here are found the county and national government offices, staffed mainly by newcomers to Skye, which serve the whole island. [344] Here too, are the grocery, drug, clothing, and hardware stores which depend on the people of at least, northern Skye [344] for a large part of their trade. There are a number of craftsmen who are equally dependent on the rural population. For the most part, the members of both groups are newcomers [368] from the Lowlands or elsewhere in the Highlands. As the [345] terminus for the mail steamer which links Skye with the mainland, and the hub of the daily bus service which connects the rural

101 621 [345] [345] [115] [164] hinterland with the outside world, Portree is a center for tourists during the summer. Due to the people's dependence on tourism and also the presence of newcomers, the villagers participate in a number of social activities which are not tolerated elsewhere on the island because of religious asceticism.

Glendale and Kilmuir are crofting communities, each with [46] a population of about 300. All, except the ministers and school teachers, are dependent on the breeding of cattle and sheep and the growing of a limited amount of grain, potatoes [47] and hay for all or a large part of their livelihood. All are bilingual, speaking Gaelic and English. Neither community [47] has a village nucleus, but both have an economic focus. Glendale [34] has a cooperative farm, and Kilmuir has a drained loch which has been divided among the small farmers. The significant [42] differences between them are three. The Glendale people are [167] land owners. In this respect they are rather unique in the [42] Highlands. The Kilmuir residents, like most Highlanders, rent [73] their crofts. The second difference is religious. Glendale [184] is religiously homogeneous while Kilmuir includes church-goers [67] of three Presbyterian sects. Finally, no formal social activities other than an annual meeting of the share-holders in the farm is allowed in Glendale, but Kilmuir has a club organization for the men who gather for lectures and discussions of economic problems.

36 basalt plateau where the light and potentially rich soil and the relatively luxuriant pasture land are valuable assets. The remainder of the island has been generally avoided, except for a few isolated areas of mixed beaches, moraine, and similar 36 162 deposits of local importance. The contrasting population densities in modern times support my assertion. With an overall density for the Island of thirteen per square mile, northern Skye has a density of nineteen per square mile in contrast to six per square mile in southern Skye. This three to one ratio has persisted for at least two centuries.

361 Until the nineteenth century all the inhabitants of Skye lived in isolated hamlet-like clusters. The majority continue to dwell in dispersed crofting communities. Indeed, the dominant characteristic of the settlement pattern is, with a single exception, the lack of nucleated villages. Skye is not unique in this respect. The Irish and the Welsh have never made the village a part of their cultural heritage.[13] The pattern I am about to describe will, no doubt, be unfamiliar to many who are only acquainted with rural communities of the Western Hemisphere. The units of settlement on Skye are on a very diminutive scale compared to those to which we are accustomed.

361 621 As we have seen, the efficient socio-economic unit is the township, the collection of individual crofts and the communal grazing lands. Skye contains 182 townships. All of them are found in an inhabited area of roughly thirty square miles.

---

[13] Conrad M. Arensberg, The Irish Countryman (New York: Peter Smith, 1950), pp. 146-155; and Alwyn Rees, Life in a Welsh Countryside (Cardiff: University of Wales Press, 1954), pp. 128-129.

to the traditions of the past. I shall discuss this further when I describe the extended family.

The Township. The township is a cooperating economic unit. Communal use of an interest in the common grazing lands gives the township its focus. Living on the several crofts, there will be found an aggregate of nuclear families and unmarried individuals who, especially in the older townships, are related and re-related on both sides. Only in the more modern townships does the degree of relationship become tenuous and finally disappear. In interpersonal activities the neighbors have a rate of interaction second only to that of the nuclear family.

The dominant social trait is the strong emphasis on the ascription of status on the basis of kinship, sex and age. There are no socially valued achieved statuses. The facts are simple. Males enjoy higher prestige than females, and the old men and women are respected by the youth. All of the same age grade and sex are essentially equal. Again we have a parallel with the Irish small farmer.[18]

There is no room for the expression of a role of leadership in economic activities. The governing principle of township administration is so-called primitive democracy. All males have an equal voice in determining the acceptance of any policy or action which concerns the group, and unanimous consent is necessary for the adoption of any change. Although each township has an elected grazing clerk and a grazing

---

[18]Cf. Arensberg, op. cit., pp. 45, 109-110; and Arensberg and Kimball, op. cit., pp. 63, 161-231.

committee, a legal requirement, these individuals lack authority. They are figureheads whose primary function is to advise the government of the decisions reached by all the crofters who share in the grazing and to regulate the use of the land by self-imposed rights. In townships where the sheep are owned as club stock the clerk serves to distribute the profits from the sale of stock, and he may also keep a tally of the individuals who are entitled to payment for labor in townships where money has replaced customary reciprocity. In any cooperative venture beyond the family level, there is no one who can step forward to act as a foreman. The assumption of this role would upset the basic status equality of the crofters, unless the person wishes to be regarded as an eccentric.

The Crofting Neighborhood. The crofting neighborhood consists of an aggregate of individuals and nuclear families who dwell in several townships, standing in close spatial proximity. It is, therefore, natural that the ties of common residence and kinship should continue to operate. The important distinguishing features between the township and the larger social entity are two: (1) cooperation in agricultural and pastoral activities is replaced by mutual aid, and (2) there is a greater wealth of formal and informal interpersonal activities in which the people associate.

There are invariably established social circles within which the individuals habitually move. One always consists of the individual's kinsmen, "his people," his family of orientation, and "his close friends," all other relatives with the fourth degree of relationship.

Township size is variable. There is a complete range from one township with a single inhabited croft and a population of three, an old man and his two sons, to one with fifty crofts, held by thirty-two families, and a population of almost eighty. Most townships contain between six and twenty crofts.

The crofts are set out in long, parallel strips, typically, at right angles to the coast, or, if the township is in a glen, across the glen. In the older townships, the houses tend to be built at one end of the strip on the least productive land. The byre, if there is one, stands at the rear or either side of the house. Exposure or road access have not always been determining factors. Most frequently, it would seem, alignment along a road is present only because the county government has built a road into the township. Only in the more modern townships, those planned or re-organized within the last fifty years, have the crofters tended to build near the road. Several of the townships lack any apparent orientation. The houses are scattered up and down the lower slopes of the hills which rise above the cultivated land.

Wherever the configuration of the land and the environmental factors of soil and rainfall permit large settlements, there is a grouping of townships into the pattern of the British open country neighborhood or the French line village.[14] Scattered among the crofts, without any nucleus of community buildings, there are, usually, a school, one or two churches,

[14] For an analysis of rural settlement patterns, see Loomis and Beegle, op. cit., pp. 229-231, 234-237.

one or more country stores, a few workshops, and a post office. Kilmuir will serve as an example of these larger settlements.

Along the shore of Loch Snizort, on the peninsula of Trotternish, there is a broad, fertile plain. Including old Loch Chaluim Chille, there are approximately ten square miles of good land. Although the soil is not cultivated as intensively as in the days when Kilmuir was "the granary of Skye," this is regarded as the best agricultural region on the island. In all there are 122 crofts, held by 105 crofters, in 9 townships. There are also two small farms. The population is slightly over 300.

The crofters' cottages are loosely strung around the old loch and across the plain in an irregular "Y" shaped pattern (Figure 3). Basically the pattern resembles the French line village, but there are several features reminiscent of the British open country neighborhood. Most of the cottages, it would seem, were originally built on the landward fringe of the plain and along the shore of a small bay, known as Camus Mor, without any regard for road access. In recent years, increasing dependence on motor transport has led to demands for roads. Now almost all the crofters, except those in Bornesketaig, have a paved road running by their door. About a third of the houses are on the county road which encircles the peninsula and links Kilmuir with the outside world via Portree.

In the center of Kilmuir, in the township of Balgown, stand two spireless churches, a church hall, a two room school,

[TEXT CONTINUED ON PAGE 46]

and the homes of the ministers and the teacher. Standing together, within a few hundred yards of each other, they provide a focal point for the surrounding area. The remainder of the buildings which we normally think of as forming a village nucleus are widely dispersed. The post office, which is also a general store, is just over a mile north of churches and school, in the township of Kilvaxter. Another mile away, off the main road, in Bornesketaig there is a small shop. South of the churches and school, almost two miles away, there is a shop and a smithy in Linicro. The remaining shops and workshops are similarly scattered hither and yon among the crofts. 621 368 621 366 368

Glendale shows much the same pattern of settlement. Stretching along the shore of Loch Dunvegan, through Glendale, on either side of the Hamara River, and out along the shore of Loch Poolteil, there are 156 crofts in 11 townships. These are the homes of 144 crofters. The total population is in the neighborhood of 350. Like the people of Kilmuir, the Glendale residents have also become dependent on roads, and they have tended to build their new cottages near a road of some sort. The single church, the post office, and the shop stand fairly close together near the center of Glendale. One school is about a mile away in Borrodale, and the other over a mile away in Colbost. Neither Glendale nor Kilmuir have a village hall. When the Glendale crofters have a meeting to discuss the club farm or when the Kilmuir crofters hold a club meeting, they use the school. Now let 361 621 [491] 368 621 [366] 621

us journey over to the "Capital of Skye" which stands on Portree Loch. 621

The village of Portree, as stated earlier, represents the only successful attempt to introduce a nucleated settlement to the island. It was created by a landlord in the early nineteenth century and has been fostered by the national and county government, especially within the last twenty years. Nothing has disturbed the English and the Lowland Scots more than the alien nature of town life in the cultural heritage of the Sgiathanach. Ever since the sixteenth century the Hebrideans have been resisting the introduction of villages. The Scottish and, later, the British, government has been only slightly less adamant in its determination that the country people should have a town, if not a burgh, come what may. [654] 621 648

Indicative of its calculated creation, Portree has been built "on the square," like so many English villages. Around the square are found the police station, courthouse, and jail; two banks and one private home; two churches and the Masonic building; and a hotel and two boarding houses. Equally indicative of the alien nature of the village, the square is normally used only when the people are going to or coming from their place of worship or business, or when they are entering or leaving Portree by the road which cuts across the square. The exceptions are an occasional civil ceremony and performance put on for the benefit of the summer tourists. 621 348 321 177

In reality, the village might best be described as an overgrown hamlet, even though it was planned. The main function of the village as far as the whole island is concerned is that 621 366

an administrative center. The government offices, however, 621 36
e scattered about the village. One is down at the pier;
other is half way out of Portree on a trunk road, and still
third is tucked away on a side road down by the shore of the
rbor. The post office is behind the court house, on the
posite end of the village, and the school, the only secondary
hool in all the Hebrides of the County of Inverness, is out
the village all together on another trunk road. For northern
ye, Portree is the shopping center. The shops are along the
in streets which run off the square and along the road which
ads down to the pier. All of them are in remodeled houses.
r the immediate area surrounding the village, Portree is a 621 368
ligious center. The churches stand together, except one
ich is on the opposite side of the village; the ministers'
mes are dispersed on the fringes of the village. Long ago 621
rtree was known as Ceilltarraglan, (burying place at the foot
the glen). The old village was no more than a church, school,
n, and jail which stood overlooking the houses of a few
shermen along the bay. The surrounding area was given over to
rming. The differing ages of the buildings show how the
llage spread along the bay, up over the terraces, out across
flats, and finally, with the assistance of the County
ncil which has built all of the new houses, on to the hill
ch overlooks the shops and the harbor. Although only the [161]
l remains as a sentinel of the past, the differing ages of
houses also tell how the population grew from a mere hand-
to 1000 in over a century and a half.

162 extreme examples, Bornesketaig in Kilmuir consists of 47 crofts
632 held by 35 crofters, but Aird in Sleat has 39 crofters who
621 rent 20 crofts. In one badly subdivided township, Calligary
427 in Sleat, one holding is held in the following shares: four
241 men each have five-twenty-fourths, one has one-sixth, and one has "a part." The whole, indeed, is more than the sum of its parts. Moreover, townships with a balance of crofts and crofters, and even those with fewer crofters than crofts, often show the effects of subdivision. Another Kilmuir township, Herbusta, is laid out in eight holdings. Although there are an equal number of landholders, several of the crofts are divided into half shares. Then, there is Kilvaxter, also a Kilmuir township, with 11 tenants and 12 crofts; one man has three full shares while two others have only half a croft each. Multiple crofts are not necessarily adjacent. Some crofters hold land in two different townships. One of my informants rents two crofts separated by over twenty miles. On foot, it takes him two days to make the trip between his two holdings.

000 Subdivision, frequently carried to its ludicrous extreme, is not a problem confined to the Highlands of Scotland. All over Europe the traditional laws of succession have had a similar result. In consequence, the governments of all European countries have been striving to initiate reform. Generally, the aim has been to consolidate scattered patches, but almost always the schemes have become more comprehensive, attempting to create economic farms and increase productivity. Since the

241 where the population has suffered the greatest decline and,
161 therefore, where enlargements, by legal or illegal means,
433 have been the most extensive, crop production has declined the most. Nor has the decline in population, accompanied by land redistribution, altered the fundamental problem.

427 The cottars (subtenants) have almost disappeared there-
241 by easing the excessive pressure on the land and removing the threat of recurring destitution. Today they are found only in a few scattered dwellings and isolated clusters. Most of them have secured some form of employment or have reached the age when a government pension is sufficient to satisfy
427 their needs. The number of crofters, on the other hand, has
241 increased. If the figures 2043 and 1227 can be accepted as
161 nearly correct for the respective numbers of crofters and
162 cottars in 1886,[15] they have increased at the expense of the latter and, also, the sheep farmer, whom they have replaced.

632 To briefly summarize the foregoing discussion of the
621 township, let us look at Kilmuir. Table 3 shows the number
161 of crofts and crofters in each of the nine townships together
162 with the acreage and "souming" rights available to each indi-
241 vidual. Although replanning during the past fifty years has
427 benefited many of the local residents, crowding upon the land
231 is still apparent.

Township Government. The township system has another marked influence on the economy of the Sgiathanach. By far the largest obstacle in the path of reform is the persistence of primitive democracy, distinguished from the democracy of Western Civilization by the requirement of unanimous consent rather than majority rule. The individual who comes to realize that it is possible to improve on the ways his father did things is deterred from attempting to introduce innovations. He cannot, for example, erect a fence around his croft unless everyone in his township approves such a departure from tradition. The dissenting voice of one old man is sufficient to thwart any plan. Unanimous decisions on all township affairs mean that the most progressive worker must keep pace with the most conservative. This fact goes a long way in explaining the essential agricultural disharmony of Skye, and most of the Highlands, with the rest of Great Britain. It is also a singular example of the incomplete adaptation of the culture to the higher socio-cultural organization.

When coupled with the many limitations on the economy, township government helps the outsider to understand why many younger crofters feel that the primary value of their few arable acres is their use as pasture. Even in townships which have been fenced, the prevailing practice is to open the crofts after the harvest. All winter long the stock is free to graze where it will. "My arable is no use at all, except to winter my sheep," said one young crofter. Another asserted, "I have three crofts and the use of one more, but it's not

worth while to cultivate any of the arable, so I use it for grazing." A case which aptly illustrates the influence of the township system as an agent of conservatism is the breedin of pigs. Although several old crofters told me how many people during the times of the "Clearances" kept a pig, they are rarely found anywhere in the Highlands today. The Biblica injunction against the flesh of swine has been taken literally The older people simply have a strong aversion to handling pigs. One man, a very successful cattle and sheep breeder, put it this way: "Pigs are filthy brutes. I just don't want to touch them -- I never have kept any and never will." At the same time, there are men who believe that the prices these animals bring at the mainland markets more than compensate for the individual's revulsion, especially as long as the Ministry of Food pays for the cost of transportation. These men cannot try branching out because they have no way to restrict the foraging animals. "Skye is ideal for pigs," on young fellow told me, "but I don't have the freedom to work the croft to suit myself."

Smaller deviations from the traditional methods of land use face the same difficulties. A progressive crofter who attempts to improve the value of his stock by growing scientifi mixtures of grasses is always penalized. As soon as the harves is over, the stock of all his neighbors will show their appreciation by concentrating on his croft, trampling his fields, and overgrazing his grass. Nor is this his only penalty. His neighbors will regard him with skepticism for his departure from the ways handed down from the past.

Not only were villages completely alien to his heritage but also he had neither the need to purchase commodities nor the opportunity to accumulate a surplus for buying more than a little grain or an occasional necessity. Whatever his small needs, they could be satisfied locally, especially, by turning to a local tacksman or the estate factor, both of whom made grain and a few sundries available on an extended credit-with-barter basis.

5 Plans were drawn up for the establishment of a village at Portree shortly after the Forty-five.[29] Over fifty years later the best that could be said of Portree was that it had "the appearance of a village."[30] Another attempt to bring a village to Skye was made in 1787 when a group of exiled Highlanders in London built the abortive fishing village of Stein.[31] As a part of the reorganization of the MacDonald estates, villages were laid out at Portree and Kyleakin sometime after 1811.[32] Kyleakin failed to develop.

[8] By 1820 Portree had become an administrative center with its own jail,[33] one of the hallmarks of civilization.

By 1845 there was a small crescent of houses along the shore, about twenty in number, and on the raised terrace there was a new inn, a church, a post office, a bank, several shops, and a street of homes.[34] The population had grown to all of 510.[35] The existence of the village depended on the summer cattle markets and the fishing industry, which was in the hands of newcomers. 175* 178* 361 421 [366] [368] [161]

Following the establishment of Portree and accompanying the gradual decline in self-sufficiency, the Island was brought into closer contact with Great Britain by an extension of regular means of communication.[36] Regular communications, of course, are a prerequisite for commercialization. There must be access to markets for the local produce and access to consumer goods. Without such access no man can specialize; with it the Sgiathanach has been diinclined to specialize. The old drove roads, the beaten paths which had served them well for many centuries, were now supplemented by roads in the Lowland sense of the term. By the end of the period most of the more accessible townships had been connected with Portree and the mainland, and a steamer had entered regular service between Portree and Glasgow. These factors paved the way for the introduction of commercial sheep farming. 175* 178* 648 [491] [505]

Each man received a permanent, compact plot of arable in pla of his former concurrent right to a whole farm. The change, the surface, seems to have been superficial. The grazings remained common property and the arable land became common property after the harvest. The significant fact is that commercialization had not yet led to a disregard for the cus ary rights of the small tenant, except in a few isolated are

There were other effects of the change in tenure beyon a leveling of the social hierarchy. By giving more people a direct share in the land emigration was stopped. The prac of subdividing the crofts among the children, as they marrie at once favored an increase in population and strengthened t family of orientation, if not the extended family. At the s time, it placed a greater dependence on the potato; the peop became hostages to the health of the potato and their own fertility. In time progressive economic deterioration began The old subsistence economy had been weakened by subdivision of the small plots, increasing dependence on external market profts from the sale of cattle, and wages from kelping or a little fishing. When the markets broke, destitution and emi gration reappeared. Finally, with a failure of the potato, economic structure collapsed. The population trends were reversed. The people had remained unspecialized in a nation of specialists.

The next stage in the process of commercialization, th growth of a village and the extension of communications, had little perceptible effect on the Sgiathanach. Villages were

alien to their heritage. There was little local need for roads and steamships, but they were paving the way for the final stage in commercialization, the conversion of the island into sheep farms.

The record suggests that the culture was suffering from disorganization and the society had been threatened by disintegration. The Revival, which began at the close of the initial period, became full blown. This movement confirms what the record suggests. A new pattern of social behavior and religious life came into being. The traditional secular patterns of interaction were being replaced by patterns of sacred interaction. New values, new statuses, and new roles were evolving to give religious sanction to the old patterns. The result was an esoteric religious hierarchy. The religious leaders, both the "Men" and the ministers, were coming from the people rather than the old hereditary families who had been closely related to the gentry. Religion replaced the clan as the focus for the culture. The similarity of the story unfolded in the Bible and the past and present conditions of the crofters made the presage of the coming dissolution vivid. By the end of the period, dissension within the Church had become a significant factor and was paving the way for individual secession. The third period of the modern era was to witness more than a social and economic transformation; there was to be religious schism.

sufficiently to make age controls an irresistible force, the prestige status of the small number of the "elect," those who had experienced a saving change, and, in particular, the elders gave them complete control over all social and religious activity. In a later chapter I shall have more to say about these facts. The important fact which I want to emphasize now is that the religious patterns provided a framework in which the culture could find continuity and through which the society could achieve a reintegration. The abhorrence of pagan-like customs resulted in a change of content, but there were positive results as well. Above all, there was a change in focus for the culture and society. The decadent belief in clan brotherhood was replaced by a sense of belonging to a known religious brotherhood.

Summary. The third period of the modern phase of Skye's culture history saw the culmination of the process of commercialization of the land. All the influences necessary for the conversion of the subsistence economy, albeit a much deteriorated economy, had begun to function. Sheep farming, on a commercial scale, formed the basis for the new economy. Newcomers with the incentive and ability to introduce improved methods of land utilization were replacing the conservative and impoverished crofters and cottars. As the commercial farmers consolidated their holdings, the communal townships were being obliterated. The concept of individual possession of the land was replacing the customary rights of the small tenants, and a clearly defined social hierarchy, based on

th degree of relationship. Although the extended 621
s now rather amorphous compared to what it must have 571
entury or two ago, it is still very real to the 602
ach. Once, perhaps, the townships and their historic 596
nts were patrilocal settlements. Then, of course, [591]
tion of the availibility of land and the legality of [175]
ion were of small importance. Now the rigid system [591]
use enforces neo-local post-marital residence, often [427]
at distance from the parents, and very often means
younger generation must join the constant outward
of the population. Thus, the extended family is
if ever, found intact. Indeed, the only times its
come together as a group is at a funeral or a wedding.
occasions the strong patrilineal emphasis becomes ap-
and the fact that the individual always remains a
his or her family group is revealed. It is, then, a
ly.

structure the extended family includes all males and 596
out to, and including, third cousins. The kinship 601
ogy is descriptive. Excepting grandchildren, all
are distinguished by sex and generation. Members of
ntal generation and lineal descendents of the parents
l kin are distinguished by their relationship to the
l's parents. Members of the grandparental and great-
ental generations and their lineal descendents are
distinguished. The same descriptive technique ex-
kinsmen of the first and second descending generations.

56

radesmen are respected, but since most are crofters, they are 554
reated like all other men.

he Village. The village contains a heterogeneous population. 621
t least a third of the families have arrived in the recent 162 167
ast. They have come to fill positions in the county and
ational government offices; in Lowland directed banks or
usiness houses which have extended their field of operations
o Skye; and in the professions as doctors, lawyers, ministers,
nd schoolteachers. A few have come to Skye to open a shop or
ffer their services as tradesmen. The remainder are either
kye folk who have recently moved into the village to see
mployment or families that have been in Portree for one or
ore generations. Very few families seem to have lived in
he village for more than three generations.

While there are many opportunities for an individual to 554
chieve status in Portree, the cultural heritage and the 184
conomic limitations under which the Sgiathanach labors has
ot allowed him to compete with the newcomers. His ability
o compete is further restricted by the prevailing policy of
he government and the national corporations to bring in
anagerial and, often, clerical personnel from the outside.
ll share one socio-economic trait; they are non-crofting. As 565

here is verticality. Highest prestige status is accorded to
hose who have been accepted among the local aristocracy. Be-
ow them rank the ministers, doctors, and school teachers.

he land into large commercial farms.[26] Even had the landlords esired to emulate the results achieved elsewhere, it is doubtful hat the persistent demands of the steadily increasing numbers f people for a share in the land could have been disregarded t this time. On Skye, as in most of the Western Highlands, he arable of the old farms was simply divided into as many qual shares of five to ten acres as possible. The grazing ands continued to be held in common and used under a system f stinted rights, and the arable was used communally between arvesting and spring ploughing. Lacking any legally recognized raditional or written right to the land, the people remained enants at will, enjoying hereditary tenure as long as they ad the good will of the landlord and, especially, that of his actor.

The people, then, were each given a precisely equal share, hich was often assigned by lot, in the old farms. Just as the ld infield and outfield system had functioned to provide each an with a bit of the worst and a bit of the best soil, the hares were set out in long strips. After the former joint-enants and subtenants received their fixed allotments, they oved their dwellings from the small hamlet-like clusters near he center of each farm to the individual plots. The township ettlement patterns, as we now know it, came into existence.

The effects of this rather superficial reorganization

arried sons into the house. Family solidarity was strengthened 175* 178* 427 593 591
each cottage came to be the home of a three generation family
roup. Adjacent crofts, more likely than not, were bound to-
ether in a network of collateral and affinal relatives. Two
the underlying principles of the clan were reaffirmed. The
ather was the source of the means of subsistence, and the
trong, almost sentimental, attachment for the land was an
xpression of the sentimental tie of kinship. Economically,
ubdivision was paving the way for disaster. It forced a
teadily increasing dependence on the potato; the people
uld not grow enough grain for household needs.

Commercialization means more than the conversion of land 175* 178* 361 621
a source of monetary revenue and the supplanting of customary
sages by contractual relationships. For its fulfillment it
equires the growth of villages and the development of a di-
sion of labor which allows specialization. Events in England
d Lowland Scotland, could not have left the island untouched.
e first rumbles of the Industrial Revolution had been followed
a vigorous growth of urban centers. The mass movements of
e rural population into these communities, as their rights
the land were disregarded and the people were driven off
made into wage laborers, were creating a new cultural
ttern. The benefits of the towns to the nation had the
pearance of being unlimited. It was inevitable that villages
ould be advocated, planned, and fostered on Skye, the most
pulous of all the Hebrides. It was no less inevitable that
llages should have limited attraction for the Sgiathanach.

Period IV (1886 - 1953)

175 The year 1886 is a chronological hinge in the culture history of the Sgiathanach. The British government began to play a positive, continuing role in local affairs for the first time in history. Hitherto, the interest of the government had been confined to proscriptions, recruiting, and taxation, occasionally interspersed with relief for the destitute. With the change in policy, we enter the realm of the contemporary culture; therefore, all I wish to do is indicate the direction the processes, which we have been following, took under the national attempt to rechannel them. The major trends to be noted are two. The proprietors' influence in determining how the land was to be used was curtailed, and, with a redirection of the commercialization of the estates, many of the traits and complexes characteristic of the traditional culture assumed renewed importance.

Since the Napier Commission had been mainly concerned with the disregard of the customary rights of the crofters and their inconsiderate treatment by proprietors, the recommendations which were presented to Parliament sought a land reformation within the framework of local custom.[79] Unlike the Continental Commune, a local, self-governing body, the Highland township had never legally existed. Elsewhere in Scotland this communal agricultural unit had been replaced by individual farm occupancy, just as had been happening on Skye. The major proposal was a retrogressive step; the township system should be given legal

irs; the interpretation is my own responsibility.

The substantial tenants had their own private tutors, but the people, in general, received only informal schooling until well into the nineteenth century when several charitable societies entered the field.[85] All schools were essentially religious. The act of 1872, and subsequent legislation, changed the program and made education compulsory for all. It was not until the end of the century that adequate facilities were available and the system began to function, with the beginning of free education.[86]

175* 178* 658 [71

Informal control within the community was augmented by the establishment of a rural police force, with headquarters in Portree and local stations at convenient points around the Island. Health and welfare became a responsibility of the state. A regional medical plan provided doctor's care and hospital facilities for all regardless of means. Old age pensions were granted to the elderly. Later, the scope of assistance for the infirm, aged, and the poor, and the unemployed was increased. Thus, the government continually usurped many of the functions of the family and the local group, especially following the abolition of the parish council in 1929.[87] Although the parish councils, or the still older parochial boards, had no legislative powers, they did handle welfare and, until 1918, education. Now, in 1929, a Skye

Claigan, for example, the crofters felt they would do 236
tter with private flocks than with a club stock. Although 476
ch man now has his own sheep on the township grazing, they 178
e cared for like any club stock. The four crofters are
eded for success at the dippings, marking, and shearing,
d they are always at the fank on these occasions. In larger 236
wnships, those with ten or more holdings, the need for all 476
e crofters to help out at the fank is less pressing while 621
e felt need for auxiliary employment is stronger. In con- 632
quence, the cooperative work habits run less smoothly. In
attempt at adjustment, many townships have resorted to
ying the share holders for their labor from the profits.
the best of my knowledge, only one township has witnessed
e total suppression of the cooperative spirit; all the
ofters are too busy with full-time employment to bother with
e steadily declining sheep stock.

Nevertheless, it has become commonplace for the crofters [829]
complain of at least one individual in the township who
es not pull his full share, someone who is "trying to
botage the whole thing."

Independence is a personality trait, but it is best 157
scribed as a steadfast determination not to conform for the 476
re sake of conformity when an innovation handed down from 829
e outside commercial world is at stake. The old ways are the 888
st ways, even if only the old men think so. It is the old
n who uphold the traditional practices. As long as they do,
d as long as unanimous consent is required for any change,

nd Morley, loc. cit.

The maximum is harder to determine, economically. There is some limit to the number who can stock a common grazing with individually owned stock without becoming involved in complicated entanglements over right, obligations, and questions of ownership. The few townships containing more than thirty crofts in the Western Highlands (91 out of 957),[13] and the negligible number on Skye (only ten), suggests that less than thirty holdings per township, no matter how much fertile land surrounds the cluster, has been found to be the optimum. Most of the townships contain between five and twenty crofts. The fact that many large, adjacent townships, such as Bornesketaig in Kilmuir and all those in the Braes, are losing their population is a reflection of a many faceted condition we have been exploring throughout this chapter--the vast majority of the crofts are too small to provide an adequate livelihood. One of the primary causes for this state of affairs would seem to be overcrowding on the land.

632
621
233
476
162

Congestion. In almost all but the recently established or replanned townships, congestion is a legacy of the increase in population during the first century of the modern period, often aggravated by coerced subdivision during the period of the "Clearances." Because of this, over-all statistics have little meaning. It is quite correct to say there are some 2300 crofts on Skye and approximately 2200 crofters, but this does not mean each family has a croft to itself. To take

[13] Ibid., table 1.

*175 District Council was established, but the only functions left
*178 to the Islanders were such minor ones as providing recreation
657 grounds and maintaining footpaths. Today the members of the
621 Council can only make the local needs known to the county council and carry out the functions of the county council.

*175 In more recent years the functions of the county and
*178 national governments have increased still more. Government
657 employees have multiplied. After the Second World War, the
[36] county became a landlord, building subsidized housing. Since
[361] the county has built these houses at Portree and at a few centers such as Broadford, Uig, and Dunvegan, where the police have their stations, they are still persisting in the attempt to
[49] bring villages to the island. Roads have become the concern of the county. Within this period, then, the crofter became dependent on the county and national government for the satis-
[181] faction of many of his needs. Although he resents authority, he has not shown any resentment at the continual encroachment of the government's services. To him the government is a "rich man" who has bestowed many favors and may be asked to bestow a few more, like electricity and plumbing.

*178 Like European peasants in general, the Skye crofters
181 have lost three important things: isolation, political independence, and self-sufficiency. At the same time, they have retained a good deal of their former identity, a continuity of culture, and an attachment to the land and to the traditional way of life. The culture has been modified by adaption to the higher socio-cultural organization, especially in material

share similar social attitudes and a distinctive way of life.[27] The investigator can understand the society with greater ease once he can equate the differing cultural expressions with the sense of status.

Ascribed status continues to be important in Portree, at least in stratifying the old Skye families. On the fringes of the village there are a few part-time crofters or tradesmen who keep some stock and grow a little grain and few potatoes. These men and their families as well as the crofters from the hinterland find their place in the village society through clique groups, in particular those based upon kinship and "friendship." Several of the county families reside in the village and, with the landed gentry who continue to live on their estates, take an active part in village life.

Between the two poles there is a large intermediate group. Their occupations range from the professions, including doctors, ministers, teachers, and lawyers; through employees of the national and county gouvernments, including estate factors, policemen, office managers, and clerks; to shopkeepers, tradesmen, truck drivers, and laborers. Elsewhere in Great Britain these people would fall into the middle and working classes.[28] On Skye such stratification is unimportant. If we cannot use the British scheme, we certainly cannot employ the American system developed by Warner.[29]

a question about a certain man I was told: "I can't help you on that. Whenever I go into a shop or meet them on the street, they change their conversation." Another told me I should ask the doctor, "He's the one who really knows their problems."

Summary

The society of the Sgiathanach reveals additional evidence for cultural continuity. In family structure, both nuclear and extended, the patrilineal emphasis has been preserved. Even though both suffer from chronic instability and the extended family has become rather amorphous, kinship remains an important regulator of interpersonal relationships. It involves obligations and privileges which few take lightly. Within the social units based on territory, the township and neighborhood status continues to be ascribed on the basis of age, sex, and kinship. Women have remained socially inferior to the men. As the father controls his family, the old men of the township and neighborhood exercise a power over their juniors to force conformity to traditional ways. Fundamentally, all of the same age and sex are equals. This status equality underlies the entire social structure. There is no room for a leader. When essential, the newcomer, normally the teacher or minister, and the landed gentry are expected to assume the role of leadership. In the village the emphasis on ascribed status for the Sgiathanach is also important. The majority of achieved statuses are left to be filled by newcomers. In the community, as a whole, beyond the polarity of the landed gentry and the

Ducey	E-4,5	(1953-1954)	1956	ES10 Highland Scots ES10 Skye

bove the settled area, the hill. In its spatial existence, he township is normally bounded at either extremity by one or ore similar clusters of homes and patches of land.

As it exists in space, so it exists in time. Allowing or the removal of the population during the "Clearances" nd for a certain amount of arbitrariness on the part of the overnment commissioners responsible for replanning during the ast fifty odd years, the majority of the townships are de-ended from the old farms on which the clansmen lived as tenants nd subtenants. On the rent rolls and in local traditions, he townships bear the names of these long forgotten farms. he functions of the township include the provision of a means f livelihood and systematic arrangement of social relation-hips. Both functions are made possible by the formal structure nd are facilitated by the informal organization of the members.

The next significant social unit is the neighborhood. his is not the neighborhood of current American sociological nd anthropological usage; it is the Old World open country eighborhood. As such, it corresponds to Murdock's community, the maximal group of persons who normally reside together n face to face association,"[1] and differs from MacIver's efinition of neighborhood, "the first grouping beyond the amily which has social significance and which is conscious f some local unity."[2] MacIver's simplest community, as he

[1]George P. Murdock, Social Structure (New York: The acMillan Co., 1949), p. 79.

[2]Robert M. MacIver, Society: A Textbook of Sociology New York: Farrar and Rhinehart, Inc., 1937), p. 148.

50 respectively.[6]

Unlike the township, the neighborhood typically has no ormal organization and is not necessarily a cooperating, conomic unit. Always, of course, there is a consciousness f common interest. In the case of Glendale this is spiritually ymbolized by the church and economically, by the large club arm in which all the owner-occupiers have a share. In Kilmuir here are two churches, standing close together, and the crofters ave a common economic focus in the drained loch which all use n equal shares for meadowland. There is also a crofters' club. urther symbolization of their common interest is provided y traditions, memories of notable personages and events eculiar to themselves. Always, the consciousness of common nterest is expressed by a feeling of superiority over the embers of other neighborhoods.

There is but one trade-center village on the island, the village of Portree.[7] It is the only true nucleated settlement. Built on the square, but still retaining the appearance of an overgrown hamlet, it is a small grouping of non-agricultural dwellings, government offices, churches, shops, a school, and the homes of those who make their living by serving the rural areas. In addition to its function of providing goods and services for the surrounding neighborhoods, it also links the island with the outside world. Although thirty-six miles from the mainland, it is the entry port for the government officials,

urists, and newcomers who carry with them ideas of reform. 621

urther, as well as being mutually dependent commercially, the rofters and the villagers interact formally and informally n social, political, and, especially, religious activities. he consciousness of common interest of the villagers, however, 621 186 tems more from a knowledge that they are different from the rofters than from any common symbol. The 1000 villagers [162] re from diverse backgrounds. They find solidarity in being ifferent rather than in "neighboring" or all attending the ame church. The village also lacks the time depth of the ural settlements, being a creation of an individual in the ast century.

For community I prefer an inclusive definition on the 631 rder of Redfield's.[8] A community is characterized by conentional understandings, the occupation of a territory, and he possession of a culture. Thus, we shall refer to the sle of Skye as the community.

It will be noted that I have not used the term parish. 632 794 lthough the parish was once important politically and religiously, 178 s the older baronies were replaced, it lost these functions n 1929.[9] People reside within parishes and they, along with heir crops and stock, are enumerated by parishes, but the arish is now little more than a statistical convenience. Church rganization and political administrative units cross-cut nd override parish boundaries. Indeed, I doubt if the people [186] ver thought of themselves as members of a parish.

182 the social superiors of women. The aged are the social
626 superiors of the youth and young adults. The father determines
[593] how his wife and children will behave as long as they remain
[888] under his control. The old man, or men, determine what changes
will be accepted or rejected. There is no way to question
[559] their decisions, unless one leaves the croft. Still, at the
bottom, there is equality. No man can step forward as a
leader. We are now in a position to look at the larger
social grouping, the neighborhood.

Kith and Kin within the Neighborhood

During the days of the clan, the residents of the
182 621 neighborhood were bound together by real and fictitious
ties of consanguinity and affinity, which were reinforced
by the strong attachment to the soil and propinquity. Only
[601] the fictitious bonds have been forgotten. Like the township,
the neighborhood consists of an aggregate of conjugal fami-
lies whose inter-personal relationships are reinforced by a
178 complicated network of kinship. Once, perhaps as late as
182 621 100 years ago, the neighborhood was a highly cooperative
social unit. When the local mills were in use and the church
had not been broken by schism, the people must have had a
more definite focus for their common interests. In more
remote times, it was a defensive entity. Today the neighbor-
182 hood is no longer a cooperative unit. On the analogy of the
621 old horse plough and the <u>caschrom</u>, cooperation is essential
to the township but superflucus to this larger group. That the
neighborhoods have not lost the potential for concerted
action in times of crisis is attested by the uprisings

during the "Clearances." 182 621

Strong in-group feeling is manifested not only in a belief that people of other neighborhoods are not quite as good somehow, but also by the tendency to withhold social acceptance. There is, for example, a family of newcomers in Kilmuir. One day when they were being discussed one old crofter remarked, "Well, when they have been here as long as Jock over there, they will be just like one of us." It turned out that Jock's family had come to Kilmuir three generations ago. More than once I was reminded of the story of the Yorkshire man who moved from one village to another. He persisted in calling everybody a foreigner, and when asked why, he replied, "I've lived here sixty years, and they still call me a foreigner." The newcomer to Skye is known only by his nationality. The few Polish war refugees are "the Poles." The man from England is "the Englishman" or, in Gaelic, Sassenach, a term also applied to Lowlanders. They have no real place in the scheme of things. 186 621 571 [182]

Within the neighborhood, there are invariably established social circles within which the people habitually move. These cliques take several forms on Skye,[16] as in most cultures, and cross cut each other as well as the townships. The most important clique consists of "my people and friends," the individual's kinsmen. The Sgiathanach carefully distinguishes between his "family," his wife and children; his "people," 571 602

---

[16] Although I consider "clique" to be an unfortunate choice of terms, because it has unfavorable connotations in the lay mind, it has been introduced into the vocabulary of the social sciences; see, e.g., Steward, Area Research, pp. 40, 49; Murdock, op. cit., p. 88; Loomis and Beegle, op. cit., p. 135.

her brothers and their wives came to visit, and at New Years they came by with their bottle of wine, whiskey being a man's drink, to toast the New Year. 576 775 [273] [562]

Excepting Glendale, where church membership and affiliation is synonymous with the neighborhood, the township may contain affiliates of two or three churches. One small township contains two Free Church families, two Free Presbyterian families, and one Church of Scotland family. As in any township, they visit one another and cooperate in handling the sheep flocks. Further, the Church of Scotland family often gets out the truck on the Sabbath and drives everyone to Church. This is one of those isolated townships far off the beaten track. Although I certainly agree that people who meet together at a church and pray together get to know each other better because of their religious unity, in this township the families have come to know each other better because they go off to their respective churches together. There is a firm, basic belief among the people that no one should be slighted, even by a minister, because he has differing religious sympathies. Were this not so, think of the position in which I would have found myself. One Free Presbyterian family put it this way, "Who can tell which church is the right one since they all claim to be on top of the pole? Maybe they all are and everyone will get to his final resting place." The "all" was later qualified to exclude Catholics. One of the gentry told me an amusing story on this point. One day during the 621 795 571 795 829 798

Religion has done more to keep the Gaelic language 771
alive than any of the numerous outside agencies dedicated 191
to the preservation of the language, such as An Comunn [186]
Gaidhealach, a national organization which sponsors a series [575]
of local, regional, and national programs in an attempt to
maintain and stimulate an interest in the Highlands and their
songs and stories. Except in Portree and at Dunvegan, church 191
services are mostly conducted in Gaelic. The newcomer who 794
wishes to attend church services in the crofting areas, and
he had better, must either learn Gaelic or be content with
the few words the minister may speak in English for his
benefit if the minister is aware of the presence of someone
who does not "have the Gaelic." Some might feel that this
is rude since most Skyemen are bi-lingual, but the crofter
seems to think quicker in his own tongue. Many crofters' [871]
children learn English only when they begin to attend school
or pick it up from an older sibling who is going to school.
Family worship is almost always in Gaelic, unless there is [782]
a visitor. We have already seen that the family worship
at the time of death is in Gaelic or in Gaelic and English.
Again we have a parallel with Wales, in that Welsh has been
mainly preserved through religion.[19]

Making Gaelic the language of their religion has, 191
however, led to several problems. It has weakened township 771
solidarity on occasion. There are many isolated townships 621
beyond the reach of a minister. In one of these remote

---

[19] Ibid., p. 129

the ways handed down from the past. We might note at this that even the progressive crofter is not always quite en ort with modern techniques. There was, for example, a man two calves infested with liver fluke. Convinced that cine was the only solution, and equally convinced that a on cannot believe everything he reads, he obtained a bottle iver fluke medicine which was plainly marked: "for sheep ." When asked how his calves responded to the treatment, esponded, "Och, they both died."

Because of the restrictions which the township system ses, there has been a growing, perceptible rumble of ation for supplanting unanimous consent with majority rule. however, would go as far as a retired seaman who returned kye after forty years. He would like to see the township em abolished. Another small group believe the Sgiathanach d be better off if the Island were given over to communal s. Most seem to favor the continuation of the present em. Of course, the majority is composed of the conserva- old men.

The Aged and the Absentee Crofter

No appraisal of the crofting system is complete without scussion of two additional factors which have affected the of the land and the present unsatisfactory economic condition he Island. One of the factors is the aged tenant, who, e have just seen, exercises a strong control over the ger men through township government. He has also influenced

CHAPTER VI

THE ISLANDERS' SOCIETY

The Units of Social Organization

Since the Sgiathanach has consistently been more bound to his locality groups than the relatively mobile members of the main stream of Western Society, I think that we shall find a pause to review the character of the social systems which are primarily based on territoriality a valuable aid to our understanding of how cultural continuity has been preserved. By now we are all well aware of the fact that the township is the efficient economic unit. It is also a social entity. The members of each township display a consciousness of common interest, symbolized by the communal hill grazing; and their inter-personal relationships, reflecting ties of kinship and friendship, reveal a rate of interaction second only to those of the crofting family. In most of the townships, the people are related and re-related on both sides by descent and marriage. Laid out along the coast or in a fertile glen, with the cottages on the individual crofts, it has a discernible form. The township is a small cluster of five to twenty homes; approximately an equal number of garden-like farms, stretching out behind the houses; and,

calls it, is my township. Nevertheless, since I share Kroeber's feeling toward the free coinage of terminology,[3] I shall not look for a new word.[4] The neighborhood on Skye is a collection of townships which are separated from surrounding clusters by topographical features. Along the coastal plains and up the glens stretch the crofts, some parallel to each other, like the French line village, and others spread out in the checker board form of the true British open county neighborhood. Scattered among the crofts, one finds one or two shops, a few workshops, and a post office. The focal point for the members is provided by the church, or a pair of churches, and the school, which more often than not stand together. There is no other nucleus of community buildings which even approximate a village center. Social factors as well as geographical features play their role in determining the extent of the neighborhood. It has been suggested that the upper limit for the size of a group is determined by the prevalent form of their economy which limits the possibility of forming close contacts with habitual attitudes.[5] Although the neighborhoods and the component townships contained many more people a hundred years ago than they do today, all are now within the maximal figures suggested by Linton and Murdock for agricultural pastoralists, 350 and

---

[3]Kroeber, Anthropology, p. 261.

[4]I suppose Murdock's "deme" would be an acceptable substitute (op. cit., p. 63). Arensberg has used Einzelhof to describe the Irish pattern (The Irish Countryman, p. 43)

[5]Murdock, op. cit., p. 81; and Ralph Linton, The Study of Man, p. 218.

offer help without an expectation of payment. Nevertheless, 791
anonymous donations of food and casual visits make sure that 573
none of their number becomes absolutely destitute. In Glendale
this religious clique merges with the person's "people and
friends." Kilmuir has two religious cliques.

We have had ample opportunity to examine the age-grades 561
of Skye's society and in the next chapter we shall have a
closer look at the functions of the age-grades, especially
that of the old men. One of the most important weaknesses 857
of the social structure, in my mind, is the lack of age mates 883
for children and adolescents. They find it difficult, almost 561
impossible, to come together as a sodality. In Kilmuir, for
example, there are only fifteen boys under twenty in an area
of ten square miles. A youth is anyone under forty. Of the [162]
total population 60 percent are over fifty. For this reason 561
the important age grade clique tends to merge with the re- 791
ligious social circle. The situation is much the same in
Glendale. There the age-grade and kinship groups are inter-
twined with the kirk congregation.

<u>Status Equality within the Neighborhood</u>. The fundamental 621
status equality which we found for the crofters within the 534
township carries over to the neighborhood, but, as would be 571
expected, there is often a need for leadership in this larger
group. Let us look at the two neighborhoods which I know best
to cast light on the methods employed in the self-election of
a leader and the means of expressing leadership as a role.
Kilmuir has a Crofters' Club, which was originally formed by 573

304

crofters, an individual's prestige depends more on what he 182 621 554
does for the group than on occupation.

The society has a strong degree of integration. This 182 621 626
is shown by the requirement of unanimous consent on all undertakings, even in the village, and by the continued success of the group in exercising social control by positive concerted action and by employing gossip as a negative social sanction. The norms of behavior and the values have remained common and clear.

We are now closer to an understanding of how the 128
Sgiathanach has maintained a continuity. For a full understanding of the social organization and to answer the question why there has been continuity we must take one final step. The religious aspect of the culture holds the key to the unanswered questions.

Skye

glens a family, newcomers to Skye, prevailed on the local 191
school teacher to hold a Sabbath school for the children. 771
The local missionary objected. If they were going to have 621
Sabbath school, it should be in Gaelic. His prestige and control over the population secured his position. The children of the people who originated and organized the program were excluded because they did not "have the Gaelic."

Another problem which is beginning to stem from the 191
use of Gaelic as the language of religion is the difficulty 793
of securing a minister. Traditionally, it was an ideal to [183]
send a son to study for the ministry. This ideal remains, [874]
but in the last few years only one young man from Skye has shown a desire to become a minister. Indeed, the majority of ministers on Skye are not Skyemen. I believe the only minister who serves his own neighborhood, the neighborhood in which he was born and raised, is the Free Presbyterian minister in Glendale. It is becoming more and more difficult to fill charges as they go vacant. Each year several Highland charges are changed from "Gaelic essential" to "Gaelic preferred." If we go beyond the role 121
of religion as it orders human relationships, through its 771
more formal aspects, and consider the influence of religion 626
on the secular behavior of the Sgiathanach, 178
we can come closer to an understanding of why the youth are slowly turning away. At the same time we shall be able to round out our picture of the expression given to the Presbyterian ethic on Skye.

6. Ducey E-4,5 (1953-1954) 1956 E310 Highland Scot E310
Skye

Additional modifications have been found in the division 178
of labor. Although no Skyeman has shown a disposition to assume 182
responsibility for domestic work, unless he lives alone, the [162]
women of Skye are expected to function in roles which once were filled exclusively by men. Old men and women for many years [561]
now have continued to perform tasks which formerly were their duties as youths and young adults. These changes, like those we have reviewed, are partially traceable to an incomplete adjustment to the contractual, commercial world. This has led [162]
to striking alterations in the age structure of the population for it is the youth who forsake the island and the aged who yearn to return. Nevertheless, there have been no observable [554]
changes in the status system of the rural neighborhoods. Primitive democracy, distinguished from our form of democracy 621
by the principle of unanimous consent rather than majority rule 554
continues to operate in the townships. The existence of such 182
an institution implies a maximum of equality co-existing with a minimum of authority. The continued ability of the crofters to maintain primitive democracy in a nation like Great Britain is possible only because there is a high degree of social integration. The simple system of ranking, on the basis of [561]
age and sex, has persisted. Men are the social superiors of [562]
women; old men are the social superiors of their juniors. I believe we shall understand how continuity of status has been preserved if we turn to a consideration of the role of religion on the island.

If I am right in asserting that a belief in clan brother- 178
hood was an all pervading cultural pattern in bygone days and 182

621 embracing several hamlets. Yet the strength of com-
476 munity life sprang from co-operation in the farm-team and
632 in the boat's crew.

178 With the passing of the joint farm the greatest dis-
461 ciplinary factor for work in common passed away from
476 agriculture. The fact that fishing still remained as a social discipline, and actually developed in importance as the farm-team declined and was abolished, was to prove all the more significant to the vitality of social life until 1914 and even to the present.

(B) THE COMMUNITY ORGANISED: STEERSMAN AND CONSTABLE

621 As small groups of two to half a dozen men could manage their agricultural affairs informally, by common consent, no official was formally chosen to manage the affairs of the
• 622 fellow-workers on a farm. Where prompt decisions are needed, however, even a small group should be led: a boat's crew therefore choose their helmsman-skipper and obey him at sea. And where several farm-groups made up a township, more formal deliberations were required, and to carry out their decisions they chose a responsible man, the constable.

175 Of the crofters' manner of deciding communal affairs
621 in Uist, Carmichael wrote, in 1884, that these meetings
181 "were highly interesting, as showing the ability of the people, their logical and legal acumen, their readiness of resources and, I can happily add, their invariable courtesy
175 towards one another. There was one regular official known
622 as the constable on whom there lay the chief executive responsibility. When a crofter is elected constable of his
[782] town-land, he takes off his shoes and stockings and, taking

175 his bonnet in his hand and bowing low and reverently,
• 622 declares on honour in presence of earth and heaven,
[782] presence of God and men—*Am fianuis uir agus adhair,*
fianuis Dia agus daoine—that he shall be faithful to
[178] trust. This simple declaration of office is extremely i
pressive, though now, alas, becoming obsolete from t
fears of the shallow thoughtless and the scoffs of the severe
[626] wise. The duties of the constables were to divide a n
peat-moss into banks for which lots are cast, to see th
every crofter does his share of free labour in road buildi
and repair, to engage herds and the like." (*Napier Crofte*
Commission, 1884.)

Naturally such duties called not only for tact, firmne
and authority, temporal and spiritual, on the part of t
constable, but for strong backing by the crofters, as a bod
175 of the man they had freely elected. But hence too, t
622 advantage to a covetous landlord of superseding fr
557 election by appointing his own nominee. Martin fou
427 that this had been done in St. Kilda shortly before his vi
(about 1695) and the people complained bitterly, as w
they might. We shall see that the same suppression
liberty was resented in Lewis less than a century ago.
a mere estate employee, moreover, the constable's positi
between the landlord's factor (or ground officer) and
fellow-crofters, was always difficult; and it might be cruc
hard, as when he was forced to help in destroying a neig
bour's house at an eviction. Neighbourly union in a tow
ship was damaged by this duality of function, when
who should have been their own impartial executive w
in the landlord's pay. When affairs got too bad in
Lewis township the people would appoint their own co
stable in addition to the landlord's; even so, rivalry a
dual functions weakened the community. Such weakne

in communal organisation, historically brought about by landlord or steward over a wide period, has commonly been ascribed to some inherent feebleness in Gaelic communal spirit. It is all the more vital to realise the strength of community and its self-governance by neighbourly 'parliament' and chosen constable, by which the people put their ideals into practice. These may be given in the three traditional terms of fellowship, fairness and freedom, summing up the Gaelic watchwords.[1] Unless the struggle for freedom was too severe, fraternity, followed by equality, came first.

[1] *Comunnar, cuidreabh* or *cairdeas*; *ceartas, coir, cead cathrom*, or *co-ionnan*, and *saoirse*.

173 coming Viking chiefs, who often intermarried with women
177 of the older aristocracy, seem to have retained some ele-
621 ments of a pre-existing order, as did their successors, the
631 Scoto-Norman lords.

So, from history back to 'proto-history', there is
192 increasingly discerned the stages of superimposition, in
621 the Isles as elsewhere. In Central Europe archaeology has recapitulated the stages by which peasant-villagers were raided, then conquered by desperate herdsmen, on horseback or bearing better arms, who had ridden in from the drying grasslands further east. In the Isles the later conquerors were the fierce raiders from the sea, sailing in from
173 the fjords of the North. An unbroken chain of tradition
621 from Viking to Gael is vividly conveyed in the stirring
177 saga of the Galley or Birlinn of Clanranald, composed only a year or two before the 'Forty-five (epitomised, Chapter VI (e)).

173 When the conqueror had won the submission of the
622 conquered and secured his livelihood, comfort and leisure
631 by their work, he came in time to bring their interests nearer to his own. Yet whenever the ambitions of two rival chiefs conflicted, the essential predatory attitude remained and either might bring fire and sword against the other's harmless people. Through time, the successive tides of emigration and storms of conquest bridged the contrast of extremes. Not two orders of chiefs and people, but successive strata, with intermixture of blood and of tradition, must be sought in the Isles as elsewhere. Traditional life in so difficult an environment tended to be diversified and to encourage all-round aptitudes in people and chief, their characters having much in
[177] common. As to blood, the history of Island Norsemen records the marriage of the new-coming chiefs with heiresses

173 from the old chiefs' families, as in the genealogies of
• 622 MacDonald of the Isles and the MacLeods. A special
631 feature contrasting with English history is that claims to differences of descent, instead of being maintained—as
[177] between the Saxon and the conqueror of Norman blood—
[171] were fused. Even when the ancestor of the chief was alien to the locality, the people and the chiefs ultimately claimed
173 to be of one and the same descent. Neighbourhood
621 softened the impositions of the hunting herdsman upon his human herd, and the feeling of kinship brought reconciliation.

193 How far, then, can the family name, which proclaims
621 every 'son' and 'daughter' of Leod to be of the *clann*,
614 the 'children' of the first Leod, really betoken a blood
829 tie? Both the differences of race to be found in clanship and the ties it formed are well brought out in a tale of Highland pride, still told with Highland laughter across
539 the Minch in Kintail. A French skipper (an importer of claret) touching at Kintail three hundred years ago, met a short, dark man and asked him of whose clan he was. "The Clan Rae," was the reply, "but we are of two kinds, the tall, fair MacRaes and" (a little pityingly) "the short, dark MacRaes." "And which are you?" "I," said the wee, black fellow, drawing himself up, "am one of the tall, fair MacRaes!" "Then God help the short, dark
193 MacRaes!" said the skipper. Even one link with the
621 blood of the chief—and that not necessarily legitimate—
614 was enough for a man to found a claim to kinship, not
829 merely as a MacRae, but with the tall, fair chief through

[1] In Gaelic, as a man is called MacLeoid (son of Leod), so a woman is NicLeoid (daughter), and the clan, *Clann Leoid*. The absurd addition of 'son' to a woman's name (as in English surnames such as 'Johnson') is unthinkable in Gaelic, in which a woman would be named 'John's daughter', *NicIain*.

173 his near kin. Again, much as in the medieval *gestes* of
621 France, fosterage of an heir by a clanswoman formed the
614 closest possible tie to at least one family of the people
829 from ancient to recent times. For it linked the heir by sympathy—though not by equal obligation—to elders
[191] and playmates in childhood and his contemporaries in later life.

565 To re-state this 'contradiction' of equality and privilege, we have thus a hierarchy of 'class' imposed upon a 'classless' society. For the joint farms and the township were essentially classless. The two classes, the lord and the people, were primarily opposed, war having placed the conqueror above those who fed him. This state of things was not active 'class-war', for the armistice could endure indefinitely by means of the bargain made between the classes for some exchange of services; none the less, it was built upon class conquest.

195 That all should ultimately claim the lineage of their
565 chief was a remarkable solution to the hereditary opposition
614 of class. A man who knew the Islanders well, John Lane
622 Buchanan (1793), noted how in conditions of the utmost
• 622 poverty the poorest addressed each other as 'lady and
[576] gentleman', *bean-uasal* and *duine-uasal*, a courtesy not lost today. And every clansman had a right to shake the hand of his chief, as Edmund Burt observed in his vivid *Letters*
[577] *from the North* (written after 1721). Indeed the sense of mutual obligation implicit in Gaelic society is well illustrated by the homely word *coir*, usually translated 'right'; it is equally used for right's correlative, duty—as when a Scots or Irish crofter may say "You've a right (a duty) to help your mother"—and for a 'right' (privilege) to shake the chief's hand. An English equivalent would be duty-privilege, or duty-right. Similarly, the same

195 words are used for neighbourly help among crofters and
565 for services to the chief.[1]
614
• 622 Full freedom of choice in marriage prevailed among the people, who honoured marriage and enjoined continence; but the position of the chief placed him apart from
195 the rest of the community. Now, the more egalitarian
582 the community, the more free are a couple to choose one another on grounds of mutual affection, passion and respect; the parents, too, are more likely to encourage or support a suitor for their child because of character and virility, rather than means.

195 The lads of the clan, chief and people, grew up together
565 in an isle or glen. But in manhood, while a labouring lad
582 sought a wife from the girl playmates of his childhood and his fellow-workers at the peats, at the harvest, or in the shielings, a chief's choice was confined to his own class. In pre-feudal clanship, tanistry, *i.e.* the choice of a chief among the higher kin, gave a wider choice for marriage near home than feudal primogeniture, irrespective of the wishes of the chief's kin except in extreme cases of unfitness. In Scotland, tanistry prevailed even in the royal line until the eleventh century. But with the dominance of primogeniture, the young chief chose a bride outside his own community for reasons other than those of human feeling, honoured by Gaelic lyrical and religious tradition and even by the Church.

As a result, the chieftain's son was granted a licence forbidden to the rest, a temptation to maidens and a bad

[1] *Cuid* (cognate with *quota*) means a portion, lot or share, or what is one's own (*n.f., gen. codach*); and the associated verb (*cuidich*) means not simply to share but actively to help. The apportioned lodging given to the chief and his 'suil' of 'lads' was the '*cuidreachy*'—*cuid-sidhche*; while the famous motto of the Seaforth Highlanders is Help the King!—*Cuidich an Righ!*

195 nurse in the family. Born about 1615 in Rodel (south-east
533 Harris), she composed her last elegy (to Sir Norman
[614] MacLeod of Island Berneray, Harris) in 1705; she may even have composed her last great song (on the birth of the nineteenth chief) a year later.[1] Towards the end of the century (between 1664 and 1693), Mary's younger contemporary, Rory Morison was bard at Dunvegan, being known as the Blind Harper, *An Clarsair Dall*. A Lewisman, Rory could not have found adequate patronage as a bard in that Island, the chiefs of Lewis having passed away. Morison is stated to have been a descendant of the Gaelic judges or *brieves* of Ness and the son of a minister, and he was to have entered the Church along with two brothers, later ministers. But smallpox blinded him, and he turned to oral, not to written 'literature', perhaps to our ultimate gain.[2]

Here then were two bards, man and woman, whose fame is growing, rather than waning, in our own day. While Mary was illiterate, however rich in lore, Rory, with his clerical home and family tradition of Gaelic jurisprudence, must have begun to read Latin and English, perhaps Greek, and also Gaelic, though not reaching Hebrew (as his brothers would) before he was struck blind. Mary, so far as is known, was the first to compose what may be called 'court' song in simple words and in the 'strophic' verse-form of rhythm and assonance enjoyed by all Gaels, Scots and Irish, since her time. Lacking the learning of the dying school of classical bards, Mary is more personal
[614] than they, "a lyrist not less than panegyrist"; and she is
• 622 more spontaneous. The same seems true of Rory. Yet the themes of the classical bards were renewed by these
[113]

[1] James Carmichael Watson, *Gaelic Songs of Mary MacLeod*, 1934.
[2] John Mackenzie, *Sar Obair: Beauties of Gaelic Poetry*, 1877.

175 two singers, as in the portrayal of a chief, " blue-eyed and
533 with clustering, golden locks . . . and brown, ruddy
614 cheeked " ; in descriptions of " his wisdom, prowess and
• 622 justice " or of his traits—his " joyous, fresh, and shame-
fast cheek ", and as a friend to the poor seeking justice,
and to men of learning, musicians and bards. In the halls
of chiefs where ancient joys and traditions were main-
tained, the ideal of chiefship was essentially that of man-
hood. Nor is the chief's lady forgotten either by Mary
or by older bards, though womanhood is a theme rather
for lyrics and for sacred song.

Even at Dunvegan the stream of clan life was once
interrupted in the lifetime of these two bards, as the
Clarsair told in his satire on the anglicised seventeenth
chief (1693–99), and as Mary hinted in her haunting
' Croon ' or *Cronan*. Happily, the stream was renewed
[173] by this chief's successor. Tradition and song show that
such renewal was primarily due to the strength of com-
munal life among the ' people ' which called out leadership
from the chiefs, in justice, in war, and in the encouragement
of the oral arts. High conduct from the chiefs was invoked
[577] by the expectations of their people. More important still,
it was the warmth of feeling among the people as a group,
and their ties to one another, which lit their personal loyalty
to a chief and called forth his loyal leadership in return.[1]

[1] Gaelic loyalty was burned away in the Jacobite Risings, but as the last Rising left the Island relatively unscathed, one may simply refer to two works: Audrey Cunningham's *The Loyal Clans*, 1932; and J. L. Campbell's *Highland Songs of the 'Forty-five*, 1933 (Gaelic and translation). The first work analyses the need for a personal relationship to Scottish kingship, felt so keenly by the clansmen. The second gives authentic evidence of the spirit of loyalty. (Both the sense and a hint of the rhythm, with several of the airs, are available for the English reader.)

I know of no explicit statement of the conclusion given above, for lack of the sociological approach attempted here; but it is surely implicit in the thought of many a Gael.

175 the last of these in outlying villages after 1918. When
554 Matheson purchased the Island in 1844 he left the fishing
565 industry to the curers, great and small. Particularly before
427 most fishermen could speak and write English, the local
228 curers were best fitted to take action not only in marketing
but in approaching the Government to aid the construc-
tion of piers and harbours. On the whole, their long ties
with place and people, coupled with education, made them
useful leaders of a community in which leaders were needed
to adapt life to a changing economy. Here and there one
or two small farmers survive, a little apart from the main
townships. Aided by a long cultural tradition, they meet
changing times by combining with their inheritance a sane
selection of new elements.

175 Looking beyond the Island to the mainland, the time is
621 approaching for a fair assessment to be made of the historic
• 622 parts of chief and landlord, factor and tacksman. Not only
is there an enlarging body of documentation, but a growing
427 understanding of communal strands in tradition and of
184 changing social economy seen in relation to geographic
[178] factors of place and region. And in the Gaeldom, condi-
[182] tions varied greatly between bordering areas from Mar to
Kintyre,[1] and the heartland of tradition in the Hebrides.
In the Island, one must remember the fundamental opposi-
tion, yet the recurrent readjustments of chiefs and people.
These, and not only individual differences in character and
conduct, explain the differences of experience and opinion
[829] quoted above. The people's belief, so frequently given
to me thirty years ago, that it was bad factors, not the
landlord, who taxed and harried them unjustly, expressed
an idealistic faith in a chief, rather than the facts of economy
[565] and history. For lordship begins with the imposition of
[113]

(B) STORM AND GALLEY; BATTLEFIELD AND REGIMENT

174 The peaceful round of daily life formed the most
614 enduring test of the mutual loyalty uniting the commoners
577 of the clan, and linking chief to people. Yet the tensest
[501] ordeals came in hours of danger faced together, whether
[726] at sea in a small fishing boat or a many-oared galley, or in
war in a clan company. The Gaels' own records must
speak for them. Many a song of the Isles conveys the
team-spirit of the crew though without describing its men.
174 And although Mary MacLeod's song of MacLeod's Galley
614 be irretrievably lost, there survives one epic poem portray-
501 ing the ship, the storm and, man by man, the crew who
538 warred against the waves and won. Alexander Mac-
donald's *Birlinn of Clanranald* is unmatched in Gaelic,
and probably in English, verse for its portraits of the crew
in action, from steersman to ' look-out '. The flowing
metrical translation by Pattison with Hugh MacDiarmid's
vivid prose helps to give the English reader some vision of
a crew of Gaelic freemen at their best.[1]

174 The poem opens in slow traditional rhythm with " the
614 Blessing of the Ship ", the arms and the crew. Then the
501 bard, speaking for the stately skipper, " incites the sixteen
539 oarsmen to row " out of the bay, and they row to a rousing
577 shanty, a *Iorram*. Next, in readiness for the voyage and

175 principle of duty-right or *coir*. Further, in so far as chief
614 and people claimed unity as the children, the clan, of one
577 ancestor, they had crystallised a fair ideal, realised by an
621 exchange of services (' cuideachy '). Gaelic clanship was
not without its Lowland counterpart in ' kindness ' which
linked those of one ' kind '—' kinsfolk ' and neighbours—
to their ferm-toun and parish, to one another, and to the
laird. Tyranny and betrayal by chief and laird make one
share the bitterness of grief once felt as competition for
scarce land broke up ' kindness '. Yet the people's endeav-
our and attainment in the past give hope for the future.

175 All have heard of the hereditary Highland chief and
614 many have read of the gentlemen-farmers, but too few
621 have heard of team and crew, and township-parliament.
• 622 It is time we learned not only of the aristocratic chief but
of the chosen helmsman and the democratic constable. So
long as the fallacy is repeated that the Highlanders " never
co-operated, and could not act together except under the
orders of a chief ", so long will it be easy to add, " and
they never will "! Historic truth may have much to teach
[642] for the renewal of leadership for life together. And beyond
the Highlands, the example of this aristo-democracy, at its
worst and its best, may contribute to new concepts of
community.

APPENDIX III

(A) THE STORNOWAY TRUST: A COMMUNAL OPPORTUNITY

THE people of Stornoway town and rural parish are in a position to control their own future to a degree unusual in Britain since the general loss of common lands in the eighteenth century. Three or four bodies or groups are important in local governance, and in addition to these an effort to arouse citizenship has taken shape in the Lewis Association. As elsewhere, the Town Council acts for the burgh and, it should be added, the Grazing Committees for the townships, the District Council and County Council acting for wider spheres. The Harbour Trust has its special charge. In addition, the fact of corporate ownership is important, as vested in the Stornoway Trust. Besides property in the burgh and its suburbs, including the Castle and its park or policies, the Trust owns virtually the whole landward area of the parish, from Arnish Moor north to Tolsta. It should not be forgotten that the resources of the sea are public property and that the inshore fishings, owing to a considerable measure of protection, are virtually in the possession of the coastal communities. Freshwater fishing is also in the hands of the Trust. Thus, not only building property but essential sources of production on land and sea are in communal possession. The Trust was formed in 1924.

During the first five years of its existence the Trust was burdened with a growing deficit, but since 1929 it accumulated a credit balance, due partly to agricultural derating and partly to the registration of the Trust as a charity and the resulting relief from income tax. Possession without prevision can do little, however; and hence the need for the citizens of town and country to regroup themselves as thinkers for the common

in communal organisation, historically brought about by landlord or steward over a wide period, has commonly been ascribed to some inherent feebleness in Gaelic communal spirit. It is all the more vital to realise the strength of community and its self-governance by neighbourly 'parliament' and chosen constable, by which the people put their ideals into practice. These may be given in the three traditional terms of fellowship, fairness and freedom, summing up the Gaelic watchwords.[1] Unless the struggle for freedom was too severe, fraternity, followed by equality, came first.

[1] *Companas, caidreabh* or *cairdeas*; *ceartas, coir, cead cothrom*, or *coroinn*; and *saorsa*.

the mansion, lodges, and grounds or 'policies', much was built and laid out for himself at the time, though part was for reclamation. This contrasts with his provision for those whose homeland he had bought—the sum spent upon his own mansions and grounds being nearly half that spent directly for the good of some 20,000 fellow-Gaels.

Matheson was not technically equipped for his chosen task of 'reconstruction'. Nor was he fitted by trade in the East for the leadership of a people accustomed, in spite of dire poverty, to considerable freedom. Ignorant, one gathers, of the language of the people, his choice of a later Factor was hardly a happy one. Tradition in Lewis speaks of this Donald Munro as an 'autocrat', and evidence in 1874 confirms it. In addition to being the Factor for an ageing man and so holding economic sway over the people, he held seventeen public and semi-public offices in the Island, from Justice of the Peace to Captain of the Volunteers, still other offices being held by his clerk! The extent of his sway is also shown by his having served summonses of removal upon fifty-six families on his own authority. As a result of the treatment of the officer sent to serve the summonses, three crofters were tried on a charge of "assault committed on an officer of the law in revenge for having executed his duty". When asked in court if Sir James would not have disapproved of this step and the manner of its execution, Munro replied that it was his practice "never to trouble Sir James with small matters". "Then you consider the eviction of fifty-six families a small matter?" was the retort. These 'Bernera rioters' were found not guilty, they and their neighbours were left in possession, and soon after the Factor demitted office.[1] Lewismen felt the result to be a moral victory,

[1] Brand Report, 1902, p. lxxi.

(B) SLOW CHANGE: 1925–39

1. *The Land, the Sea, and the Loom*

When Leverhulme parted company with the people of Lewis his gesture of farewell was one of generosity: the offer of Lewis to its people. The Stornoway Trust was formed, and this accepted the gift of the adjacent crofting townships of the Parish, and of the Castle and its beautiful Park or 'policies'. In crofting townships, however, the people declined the offered gift of land, finding that they could not afford the augmentation of rates entailed by acceptance. So the remainder of the estate was offered for sale in several lots, which were bought by individuals and have proved safe investments. The letting of sporting rights adds a further, albeit a variable, return of income to that of the rents received. It is indeed anomalous that a crofting estate, such as a Lewis parish, can yield a good return to a purchaser, yet that the crofter-occupiers themselves would lose by receiving it as a gift.[1] Much-needed improvements in housing would also be discouraged, for fear of increase in their rates. It is true that if (under existing laws of assessment) all the farmers and crofters, cottars and squatters of a county were to become owners at the same moment, the total increase in assessments would either be repaid in greater services or met by lowered rates

[1] The reasons (as indicated in Chapter IX (E)) are briefly that a crofter (or 'small landholder'), as occupier of an agricultural holding, can only be assessed at three-eighths of the occupier's half of the assessment on his Fair Rent, *i.e.* at less than a quarter of the whole rental. Although he may have built a good house and other buildings he is not assessed at their full value; neither is his landlord. Were he to become owner he would then be liable to assessment both as occupier and as owner, on the full annual value of land and of buildings too; with deduction of five-eighths on the agricultural value as occupier only.

λ [see pp. 320-323 · analysis]

—or by a compromise between. But as it is, if one crofter, or a small group of crofters like those of a township or parish of Lewis, were to become owner-occupiers (even by gift), they would be penalised as compared to others. Hence the Lewismen preferred to go on paying rent as statutory crofting tenants. Leverhulme sold the land and received the price; the new owners paid for it and received an investment; and the only 'loser' on this curious transaction was the Local Authority, the County, which failed to make more in rates!

Further reasons why the great majority of crofters declined Leverhulme's offer have been given by the Lewis Association's Economic Committee (1944):

(a) As individual proprietors, they would lose the advantages of the jurisdiction of the Scottish Land Court in dealing with their disputes, and any litigation would take a more costly form.

(b) They would be debarred from obtaining loans from the Department of Agriculture for Scotland for the improvement of their holdings or houses; as the Department would no longer have the "Corner Stone" of a landlord to fall back upon in the event of renunciation.

(c) The crofters were afraid that as individual proprietors they would forfeit their share of the Common Grazing rights.

(d) Should they wish to quit their holdings they would be compelled to find a buyer in the open market, instead of renouncing to their landlords and getting valuation.

(e) There is a feeling among Lewis crofters that they prefer to have a landlord before whom they can lay their difficulties and disputes, and who will attend to their wants; an authority that relieves them of responsibility.

As the historical evidence has shown, a lack of responsibility has been greatly due to the undermining and then the abolition of the authority of the township's own elected Constable.

The Trustees of the Stornoway Trust have not found it easy to meet the cost of keeping up the valuable property of the Castle and Park, nor to carry the burden of its rates, no adequate income being available for the purpose. Today, however, Leverhulme's gift is being put to good use as a Technical College, opened in September 1952.

Division of the available farms, after providing about 200 small crofts (of ten acres or so), still left the problem of finding legal homes on legal tenure for the remaining cottars and squatters.[1] The Department of Agriculture arranged to feu plots of 'skinned land' on the outrun of certain townships, including one in the extreme north and others in Lochs. About 200 of these little holdings with potato ground were provided. On the holders' behalf the Department feued land from the owner, after obtaining the consent of the Common Grazings Committee of the township and permission from the Land Court for 'resumption', *i.e.* for enclosure of a portion of the common. The legal and administrative procedure involved may seem disproportionate to the economic value of the holdings. Yet difficulties of law and custom had been allowed to go from bad to worse during the past eighty years; and these difficulties were overcome.

To encourage better housing in the crofting counties, loans are made to 'crofters and fishermen feuars' personally. Local stone, or latterly concrete, is used, and much of the building is done by the 'man of the house' himself, and his friends. From 1920 to 1940, nearly 1200 loans were made in Lewis and Harris for the erection (or improvement) of houses, and in a few cases for the erection

[1] Estimated at 1200 to 1500 shortly before, the open question was whether subdivision during the previous eighty years was to be recognised and accepted.

427 651 crofter pays only half of the assessment, which is based on rental value, and he is granted an additional benefit by having the land devalued seven-eighths for purposes of taxation. The majority pay £3 a year, or less, in rent, and, with a rateable value of 5s, or less, between 1s and 2s in taxes annually. Many pay no taxes.

427 341 423 On his small plot of land the crofter has his cottage. Here we find another rather unique interpretation of the laws of land tenure. Although the crofter is an occupier of the land, he is the owner of his dwelling. If he or one of his ancestors did not build the house, frequently with a grant and/or loan from the government, he will have paid "compensation" to his landlord for the dwelling upon accepting occupancy. Should he, at any time, relinquish his right to the croft, the crofter, in turn, will be entitled to full "compensation" for the value of the improvements on the holding as determined by the Land Court. The crofter's home is not entered on the county valuation roll and, therefore, is not subject to assessment.

427 241 233 In addition to the land under crops and improved grass, the crofter's rent entitles him to a share in the unimproved township grazing lands which are held in common and used under a system of allocation known as "souming." In each township, 623 624 the collection of individual holdings, the crofters elect a grazing clerk and committee. They determine the number of cattle, sheep, and horses the individual is allowed to put out to graze. Usually each crofter has an equal share, but in

565 582 villagers say he married above his station. His daughter, they believe, married below her station. Be that as it may, he disowned his daughter. He never spoke to her again. The third case involved the marriage of one of the poor, but nevertheless accepted, gentry and a crofter's daughter. He has fared differently. Rather than cast him out, his mother refused to recognize the marriage. He was forbidden to bring his wife home. To this day he continues to divide his time between his estate and his "town house," where he keeps his wife. Further, this man, who I have been told should have become chief of Clan Ranald, is no longer of the county people.

565 554 Among the distinctive features which overtly characterize the county people is their ascribed status and role of leadership. Indeed, this is their most important function. As the tacksmen were once the counselors of their subtenants, so today the landed gentry must fill this role which the 624 feirthpasch from the croft will not assume. Even if a Skyeman here and there feels that the local proprietors would like nothing better than to have all the people behave like serfs, bowing and scraping before them, he expects the proprietors 565 554 423 to get things done. In Portree the local gentry form the village council. During the war when they were on active duty, there was no village council. The Skye District Council, which replaced the old parish councils and which, acting as an agent for the County Council, is the only administrative body on the island, reveals a similar membership. In any of

423 632 241 rigs. The rigs are numbered and then balloted for by a double ballot. First the men approach the hat in any order and pick out a number: this is to decide the order in which they will approach the hat in the second draw. The second draw then decides the number of the rig. The crofter retains the rig while this particular scatt remains in cultivation, usually for a period of two or three years. The machar is shared by the whole township. The crops grown include a light type of oats, barley, a little rye, and potatoes; and clover may be cut.

423 244 624 In the division of the machar for potatoes at Barvas, there are now no such hard-and-fast rules. The Common Grazings Committee select a certain area for cultivation and each crofter is allowed to take as much land as he requires within this area. This land is only cultivated for one year in six to ten years, and then reverts to grass. If cultivated for two or more years in succession there is a danger of the sand being blown away, and grass would be difficult to establish again. Potatoes are now the only crop grown on the Barvas machar.

134 195 423 241 Beyond the machar of the Isles lies the moor with its fringe of reclaimed croft land. By Carmichael's day this was held in individual portions, though, as he said, most of it was once held in 'farms' in run-rig practised by small units, not by the whole township. Why this difference between the arable of the machar and of the moorland? Carmichael did not explain it.

134 241 Three explanatory points are, first, that the whole cultivated land of the scatt or the machar is continuous, whereas the moorland is hummocky and boggy by turns, and cultivation is therefore patchy; secondly, that, unlike the stony clays, the light shell sand is easily forked or ploughed and needs no 'team' to plough it; and thirdly,

195 632 427 [241] 624 co-operate in active endeavour. It was all the more important to have an elected 'official', the Constable, one of themselves but placed in authority. There could be no restitution of the old joint farms where they had been broken down by migration. Yet it should have been still possible to extend the old spirit to the larger townships, as the Commissioners held.

195 632 423 671 Again, the constitution of the township is bound up with the rights of common pasture upon the moor all the year, and in winter even on unfenced arable; but the Crofters' Act failed to regulate the rights and obligations of Common Grazings. It slackened the authority of the estate without restoring the hold of the tenant community upon its members. After five years the Government began to recognise the mistake, and passed the first Crofters' Common Grazings Regulation Act, permitting the crofters to elect a Common Grazings Committee. But it was ill-considered; most of all because non-crofters, that is, cottars and squatters without legal tenure, were not bound by the Regulations. On one hand they could not get permission to 'resume' (or enclose) a portion of the outrun, in order to reclaim it as a croft, without first obtaining the unanimous consent of the township's crofters; and in large 233 townships there might always be an objector. Yet each cottar could, and did, put on stock, a cow or two and a few sheep, so nullifying the possibility of discipline.

In 1908 a second Act was passed; but twenty years had allowed tradition to lapse and difficulties to accumulate. In Isle Scalpay (Tarbert) for instance, by 1909 there were only forty legitimate crofters, but eighty cottars; and the legal crofters would not take part in depriving any 496 462 cottar of such grazing liberties as he exercised. All were neighbours and most were relations, and their principle

423 431 477 632 829 —or by a compromise between. But as it is, if one crofter, or a small group of crofters like those of a township or parish of Lewis, were to become owner-occupiers (even by gift), they would be penalised as compared to others. Hence the Lewismen preferred to go on paying rent as statutory crofting tenants. Leverhulme sold the land and received the price; the new owners paid for it and received an investment; and the only 'loser' on this curious transaction was the Local Authority, the County, which failed to make more in rates!

623 Further reasons why the great majority of crofters declined Leverhulme's offer have been given by the Lewis Association's Economic Committee (1944):

(a) As individual proprietors, they would lose the advantages of the jurisdiction of the Scottish Land Court in dealing with their disputes, and any litigation would take a more costly form.

(b) They would be debarred from obtaining loans from the Department of Agriculture for Scotland for the improvement of their holdings or houses; as the Department would no longer have the "Corner Stone" of a landlord to fall back upon in the event of renunciation.

(c) The crofters were afraid that as individual proprietors they would forfeit their share of the Common Grazing rights.

(d) Should they wish to quit their holdings they would be compelled to find a buyer in the open market, instead of renouncing to their landlords and getting valuation.

(e) There is a feeling among Lewis crofters that they prefer to have a landlord before whom they can lay their difficulties and disputes, and who will attend to their wants; an authority that relieves them of responsibility.

181 624 195 As the historical evidence has shown, a lack of responsibility has been greatly due to the undermining and then the abolition of the authority of the township's own elected Constable.

to the traditions of the past. I shall discuss this further when I describe the extended family. 594

The Township. The township is a cooperating economic unit. Communal use of an interest in the common grazing lands gives the township its focus. Living on the several crofts, there will be found an aggregate of nuclear families and unmarried individuals who, especially in the older townships, are related and re-related on both sides. Only in the more modern townships does the degree of relationship become tenuous and finally disappear. In interpersonal activities the neighbors have a rate of interaction second only to that of the nuclear family. 621 632 341

The dominant social trait is the strong emphasis on the ascription of status on the basis of kinship, sex and age. There are no socially valued achieved statuses. The facts are simple. Males enjoy higher prestige than females, and the old men and women are respected by the youth. All of the same age grade and sex are essentially equal. Again we have a parallel with the Irish small farmer.[18] 621 594

There is no room for the expression of a role of leadership in economic activities. The governing principle of township administration is so-called primitive democracy. All males have an equal voice in determining the acceptance of any policy or action which concerns the group, and unanimous consent is necessary for the adoption of any change. Although each township has an elected grazing clerk and a grazing 621 632 594 624

[18]Cf. Arensberg, op. cit., pp. 45, 109-110; and Arensberg and Kimball, op. cit., pp. 63, 161-231.

committee, a legal requirement, these individuals lack authority. They are figureheads whose primary function is to advise the government of the decisions reached by all the crofters who share in the grazing and to regulate the use of the land by self-imposed rights. In townships where the sheep are owned as club stock the clerk serves to distribute the profits from the sale of stock, and he may also keep a tally of the individuals who are entitled to payment for labor in townships where money has replaced customary reciprocity. In any cooperative venture beyond the family level, there is no one who can step forward to act as a foreman. The assumption of this role would upset the basic status equality of the crofters, unless the person wishes to be regarded as an eccentric. 621 632 594 624

The Crofting Neighborhood. The crofting neighborhood consists of an aggregate of individuals and nuclear families who dwell in several townships, standing in close spatial proximity. It is, therefore, natural that the ties of common residence and kinship should continue to operate. The important distinguishing features between the township and the larger social entity are two: (1) cooperation in agricultural and pastoral activities is replaced by mutual aid, and (2) there is a greater wealth of formal and informal interpersonal activities in which the people associate. 621 632 571

There are invariably established social circles within which the individuals habitually move. One always consists of the individual's kinsmen, "his people," his family of orientation, and "his close friends," all other relatives within the fourth degree of relationship. 621 571 662

427 651 crofter pays only half of the assessment, which is based on rental value, and he is granted an additional benefit by having the land devalued seven-eighths for purposes of taxation. The majority pay £3 a year, or less, in rent, and, with a rateable value of 5s, or less, between 1s and 2s in taxes annually. Many pay no taxes. 624

427 442 423 On this small plot of land the crofter has his cottage. Here we find another rather unique interpretation of the laws of land tenure. Although the crofter is an occupier of the land, he is the owner of his dwelling. If he or one of his ancestors did not build the house, frequently with a grant and/or loan from the government, he will have paid "compensation" to his landlord for the dwelling upon accepting occupancy. Should he, at any time, relinquish his right to the croft, the crofter, in turn, will be entitled to full "compensation" for the value of the improvements on the holding as determined by the Land Court. The crofter's home is not entered on the county valuation roll and, therefore, is not subject to assessment.

427 241 233 In addition to the land under crops and improved grass, the crofter's rent entitles him to a share in the unimproved township grazing lands which are held in common and used under a system of allocation known as "souming." In each township, 623 624 the collection of individual holdings, the crofters elect a grazing clerk and committee. They determine the number of cattle, sheep, and horses the individual is allowed to put out to graze. Usually each crofter has an equal share, but in

559 626 829 New Zealanders breed sheep and make linen. One might say he knew more about the world than about Skye. He could not understand why so many people made fun of him when he was only trying to help.

626 632 In the absence of any traditionally valued status and role of leadership, administration of the common interests of the township members is the concern of all. We say in the last chapter that primitive democracy is the guiding rule. Each crofter has an equal voice in deciding any question which affects the group and all, without exception, have to agree before any action is taken. Consent is expressed by silence. Typically, the crofters will have talked the 624 matter over among themselves beforehand. At such times the fact clearly emerges that the grazing clerk and the grazing committee are no more than figureheads required by law. They have no coercive or disciplinary powers. In any group situation, their views are taken no more seriously than those of any other man.

887 888 626 632 It is the old men who gather at one anothers' homes or on the hill on a sunny evening to weigh the innovation which the youth want introduced. If they find the change acceptable, they approve it at a meeting of the township by keeping silent. If they believe it will upset the communal system, they disapprove it. The dissenting voice of one old crofter is all that is required to maintain the conservative patterns, economically and socially.

182 626 In summary, we may say that within the township and on the croft the cultural patterns reveal a fundamental continuity. As of old, status is ascribed. Men have remained

625

625 POLICE--specialized law-enforcement organs within the community and higher political units; personnel (e.g., qualifications, appointment, training, organization, promotion, retirement); equipment (e.g., uniform, insignia, arms); functions (e.g., crime prevention and detection, quelling disturbances, traffic control); specialization (e.g., patrolmen, detectives, vice squad); powers (e.g., arrest, detention, summary justice); degree of civilian control; special police organizations (e.g., state police, secret police); private police (e.g., bodyguards, watchmen, industrial police, private detectives); etc. See also:

175 632 241 In any case, the "town" or township was not the effective work unit, but rather was the larger neighborhood in which several joint farms existed. [233] The tenants of several joint farms grazed their stock on the surrounding moorland (i.e., on common grazing land).

D. From Run-rig to Crofting

175 233 241 311 Run-rig was an agricultural system suited to a pastoral people, who required the use of open, common pasture for grazing their livestock; the arable land was limited, and of varying quality (according to Day (1918: 12), 54% of the land in crofting counties was mountain and heath used for grazing, and only 5% was [423] arable land). Residents worked several strips of different quality, and the strips (in drained beds of earth a few feet wide and many feet long called lazy-beds or fiennagan) were usually re-allocated every few [625] years. A "constable" acting for the landlord ensured that proper husbandry was maintained.

175 241 178 427 The joint farm, and the stratification of tenants and subtenants within the farm, disappeared as "progressive" landlords began, in the second half of the 18th century, to substitute compact holdings for the "mingle-mangle of dispersed strips (Gray 1952: 46)" which characterized run-rig. Hamlets or clachans

178 241 476 of the normal capitalist farmer in the West; but in crofting areas, these practices reveal a strain between communal and individual tendencies.

a. Fencing:

233 (178) (417) (333) Although run-rig was replaced by fixed, compact holdings, the method of animal husbandry was not affected until the land began to be fenced. A single dry-stone dike enclosed the township, keeping livestock on the moor and away from the arable land. In different parts (184) of the Hebrides, various types of herdsmen were hired to protect both the livestock and the growing crops (cf. Owen 1958-59 for a discussion of cattle, calf and sheep herdsmen in North Uist).

175 625 The township Constable had a great deal of power, which included the right to evict people from their crofts, to enforce rules of good husbandry. The last Constable of Shawbost, who died at the turn of the century, has been credited with a number of ignoble actions, such as forcing an old woman with a sore leg to take her cow to the moor along with all the others. Old widows who had no one going to the fishing and hence no means of paying their rent might be evicted in favor of other persuasive, land-hungry members of the village.

175 166 In the last half of the 19th century, many families were "cleared" from the district of Uig and resettled in Shawbost. According to a local version of village 173 625 166 history, the Constable evicted persons from North Shawbost and resettled them in New Shawbost. "The people from Uig were fishermen, so they needed to be by the sea. They wouldn't take a croft in New Shawbost at all." According to another version, the crofts once extended all the way across from Carnan to the loch; when the Uig people came, the crofts were chopped in half, and the street called Baile Stigh was created.

175 625 Whatever effect the Constables had on land use and animal husbandry, they are now referred to as "tyrants," who went mad or committed suicide after the Crofters Act of 1886.

175 311 233 Cattle and horses were tethered or herded within easy walking distance from the township; sheep could be left on the moor without much surveillance. At a much earlier time another dike existed out beyond the (178) (221) township dike. The dikes were used according to principles found in grazing schemes today: the sheep were kept far out on the moor, beyond the second dike, until midsummer when they were moved in closer to the village. At this point they were still out of the arable land of the

175 275 273 of beer at one time to avoid having to mal round trip very often. Men met to drink tigh ceilidh, the houses in which people evening visiting, but for this purpose eve huts of stone or concrete, or used shelter available such as the shells of old buses built by the armed forces but no longer us (361) These shelters, separate from the rest of were called bothans. public health and general administration, and has offices in Stornoway. Stornoway itself is largely looked after by a Town Council which deals with the property of the burgh, makes and administers byelaws and imposes burgh rates. The police are under County administration, each burgh paying an annual contribution for their services; the law is administered by a sheriff-principal and two sheriff-substitutes, one of whom holds court in Stornoway. Each parish has a local committee of management.

The political history of the Western Isles, and no less Harris and Lewis, reflects the agrarian troubles. Before 1917, when Lewis was a Parliamentary part of Ross & Cromarty, and Harris part of Inverness, the electorate was both Liberal and Radical; traditionally there has been a significant anti-Tory vote. In 1917, the Boundary Commission for Scotland set up the Parliamentary County of Inverness and Ross & Cromarty, with three divisions: Inverness, Ross & Cromarty and the Western Isles. In 1918 the Western Isles voted for the first time as a Parliamentary constituency of its own, and showed a predominant Liberal sympathy; the returned candidate was also standing for the reform of the Land Law.

In the General Election of 1923 a Liberal candidate was again returned, with a repeat performance in 1929. In the latter election however, the Socialist came in second place. In the crisis or scare election of 1931, the Labour Party did not contest the seat, which was won by a Liberal-National candidate opposed by a full-blooded Conservative. In 1935 the Labour candidate, a native of Lewis, was returned with a 1,345 majority. This Member retained his seat through all subsequent elections losing it only in 1970 to a member of the Scottish National Party, who became a lone Home Ruler in the House. Labour, Conservative and Scottish National parties are represented in the constituency, with a small Liberal showing. The revision of local authorities has given virtual autonomy to the Western Isles.

PUBLIC SERVICES

The lack of adequate social and public services has been cited by some authorities as a factor encouraging people to leave the

through division of labour or united effort, but simply for the sake of mutual stimulus and pleasure!

(D) THE SHARING OF MACHAR, MOOR AND SEA

Embracing several joint-farms, each with its team or crew, came the township. The township had not only its common pasture, it had a special extensive system of run-rig on sandy, coastal machars, as in parts of the Island and in Uist—a system continued to this day.

On the machar of Barvas, cultivation strips are still re-allotted periodically, as they were annually on all the Island machars. The machars behind the 'storm-beach' dunes of the Outer Hebrides closely resemble one another, from the Butt of Lewis to Barra Head. The immemorial system was noted by Walker and more fully by Carmichael, who called it 'intermediate run-rig' to distinguish it from the run-rig of older joint farms on boulder clay, and it persists at the present day.[1] In North Uist the machar land is laid off in large scatts or fields. Each scatt is divided into as many rigs as there are crofts in the township. There may be a dozen scatts in all, and usually half the number are lying out in natural pasture, but they are put under crop in rotation, so that each year one or two scatts will be brought into cultivation, and the others left out after a course of cropping. When a scatt is to be brought into cultivation the township 'constable' (who holds sway under the district ground officer) appoints a day for allocating the rigs.

[1] Walker (1808); Alexander Carmichael, appendix xlviii and xcix, pp. 213 ff. and 451 ff., Report of the Crofters' Commission, 1884. Socially these form the most significant evidence in this great Report. See also "Grazing and Agrestic Customs", *Celtic Review*, 1905. Cf. C. Macdonald, *Scot. J. Agric.*, 1919. See also his lively accounts of machar and pasture: *Highland Journey: Suil air ais*, 1943.

185 for the social arts, education could be won abroad by those who have imbibed at least some part of their native heritage but who cannot easily learn how to make the best of their birthright. At this time, change of outlook must be radical for all, but most of all perhaps for those communities who are in process of changing from one tongue to another, and for whom there is therefore so much to lose, so much—potentially—to keep, and so much to be gained.

In the Island there is a strong feeling that reorientation is required to direct surveys which may enlighten policy and lead to action in common. It was as a result of this that the Lewis Association came to be formed.

(B) THE LEWIS ASSOCIATION

185 In the constitution of the Lewis Association are embodied 'six
623 fundamental principles' which illustrate the feeling quickened among thoughtful citizens in time of war, that 'temporal' considerations require the guidance of the spiritual. They run as follows: "(1) There is a law of God, to which all men must conform in their social, economic and political relationships. (2) The Resources of this Island should be used as God's gift and for future generations. . . . (3) Every child should find itself a member of a family housed with decency and dignity, in a happy fellowship, unspoiled by drab surroundings; and (4) have an education, planned for his aptitudes and development and inspired by faith. . . . (5) Every citizen should be secure to enable him to maintain a home. . . . (6) The community should provide for its members' recreation to enable them to enjoy a full personal life. . . ."

What is the Association achieving, it will be asked. A member remarked that, imperfect as the findings might be, a useful purpose was served in regular gatherings of a number of people to thrash out the facts together. A remarkable and perhaps a surprising measure of agreement has been reached, in view of the highly controversial nature of many of the

subjects discussed, and their relation to issues which had aroused heated public argument and even led to lawsuits. It was thought that conveners of committees might have difficulty in maintaining harmony, but this had not been the case; discussion had been frank and warm, but not overheated. Preparatory discussions, followed by publicity, had done much to arouse the townsfolk, in particular, to questions of planning. The result contributed to greater keenness in the elections to the Trust, and led to new activity in Trust and Council. As a local association such as this is somewhat unusual as yet, is it an early sign, as one would hope, of a widespread movement for survey and service? Their example is being followed elsewhere.

When formed, the personnel of the Association, compared to that of many war-time bodies, was comparatively young; and younger members found a welcome and a role to fill on their return from the Forces. The Association owes its inception both to men and women, to natives and residents of long standing, and also to comparative new-comers. The first Chairman, a minister of the Church of Scotland with experience of local government in a great Lowland county, was the Rev. Ian Carmichael, D.S.O., M.C. The Honorary Secretary, Mr. J. S. Grant, is the editor of the weekly *Stornoway Gazette* in succession to his father. An able journalist, Mr. Grant is reputed throughout Scotland as a writer of plays on themes significant to national life. To start with, the membership was largely urban, though country schoolmasters and others whose duties lie in the landward townships took an active part. Meetings were then held in villages to enlarge the rural membership and justify the name and aims of the Association, by making it truly " representative of each district in the island of Lewis ". Its publications are models of their kind.

CONTINUED
FROM
PRECEDING
FICHE

623 633 433 361 for planning preceded by adequate survey became publicly recognised, this crisis seems to have caused a change to constructive policy on the part of the Trust. It led to the election of a new member of the Trust on a planning platform, and to a general searching of heart and mind in the community.

[184] Meantime the movement for town planning which had spread from the bombed cities to the rest of the country, led to a closer co-ordination of planning aims between the Trust and the Town Council, and there is real hope of progress in collaboration with the County Council as the statutory planning authority.

In brief, the opportunity arose for the Trust to frame a comprehensive policy, one binding together the objects separately listed in the Deed, " to promote the material and social welfare of the community ". The ' material ' provisions of the Deed allow for the promotion of industry—including fishing, of course—of agriculture and afforestation, and of communications by land, sea and air. Medical service is not forgotten. The encouragement of social life and education is foreseen, and bursaries may be provided to enable deserving scholars to proceed to secondary schools and universities.

185 It is felt by far-sighted citizens that these aims should be properly co-ordinated. Development of resources and social life, they feel, could be combined with education and training deliberately designed to equip young people to return to the Island and use their capacities to serve their own community. [311] Thus among the development schemes which have been mooted are the reclamation of peat, the reclamation of the sandy inlet just north of Stornoway, and local afforestation. [871] All these technical jobs require training, at the levels of engineer and skilled foreman or working hand. Bursaries might take [168] the form of education for such rural tasks. The ' export ' of talent may be necessary when no outlet is possible at home, but in the end it can drain away the community's youth. Hence a policy for the return of talent is required. For fishing, for industry and particularly for the weaving arts, training is required in preparation for possible careers at home. Lastly

183 The generally low level of stimulation derives in
181 part from values which restrict opportunities for self-
[521] expression. People are ready to gossip, i.e., to partici-
pate vicariously in the escapades of others, but are less
• [626] eager to act. Stories concerning mad-cap adventures of
some villagers do not belie the existence of constraints
[166] imposed on expressiveness. One of the major reasons
given by young villagers for wanting to leave the island,
and by emigrants for why they left, is that, "There is
nothing to do. The place is dead."

156 In the everyday life of the village, a style of
181 indirectness and restricted communication is encouraged.
183 A man might be praised in an obituary by the phrase, "His
621 voice was never heard in the community." The encouragement
of a "low profile" of behavior is characteristic of
communities in which people meet each other frequently
and know they will continue to meet and ask things of
each other for a long time to come. Indirectness avoids
conflict arising from divergent expectations, and embarrass-
ment from changes in plans.

155 A major feature of practices of child-rearing on
861 the island is inconsistency, which develops a style of
guarded watchfulness and hesitance to act or express
oneself. Children are teased by being offered things
which are then snatched away. Punishment is inconsistent.

794 2. The Township as Religious Network: The religious
621 sphere has two distinguishable social networks, one of
which coincides in personnel with the village network.
Most household within the village feel obligated to
"make an appearance" during at least one of the two
796 Sunday services. Most children are sent to Sunday school,
851 and all are baptised. In baptism, fathers stand with the
children, promise to raise them in the church, and to set
a good example for them. Baptism must precede Communion,
the ceremony by which a person becomes a full member of
the church. Baptism signifies membership in the community,
the village-qua-congregation. "Somehow you're not really
legal until you've been baptised." Some feel that the
child's soul may be endangered if he should die without
baptism, although this idea is discouraged by the church.
[199] According to the Calvinistic ideas of predestination, the
fate of one's soul has already been decided.

796 The pressure to have children baptised enables the
851 village-as-congregation to exert social control over deviant
• 626 individuals. If a child is conceived out of wedlock, the
848 parents of the child (if they have gotten married) or the
unwed mother alone must stand in front of the congregation
and be lectured by the minister before the child may be
baptised. A woman who has married a man known not to be
the father of her child must also stand by herself. A

796 miscarriage occurring before marriage also requires
851 standing even when the child to be baptised was conceived
• 626 by the couple after marriage. A married man who has
848 impregnated a woman who is not his wife must undergo
[857] this ordeal before he can have his own children baptised.

It is the responsibility of the entire community to
ensure that this punishment is carried out. On one occasion,
the minister forgot to lecture a couple, and afterwards
sent them a note that they would not have to stand; but
they insisted, afraid that people would say that they
were getting special treatment.

[203] According to one minister, the manse is a kind of
[521] "research center" to which all gossip is reported. Some
[193] ministers use this information in the pulpit, chiding
[194] people and calling attention to wrong-doings in front of
the congregation. In contrast, a different attitude exists
[184] in parts of Stornoway, where villagers have approached
[159] doctors in the maternity ward for information regarding
miscarriages and premarital births only to be told that
this information is confidential. The ordeal of standing
[178] in church does not exist in Stornoway. In 1971 a person
in Shawbost was accidentally exempted from this ordeal
and his exemption was seen by some as providing an
opportunity to stop what is considered by many to be an
archaic custom.

175 his bonnet in his hand and bowing low and reverently, he
622 declares on honour in presence of earth and heaven, in
[782] presence of God and men—*Am fianuis uir agus adhair, am*
[178] *fianuis Dia agus daoine*—that he shall be faithful to his
trust. This simple declaration of office is extremely im-
pressive, though now, alas, becoming obsolete from the
fears of the shallow thoughtless and the scoffs of the severely
• [626] wise. The duties of the constables were to divide a new
peat-moss into banks for which lots are cast, to see that
every crofter does his share of free labour in road building
and repair, to engage herds and the like." (*Napier Crofters' Commission*, 1884.)

Naturally such duties called not only for tact, firmness
and authority, temporal and spiritual, on the part of the
constable, but for strong backing by the crofters, as a body,
175 of the man they had freely elected. But hence too, the
622 advantage to a covetous landlord of superseding free
559 election by appointing his own nominee. Martin found
427 that this had been done in St. Kilda shortly before his visit
(about 1695) and the people complained bitterly, as well
they might. We shall see that the same suppression of
liberty was resented in Lewis less than a century ago. As
a mere estate employee, moreover, the constable's position
between the landlord's factor (or ground officer) and his
fellow-crofters, was always difficult; and it might be cruelly
hard, as when he was forced to help in destroying a neigh-
bour's house at an eviction. Neighbourly union in a town-
ship was damaged by this duality of function, when he
who should have been their own impartial executive was
in the landlord's pay. When affairs got too bad in a
Lewis township the people would appoint their own con-
stable in addition to the landlord's; even so, rivalry and
dual functions weakened the community. Such weakness

181 for help?" In one of the Outer Isles, I know of one or
458 two crofters holding fifteen acres of arable, with a share of
746 a good outrun, who have let their stock dwindle and
deteriorate, and their crofts lie mostly fallow, though these
could support a horse or two, several cows, and fifty sheep.
After having found some casual labour, they discovered
they could live mostly idle 'on the dole'. Self-respecting
neighbours suffer: good families who prefer to be inde-
pendent of 'Assistance' and to improve their crott
[472] and stock, and the outrun too. These find their stock
deteriorating for lack of co-operation in breeding, fencing,
and other communal duties, and see their crops invaded
by weeds, blown from a lazy neighbour's plot. While
an idle neighbour benefits by their industry, they them-
selves are losers.

In another island, a hard-working crofter lost a score
of good lambs through 'worrying' by the dogs of an idle
neighbour, whose own stock had dwindled to a trifle. He
was finally awarded legal compensation; but he found it
wiser not to exact it, for the unspoken threat of exaction
[472] gave him a hold upon the idle 'dole-drawer'. The worker
• [626] could still insist that the idler pay his share of the cost of
posts and wire for a fence on the outrun, or contribute
the minimum hours of labour due for fencing and other
[461] statutory tasks in the township. Men like that idler sap
181 the urge to work. They lower communal morality to a
semblance of the social code once too commonly seen by
Islanders in the domestic service of the upper and middle
classes, a code by which chronic idleness was disguised as
'leisure' and conspicuous dependence upon the work of
others was honoured as 'independent means'.[1]

[1] A summary of production, and figures of productive and non-productive income, are given in Appendix I.

In the absence of terms for in-laws, these relatives are simply referred to as the husband's or wife's kin. Hence, structurally, the extended family on Skye is comparable to the Irish system,[19] and, obviously, is dissimilar to our bilateral family structure.[20]

Because the extended family is so very unstable, it is difficult to describe it functionally. There was a time when the people were divided into three communities of fate, the members of which were bound together by the bonds of real and fictitious kinship. Today individuals whose remote ancestors stood together in defense of their homes may not have seen their brothers in many years. The material I gathered allows only two generalizations. Any member of the extended family is always free to call upon his kinsmen for help or, at least, hospitality in need; and the closest surviving relatives always know their obligations and are ready to fulfill them. Thus, the family is a mutual aid group. The primary responsibilities of the kin are to see that all have food, shelter, and a proper burial.

There are additional social circles in the crofting community. The youth, young adults, and the aged are divided into age grades. Of these, the age grade of the old men is especially important. They control the economic progress of the island by their deliberative function concerning any innovation in the crofting system. Whether it is a suggested

[20]Cf. Talcott Parsons, "The Kinship System of the Contemporary United States," American Anthropologist, XLV (January-March, 1943), pp. 22-38.

change in the use of the grazing land or a desire of the young men to fence the crofts in an effort to improve the individual crofts the old men must have their say. Through their position in the churches, the old men also are the paramount source of social control, preserving their traditional habits and statuses, including a severe limitation on all social activity of a frivolous nature. This religiously sanctioned control is strengthened by the inability of the youth to form a solidarity. Indeed, one of the most serious limitations of the society of Skye is the small number of young men and women, boys and girls and the few opportunities which they have to come together as a group. The functions of the old men's age grade are identical with those described for the Irish small farmer.[21] Another social circle is composed of the affiliates of the same religious sect. They are mainly a mutual aid group.

Although the status equality noted in the township for all of the same sex and age carries over to the larger community, there are always a few people who have an achieved status. The minister enjoys high social prestige as the spiritual guardian of the people. The doctor is valued for his role in caring for the people's physical well-being. The school teacher is respected because he educates the youth and often acts as a spokesman for the group. If there is a member of the landed gentry, he will be accorded the highest status in the area. It is interesting to note that the achieved status positions are most often filled by newcomers to the island. The shopkeepers and

[21]Arensberg, op. cit., pp. 125-139.

enlargements when the proprietor would not lease it on reasonable terms. Thus, the government began to protect the crofter from potential abuses and to restore the land to the descendants of the clanna, who had, to say the least, manifested a persistent disinclination to accept any other system of land use. A complete reformation, however, was not yet possible.

The crux of the problem of maintaining the crofting population was succinctly stated in 1851 by the chairman of the Highland Destitution Board. The people could not support themselves, at a subsistence level, unless each crofting family were given ten acres of arable land plus pasture. Not only was there not enough land, but without credit facilities, a man could not find local employment until the land began to produce, and, if he sought employment at a distance, he could not work his land to free himself from the necessity of working for a wage. In 1883 it was estimated that a 50 percent reduction in population would not leave enough land to give each family an adequate holding, ten acres of arable and 277 acres of grazing land.[81] How right they were. Today the population is less than half that of 1883, and still very few have what was considered an adequate holding a hundred years ago. Let us see what measures the government took in the attempt to solve this problem.

At first the land reorganization program was thwarted by a lack of available land and by the continued tendency of

[81]Napier Report, pp. 100-101.

the people to overstock. No land could be assigned as an enlargement if it would impair the value of a sheep farm or deer forest. The remainder of the island was already possessed by crofters. Moreover, there was no one to regulate the use of the common grazings. As the Crofters Commission usurped the functions of the landlord, estate management became lax. The township constable had disappeared. The cotters, 36 percent of the population, had been omitted from the provisions of the Crofters Act. Later when the government provided for a grazing committee to draft voluntary regulations for sharing the common grazing and, finally, coerced the crofters to elect a grazing committee, the regulations could not be enforced, except by appealing to the sheriff.

At length another commission of inquiry visited the Highlands to decide how the resettlement program might be extended. Then, in 1897, the Congested Districts Board was created. The Board was given power to purchase land for enlargements and for creating new holdings, to resettle crofters and cottars from congested districts, to foster the development of stock breeding, agriculture, fishing, and home industries, and to improve communications. It was not intended that the government should become a landlord. The crofters, like the Irish small farmers, were supposed to have acquired a desire to own their own land. In 1904 the estates of Glendale, the present twelve townships, and Kilmuir, the whole parish and part of the parish of Snizort, were purchased. On the Kilmuir Estate there were 450 crofts in 35 townships and 10 large farms.

Township Government. The township system has another marked influence on the economy of the Sriathanach. By far the largest obstacle in the path of reform is the persistence of primitive democracy, distinguished from the democracy of Western Civilization by the requirement of unanimous consent rather than majority rule. The individual who comes to realize that it is possible to improve on the ways his father did things is deterred from attempting to introduce innovations. He cannot, for example, erect a fence around his croft unless everyone in his township approves such a departure from tradition. The dissenting voice of one old man is sufficient to thwart any plan. Unanimous decisions on all township affairs mean that the most progressive worker must keep pace with the most conservative. This fact goes a long way in explaining the essential agricultural disharmony of Skye, and most of the Highlands, with the rest of Great Britain. It is also a singular example of the incomplete adaptation of the culture to the higher socio-cultural organization.

When coupled with the many limitations on the economy, township government helps the outsider to understand why many younger crofters feel that the primary value of their few arable acres is their use as pasture. Even in townships which have been fenced, the prevailing practice is to open the crofts after the harvest. All winter long the stock is free to graze where it will. "My arable is no use at all, except to winter my sheep," said one young crofter. Another asserted, "I have three crofts and the use of one more, but it's not

the people to overstock. No land could be assigned as an enlargement if it would impair the value of a sheep farm or deer forest. The remainder of the island was already possessed by crofters. Moreover, there was no one to regulate the use of the common grazings. As the Crofters Commission usurped the functions of the landlord, estate management became lax. The township constable had disappeared. The cottars, 36 percent of the population, had been omitted from the provisions of the Crofters Act. Later when the government provided for a grazing committee to draft voluntary regulations for sharing the common grazing and, finally, coerced the crofters to elect a grazing committee, the regulations could not be enforced, except by appealing to the sheriff.

At length another commission of inquiry visited the Highlands to decide how the resettlement program might be extended. Then, in 1897, the Congested Districts Board was created. The Board was given power to purchase land for enlargements and for creating new holdings, to resettle crofters and cottars from congested districts, to foster the development of stock breeding, agriculture, fishing, and home industries, and to improve communications. It was not intended that the government should become a landlord. The crofters, like the Irish small farmers, were supposed to have acquired a desire to own their own land. In 1904 the estates of Glendale, the present twelve townships, and Kilmuir, the whole parish and part of the parish of Snizort, were purchased. On the Kilmuir Estate there were 450 crofts in 35 townships and 10 large farms.

The substantial tenants had their own private tutors, but the 175* people, in general, received only informal schooling until 178* well into the nineteenth century when several charitable societies 658 entered the field.[85] All schools were essentially religious. [794] The act of 1872, and subsequent legislation, changed the program and made education compulsory for all. It was not until the end of the century that adequate facilities were available and the system began to function, with the beginning of free education.[86]

Informal control within the community was augmented by 175* the establishment of a rural police force, with headquarters 178* in Portree and local stations at convenient points around the 657 Island. [625] Health and welfare became a responsibility of the state. A regional medical plan provided doctor's care and hospital facilities for all regardless of means. Old age [737] pensions were granted to the elderly. Later, the scope of assistance for the infirm, aged, and the poor, and the unemployed was increased. Thus, the government continually 175* usurped many of the functions of the family and the local group, 178* especially following the abolition of the parish council in 657 1929.[87] Although the parish councils, or the still older 621 parochial boards, had no legislative powers, they did handle welfare and, until 1918, education. Now, in 1929, a Skye

[87] C. De B. Murray, How Scotland Is Governed (Glasgow: Art and Educational Publishers, 1947), pp. 118-136; 195-196.

421 "rich man, the government." Since subsidies depend on the 887 number of stock, he may forget that all or part of his "souming" 231 has been given away. One old crofter, for example, a few years 824 ago asked a young lady to fill out his agricultural return. She knew his estimates gave a great deal of reason to doubt his veracity, but, preferring not to question the point, she entered his figures. When it came time to sign the report, he was canny. "Och," he said, "just put a tremble in your hand and sign it yourself." There are other crofters who puzzle the authorities by returning the same number of cattle and sheep year after year. Although even the best crofters and farmers lose a few sheep and an occasional cow, they insist [625] that their stock has produced as many as have been sold. As a means of protecting the government from paying for non-existent stock, the police have to be notified when the annual stock counts are to be made. Even when they do supervise the counting, allowances for stragglers have to be made.

654 So pernicious is the effect of non-residence and decrepit 427 crofts, that a recent government commission has recommended the 888 severance of the house from the land in the case of the aged and the eviction of the absentee, as a means of bolstering the economy and alleviating the widespread condition of bad 427 husbandry.[17] This could be the final blow for the culture. Not 888 uncommonly, the croft is subjected to both absenteeism and the infirmity of old age. The heir does not return until he has passed the age of retirement and begins to think, "It would be

[17] Report of the Commission of Enquiry into Crofting Conditions, pp. 42-43, 46-47, cb.

685 then, is theft handled?

685 The police who are charged with the responsibility of 625 protecting and restoring the property of the local citizens are faced with many difficulties. To begin with, the local people will not always complain to them. Even if the help of the police is sought, the person seeking it will not tell who might have committeed the crime. Even if he knows who is guilty, he will not tell. The police must build their case with care. If the facts are clear and straightforward, the 685 defender invariably confesses. One reason for this is the 692 fact that a confession means a local trial by a justice of the peace rather than one before a sheriff. The defendant can hope for sympathy, and he rests secure in his knowledge that his sentence will be lighter because of statutory 685 limitations. If witnesses are required, the police must almost 625 put words in their mouths, and they are never free from the possibility that a witness may change his story when he is put on oath. One policeman said, "They hold their church services up there," pointing to the court room, which was being used by one sect while their church was being repaired, "on the Sabbath from 10:30 until 2:00 and they're back again at 6:30, but they tell the damnedest lies in the same room."

685 We are dealing with a dichotomy like that we noted in 183 the case of poaching. As far as I was able to determine, those cases which come to court involve activities which do not affect the norms of the group. There was for example, a girl in Portree who stole the equivalent of some five or six thousand dollars in cash and material over a period of two

626

626 SOCIAL CONTROL--incentives to conformity (e.g., expectation of rewards, reciprocity, fear of social and supernatural sanctions, conscience); means of inducing conformity (e.g., example, precept, praise, rewards, warnings, threats); pressure of public opinion; informal mechanisms of social control (e.g., criticism, ridicule, gossip, cursing, sorcery, intentional silence, ostracism); incidence and effectiveness of such sanctions as compared with the application of physical force; etc. See also:

621 used on different occasions, for example, to discourage
626 deviant behavior or certain marital alliances. Any sign
582 of physical or emotional disability in someone planning to get married invites an attempt by other villagers to
[539] discourage an alliance. According to a Gaelic proverb, "If you want to be praised, die; if you want to be criticized, marry (Ma tha thu airson do mholadh, basaich; ma tha thu airson do chaineadh, pos)." The villagers
621 consider not only the behavior of the person but of his
626 ancestors. The individual is perceived as belonging to
582 a family unit which through many generations has manifested
827 certain physical and behavioral traits. Traits of behavior such as shyness, heavy drinking, stealing and tight-fistedness are interpreted as hereditary traits. "It's in the blood (Tha e anns an t'fhuil)." "It's in the people." Particular occupations are also associated with families.
[463] Stornoway, which is not so "urban" as to have a constant turnover of population, contains many examples of occupations passed down through generations.

632 In Chapter 3 I mentioned the development of several
578 groups in the crofting township which seem to be in conflict with the township as a strongly bounded system. People who keep only sheep have come to blows with those who keep both sheep and cattle; and a distinction between crofters and non-crofters may be seen. Many persons have preferred

197 Within the village there are no branches of An Comunn
178 Gaidhealach and few books written in Gaelic. Once a rural
166 family moves to Stornoway, children often refuse to speak
191 Gaelic, even though they understand it, and parents tend to speak only English to their children, believing this will help them "get on." In the next generation, the
[871] language is lost. Village children attending school in Stornoway often prefer talking to their Gaelic-speaking
[867] roommates in English. A young island woman, married and living in Edinburgh, says she would like her baby son to learn Gaelic but feels that if he had a mixture of the two languages the other children would laugh at him.

197 English is the language of the larger society, the
191 language spoken in school and the language required in most jobs and in dealing with most officials. In Gaelic-
197 speaking areas, the speaking of English connotes high
191 status. If an English speaker mispronounces Gaelic words,
554 he is quickly forgiven, praised for trying to learn such
626 a difficult language, and asked why he bothers with a
578 language that "isn't any use anyway." But if a Gaelic speaker makes mistakes in English, he is teased mercilessly.
[551] Many nicknames derive from such mistakes; for example, "Peter Squeak" got his name by mispronouncing the word
[524] "picturesque." People "win points" by competing with each other in speaking English. "See how good you are in

197 English, no Gaelic allowed. I can beat you any time...."
191 One person observed, "People here make fun of each other
554 all the time. They're always trying to be superior, to
626 get one over the other person. Speaking English gives
578 you a feeling of superiority."
[524] If a Gaelic speaker chooses to speak English in a village situation where there are no officials present or other cues which make English-speaking appropriate, this indicates that he considers himself a cut above everyone else. "I went to help Calum pull his tractor out of the mud, and Malina was there with her husband. She was speaking English. Oh, I says to myself, lady, you're not for this place. You don't belong to this village."

In evaluating whether or not a particular woman is "snobbish," villagers may decide, "She must be; whenever I've seen her in the post office, she never speaks any Gaelic."

197 The sanctions against speaking English when all
191 persons present speak Gaelic indicate the effect of inter
554 action between a socially marginal group and the dominant
571 group. The effect is to increase the emphasis on uniform
184 behavior within the marginal group. The existence of a
578 higher social stratum has diminished social differentiati within the village setting. Individuals may move out of that setting and adopt the language and other forms of

worth while to cultivate any of the arable, so I use it for 626 632
grazing." A case which aptly illustrates the influence of 621 233
the township system as an agent of conservatism is the breeding 231
of pigs. Although several old crofters told me how many 779
people during the times of the "Clearances" kept a pig, they 183 632
are rarely found anywhere in the Highlands today. The Biblical 621 626
injunction against the flesh of swine has been taken literally. The older people simply have a strong aversion to handling pigs. One man, a very successful cattle and sheep breeder, put it this way: "Pigs are filthy brutes. I just don't want to touch them -- I never have kept any and never will." At the same time, there are men who believe that the prices these animals bring at the mainland markets more than compensate for the individual's revulsion, especially as long as the Ministry of Food pays for the cost of transportation. These men cannot try branching out because they have no way to restrict the foraging animals. "Skye is ideal for pigs," one young fellow told me, "but I don't have the freedom to work the croft to suit myself."

Smaller deviations from the traditional methods of land 621
use face the same difficulties. A progressive crofter who 632
attempts to improve the value of his stock by growing scientific 626 232
mixtures of grasses is always penalized. As soon as the harvest 241 178
is over, the stock of all his neighbors will show their appreciation by concentrating on his croft, trampling his fields, and overgrazing his grass. Nor is this his only penalty. His neighbors will regard him with skepticism for his departure from the ways handed down from the past.

621 from the ways handed down from

[882] speak unless addressed.

626 178 All societies allow some deviation from traditional
norms of expected behavior. On Skye, as elsewhere, excessi
deviation is censured. Neither increased opportunities for
education nor the steady flow of Skye men and women to the
four corners of the earth, accompanied by the slow returnin
trickle, have disturbed these fundamental values. Like the
youth who leaves home to achieve upward mobility through ou
ward mobility, the man who returns must conform to the
traditional norms, which he learned as a child, or be regar

254

an eccentric. Included among these norms is a willingness to tisfy the curiosity of one's neighbors. Although the old woman o acts in mysterious ways is no longer regarded as a witch, o of the loneliest people I knew on Skye were two old insters who had kept their past concealed. No one in the wnship would have anything to do with them. Were it not for riodic visits by the local Red Cross, they could have died l hardly been missed.

This status equality for all of the same sex and age ade leaves no room for the status and role of a leader.[15] casionally, an individual fancies himself as a self-elected ader, but he is always resented by the remainder of the wnship and his neighbors do not hesitate to show their dis-easure. As an eccentric, he is dubbed with a cynical title, h as "the sheriff." If he can keep himself immune to the unts and jibes of the people, he is accepted in time or, rather, es to be tolerated. He gives the people something to talk ut. The aspiring leader becomes the subject of numerous es. Any human failing he displays is immediately taken a means to censure him. These are negative social sanctions. s drastic than ostracism. I only knew one of these self-led leaders. He was a well traveled man and a walking ycleopedia of miscellaneous facts. Walking the hill with , I was told how Boston compared with Glasgow; how the tish fought the Crimean War; how the money they received from Turks helped Skye during the potato famine; and how the

255

554 626 829 New Zealanders breed sheep and make linen. One might say he knew more about the world than about Skye. He could not understand why so many people made fun of him when he was only trying to help.

626 632 In the absence of any traditionally valued status and role of leadership, administration of the common interests of the township members is the concern of all. We say in the last chapter that primitive democracy is the guiding rule. Each crofter has an equal voice in deciding any question which affects the group and all, without exception, have to agree before any action is taken. Consent is expressed by silence. Typically, the crofters will have talked the [624] matter over among themselves beforehand. At such times the fact clearly emerges that the grazing clerk and the grazing committee are no more than figureheads required by law. They have no coercive or disciplinary powers. In any group situation, their views are taken no more seriously than those of any other man.

887 888 626 632 It is the old men who gather at one anothers' homes or on the hill on a summer evening to weigh the innovation which the youth want introduced. If they find the change acceptable, they approve it at a meeting of the township by keeping silent. If they believe it will upset the communal system, they disapprove it. The dissenting voice of one old crofter is all that is required to maintain the conservative patterns, economically and socially.

182 626 In summary, we may say that within the township and on the croft the cultural patterns reveal a fundamental continuity. As of old, status is ascribed. Men have remained

182 626 [593] the soci superior how his

Kith and Kin within the Neighborhood

ring the days of the clan, the residents of the
hood were bound together by real and fictitious
consanguinity and affinity, which were reinforced
trong attachment to the soil and propinquity. Only
itious bonds have been forgotten. Like the township,
hborhood consists of an aggregate of conjugal fami-
se inter-personal relationships are reinforced by a
ted network of kinship. Once, perhaps as late as
s ago, the neighborhood was a highly cooperative
nit. When the local mills were in use and the church
been broken by schism, the people must have had a
inite focus for their common interests. In more
imes, it was a defensive entity. Today the neighbor-
no longer a cooperative unit. On the analogy of the
e plough and the caschrom, cooperation is essential
ownship but superfluous to this larger group. That the
hoods have not lost the potential for concerted
n times of crisis is attested by the uprisings

565 and no one thought himself capable of running a future meeting.
554 At last reports, the wife of another proprietor was having
747 her impression that "It's not as easy as it sounds just to call a public meeting in Glendale," confirmed. While the majority of the crofters thought an Old People's Welfare Committee was a good idea, they had no intention of being instrumental in its organization or in assuming any position which might elevate them above their neighbors. Throughout this chapter, the stress on conformity has been apparent, let us now turn to the problem of social control for a clearer picture of how conformity is enforced and to see how the Sgiathanach handles the deviant.

Social Control

626 Since social control is an important topic, I want to go into a further analysis of the manner in which the group influences the behavior of its members. For the sake of clarity, we must distinguish between social and political
121 control. By social control I mean the informal pressure or spontaneous action which any organized group can muster to exert an influence on its members sufficient to encourage conformity to tradition patterns of behavior. Political control, to me, involves the independent or requested interference of the state, as represented by the police, in any case which involves the enforcement and maintenance of law
671 and order as prescribed by legal enactments. On Skye the
829 laws of the land do not always have the same meaning to the

671 people as they have for the larger society. This is true
829 in spite of several hundred years of continuous and increasing contact.

Poaching provides an excellent contrast between the two forms of control and the differing attitudes of the state and the Sgiathanach. In Great Britain the tenant of the land does not automatically have hunting and fishing rights. The landlords, including the Department of Agriculture, lease them separately and the county taxes them separately. The crofters, and many of the villagers, have never fully accepted the legality of their being barred from the rivers for fish, the moors for grouse, and the hills for deer. The police enforce the law to the best of their ability, but they cannot always count on the support of the local justices of the peace, much less the cooperation of the people. Several of the local justices of the peace, those who are not landlords, feel that a man catching a few fish for his own use is not poaching.

626 If social control were to assume importance with respect
671 to poaching, it should appear in Glendale. When the crofter
829 owner-occupiers are able to rent the hunting lodge and gaming rights which they received as part of the purchase, they all share in the rent and benefit by not having to pay both owners' and occupiers' rates on the property and the gaming rights. Unfortunately, they have had a great deal of trouble in finding tenants and even more difficulty in keeping them. The river and land is all poached. When asked by whom, one man replied, "Och, who but ourselves would be doing it?" The

299

iserable they have left the island. Adultery, as we have 626
een, is an excellent illustration. Another example is
hurch going. Almost everyone goes to church. It is expected.
everal newcomers frankly admitted that they only go because
he people would talk about them.

Gossip has another important social function. It is a 626
ans of social sanction, and as such reinforces the "unconscious 182
ystem of meanings" to use Herskovits' words.[40] Through its
ositive and negative aspects, the use of gossip as a social
anction contributes to the solidarity of the group by creating
feeling of oneness. It can also accord status to individuals,
d it can either make an individual with high status more
ecure in his belief of superiority or make a person of low
tatus feel less inferior.

The crofters relish stories of human failings among 554
hose of high status. The landed gentry seldom give them 626
ch to talk about, but the few unexpected things they do,
ch as marrying outside their circle, are long remembered.
e villagers often provide them with choice stories. Any-
e, especially a native son, who moves into Portree or
turns to Portree and sets up a business is bound to be
lked about. "Do you know what I heard? Well, I heard that
got his money down south and just beat the police out of
wn." Men who have shops which their fathers or grandfathers
tablished escape, but the founder of the business is still
membered. "You know where the old man got his money? He
s going home one night after a cattle sale with a group of

[40] Herskovits, Man and His Works, p. 222.

300

his neighbors, and he done them in and took all their money." 554 626

The villagers and, in particular, the county people 369
enjoy amusing stories about the crofters. One tale concerns
a crofter who received electricity from the Hydro-Electric
Board. After the cottage had been wired, his wife bought him
an electric razor. This created a problem. If he plugged
the razor into the single light socket, he could not see to
shave on a winter morning, but if he had the light on he could
not plug in the razor. There are many stories about crofters
who refused electricity because they were afraid the house
might blow up if hit by lightning, and there is the favorite
story of the old woman, on the Isle of Lewis, who thought
electricity was fine to see to light her candle.

To see how gossip, bordering on tradition, is indicative 522
of high prestige status, we may take the story of the doctor
of Kilmuir. One day just after a cattle sale the doctor took
the boat from Portree to Kyle. In addition to several local
people and many cattle, there were two Sassannachs on board.
The Englishmen asked the doctor how many cattle there were.
He thought there were quite a few. A hundred, the Englishmen
asked. "Sure," said the doctor. Two hundred, they asked.
The doctor again said, "Sure." They then inquired whether
or not the doctor could count. When he answered in the
affirmative, they asked how many they and the doctor were.
He replied, "One hundred, I am one and you two are nothings."
The core of these stories always involves the doctor's getting
the better of someone, especially an Englishman. It may be

304

crofters, an individual's prestige depends more on what he 182
does for the group than on occupation. 621
384

The society has a strong degree of integration. This 182
is shown by the requirement of unanimous consent on all under- 621
takings, even in the village, and by the continued success 626
of the group in exercising social control by positive con-
certed action and by employing gossip as a negative social
sanction. The norms of behavior and the values have remained
common and clear.

We are now closer to an understanding of how the 128
Sgiathanach has maintained a continuity. For a full under-
standing of the social organization and to answer the question
why there has been continuity we must take one final step.
The religious aspect of the culture holds the key to the
unanswered questions.

315

794 125 members. That the Sgiathanach has not been influenced by
the laxity of the newcomers in self-examination is indicated
by the existence of 450 adherents. Further, the Free Church
has only 21 members in a congregation of some 280, and the
Free Presbyterian Church only 20 members in a congregation of
320.

The esoteric religious hierarchy established by the
"Men" during the nineteenth century revivals continues to
influence the lives of the people. From the small number of
the "elect" are chosen the elders, the venerable guardians
of behavior, and the deacons. The majority have been baptized
but are in a fallen condition. Shall we stretch an analogy 545
and ask is this not comparable to the social hierarchy of
ceann-cinnidh (clan chief), daoin'-uaisle (tacksmen), and
clanna (clansmen) of the past? This much is certain: a
strong hierarchial sense must be numbered among the persistencies.

889 In our discussion of the Islanders' economy we noted
575 two significant facts concerning the sodality of the old
794 men of the neighborhoods. We saw that they have a deliberative
626 function in discussing economic innovations before they
pass down to the townships, and that they are able to block
any innovation of which they disapprove through the require-
ment of complete unanimity in township affairs. We may also
recall the statement, "If you can't respect an elder of the
church, who can you respect?" We may now add they have
judicial and authoritarian functions in the religious sphere
of activity, and, through their status within the church,
they ultimately control the patterns of social behavior.

316

Their deliberative, judicial, and authoritarian functions 626
are identical with those found among the Catholic small 171
farmers of Ireland.[9] Of course, it is by no means unique in 175
human groups for the aged to attempt to maintain their 794
accustomed habits and statuses while the youth endeavor to 121
find acceptance for new ideas.[10] Nor is it unique for the
younger members of the society to resent the restraints
imposed by the older people to punish deviation from tradition-
al behavior.[11] Culture phases, as Kroeber has pointed out,
associated with age tend to correspond to changes taking
place within the society, rather than reflect static lines
of segregation, such as those which exist between classes.[12]
If these assertions are valid, the success which the elderly, 88
as a sodality, enjoy in barring the youth from achieving 626
acceptance of novel patterns should be indicative of the
importance of age controls on the Isle of Skye. In order to
see how they exercise control and how successful they are,
let us consider those events in the life cycle which Van Gennep
has called rites of passage.[13]

Rites of Passage

Rites of Passage function in all societies to mark the 121

passage of the individual from birth, through his age statuses, 121
to death and to re-establish meaningful patterns of interaction
after a disturbance by an event in the life cycle. When 851
individual and reciprocal patterns of behavior following birth 794
were described, I pointed out that they were a much modified
survival of the old practice of kirking, the custom of having
the parents, their "people," and "friends" attend a church
service to offer thanks, followed by a feast and dance. Similar
festivities once accompanied baptism. As the first event in
the life cycle which concerns the church, and as one of the
two sacraments celebrated in the church, baptism is of supreme
importance. In addition to revealing the amount of control [121]
the elderly have over the group, it shows how the status and
role of the father has been maintained.

The child's father, as the religiously sanctioned head 626
of the family, approaches the elder for his township and 851
requests the administration of the sacrament. The elder, in 888
turn, intimates the father's request to the minister, who 794
then calls a kirk session. At the kirk session the father is
examined. He must live an exemplary life, in the way of the
church, including regular sabbath church attendance, daily
worship in the home, and the renunciation of all forms of
frivolous amusement. The elders, of course, know how he
habitually behaves by observation and reputation. In Glendale,
if not in Kilmuir, the minister knows as well, for, as one
woman said, "You never know what your neighbors will run and
tell the minister." Sudden reform is not good enough. The [177]
father must also demonstrate his ability to raise the child

in the nurture of the church by being tested on his knowledge 626
of the Bible and the Shorter Catechism. The elders, then, 851
sit in a judicial capacity. If the father measures up to the 888
standards imposed by the elders and the minister, who is their 794
choice and, therefore, must reflect their views, the father
is told to present the child for baptism. If he does not
satisfy the elders, his child is refused the rewards of the
church until his father mends his ways. Here the authoritarian
function of the elderly finds expression.

Many men are reluctant to approach the elders to ask
for the sacrament. Everyone knows when a man is going to be
tested and judged. The humiliation of being refused forces
the father to reform. Since the elders think in terms of
habitual behavior, one or even two years may pass before the
father will feel that he has continuously demonstrated his
conformity to the satisfaction of the elders. Nor is the bond
of affection between the elder and his people and friends
strong enough to prompt any leniency. To do so would threaten
the status of the elders and the continuation of their control.
In one case a first cousin of the minister was refused.

In the trade center village the question of baptism is 369
a sore point for the ministers of the Free Church and the Free 626
Presbyterian Church. As might be expected, the elders of the 851
Church of Scotland are chosen from the county families and 888
the prominent newcomers. Neither group shares the views of 794
the *Sgiathanach* as far as their interpretation of circumspect
behavior is concerned. For them baptism is administered to

the child. Consequently, the sacrament is normally administered 369
without even the formality of a kirk session examination. The 626
ministers of the other churches assert that non-church-going, 851
drunken fathers whom the kirk session has refused have gone to 888
the Church of Scotland and have secured the sacrament for their 794
children after pretending to mend their ways. They have then
gone back to their former habits. It may be so, but at least
one man in Portree was very surprised to find that the Church
of Scotland can require a severe examination.

At baptism the child is formally introduced into the 851
folds of his father's church. His mother and father stand 794
before the minister and are admonished to bring up the child
in the nurture and admonition of God, to the best of their
ability.

Marriage is not a sacrament in Scotland, and, therefore, 585
does not provoke any strong resentment beyond a feeling that [177]
the Church of Scotland should not have the exclusive right
to proclaim the banns of marriage. It is the one time in 585
the life of a woman when she is the center of attention and 562
has complete control over the situation. She decides where 794
she will be married and what minister will preside. Church
affiliation seems to make little difference. At least, the
wedding of a daughter of a strict Free Presbyterian family
in the Church of Scotland did not give the people any cause
to gossip. Although a wedding is no more than a legal formality,
the vows made at marriage are sacred. It would not strike
Americans as being particularly significant to omit the promise
to obey from the ceremony; Americans are said to have an

equality of the sexes. On Skye, where women are the social 585
inferiors of men, its omission is curious. The ministers have 562
taken the promise of the ceremony out because, as one said, "The 794
man may be a rogue, irresponsible, making it impossible for
the woman to obey." She nevertheless promises to be "loving,
truthful, and dutiful."

Election, as a passage rite, marks the attainment of the 794
status of the elderly. We already know that to become one of 888
the "elect" the individual, man or woman, must not only 626
experience a soul-saving change but also manifest steadfast
conformity to the ideals of behavior which have religious
approval. These ideals are the habits and statuses which
the old people are striving to maintain. Thus religion 794
sanctions the status of the venerable old people. Their 888
interpretation of "Effectual Calling" functions to provide 626
the elders, the most eminent of the "elect," with an additional [182]
means to exercise their judicial and authoritarian roles.
There can be no rapid conversion. Whether or not the pro-
bationary period of three years imposed by the "men" in the
last century is still enforced I do not know. The person who
believes he has experienced a saving change, "a visitation
from the Holy Spirit," is examined by the minister and his
elders. Like the father who is seeking baptism for his child,
such an old man or woman is judged on his knowledge of the
Bible and the Shorter Catechism and on his conformity to the
righteous life. No one can experience a saving change unless
he is known, by observation, to have lived an upright life.
The person who continues to pursue his own mundane pleasures

cannot be spiritually enlightened. The individual who is asked
about the nature of his visitation is not judged on his ability
to raise his family in the nurture of the church. He is rather
judged on his preparation to carry on the tradition. He must
be worthy of the respect due to one of his status. While old [56]
women are numbered among the "elect," their exclusion from any
active role in the church has kept them socially inferior to
the old men.

I wish I could give some examples of the nature of this 121
"visitation;" however, Skye is a land where the direct question 57
is not used. One can ask a direct question without offending,
but the code of hospitality requires an either affirmative
answer or the answer you think your guest expects. My
circuitous promptings on this topic only succeeded in arousing
concern for my soul.

Two groups escape from the control of the elders as it 626
is exercised through acceptance of an individual into the 888
"elect." As mentioned earlier, the newcomers to Skye have 794
come from different backgrounds. Beyond the Highlands, the 167
meaning of "Effectual Calling" has changed over the years. The [184]
youth attend a young communicants' class in which they are
taught the meaning of church membership. Notestein, writing
about the national character of the Scot, maintains that
interest in "election" has disappeared.[14] Most of the members
of the Church of Scotland in Portree would no doubt agree with
him. One attempt has been made on Skye to hold a young 77
communicants' class. It took place, of course, in the Church 77
184

[14] Notestein, op. cit., p. 153.

848 father. So well is the situation handled that the child in many cases does not know of his illegitimacy. We may illustrate this point with the story of a young lad of fifteen.

An old woman applied to the local office of the Ministry of Labor on behalf of "her son" for acceptance in an apprenticeship training course given in Glasgow. The manager of the exchange, who had recently arrived from the Lowlands, was suspicious. He pressed her for information until she admitted the child was her grandson. At a later conference, the boy was asked if he had any place to stay in Glasgow. He replied that he could live with his married "sister." In this case the girl had married someone other than the boy's father. There is no pattern of marriage in these situations. Sometimes the unwed mother-to-be marries the child's father before the child is born. Financial hardship often forces a postponement of the marriage until the very last minute. One couple was married on the day of their child's birth. Other girls never marry. In the latter event gossip appears as a social sanction. As I mentioned earlier, the native who has prospered is not always held in high esteem by the local people. There are several stories on Skye about such men, especially men in Portree, and their illegitimate children.

837 626 Extra-marital relations present a different problem. They definitely are not characteristic of the Sgiathanach. When a husband or wife does commit adultery, he or she is usually a newcomer. Nevertheless, the Islanders feel

strongly about this infringement of the traditional norms. 837 626 Gossip spreads very rapidly. The offenders are said to be "no better than the tinkers." While tinkers are respected [554] [754] because they have the power of the evil eye, they are not accorded any more prestige than we would give a beggar. All who have any contact with the neighborhood or the village where the deviants live soon know all the details. Since [369] most of the adulterers on Skye have been in Portree, it adds another brick to the wall which separates the rural neighborhoods and the trade-center village. The offenders normally leave Skye as quickly as possible.

The Sgiathanach cannot be said to have a strong sense 423 421 of property, or, more correctly, the land is valued as a place of residence and identity not as something to be bought and sold. We have seen that he uses his land communally and that he often will not leave a will for the house, not to mention his land. Even though the state thinks otherwise, he looks upon the natural resources of the island as his for the taking. At the same time, he normally respects the fruits of 421 his neighbor's labor. Any one can cut peat on the moor, but [314] no one, except an unthinking tourist, would take a piece of turf once it had been cut. In a simlar way, the children are 857 generally well behaved. In the village there is a bit of stone throwing, a little profanity, and uncommonly some drinking on the sly, but rarely do children show any disrespect for the rights of others. One contractor, a Lowlander who came up to Skye to make alterations on the school, was amazed. Skye

becomes too worked up, he is expected to withdraw. On occasions, such as weddings, when all have had their share of the uisge beatha (water of life), there may be heated quarrels, including the raking over of old clan feuds. Again, some older man will take the offender in hand, "It's not you that's talking, Murdo, it's the drink." The man almost invariably expresses regret for his outbreak later. Political meetings, often explosive situations in a democratic country, may involve some heated debate, but the code of etiquette is never breached. When one politician told the Kilmuir crofters that something should be done to stop depopulation because soon they might not have any young men for the army, the people were indignant, but they remained quiet. In the case of the cattle thief, cited above, no one lost his temper. In fact, the matter was discussed almost in a monotone.

People still talk about the one outstanding example of aggression which has occurred recently in Portree. At the end of World War II, a collection was made for the benefit of the returning servicemen. A public meeting was held to discuss what would be done with the money and who was eligible to receive a gift. Two young men, both of whom had spent several years in a German prison, and had been drinking, became boisterous. They accused the committee of spending the money and trying to cover it up. The chairman left the meeting. His replacement, a newcomer, restored order by threatening to call a policeman, something which never had been suggested at a public meeting. The boys were forgiven because they had been

German prisoners and must have had a terrible experience, and anyone knows the uisge beatha brings back memories.

Gossip

Social control does not always take such dramatic forms as those we have been considering. Infringement of the traditional norms is deterred, and deviation from the expected patterns of behavior are censured, by a more informal technique, namely gossip. It is not an exaggeration to say that everyone within each neighborhood knows his neighbors intimately. They know the individual, his family, and his ancestral stock. They are aware of his activities inside and outside his cottage, the way in which he meets his moral and religious obligations, and his general outlook on the world. The villagers are equally aware of the character and behavior of one another. Further, almost all the crofters who have dealings in the village know and are known by the villagers, at least by reputation. If any individual is not known, personally, it is relatively easy for a person to find out all he wants to know from another villager. To remain a mystery is dangerous; it begets resentment. Any new arrival to the island, other than a tourist during the summer, soon becomes known in the local area. If he is an important person, his arrival and departure are heralded across the island.

Gossip has enough emotional force on Skye to deter deviations by the native and to mold the newcomer's behavior to no small degree. It has been known to make people so

626 last tenant apparently decided the whole island was working
671 against him. Unable to catch a single salmon in the Hamara
829 River, an excellent fishing stream, he drove into Portree to buy one from the local fish shop. After he had purchased a fine salmon, he asked the shopkeeper where it was from. Not knowing the gentleman, the fishmonger told him it was fresh in from the Hamara. Buying his own fish, so to speak, was too much for him to take.

626 Favorite subjects in discussions of social control,
834 or the lack of it, are pre-marital and extra-marital sexual relations. One reason for this is, no doubt, the fact that
836 the social control of sex is a universal.[36] In an area such as Skye where the most powerful institution to which the Sgiathanach looks for guidance, the church, forbids or condemns open courting, young people must court in secret. Moreover, for a people who find marriage all but impossible in their younger years, secretive courting not infrequently is accompanied by illegitimacy. A pattern has evolved on Skye to handle such mishaps.[37]

848 The child of an unwed mother is "adopted" by the girl's parents, or, less often, the girl's brother or sister. The foster parents raise the child as their own. People exercise great caution in asking about the parentage of a child who does not seem to be compatible with the age of his mother and

---

[36] Murdock, op. cit., p. 260.

[37] I have recently found the same pattern in northern New York, and I suspect that it probably exists in other rural areas throughout the Western World.

the Outer Isles, an area of recent depopulation, there are 888
enough youth to resist the dictates of their elders.[25] If 541
they cannot have a dance in a hall, they hold their dance 626 •
on a plank bridge. In Kilmuir the crofters are looking
forward to "Effectual Calling." To defy the elders, or
allow their children to run counter to the wishes of the
elders, would mean a loss of all hope for salvation.

For the majority of crofters, any form of amusement 785
is objectionable, but there are slight differences among 795
the affiliates of the several sects. The Church of Scotland
is the most lenient. For adherents, concerts, film shows
and similar organized forms of entertainment may be admissible,
especially if they are held outside the neighborhood. There [54]
is a "picture bus" from Kilmuir to Portree on Wednesday and [34]
Saturday night. Sports activities are often considered [526]
as wholesome outlets for the youth. Some of the ministers,
feel the lack of social contact with their people and
believe they might do some good by taking part in life
outside the pulpit. The Church of Scotland minister in
Kilmuir occasionally attends the Crofters' Club, the only
secular activity admitted in the neighborhood. Significantly,
Free Church opinion, although the voice of a minority, has
prohibited the playing of pipes and recitals of the Gaelic
Choir at the annual agricultural show. The Church of Scotland
minister in Sleat has taken a hand in the village hall.
Unorganized dances are condemned. This is not because dancing [535]

[25] Darling and Morley, op. cit., pp. 21-24.

that the people of Skye, including many of the newcomers, 785
have not been favorably impressed by Skye Week. The consensus 795
is that it is not representative of Skye. For the Sgiathanach 541
the Highland Games are alright, but the concerts, dances and
similar festivities only cause ill feelings.

As might be expected social life is more vivid in Portree. 369
Here the members and the adherents of the Church of Scotland 795
partake of a number of recreational activities. In the winter 52
there is badminton twice a week. In the spring and summer [526]
there is a little golf and tennis. The limitations are not
religious; they are climatic. Then, too, there is shinty.
We have already noted the existence of many clubs. There are [535]
regular dances. Moving pictures take place twice a week. [54]
All of these activities are run by newcomers; the Skyemen have [167]
a more or less passive role. The "elect" of the two smaller 795
sects are, to say the least, very much disturbed by these 794
frivolities. What is worse, the children attend the dances 626 •
and the concerts and the boys play shinty. They can find 883
enough solidarity among those of their own age grade to out- 52
weigh the threats of their elders. Apparently they find
enough security to be unaffected by the stern denunciations of
the minister from the pulpit. When they marry, however, they 794
have to recast the pattern of their behavior, for now the 883
elders are in a position to exercise control by withholding 626
baptism from their children. Some may turn to the Church of
Scotland.

Standing in marked contrast to Portree, in Glendale the 888
control by the aged is complete. There is not a single activity 883
626
[34]

at which the youth can join together as a sodality; hence, they 888
hardly ever have a chance to question the control of the "elect." 883
Only once in recent years has the control of the old people 626 •
been criticized. After World War II, the men who returned to 578
the neighborhood wanted to erect a village hall. This threatened 888
both family unity and the solidarity of the neighborhood. 883
The young people were divided between the time honored obligation 626
to honor their parents and their own desires for a fuller life.
The parents were torn between religious beliefs and their
affection for their children. The minister and his elders
were faced with a situation which threatened the fundamental
tenets of the faith and the continued ability of the religious
expression to sanction the existing order. How strong are age
controls? The youth did not get their village hall. Many of [167]
them left Skye for the Lowlands where social life is less
restricted.

The difficulty is that until, say, forty years ago the 178
traditional outlets were sufficient. Middle-aged people 883
remember how the youth used to drop in on the old widow for 177
a visit on an evening and then make their way off in couples 52
for a bit of courting. Two World Wars and the continuing
program of National Service, not to speak of the influence of
the schools, have given the youth a new perspective. They
have spent one or two years in an environment where recreational
activities are considered not only innocent but also wholesome.
The radio and magazines have contributed to the demands of the
youth for amusements. As if this were not enough, there are

796 may need just one more dry day to finish his harvest. If the
241 next day is the Sabbath, his one dry day may be two or three
weeks away and the hay a sodden heap. Nor did the Sgiathanach,
or any newcomer with a croft, change during the war despite
all the pleas of the government for full agricultural pro-
796 duction. This is the one time that the Older Order Amish
slogan "And be not conformed to this world" fully applies
to the island. Circumspect behavior on this day functions
to remind the people of all the negations and all the sanctions
which religion has bestowed on the culture.

178 As in the case of Communions, there has been a gradual
796 lessening of the importance of Sabbitarianism, especially
since the return of many young men and women from the war.
[36] Again, the rather spontaneous relaxation of the rules is
most common in Portree. It does not have the encouragement
of the ministers of any church nor the elders of any church,
• [622] except the Church of Scotland. Thirty or forty years ago
the ministers and the lay kirk officers had enough influence
to stop the running of trains throughout the western Highlands,
shipping in the Western Isles, and the Kyle-Kyleakin ferry
[487] on the Sabbath. Public transportation is still at a stand-
[204] still on the first day of the week, but the Sunday papers
appear in Portree after the evening services, despite all the
efforts of the ministers. They come by car from Inverness, by
row boat across the strait, and by car to the village.

178 Before the war no one in Portree would let their
796 children out of the house, except to go to church with their
857

control of the "elect" crofters. They, are the "elect," 796
and their status is independent of the control of the vener- 545
able old men. 626 •
584

Summary

Whereas the culture of the Sgiathanach was oriented 771
around the clan system in the remote past and was intelli- [178]
gible only by an awareness of the all-pervasive influence
of the clan, today congregational religion provides the
focus for the culture. If we are to understand the Sgiathanach [21]
we must fathom his religion, that is, the interpretation
which he has given to Calvinism. Moreover, this highly 182
integrated and systematized aspect of his culture has pro- 771
vided the means for preserving cultural continuity. Economics
and social organization aid us in recognizing how cultural
continuity has been maintained. Religion puts at our finger
tips the how and the why.

The basic status values have held good because religion 771
has sanctioned them. The old men of the neighborhood have 584
been successful in sustaining their statuses and habits 182
through their position in the esoteric religious hierarchy. 626
By holding the father responsible for the spiritual welfare [593]
of his family, and judging a man's spiritual enlightenment
on his renunciation of mundane pleasures as well as his
knowledge of religious tenets, the elders exercise judicial
and authoritarian functions. At the same time, the status [593]
of the father within the family is strengthened. After a

man is no longer concerned with the necessity of having his 771
children baptized, the venerable old men, the family-head 554
elders, prolong their social control by sitting in judgment 193
on those who seek salvation. The strength of age controls 626 ●
is indicated by the continued ability of the elders to resist 178
all attempts to introduce secular innovations to the crofting
neighborhoods. Even in Portree the majority of the people
are under the watchful eyes of the old men.

Many of the meaningful patterns of interaction are 771
religious. The rites of passage function to augment social 182
control, restore disturbed equilibriums, and establish new 626
ascribed statuses. The rites of intensification, including
those associated with death, function to restore disturbed
patterns of interaction in the family, nuclear and extended,
and the larger social groups and to establish meaningful
relationships when large congregations gather for the
celebration of communion. Religion for the majority is not 771
merely dependent on attending church on the Sabbath and 782
attending Wednesday night prayer meetings. Every day of
the week begins with a prayer and ends with family worship.
All social activity outside the home is ideally limited to 52
the church, and the church is never used for mundane activity.
Only in Portree are there a number of social activities to 349
tempt the people. Kilmuir has no more than a Crofters' 575
Club for men, and Glendale has no social activities, unless
one would include the annual meeting of the share holders
in the farm.

barley have been replaced by grass and hay. Conceivably, this 178
is a more complete adjustment to the environment, which has been 231
made possible by integration with a commercial economy, than 241
an adjustment to the demands of the outside world. Whereas 233
the objective of the local economy once was the export of
cattle, today the purpose is the breeding of cattle and sheep
for the national markets. We have seen that there are a host 182
of limitations and difficulties in the economic aspect of the 231
culture. Many of these are due to the persistence of con- 241
servative practices. Each crofter must keep pace with his 233
tradition-practicing neighbors, with the old men of the town- 626 ●
ship. Others are the result of an inhospitable environment.
The economy does not run smoothly, but this is not conclusive
evidence for disorganization. Integration does not mean
smooth functioning. In the spring and autumn the crofter is
confronted with a variety and succession of tasks which would
fill a specialist with dizzy. Very often, these pastoral
and agricultural chores have to be carried on in conjunction
with outside employment. In return for his labor, the crofter 34
receives a meager income, frequently supplemented by con- 457
tributions from his children or the government. As a further 167
result of the partial adjustment to the wider society and
culture, the people leave the island to seek employment and
to achieve an upward mobility impossible on Skye. Economically 175
Skye, along with most of the Highlands, may be viewed as
presenting a picture of the Lowlands of Scotland 200 years ago.
That is the extent of the economic adaptation of the Sgiathanach
to the national culture.

from the necessity of daily calls at the post office and shop, 182
but the drivers serve the function of passing on the news of the 571
day at each stop. 243

Standing in the place of many of the traditional social 182
outlets which have disappeared or been modified, there are the 794
religious occasions for joining together as a small group. We
have found the Sgiathanach to be very religious. Everyone is 794
expected to go to church on the Sabbath, and everyone goes to
church. Irregular attendance soon becomes noticed by one's
neighbors, the kirk elders, and the minister. Concern over 626 ●
what one's neighbors may think, in itself a strong motivating
factor, is reinforced by a forbidding fear of what the venerable
old men may do whenever an opportunity presents itself. There
are Wednesday night prayer meetings for further social inter-
course. Above all, there are the semi-annual Communions which, 182
except in Sleat and Strath and one Bracadale sect, bring to- 794
gether the people of the kirk, the members of the same sect from 796
other neighborhoods, and affiliates of the denomination from
the mainland. Even the adherent, the individual who has not
experienced a saving change because he is not old enough, normally
takes his vacation, if he is employed, at the time of the
Communions in order to attend.

The decline in interpersonal religious strife does not 182
mean that strong personal sentiments are not present. No one, 571
other than the eccentric, is indifferent to his neighbors or 243
others with whom he may have dealings. The crofter and his 647
village cousin may not bother to vote, but they closely watch 668
and freely discuss their representatives. Gossip has retained

see what Linton, the most explicit exponent of the concept of 121
status and role, has to say about societies which are faced with 554
changing conditions and disorganization.[15] Linton believes that
such societies attempt to develop new social patterns by allowing
individual initiative, thought, and competition free rein. They
are characterized by a wealth of achievable statuses. With
adjustment, ascribed statuses again become common. The con-
clusion seems inescapable that Skye has adjusted. Perhaps a
few additional illustrations will make my point clearer. The
crofter who assumes a role of leadership is regarded as an
eccentric, someone to poke fun at no less than the village
idiot. The crofters' children who find their status too con- 554
fining must leave the island to achieve status. Some succeed, 626
to a limited degree, by moving to Portree, but they are never 167
free of suspicion. Since the majority of achieved statuses
on Skye are left to newcomers, it might be said that the
Sgiathanach has selected place of birth as a means to ascribe
status. Not infrequently the newcomer's acceptance is followed
by his being placed in roles of responsibility in both formal
organizations and informal groups. The reader may remember
the case of the young man from the East Coast who found himself
on no less than eleven committees. In Kilmuir the people are
represented on the County Council by a minister and the Crofters'
Club is run by the school teacher.

I believe that the most important feature of the concept 626
of anomie is the loss of social control which is said to follow 182

[15] Linton, The Study of Man, pp. 113-131.

disequilibrium. I find it difficult to understand how any 626 ●
group could have a low rate of interaction without a loss of 182
social control. Conversely, I feel that it is all but incon-
ceivable that a group could continue to exercise social control
without a high frequency of face to face contact. On Skye
social control is a very potent factor. Gossip is a double
edged weapon. It not only continues to enforce acceptance
of the traditional norms by the Sgiathanach and, to a lesser
extent, the newcomer but also can be used to punish the
deviant. People have been known to leave the island after 167
a deviation which rendered them unacceptable. Gossip became
a source of misery from which there was no escape other than
flight. Exactly how powerful the dread of gossip is in Portree
can be judged from the experience of my wife and myself. We
have played chaperons to people much our superiors in age.
Nor can one escape gossip by secrecy. The person who remains
a mystery is rejected as a deviant.

The amount and influence of social control, of course, 626
depends on the values of the Sgiathanach. Poaching is rather 665
good sport, but the theft of stock is a serious offense. The
one is the concern of the police and the justices of the peace;
the other is a matter which the people prefer to handle them-
selves. It is quite wrong to purgle a home, but theft from
a shop is a different matter, especially when the store is
owned by a Lowland corporation. A similar dichotomy applies 684
in the case of illicit sexual activities. A pattern has 626
evolved to protect the unwed mother, but the married man or
woman who violates the taboo is severely censured. Ideally,
the offender is cast out by the community and his spouse, or

else the spouse is likely to lose status.

The most powerful of all agents for social control are
the old men of the neighborhood. Through their position in
the church, a religious sanction for their prestige status,
they enforce conformity to the norms of behavior which relig
has sanctioned either positively or negatively. No one, nor
any group, has been successful in questioning the right of
these venerable men to maintain their habits and statuses
which have been preserved over the generations. The baptism
of a man's children and his own salvation depends on accepta
of the authority of the elders, for they will be his judges.

As far as the contemporary scene is concerned, there
is no anomie. The content of the culture has been greatly
modified, but the form, the underlying distinctive pattern,
has been preserved. We are dealing with a single tradition
in which the norms of behavior and the sanctions for them
have remained common and clear. This is all the more strikin
because there have been periods in which cultural and social
disintegration threatened to overwhelm the Sgiathanach. This
brings us back to the role of religion in preserving cultura
continuity.

Lomais and Beegle have employed Durkheim's theory to
analyze the growth and spread of fundamentalist religious
sects in contemporary United States.[16] They conclude: "It
is no mere coincidence that various types of emotional
religious sects are now among the most rapidly expanding

[16] Loomis and Beegle, Rural Social Systems, pp. 401-407

ctland in Portree. Only one girl appeared for instruction. 794
the significance of her preparation had been fully explained, 779
eclined to take the final step. She did not disagree 184
the minister's view that she was prepared for membership
ommunion, but she was afraid of what her friends in the
Church and Free Presbyterian Church might say. She was
bly wondering what the middle-aged adherents of her church
have to say, too. When the Sgiathanach takes his first
nion, in Glendale, Kilmuir, or Portree, the people must
le to look up to him.

The second exception to the age-grade requirement rules 626 ●
the county people. Because of their social position 888
e community, which rests on the expression of their statuses, 565 794
les, as landlords, village and neighborhood representatives
eaders, and members of the national class system, and
se of their education in England, the county people
n membership in the church at an early age. Some have
e elders of the church at twenty-one. To subject them
s control of the crofters would, obviously, be incompati-
ith their social standing. Although they are all Church [182]
otland, here again religion is a reinforcing factor for
tructure of the society.

Dying, the final act of living, reveals a host of traits 763
only receive covert expression during an individual's 829
While the youth is censured for his spontaneous
ures and the adult is criticized for his behavior, the
sed is always respected. As one woman said, "It is the
ime in a person's life that the people have nothing but

There is another aspect to the prayer meetings. They 796
are no longer held in the Church of Scotland in Portree. 795
The ministers of the other sects say this is an indication 794
of the low degree of spiritual enlightenment among that 369
congregation. Further, Wednesday night is picture night in
the village. The newcomers taunt the devout with, "off to
the pictures?"

It is at these Wednesday night meetings that the people 554
get to know one another. They participate in the worship 571
through the eminent "Men," who in a society such as Skye 796
where almost everybody is related on one side of the family 794
or the other by some bond of consanguinity or affinity, are [602]
the "people" or "friends" of the worshippers. This custom of
offering extempore prayers not only augments the prestige of
the "elect" but it intensifies the unity of the group and
makes them secure in the knowledge that they belong. This
feeling of unity and the sense of belonging is further
strengthened in some churches by setting aside a day of
Humiliation. Services are held during which the congregation [782]
as a group beseech God for forgiveness for the poor spiritual
condition of the world. In their minds the God of this world
is surely the Prince of Darkness.

But for the interaction of the members of the several 794
sects, the control of the "elect" would not be as strong as 795
it is. The elders of one kirk cannot exercise any direct 626 ●
control over the adherents of another sect. Through what
agency could they express their judicial and authoritarian

functions? Certainly not the kirk session. But since they 794
share a common tradition, which is reinforced by interaction 795
and mutual respect, the elders impose more or less common 626 ●
standards. The norms are the by-product of the history of
Skye. If there was cleavage, might not the behavior of the
people begin to diverge? In Kilmuir there are three sects. 795
Two of them have churches. The Church of Scotland is in the 796
majority. The Free Presbyterians are a definite minority;
I think there is only one family of them. Although several
ministers of the Church of Scotland have begun to follow
the example of the national church elsewhere in Scotland and
celebrate Christmas, at least on an appropriate Sunday,
there is no Christmas in Kilmuir any more than there is in
Glendale. The custom is said to be "popish." Naturally,
if the birth of Christ is not celebrated, his rebirth cannot
be commemorated at Easter. All churches, on the other hand,
celebrate New Years, which is also the traditional time to
exchange gifts among members of the family. It is a time
of license. After midnight the people of the townships 796
practice "first footing." Until early in the morning, the [273]
people make their rounds exchanging visits and toasting one
another and the New Year with whiskey, for the men, and wine,
for the women. The people of Kilmuir are noted for their 571
inter-relationships. "You have to watch what you say up 602
there," I was told, "they're all relatives and friends of
each other."

The situation in Portree for the Sgiathanach is much the 400

same as in the crofting areas. When a young girl presented herself for instruction in the significance and meaning of church membership, preparatory to her acceptance of Communion, she refused to take the final step not because of any personal religious problem, but rather because such a step would upset her normal associations. What her Free Church and Free Presbyterian friends would say was her main concern. Who was she to become an "elect" member? Here, then, is the answer to how the elders of the other sects are able to control behavior of the larger group, through the fear of gossip as a negative social sanction and, perhaps, rejection.

The semi-annual Communion celebrations are rites of intensification par excellence. Although some churches celebrate only one commemoration of the sacrament, and it may be as early as February or as late as November, the months from late April until early September, are commonly referred to as the "Communion Season." The activities of the people during this period cast additional light on the influence of religion in ordering social relationships. While clique membership based on sectarian affiliation is a secondary factor in determining the patterns of interaction in the extended family in the local group, it is very important in determining one's wider relationships, the relationships between the neighborhoods and between the Sgiathanach and the mainland Highlander.

Within living memory thousands used to come to the Communion celebrations from all parts of Skye and many nearby

for the approaching evening and many nights to come.

Saturday is a day of preparation. After a morning service, those who have been examined by the elders and admitted to church membership, and the visitors who satisfy the elders of the kirk that they are worthy to receive Communion, receive tokens which will admit them to the Lord's Table on the following day.

On the Sabbath the service is oriented around an "Action Sermon." The minister speaks of the sufferings and blessings of Christ. At the conclusion of the sermon, the Lord's Table is "fenced." Once all the Highland churches gave communion at a table with a rail around it. Now there is only one kirk on Skye with the fenced table, the old parish church in Bracadale. Today the first few pews are used. The minister draws a sharp distinction between those who are entitled to sit at the "table" and those who do not have the right to partake of Christ's body and drink of His blood. The former are reminded of the dangers which neglecting to come forward involves. The latter are warned of their promised damnation as a consequence of partaking unworthily. Since only the old men and women are worthy of the sacrament, the minister's exhortions and denouncements function to sanction the prestige of the old people before the congregation and the wider community. After reading from the Bible, offering a prayer, and addressing the communicants on their humble position, the bread and wine is distributed.

The Communion is concluded on Monday morning with a

"elect" are predominantly newcomers and the elders are either members of the landed gentry or newcomers. I was rather amazed one day when a Skyewoman told me, "the 'Wee-Frees' and 'Seceders' are no better than the Mohammedans giving gifts to idols," when they sent food to the manse for the minister's guests at the Communion. Over in Bracadale the custom is also losing its importance, except in the Free Presbyterian Church, and the fellowship meeting has been abandoned in the United Free Church because of the reluctance of the members to engage in public displays, either at Communions or at prayer meetings. The custom of visiting has entirely disappeared in Sleat and Strath. One of the ministers ascribed this to the isolation of the two parishes from the rest of the island and from each other. Certainly the Sgiathanach on the south end of the island seldom looks to Portree and the northern crofter hardly ever goes to Sleat, but this does not explain why people from the mainland will go to Bracadale, by-passing Strath.

The vitality of religion can over-ride considerations of family and friendship if a Sgiathanach deviates from the accepted norm. We may recall the young girl who stole church funds and was ostracized by her "people" and the whole community. Let us consider another example. Marriage vows, as we know, are held to be sacred on Skye. Divorce is all but unknown and separation is uncommon. To be precise there are four known cases of separation. Nevertheless, if a husband or wife were to break a taboo, it is expected that the offender would be cast out. Forgiveness is not compatible with a

ef in a God who punishes iniquity "unto the third and 586 771 th generation." 626

In one family the wife transgressed by committing 684 tery, albeit a rare sin. Her husband was one of the 794 ct" and a deacon in the Free Church. Fully aware of 626 fact that his wife had remained away from Skye until r her child was born, he took her back. He was older she and devoted to her. The story could not be covered n Skye, where the elders have their thumbs on the pulse he congregation. The elders summoned him before the session. After he admitted he knew all the details and fact that his sister-in-law had taken the child, they ared him to be excommunicate. The control of the elders till characterized by austerity and severity toward the y and ungodly alike. What hope has a Sgiathanach once 771 as been eternally denied salvation? Perhaps, someday 794 ill again receive a visitation from the Holy Spirit experience a saving change. Although no longer entitled he benefits of the church, he continues to attend, as an rent. One may ask, what was the reaction of the people his punishment? A few Church of Scotland people, feel the elders might have tempered their decision. As one "They thought only of Moses on Mount Sinai and forgot on Calvary." Most of the people, however, including n the Free Church and Free Presbyterian Church, either oved the action taken or, at least, would not question judgment of the elders.

glens a family, newcomers to Skye, prevailed on the local 191 school teacher to hold a Sabbath school for the children. 771 621 The local missionary objected. If they were going to have Sabbath school, it should be in Gaelic. His prestige and control over the population secured his position. The children of the people who originated and organized the program were excluded because they did not "have the Gaelic."

Another problem which is beginning to stem from the 191 use of Gaelic as the language of religion is the difficulty 793 of securing a minister. Traditionally, it was an ideal to 183 send a son to study for the ministry. This ideal remains, 874 but in the last few years only one young man from Skye has shown a desire to become a minister. Indeed, the majority of ministers on Skye are not Skyemen. I believe the only minister who serves his own neighborhood, the neighborhood in which he was born and raised, is the Free Presbyterian minister in Glendale. It is becoming more and more difficult to fill charges as they go vacant. Each year several Highland charges are changed from "Gaelic essential" to "Gaelic preferred." If we go beyond the role 121 of religion as it orders human relationships, through its 771 more formal aspects, and consider the influence of religion 626 178 on the secular behavior of the Sgiathanach, we can come closer to an understanding of why the youth are slowly turning away. At the same time we shall be able to round out our picture of the expression given to the Presbyterian ethic on Skye.

that young sinners will not escape from his kingdom." 785 779
Another of the same church expressed himself, "One is constrained to look upon this world as a great battlefield between Christ and the devil and between grace and sin. In our day the kingdom of darkness is carrying everything before it; the Prince of the kingdom of darkness is the god of this world." This attitude is not, however, carried to the extreme that characterizes the Old Order Amish in their determination to "Be not conformed to this world."[24] On Skye, the position is rather that the church, as Christ's witness, must resist the encroachment of worldly pursuits. In a world which is moving as fast as ours, the success 888 626 794 of the resistance of the church is indicative of the hold of the pillars of the faith, the venerable old man, over the group. [554] We have learned how the prestige status of the "elect" and the elders stems from their high position in the esoteric religious hierarchy, and how, through their power to withhold the sacraments, they enforce social control. When the elders sit in judgment of the father who has come to ask that his child be baptized, or the person who thinks he has experienced a "saving change," they base their estimation of him on his non-religious behavior as much as his knowledge of the tenets of the faith. He must [785] not only attend church regularly and conduct family worship; he must also deny himself all pleasures of a frivolous nature.

---

[24] Kollmorgen, Culture of a Contemporary Rural Community: The Older Order Amish of Lancaster County, Pennsylvania, p. 1

The man who seeks sensory pleasures and finds enjoyment in 785 779 mundane recreation is believed to be spiritually unenlightened. It seems almost an anticlimax to add that social life is restricted.

Beyond the Highlands and, indeed, within the Highlands 771 883 571 in certain prosperous areas, where poverty has not been a factor of such importance that it requires religious sanction, the Church of Scotland has endeavored to find room within the church for recreational activities, especially for the youth. As in America, the church feels a responsibility to the youth which requires a combination of religion and recreation if the citizens of the community are to be well-rounded adults. Youth programs and youth clubs, young adult groups, and social circles for the older men and women are an essential part of church work. In 794 571 an organizational sense, the Church of Scotland on Skye has, at the most, a Woman's Guild which meets once a month to hear a lecture on a topic such as missionary work in India, and which holds an occasional sale of work to reduce the church debt or buy the minister an electric tea kettle to keep in his vestry; and a choir, which meets once a week for rehearsal. It is, as I have said before, not the overall policy of the church which determines the activities in which the people participate or which they reject. The 888 561 626 elders are the prime movers. Were the youth in Kilmuir anyone under thirty, instead of anyone under forty, the control of the aged might not be as strong as it is. In

627 INFORMAL INGROUP JUSTICE--unformalized mechanisms for adjusting grievances and applying sanctions within the community; private retaliation (e.g., lynching, tarring and feathering, feuding); negotiation and compromise; informal hearings before the headman or local council; etc. Data on justice will be filed under 69 rather than under this category whenever formal judicial institutions are found even at the community level. See also:

Liability . . . . . 67 Offenses and punishments 68

241 175 423 grazing land and he could not transfer such property in a will. Similarly a crofter had no right to his buaile, and could not formally protest if another crofter sought to apportion this land for his own use (see Chapter 2 [627] for a discussion of apportionments). But in both situations, informal understandings superseded legal rights.

241 657 175 Various legislative acts which followed the 1886 act focussed attention on the crofter. Various matters associated with crofting are handled by a Crofters Commission. Crofters have access to grants and loans [654] to improve land and build fences and homes. They may [494] buy goods at low prices in a nearby cooperative store. As crofts were fenced, land around the townships became scarce and non-crofters found it difficult to keep large numbers of cattle and sheep.

241 178 423 Within recent years it has become possible for non-crofters to gain title to the small plots of land on which their houses are built. Some loans are available [452] to them for building houses. Non-crofters have access [654] to the various subsidies available to all agriculturalists, such as the subsidies for raising hill sheep and beef [629] cattle. There is still the feeling, however, that crofters have rights which non-crofters do not have and that in conflicts over scarce goods crofters have

685 183 years from her employer, an outside concern. She spent the money on clothes and holidays in London, and gave the material to her friends. She was brought to trial and given a sentence of six months. Upon her return, she was welcomed with open arms. The sympathy of the people was with her rather than with the organization with its main office in far off Edinburgh. As they said, "Poor Jane, she was a good girl." "Poor Jane" died not long after being released.

When traditional norms are involved the situation is handled quite differently. There was another young girl in the village who was guilty of a similar petty crime, on a smaller scale. During the last war, one of the local ministers organized a group of girls from the school hostel to make a door to door collection for a charity. One of the girls, a "foster child," had never been given any spending money. The temptation was too great. She spent her collection. To replace the money, she stole from a fellow hosteler. When she was found out, she was expelled from the hostel. The school year had two remaining weeks, at the end of which she was to graduate. Not one Sgiathanach, including her "people" and "friends" of her relatives, would have anything to do with her. As far as they were concerned she had exiled herself. She was an outcast.

685 627 Now let us turn to the crofting neighborhood to see how a crime is handled there. In most cases the neighborhood, as the fundamental locus of social control,[38] is able to deal with

[38] Cf. Murdock, op. cit., p. 84.

685 627 deviants without recourse to the court. Indeed in Kilmuir they do so well that I never heard of any theft. Still, there has been some theft in Glendale. Shortly before each cattle sale the shepherds on the club farm found one or two cattle had disappeared. At first they thought the cattle might have gone over the cliff, but coincidence soon indicated they had a thief in their midst. One of the crofters, a retired Glasgow policeman, took a hand in discovering the guilty party. At length he found out who it was. At the annual meeting several weeks later, he stood up and told the shareholders exactly what he had seen. Here were the facts, in detail. He did not, however, name the guilty person. After he had finished, the crofters calmly asked him to retell several parts of his story, and then there was a period of silence. Finally, the man publicly confessed and expressed repentance. He was not cast out or handed over to the police -- I doubt if the police know of this even now. His humiliation was sufficient punishment.

682 [743] Among such crimes and the forms of social control which they prompt, however, murder is almost unknown, deterred by the tales which tell of being plagued by the man's ghost to the grave, and suicide is extremely rare, with only three cases in many, many years. Much more important, however, is the influence of social control over public behavior.

683 183 157 During my stay on Skye, I was struck by the lack of overt aggression. Aggression was an outstanding characteristic of the culture during the days of the clan, as the Crown ruefully

628

628 INTER-COMMUNITY RELATIONS--traditional friendships and rivalries between communities; establishing, maintaining, and breaking relations; blood vengeance; feuds; negotiation and composition (e.g., payment of wergild); mediation and arbitration; etc. See also:

Formal justice . . . . . 69 Gang wars 870
War . . . . . 72 International law 648

For example, 46
a Widow Catherine lost "one red
175 mare and foal (L10), one dun cow (L3/10), and one dun
42 heifer (L1/10)." One family is said to have paid rent
435 by being fiddlers for "the castle" (the home of Sir
551 James Matheson), thus earning the patronymic, "Fiddler."
Their income stopped abruptly when the fiddler at the
time, a great-grandfather of descendants now living,
converted to the Free Church and smashed his instrument.

In 1899 and in 1905 it was noted in the rent ledger
that two crofters wanted "first chance of a vacant croft
in the township." In the first quarter of the century,
• 628 a conflict ensued between Shawbost and a neighboring
764 township over the extension of a cemetery; land was too
precious to take out of cultivation and give to the dead
of another village.

173 A 65-year-old man recalls, "Men got their living
241 from the land and sea. They kept more cattle when I was
233 young. They used the dung of the cattle to fertilize the
220 soil. The entire croft was used. My father's croft was
only 2½ acres, but he worked it well and harvested eight
stacks of barley to see us through the year." There were
173 a number of kilns to dry grain, and mills along the streams
213 to grind the barley. The "old Norse mill" which was
252 recently rebuilt by the school children as a school project
251 was in operation from 1920-1934. "Then the tweeds got
897

175 womanhood a prey to prostitution. The licence of a chief
585 among young women was preferable to this; but evils were
inherent in the fact of lordship.

(c) TWO ISLAND BARDS: MARY MACLEOD AND THE BLIND HARPER

175 While in Lewis the continuity of clanship was sorely
63 shaken by the fall of the chiefs, the Torquil-MacLeods,
621 in Harris it was maintained in the family of the Norman-
MacLeods of Dunvegan in Skye. The family of Dunvegan
is famed for chivalry and gentleness, not only in the songs
of the past but in the speech of Skyemen to the present day.
Harris did not suffer the bloodshed endured in Lewis from
the death of Torquil until after the accession of MacKenzie
in 1611; and Harris was not involved, like Lewis, in the
troubles of 1715. MacLeod of Dunvegan retained Harris
until the end of the eighteenth century, when it was pur-
chased by a cadet of the family who had made his fortune
in the East; and it only passed out of MacLeod hands half
a century later. Hence it is that while in Lewis there is still
talk of the 'give and take' between later laird and people,
533 in Harris there is more. In "the hereditary Hall of
MacLeod" of Dunvegan, two Island bards gave birth to
immortal song. Together, the tales of Lewis and the songs
of Harris and Skye give us an authentic record of clanship
in fact and feeling, linked with community today.

• 628 In spite of the break in continuity, ease and warmth of
feeling could spring up between a MacKenzie of Seaforth
and the Lewismen, though Seaforth was a peer of the realm,
and of a mainland name, not a MacLeod by direct descent.
Playful rhyming, chaffing contests between titled laird and
small tenant, are recorded by A. Carmichael and W. C.

63

63 TERRITORIAL ORGANIZATION--general statements dealing with several distinct levels of political territorial organization. Statements dealing with territorial hierarchy will be filed in 631. Material on political institutions of administrative or territorial units intermediate in size or functional scope between the community and the state, the sovereign or maximal political unit will be filed in the three digit categories below. It will be used only for societies of some political complexity, not for those in which communities are politically independent or for those with petty states embracing only a single district or a small city with its environs. The individual categories represent increasing levels of size and complexity, but since these are not universally comparable they must be considered subject to modification in order to adapt them to the actual territorial units of particular societies.

APPENDIX II

178 300 houses, with nearly 30 built by "private enterprise"; in
362 addition the Local Authorities built 140 in the immediate
647 'suburbs' (of which 50 were temporary), a total of over 470
• 63 and an average of, say, 47. Another 115 were built in the rural
429 townships. If we give a round total of £125,000 as the value

434 241 231 184

178 for an average year (such as 1953) for Local Authority Housing,
362 we may allot half this to net output of local materials and to
647 wages earned by Lewismen, some £65,000, of which rural
63 wages were a small fraction, say £20,000.
435 For crofters and cottars, however, in 1953, a fairly typical
year, there was much local effort and achievement, by help
434 of 180 loans and grants from the Department of Agriculture
647 for Scotland, totalling £81,000 for new houses or house im-
654 provements (with a very few steadings). £80,000 may be
426 allotted to local materials and to labour paid or given by house-
holders themselves.

631

631 TERRITORIAL HIERARCHY--territorial structure of the state; the various levels of territorial and administrative organization within the state and their reconciliation with the categories below; hierarchy of political officials; integration with larger political units (e.g., Ukraine within the USSR); general nature of the territorial hierarchy (e.g., feudal, administrative, federal); degree of local differentiation in structural forms (e.g., federal districts, free cities, territories, colonies); etc. See also:
Identification of the cultural group in relation to culture areas and neighboring societies. 101

A HARRIS VIGNETTE

423 acreage of regulated common grazings amounts to 65,000 acres.
241 The working units (as distinct from crofts) in Harris are classified according to the arable acreage; the majority have up to 10 acres arable land. Less than 250 acres of land have been improved.

162

The age stucture of the Harris population in 1931 and 1961, showing the decline in numbers and rise in age

• 631 There are four districts in Harris: North Harris, with its islands; the Bays of Harris on the east coast; the Leverburgh area, with the islands of the Sound of Harris; and the west coast.
[133] North Harris is mountainous country, dominated by the Clisham

A HARRIS VIGNETTE

(2,620 ft); grouped around this are the lesser peaks staring stark 631 •
and treeless to the skies. At the feet of these hills are the small 133
villages straggled along the shores of West Loch Tarbert. Much of this area is owned by the proprietors of Amhuinnsuidh Castle, a magnificent structure built by the Earl of Dunmore in the last century; the hills lying north of it are rich in red deer. The road [491]
past the castle trundles on until it peters out at the far-east village of Hushinish, beside a glorious scimitar-like curve of silver sand. Beyond Hushinish is the Island of Scarp.

The road along the shores of East Loch Tarbert ends at the 631
village of Kyles Scalpay which overlooks Scalpay island. The [491]
Bays of Harris hold in their crevices the scattered groups of houses [361]
here and there, where an inlet of the rocky coast affords some [133]
anchorage and where a patch of ground is suitable for cultivation. Tortuous, winding footpaths have been gradually replaced by [487]
narrow roads connecting the townships. Lack of sufficient re- [161]
munerative employment has led to considerable depopulation. [162]
Fifty years ago the population of the area was just over 5,400; it is now about 2,900.

The south of Harris is better known for its association with Lord Leverhulme. Obbe, later Leverburgh, became the centre of his schemes. He built a large pier, huge kippering sheds, houses for the workers, roads and lighthouses, and blasted away underwater rocks which hindered free navigation. The bulk of this work was complete in 1924, but when he died (in 1925) his successors, in the cold light of economics, decided to close down the embryo industry and realise its assets. The harbour works had cost £250,000; they were sold for £5,000 to a demolition company. Leverhulme's memorials are still to be seen. The west coast of Harris is now becoming known for the long stretches of shell sand and the green machar-land beside it, a true delight for the tourist seeking isolation.

Tarbert is the central village in Harris, with a population of 631
about 400. It is a thriving community, nestling at the foot of 621
Beinn an Teanga and at the head of the sheltered anchorage of East Loch Tarbert—sheltered from the prevailing south-westerly winds and from the Atlantic storms. The car ferries give direct [505]
contact with the Scottish mainland, via Skye, and Tarbert also

A HARRIS VIGNETTE

has direct or indirect communication with Glasgow, Stornoway and North Uist. In summer a thrice-daily bus runs to Stornoway, and once a day a bus makes the round trip of East and West Harris. The township, linear in pattern, east to west, includes sixteen shops which cater for most of the needs of the population within reasonable travelling distance; it also has two cafés, a post office, a licensed hotel, a hall for social functions, a masonic hall and two churches. The Sir E. Scott School here is the only secondary school in Harris with an academic stream. Most of the working population is employed in the service industries, the professions and the tweed industry. Tarbert was a fishing port of some significance in the past, and is now a refuelling point for ships.

The absence of organised industry on a large scale, such as Lewis has, is a factor which tends to bring nearer to reality any desire on the part of Harris natives to leave their native soil. There are small pockets of industry, but these are only dabs of easing ointment on the excessive unemployment sore of 27 per cent. The main occupation is of course crofting, the income from it being augmented from a variety of sources. Some crofters concentrate on the production of Harris Tweed, perhaps using the wool from their own sheep; the natural dyes from the lichens which grow on the rocks and from other plants are still used occasionally. Others specialise in knitwear. Recently shell-craft and wood-turning have been added to the traditional crafts, with a view to the tourist market. Fishing, of course, plays a part in the economy in some communities. The interest of such organisations as the Scottish Country Industries Development Trust has been concentrated on the potential in shell-fish processing, and the production of knitwear on a larger scale than exists at present. Roadwork gives employment to about thirty men, but is of course seasonal.

An apparently bright light on the employment horizon showed itself in 1965, with the opening of a quarry at Lingerbay. The mineral quarried was anorthosite, a white granite used as an abrasive in cleaning products. A 99-year lease was taken out by a subsidiary company of William Robertson (Shipowners) Limited, Glasgow. But the quarry was closed in 1967 due to lack of orders.

SULASGEIR

Dean Monro, in his 1549 account, refers to the vast numbers of wild fowl and mentions that the men of Ness sail there and stay for seven or eight days and bring back a boat full of dried wild fowl and feathers. The *Old Statistical Account* (1796) says: 'There is in Ness a most adventurous set of people who, for a few years back, at the hazard of their lives, went there in an open six-oared boat without even the aid of a compass.' The boat, says the *Account*, could not be pulled up out of the sea, and therefore, while some of the men worked on the birds, the others had to stay in the boat on the most sheltered side of the sheer-cliffed island. This custom of hunting young gannets (or 'guga') on Sulasgeir still continues. Under the Protection of Wild Birds Act, 1954, the gannet is protected by law, but so that the Ness men could continue their old custom, a Statutory Order was passed making a special exemption (from 31 August each year at the end of the close season) of the gannets on Sulasgeir. With North Rona, Sulasgeir is one of the great breeding grounds for British oceanic seabirds.

The Loch Roag islands

The one large inhabited island off the Lewis coast is Great Bernera, though technically it is not now an island, having been connected to the mainland of Lewis in 1953 by a bridge. It is part of the parish of Uig, as are the other islands in Loch Roag. Its population reached a peak of 730 in 1911, but has now fallen to about half that figure. Off the west of Great Bernera is Little Bernera, which in Dean Monro's time was 'inhabit and manurit', but which has had no population recorded since the 1861 Census. Monro describes it as full of rough little craigs, but with fertile earth between.

Also in Loch Roag are three islands which, now deserted, once supported families: Pabbay had 17 people in 1861, 9 in 1881, and none since; Vacsay had nine men in 1861, and none since; Orasay in 1891 had one man and one woman, but none since.

The Flannans

Belonging again to the parish of Uig is the group of islands known as the Flannans, or Seven Hunters, some twenty miles

THE OTHER ISLANDS

north-west of Gallan Head. There are seven main islands, all small, high and cliffbound, and a number of rock stacks and islets. All are uninhabited. Eilean Mhor, the largest, of 39 acres, has an automatic light. Dean Monro's description of the islands as 'nouder manurit, nor inhabit, but full of grein high hills and scheipe' still holds, for sheep are taken annually from Lewis to the grazing on the Flannans. Their name is said to be derived from the ninth-century St Flann, whose saintly influence was recognised during the centuries when men from Lewis visited the islands for their harvest of wool, wild fowl and feathers.

The Flannans were the scene of a great sea-mystery: the complete and utter disappearance of three men from the lighthouse at the turn of this century. In December 1900, the lighthouse, with its 140,000-candlepower beam 283 ft above sea level, was a year old. It had taken four years to build instead of the estimated two. All the materials had to be swung up piecemeal from the boats and hauled up the almost sheer 70 ft cliffs to the top. That month a passing ship, the *Archer*, noticed that the Flannans light was out; a message was sent to the Flannans shore station at Breaclete, Lewis, and the *Hesperus*, preparing to pay a Christmas visit to the lighthouse, got under weigh.

Its crew landed and searched the island, but found no trace of the missing keepers. In the lighthouse was an uncanny silence. The fire was dead. The clock had stopped ticking. The beds had been made up in the clean, clinical way of all sailors. And in the galley, the pots, pans and dishes sparkled their welcome to the searchers. In the lamp-room the lamp was cold. The wicks had been trimmed and the lenses polished. The logbook showed a last entry on 0900 hours, Saturday 15 December. In the subsequent investigation some theories were offered in explanation of the disappearance, but none quite fitted. The mystery remains, a haunting, unexorcised cloud hovering over the island.

The Shiant Isles

Turning to the east coast of Lewis, in the parish of Lochs are the Shiant Isles, about 4 miles off-shore, across the Sound of Shiant (Gaelic: charmed, enchanted). There are three islands in the group: Eilean an Tigh (House Island), Garbh Eilean (Rough

CHAPTER VI

CLANSHIP: PEOPLE, CHIEF AND TACKSMEN

(A) COMMUNAL EQUALITY AND LORDLY PRIVILEGE

175 632 642 631 THE equalitarian customs of hamlet and township astonish many to whom the crofting villages are unknown and whose picture of the Gaelic past is derived from tales of the 'Forty-five. The widespread historic fact of lordship over a subject peasantry has obscured that of peasant-neighbourhood, more ancient, it would seem, and, in the Isles, still more enduring. The very existence of 'rural democracies' such as those just described has been doubted by certain scholars on the theoretic ground that they would be humanly unworkable! (614) Yet it is none the less true that the peasants as clansfolk gave loyalty to their chief. The fervent loyalty given to the exiled kinsmen-kings, the Stewarts, was a scarlet thread interwoven—or entangled—in the homespun web of community, of clanship. [533] Wherever the Gaelic is spoken, the Jacobite songs are sung with passion, and their echo has gone round the world.

[171] So in the life of the Gael, without doubt—and in varying degree throughout Britain and the rest of Europe—we have to envisage a composite, perhaps a contradictory, state of things, in which communal equality is overlaid by

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

175 631 632 642 [171] [621] lordly rank: a working, equalitarian democracy dominated by an aristocracy proudly refusing to work. The fascination of Gaelic community is, first, that its elements stand out so clearly, and, secondly, that links were forged in clanship which made its living chain, though heavy, a thing that shone with pride, and beauty too.

(B) CLANSHIP, COMMON DESCENT AND CLAN-HELP ('CUIDEACHY')

621 To what extent is it now possible to disentangle the two contrasted elements of the lord or chief and the farm-teams and townships? 172 Prehistory is hard to unravel; but the successive waves of conquest flung upon the Island shores 621 have left their jetsam, unmistakably. The circle of huts 177 found near a broch or commanding *dùn* recalls the tenants' village grouped close to the castle of a chief, from early history down to the 'Forty-five, and suggests a primitive 173 form of feudalism or of clanship. Traditions add their 621 part. In Uist one may still hear the ancient heroic lays 631 traditionally ascribed to Ossian, Oisean, son of Fionn or Fingal—lays of which Macpherson's sonorous prose gave free rendering. The Fingalian tales differ from the lays, being frankly fantastic. Lewis had its own cycle of Fingalian tales; examples are given by W. C. Mackenzie (1919). Both lays and legends tell of an aristocracy or warrior class, the Fenians, of their enjoyment of the chase, and of their relative comfort, with wealth in gold and silver, in banners and flowing mantles. The chase combined with riches implies the existence of a community to feed and clothe the huntsmen. The traditions of the Cuchulainn cycle, with closer approximation to historical and [177] archaeological truth, tell the same tale. Historically, in-

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

173 177 621 631 coming Viking chiefs, who often intermarried with women of the older aristocracy, seem to have retained some elements of a pre-existing order, as did their successors, the Scoto-Norman lords.

So, from history back to 'proto-history', there is 172 621 increasingly discerned the stages of superimposition, in the Isles as elsewhere. In Central Europe archaeology has recapitulated the stages by which peasant-villagers were raided, then conquered by desperate herdsmen, on horseback or bearing better arms, who had ridden in from the drying grasslands further east. In the Isles the later conquerors were the fierce raiders from the sea, sailing in from 173 the fjords of the North. An unbroken chain of tradition 621 from Viking to Gael is vividly conveyed in the stirring 177 saga of the Galley or Birlinn of Clanranald, composed only a year or two before the 'Forty-five (epitomised, Chapter VI (E)).

173 When the conqueror had won the submission of the 622 conquered and secured his livelihood, comfort and leisure 631 by their work, he came in time to bring their interests nearer to his own. Yet whenever the ambitions of two rival chiefs conflicted, the essential predatory attitude remained and either might bring fire and sword against the other's harmless people. Through time, the successive tides of emigration and storms of conquest bridged the contrast of extremes. Not two orders of chiefs and people, but successive strata, with intermixture of blood and of tradition, must be sought in the Isles as elsewhere. Traditional life in so difficult an environment tended to be diversified and to encourage all-round aptitudes in people and chief, their characters having much in [177] common. As to blood, the history of Island Norsemen records the marriage of the new-coming chiefs with heiresses

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

173 622 631 [177] [171] from the old chiefs' families, as in the genealogies of MacDonald of the Isles and the MacLeods. A special feature contrasting with English history is that claims to differences of descent, instead of being maintained—as between the Saxon and the conqueror of Norman blood—were fused. Even when the ancestor of the chief was alien to the locality, the people and the chiefs ultimately claimed 173 621 to be of one and the same descent. Neighbourhood softened the impositions of the hunting herdsman upon his human herd, and the feeling of kinship brought reconciliation.

173 How far, then, can the family name, which proclaims every 'son' and 'daughter' of Leod to be of the *clann*, 621 614 the 'children'[1] of the first Leod, really betoken a blood tie? Both the differences of race to be found in clanship 829 and the ties it formed are well brought out in a tale of Highland pride, still told with Highland laughter across 539 the Minch in Kintail. A French skipper (an importer of claret) touching at Kintail three hundred years ago, met a short, dark man and asked him of whose clan he was. "The Clan Rae," was the reply, "but we are of two kinds, the tall, fair MacRaes and" (a little pityingly) "the short, dark MacRaes." "And which are you?" "I," said the wee, black fellow, drawing himself up, "am one of the tall, fair MacRaes!" "Then God help the short, dark 173 MacRaes!" said the skipper. Even one link with the 621 blood of the chief—and that not necessarily legitimate—614 was enough for a man to found a claim to kinship, not 829 merely as a MacRae, but with the tall, fair chief through

[1] In Gaelic, as a man is called MacLeoid (son of Leod), so a woman is NicLeoid (daughter), and the clan, *Clann Leoid*. The absurd addition of [551] 'son' to a woman's name (as in English surnames such as 'Johnson') is unthinkable in Gaelic, in which a woman would be named 'John's daughter', *NicIain*.

COMMUNITY FROM PAST TO PRESENT PT. II

175 Such are the mingled traditions of the Highland
701 regiments which served in so many wars, for right or for
wrong. Of all the desperate alternatives before the Gael
[614] —famine at home, semi-slavery in the factory towns, death-
stricken sea voyages, pioneering in the forested hills of
Eastern North America, or war, it was this last which
offered the men not only the trappings and glamour of
clanship but continuing fellowship. In the regiment a
Gael was among friends. Modern civilisation offered him
no other life promising social continuity and the hope of a
return to croft and township, " if death should spare him ".

175 It would be wrong to suggest that only the gentry could
701 rise to command, for as English and literacy were acquired,
the sons of small tenants received commissions. British
565 military discipline has too often driven a breach between
554 the men and the non-commissioned officers, spoiling the
[703] latter's fitness for higher leadership. But among High-
landers " the bond of faith and affection " led naturally to
commissioned rank. For generations, historic precedent
[178] was carried on in living tradition.[1] Given education, the
[871] sons of Island crofters have risen to command on land and
sea ; but education came late.

CONCLUSION

175 Thus in the ' little commonwealths ' of the farm-hamlets
621 grouped within the township, personal right and equal
631 shares were balanced by common duty, summed up in the
577 principle of " duty-right or cor-
614

[1] The training or leadership came for review but here one can only cite examples. For instance, descendants of his neighbours in Strath Spey told me that my paternal grandfather, as a penniless lad speaking Gaelic and English (in which he was literate), enlisted in the Black Watch about 1849. He was known as a N.C.O. for his power of quiet, reasoning discipline. He thrice refused the offer of a commission, which was then given to others, of whom more than one rose to high command in the battalion.

Island) and Eilean Mhuire (Mary's Island). The Shiants are the eroded relic of the same age of volcanic activity that formed the strange-looking columns of Staffa and of the Giant's Causeway in Antrim. The mass of cooling molten rock slowly crystallised and changed in composition: the early-formed crystals sank to the bottom, the later ones being found nearer the top. In 1845 one family lived on Garbh Eilean, the largest, which is joined to Eilean an Tigh by a low storm beach; but the family was lost, falling over one of the great precipices which are a feature of the group. In 1821, 2 males and 4 females lived there; in 1891, 3 males and 5 females; and in 1901, 4 males and 4 females. But in this year the last family upped and went to Tarbert, Harris; for one of its members, a girl of 21, it was the first visit to the outside world. Since then there has been no permanent population. Back between 1811 and 1821 a visitor to the Shiants had some hard things to say about the filth and darkness of the shepherd's dwelling in contrast with the 'loveliness of nature, the bright sand, the fair rock, the enamelled green turf, and the sweetness of the summer breeze'.

Records show that at one time in the islands' history some sixteen people lived there, working small crofts. The ruins of their chapel can still be seen. The author Sir Compton MacKenzie had the house on Eilean an Tigh renovated for a stay there, and later the islands were bought by Nigel Nicholson, author and publisher. Today they are used for grazing sheep.

St Kilda

The St Kilda group of islands, some 45 miles off the west coast of Lewis, belong to the parish of Harris. These islands have an extensive literature and can only be touched on here. When the population was evacuated from St Kilda in 1930, the move broke for all time almost 2,000 years of continuous island living; they were taken off at their own request, after much careful and serious deliberation by the St Kilda 'parliament'. Life in Hirta, the only island in the group with a permanent human settlement, depended on the seabirds that breed in their tens of thousands on the cliffs of Hirta and Boreray, and the great stacks of Stac an Armin and Stac Lee. The flesh of puffins, gannets and fulmars

Research into markets and more co-operative effort, into better use of the land with less dependence on subsidies and grants, is scheduled for the Western Isles Crofters' Union. 467

Fishing as an industry, though now receiving the necessary shot in the arm by the establishment of the nucleus of a local fishing fleet, is still bothered with the perennial problem of poaching. The Minch remains one of the great fishing areas of Britain, but, it is argued, its fertility is forever being depleted by fishing inside the three-mile limit. This limit was originally chosen because it was the effective range of a cannon ball about two centuries ago. Fish, however, when they choose their spawning grounds are uninfluenced by the range of eighteenth-century artillery, paying far more attention to the nature of the sea-bed, which varies as much inshore as it does offshore. 228

POLITICAL ORGANISATION

In 1918, the Outer Hebrides became a separate Parliamentary constituency known as the Western Isles, a recognition of their geographical position in relation to the many other islands off the west coast of Scotland. Before this constituency came into being, Lewis formed part of the County of Ross & Cromarty for Parliamentary purposes, while Harris and its own islands of Scarp, Taransay, Scalpay and the isles in the Sound of Harris were included in Inverness-shire. 631

For the purposes of local administration, however, Lewis still forms part of Ross-shire (part of Ross & Cromarty), with its centre at Dingwall, the Ross & Cromarty county town; while Harris, North Uist, South Uist, Benbecula and the Barra Isles belong to Inverness-shire, and are administered from far-away Inverness. The Lewis association with Ross-shire is a historical one. When the boundaries of the Earldom of Ross were changed in 1661, Lewis went with Ross as part of the possessions of the Lords of the Isles. The present districts recognised for administrative purposes do not in fact greatly differ from the divisions, or parishes, set up after the creation of the Bishopric of Ross in the twelfth century, the Lewis parishes being Stornoway, Barvas, Uig and Lochs. The County Council attends to finances, education, roads, [175]*

631 public health and general administration, and has offices in Stornoway. Stornoway itself is largely looked after by a Town 632 Council which deals with the property of the burgh, makes and 625 administers byelaws and imposes burgh rates. The police are 634 under County administration, each burgh paying an annual con- 693 tribution for their services; the law is administered by a sheriff-principal and two sheriff-substitutes, one of whom holds court 631 in Stornoway. Each parish has a local committee of management.

631 The political history of the Western Isles, and no less Harris and Lewis, reflects the agrarian troubles. Before 1917, when Lewis *175 was a Parliamentary part of Ross & Cromarty, and Harris part 665 of Inverness, the electorate was both Liberal and Radical; traditionally there has been a significant anti-Tory vote. In 1917, the [634] Boundary Commission for Scotland set up the Parliamentary County of Inverness and Ross & Cromarty, with three divisions: Inverness, Ross & Cromarty and the Western Isles. In 1918 the Western Isles voted for the first time as a Parliamentary constituency of its own, and showed a predominant Liberal sympathy; the returned candidate was also standing for the reform of the Land Law.

666 In the General Election of 1923 a Liberal candidate was again returned, with a repeat performance in 1929. In the 665 latter election however, the Socialist came in second place. In *175 the crisis or scare election of 1931, the Labour Party did not contest the seat, which was won by a Liberal-National candidate opposed by a full-blooded Conservative. In 1935 the Labour candidate, a native of Lewis, was returned with a 1,345 majority. This Member retained his seat through all subsequent elections losing it only in 1970 to a member of the Scottish National Party, who became a lone Home Ruler in the House. Labour, Conservative and Scottish National parties are represented in the constituency, with a small Liberal showing. The revision of local authorities has given virtual autonomy to the Western Isles.

PUBLIC SERVICES

36 The lack of adequate social and public services has been cited by some authorities as a factor encouraging people to leave the

18 pastoral group, the germ (in the Hebrides)
621 township with its common grazing. Haml

174 to notice the absorption or suppression of rights held in
621 common in 'the North and West', together with the
631 abolition of the duties of fellow-workers to one another.
178 Too frequently they have not troubled to enquire into the
former existence of common rights and fellowship duties,
184 the observances of which have so much to teach. Yet to judge from the completeness of the Hebridean evidence, and from wider evidence to be touched upon with reference to Norse and Lowland conditions, suppression caused a profound social and moral revolution.

178 Indeed, the profound character of that revolution makes
184 it hard to recognise the common origin of features which may differ greatly today. To choose four examples, the
[428] long succession from father to son, found from end to end
[166] of an Island township, contrasts with a restless movement of farm servants, and even tenant-farmers, all too common until 1939 in Lowland Scotland and parts of Northern
[181] England. The ideals held by fellow-workers in Gaelic tradition, of kindly and courteous co-operation, contrast with the avowals of rugged individualism made on many a farm even of the southern Highlands today, and certainly of
[291] the Scottish Lowlands and Northern England. Languages have changed as English has advanced during 1500 years: the Lewis crofters' children still speak Gaelic, but children in Stornoway ceased to do so forty or fifty years ago.
[771] And in the recorded religious life of Gaelic hamlets far from any priest (or later, minister), the part of revered men and women is very different from the part played in Calvinism by the Minister and the male Elders of the Kirk. All these four contrasts are due to revolutionary changes in home, work, language and religion. Such changes, of which all trace may be lost elsewhere, are traceable from the fullest evidence among the Gael.

233 C(2)) and the cattle soums appear impossibly high unless large quantities of winter fodder
311 are imported. In the old townships the soums of each croft are still based on minor
178 variants of the traditional "1 cow and follower and 8 sheep per pound rent"; the rents,
427 however, were calculated on the potential value of the croft in days when an inexhaustible supply of labour was available for production of winter fodder by cultivation. This is no longer the case and the old assumption no longer holds.

Township pastures are seldom, if ever, used to best advantage. Because the regulations generally allow unlimited substitution of sheep for cattle, the soumings are not, in theory, exceeded by the presence of the increased flocks of sheep. In practice, however, the situation is quite different. In the first place the difference between the effects of the grazing of sheep and cattle on the hills is not widely appreciated. In discussions some crofters remarked on the change during the present century in the appearance of the nearer hill pastures - "they were green when I was a boy, now they are black", - but this was seldom correlated with the decline in cattle and increase in sheep. There can be no doubt that the increase in the ratio of sheep to cattle has generally led to a deterioration of the grazings. Further, there are almost five hundred separate sheep packs on the parish pastures, most of them with less than 20 ewes; at some fanks the men and dogs seem to outnumber the sheep! Little real sheep-herding is done - nor can it be by men who have other regular employment. Consequently the hills are not grazed evenly: some areas are grossly over-grazed whilst others are neglected. This situation has grown worse with the decline in cattle numbers and consequent abandonment of the shielings, the occupation of which ensured that use was made of the more distant pastures.

361 Yet another factor inhibiting proper use of township pastures is their situation and
233 shape. Many townships, particularly in South Uig, have detached areas of hill pasture,
311 former shielings. These are often singularly inaccessible now that the custom of
178 staying at shieling huts has ceased. Other township pastures are long narrow strips running inland for up to seven miles. Straying from one township's lands to those of another is therefore common. Individual allocation of the hill pastures is not practicable but a certain amount of fencing and, possibly, the employment of a paid township shepherd (as in the nineteenth century), would help.

233 If we examine the stocking of individual working units, Table 39, we find that only 30%
311 carry more than their total soum, 35% carry between a half and a full soum and a further
631 35% carry less than half their soum. The situation does not vary very much as between the four districts, although there appears to be a slight tendency for working units in

233 Bernera and South Uig to carry more stock than those in East Loch Roag and Carloway. Taking the total scum (cattle and sheep together) obscures some aspects of the livestock
311 economy. If we examine cattle and sheep separately quite a different picture emerges
631 (Table 40). As to cattle over one year old, two-thirds of the units carry but one cow, 14% have none, and only 3% carry two or more. In all districts the majority of units carry but one cow, but in South Uig and Bernera a significant proportion carry two - either a second milk cow or a young beast, the latter probably for sale in the autumn. Clearly, the great majority keep a cow mainly as a walking dairy; experience in other areas confirms this and in the Point and Tolsta districts of Stornoway parish many crofts have ceased to keep cattle at all since organised milk supplied became available. Sheep stocks, on the other hand, vary far more from unit to unit (Table 40). There is a marked tendency for the flocks to be bigger in the south and Bernera districts, where units without sheep are also rare, whereas in the north a quarter of the units in the Carloway district are without sheep and few have more than 50. In other words, agricultural production per working unit is greater in the two southern districts than in the north.

233 The management of the 500 or more sheep flocks deserves some comment, even from
[227] the non-agriculturalist. Lambing takes place in April on the crofts or on near-by common land; the ewes, with lambs, go to the hills in May, weaning takes place at the end of August and at the end of October or early November all sheep return to the croft land or near-by common pastures. The lambing percentages (60% - 90%, see appendices A(2) and C(2)) as reported to us appear optimistic, even for a good year, but this is probably because they were given to us before weaning; at least a 10% reduction of the figures given would be realistic. Except for certain South Uig flocks few lambs are sold; the

employment and, as we shall see, in most cases, the croft carries so little stock that it cannot be the most important source of income.

This situation does not vary very much from district to district (Table 44), except that South Uig has a noticeably high proportion of elderly croft workers. This is to be correlated with the unsatisfactory age structure of the south Uig district which, in turn, is probably a reflection of the poorer employment opportunities there and consequent emigration. Weaving, in particular, is less important than elsewhere. This situation is also reflected in the smaller proportion of crofters with regular employment and the larger proportion which relies on casual employment as shown in Table 44.

162 Finally, we may enquire whether the size of agricultural unit available to a man has
311 any influence on his employment status. To this end status has been plotted against size
464

of unit; the result (Table 45) does not suggest that the possession of a large agricu unit encourages a man to become a full-time rather than a spare-time agricultura Indeed, the possession of a large unit, built up by amalgamation, is often a fortui
[462] result of marriage, death, or inheritance, rather than a matter of individual choi only significant correlation in the table seems to be the understandable tendency f female croft workers to work the smaller, rather than the larger, crofts.

241 The cultivated land
311
● 631

The chief crops are hay, oats and potatoes, in that order:

DISTRICT	Acreage of: Oats	Potatoes	Hay	All Crops	Average
South Uig	149	50	209	407	2.
Bernera	121	38	69	228	2.
East Loch Roag	83	35	170	288	2.
Carloway	113	42	202	357	2.
TOTAL	466	165	650	1,280	2.

241 Barley, which in the form of bere was important until the 1920's, has almost
[178] disappeared. Turnips, marigolds, rape and other animal food crops are only gr

175 and still more to pay arrears, was "the rugged Hag,
241 Poverty, that would resist both King and Government".
427 We may guess that MacAulay passed a hint to the tenantry
451 that (in a good Gaelic idiom) they had better 'disremember' details of arrears: and this they did.

175 Of the four names on the deposition quoted, one or
551 two may have been surnames, others the patronymics of
613 kinsmen. As is still the custom, clansmen knew one another
178] by names of many kinds. Stature or colour was used to distinguish a big John from a little one, a fair from a dark, or a pale from a swarthy; occupations such as smith or caird (artificer, not necessarily travelling tinker as now) were
241] used, and also mere nicknames. Of the eighty-one crofters
226] or fisher-burghers in Stornoway, fourteen were MacKenzies; and other mainland surnames, such as Fraser and Gunn, Matheson and MacLennan, also showed their descent from the immigrants brought in when MacKenzie of Kintail founded the burgh to encourage fisheries after 1611. Each held a single holding, usually rented at two shillings sterling.

175 To conclude, rentals about 1715 show (1) the character-
241 istic equalitarian grouping of small peasants as fellow-
427 workers in the hamlet-farms still held directly from the
331 superior, Seaforth; (2) the eighty-one small burghers of Stornoway; and (3) tacksmen, responsible for the larger part of the Island rent, but under whom we know that the labouring peasantry, though without the local independence of the others, also continued to dwell and to work together. The tacksmen were to pass away, as many of them had originally come, at the desire of a mainland lord, and the lord, in his turn, was to leave; but the small peasantry of immemorial stock still hold and work their land.

Fig. 3. The Crofting Townships of Park

/facing p. 4/

121 a wider applicability of my thesis. The evidence in support of
101 my assertion was collected on the culture history of the Isle of Skye, a part of the area known as the Highlands and Islands of Scotland.

101 Since I shall frequently speak of the Highlands and Islands in the following pages, we should have a precise definition of th
133 region (Figure 1). Geographically, the Highland boundary should be placed at the Great Highland Fault, a series of geological faults which extend across Scotland from the River Clyde to Stonehaven, south of Aberdeen. Politically and economically,
131 however, this line has receded to the north and west. Since 1883 it has been common in Scotland to equate the Highlands and Island with the "Seven Crofting Counties," those counties in which the
241 predominate form of land use is the crofting system. Crofting may be defined as a system of hereditary tenure of a few acres of arable land combined with common tenure of hill grazings.
684 These counties are: Argyll, Inverness, Ross and Cromarty,
633 Caithness, Sutherland, Orkney, and Zetland. Out of the 163 parishes in these counties only 12 are considered non-crofting.[1]
161 In addition to this shared socio-economic pattern, the seven counties have experienced common economic-geographical influences a century of accelerating population growth, followed by a centur of persistent depopulation.

---

[1] Adam Collier, The Crofting Problem: A Social and Economic Study (Cambridge: Cambridge University Press, 1953),
794 p. 11n. A parish in Scotland is an ecclesiastical district which until 1929 was also a civil unit with self-government in such local affairs as education, relief for the poor and infirm, and health. If the British county is thought of as analogous to an American state, the parish can be thought of as a county, but one devoid of any function.

tourists, and newcomers who carry with them ideas of reform. 621
Further, as well as being mutually dependent commercially, the crofters and the villagers interact formally and informally in social, political, and, especially, religious activities. The consciousness of common interest of the villagers, however, 621 186 stems more from a knowledge that they are different from the crofters than from any common symbol. The 1000 villagers [162] are from diverse backgrounds. They find solidarity in being different rather than in "neighboring" or all attending the same church. The village also lacks the time depth of the rural settlements, being a creation of an individual in the last century.

For community I prefer an inclusive definition on the 631 order of Redfield's.[8] A community is characterized by conventional understandings, the occupation of a territory, and the possession of a culture. Thus, we shall refer to the Isle of Skye as the community.

It will be noted that I have not used the term parish. 632 799 Although the parish was once important politically and religiously, 178 as the older baronies were replaced, it lost these functions in 1929.[9] People reside within parishes and they, along with their crops and stock, are enumerated by parishes, but the parish is now little more than a statistical convenience. Church organization and political administrative units cross-cut and override parish boundaries. Indeed, I doubt if the people [186] ever thought of themselves as members of a parish.

632 TOWNS--political organization of municipalities (e.g., towns, townships, boroughs, parishes) embracing a number of communities; governmental personnel (e.g., executive, advisory, administrative, legislative); mode of selection (e.g., appointment, election, hereditary succession); jurisdiction, authority, prerogatives, functions, and activities associated with each position; etc. See also:

Physical characteristics and facilities of settlements. 36

000 24,863 acres. The value of this boggy property, as
423 far as the landlords are concerned, is determined by
427 its fishing potential. The landlords generally reside
226 away from their property, and brave the buffeting gales
several times a year to return to fish for trout and
[463] salmon. For the rest of the year they hire river-
watchers to prevent their tenants from poaching. As
[635] in Wales (Emmett 1964), the islanders continue to poach,
[171] in part as an expression of their identity as independ-
ent countrymen, a minority group in a nation-state.

161 Lewis is the most populated area in the Outer
162 Hebrides, containing 21,934 of the 32,607 Outer Hebrideans
437 numbered in the 1961 census. It is part of the County
of Ross and Cromarty, whose headquarters are on the
• 632 mainland near Inverness. Lewis has four administrative
areas called civil parishes in which births, deaths
[197] and other vital statistics are recorded. Stornoway
parish is largest, containing the town of Stornoway
on the east side of the island in which many non-Gaelic
speakers live. Of the other three parishes, the largest
[162] is Barvas which stretches along the west side of the
[197] island and contains 4,331 persons, of whom 94.5% are
Gaelic speakers. The people of Stornoway refer to someone
[186] from the west side as a siarach (west-sider), a term
which connotes rusticity.

131 Lewis is about 40 miles long. The distance from
Stornoway to the west side of the island is about 15
361 miles. Along a tar-macadam road through Barvas parish
491 from its northeast tip toward the southwest, about
18 villages are clustered along a relatively flat coast
for as many miles until the land becomes hilly. The
narrows and takes hairpin twists around blind,
361 stony corners. Villages become fewer, and nestle in
protected coves or string haphazardly across the face
of the hills.

Shawbost (from the Norse nid or sid meaning "sea"
• [632] and bost or bolstadhr meaning "dwelling" or "homestead"),
a village in the parish of Barvas, lies on three low
hills on the west coast. Shawbost is 18 miles from
Stornoway on a circular route in which Stornoway and
Shawbost are antipodes.

172 On the south side of Shawbost bay, huddled beside
the sea strand, is a cluster of ruins called Sean Bhaile
(the old village), believed to have been occupied over
200 years ago when fishing was important in the local
[348] economy. Banks of the streams are dotted with the ruins
of old grinding mills and ovens for drying grain.
[312] Fresh-water springs are still kept clear of rushes,
although water is now piped to most houses from a nearby
000 loch. Hundreds of place names are known to the villagers

Hundreds
103 of place names are known to the villagers
[193] constitute part of the oral tradition of a population
which has lived in a confined geographical area for
generations.

In most of Lewis, village and township coincide.
• 632 The village of Shawbost is composed of two townships,
621 South Shawbost in which the crofts splay outward like
311 a fan from roads which curve over an uneven landscape,
423 and North Shawbost which is composed of linear streets
[363] (see Map C), to which the crofts are perpendicular.
Each township has its own common grazing land, and its
own grazing committee. All of South Shawbost and part
of North Shawbost belong to one private estate (which
includes other townships to the southwest), and most
of North Shawbost belongs to an estate which extends to
Barvas. Beyond the fact that non-crofters in South
Shawbost have found it easier to acquire crofting status,
little difference between the two townships appears to
be due to their belonging to different estates. As
[427] elsewhere in crofting regions, the landlords of the
[524] two estates are concerned mainly with the sporting
potential of their land.

632 The two townships are themselves divided into named
neighborhoods (cf. Vallee 1955 for a discussion of
"natural neighborhoods" in crofting areas).

000 "natural neighborhoods" in crofting areas). The
363 northernmost street of North Shawbost is called Carnan
103 (carn = a heap of stones), and the street parallel to
it, by the loch and the sea, is Baile Stigh ("the town
within," i.e., in toward the sea. In everyday speech,
[196] one goes "in" to the sea and "out" to the moor, a
reference which probably derives from the days when
fishing was extremely important. The sea was then the
focus, from which the village expanded "outward." Today
the road is the source of goods and transport). Part of
the Baile Stigh is sometimes called Gearraidh Buidhe
(buidhe means "yellow"; gearraidh is the land from which
peat has been stripped). The Baile Stigh intersects
the main road and continues toward the moor, where it
becomes New Shawbost. New Shawbost, once called New North
Shawbost, is also called Pairc, referring to a farm which
existed there before the land was turned into crofts.

The neighborhood regions of South Shawbost are less easily
• 632 recognizable as the land is not divided into linear
363 streets. To the people of North Shawbost, South Shawbost
103 is simply Baile Thall, "the town over yonder." (Residents
of South Shawbost also refer to North Shawbost as Baile
Thall, but also frequently refer to the different streets.)
Within South Shawbost, several neighborhoods are
distinguished on the basis of the clustering of houses,

• 632 distinctive geographical features, and nearness to the
363 sea: Ceann a Stigh (or Ceann a Stigh Bhaile, or Baile
105 Stigh, the "town" at the "head" of the road "in" by the
sea), Ruailebhir (an area identified with the keeping
of cattle), Gearraidh Mor, Creagan, Pluic, and Mach a
Chul ("out the back," by a road built relatively recently).
A street which leaves the main road and cuts into the
moor, or common grazing land, is called Grinnbhat, from
the name of a nearby loch.

511 The presence of a large Harris Tweed mill in
[348] Shawbost has contributed to a high standard of living
[288] within the village. It is estimated that only 25% of
[493] the households of rural Lewis have cars; about 50% of
the households in Shawbost possess them. In 1970
[342] Shawbost had only one occupied tigh dubh, or "black
house" built of dry stone and roofed with thatch, which to
many islanders symbolizes a past life of poverty and
[404] adverse times. Modern appliances such as refrigerators,
[251] deep freezers and electric toasters are common in
[207] Shawbost. Most homes also have television sets, and
[206] many have telephones.

238 The mill in Shawbost employs between 60 and 70
463 persons to dye, card and spin yarn, to prepare the yarn
in warps which are then delivered to weavers who work
in their own homes, and to darn, wash and market the

175 Thus some tenants were relatively more prosperous than
423 others. A large class of subtenants (scallags) did
427 corvée labor in return for a small amount of arable
land and the right to graze a few livestock. Their
land was intermixed with that of their masters in the
prevailing system of run-rig. "Crofters" had economic
standing similar to that of scallags, but had permanent,
compact allotments (Gray 1952: 49).

C. Joint Farm vs. "Crofting Township"

The 1726 rental indicates that the "town" of
• [632] Shawbost was a corporate unit and thus that "crofting
townships" have a long history. However, Geddes (1948)
argues that the form of the 1726 rental was due to the
method by which it was collected. In 1726, officials
toured the island and made a list in large public
hearings of the rents of those assembled, thereby attempting
to make certain that no tenants were excluded from the
[461] rent roll. The major cooperative work unit seems to
[476] have been not the township but the joint farm, which
contained enough men to make up a crew for ploughing
and fishing.

171 In the Lothians and eastern Lowlands, the land could
192 be worked in larger units than in the Highlands, and a
287
427

175 In any case, the "town" or township was not the
• 632 effective work unit, but rather was the larger
241 neighborhood in which several joint farms existed.
[239] The tenants of several joint farms grazed their stock
on the surrounding moorland (i.e., on common grazing
land).

D. From Run-rig to Crofting

175 Run-rig was an agricultural system suited to a
233 pastoral people, who required the use of open, common
241 pasture for grazing their livestock; the arable land
311 was limited, and of varying quality (according to Day
(1918: 12), 54% of the land in crofting counties was
mountain and heath used for grazing, and only 5% was
[423] arable land). Residents worked several strips of
different quality, and the strips (in drained beds of
earth a few feet wide and many feet long called lazy-
beds or fiannagan) were usually re-allocated every few
[625] years. A "constable" acting for the landlord ensured
that proper husbandry was maintained.

175 The joint farm, and the stratification of tenants
241 and subtenants within the farm, disappeared as
178 "progressive" landlords began, in the second half of
427 the 18th century, to substitute compact holdings for
the "mingle-mangle of dispersed strips (Gray 1952: 46)"
000 which characterized run-rig. Hamlets or clachans

175 Geddes (1948: 56) gives evidence that joint farms
178 were abolished in Lewis early in the 19th century.
241 Gray (1952: 50) says that by 1819 there was little
423 run-rig left in Lewis. The factor's notebook for
Bressclete, on the west side of the island, shows the destruction of clachans around 1850, and their replacement by linear townships.

175 In the Napier Commission's "Evidence" (1884) for
423 the parish of Barvas, it was mentioned that the rent
427 had been increased because of improvements made by the
• 632 landlord, Sir James Matheson, between 1849 and 1852.
178 Land had been drained and new townships created; and both old and new townships were lotted and rented in 1850 and 1851 (Napier 1884: 959). The Ordinance Survey
195 map drawn up in 1852-53 reveals several interesting
361 features of Shawbost: "New Shawbost" has recently been
423 laid out; and in an area now incorporated by only a
427 few separate crofts on "Carnan," a cluster of houses
178 appears, perhaps the clachan in which joint tenants lived, and from which they went out to farm their various strips of land, before Matheson reorganized the land in linear strips with dispersed housing. The peat banks
(314) in the Carnan area are almost exhausted, indicating a
(194) long period of settlement in this area.

175 F. The Decline in Self-Sufficiency
• 632 Until the second world war, when weavers began to
433 earn larger sums of money for their weaving, the
175 township was relatively self-sufficient. The land was
463 more thoroughly cultivated, and the village boasted a
(240) number of local specialists. These specializations
175 were linked with particular family lines. Certain
592 families were blacksmiths; others were undertakers, joiners, cobblers, or midwives. As generations succeeded one another, occupations were not thrown open in the competitive, individualistic way of the mobile city. Certain occupations were seen to be "naturally" linked with particular families. Sometimes it was said that people of a particular family (which might include quite a number of collateral lines) had hereditary characteristics which suited them for particular occupations.

"Taggy was an expert bone-setter. He wasn't a doctor
(199) at all, but he could set bones better than any doctor. And he used to let blood, when people were dizzy with threatening strokes, or had pneumonia. It was in the
(827) people. He was a direct descendent, through his mother, of the Murrays of South Shawbost, the people who had the mill and were the blacksmiths for generations. He got that ability from them."

121 of the township with the larger society, and examines
128 the effect of geographical and social marginality on the boundedness of the township network. Chapter 6 discusses two important networks of social relations within the township.

B. Township as Social Boundary System

• 632 The township constitutes a relatively firmly bounded
178 system, although its boundaries are weaker than formerly
621 when the township was relatively self-sufficient economically. Township members worked together in small
(496) fishing crews, and families relied on each other for help when members of the family were away from the island "at the fishing."

621 Relatives were expected to give priority to helping
476 each other. According to one proverb, "A relative is
602 your best friend." First and second cousins were
(539) considered especially close, but knowledge of one's
(605) kinsmen extended to at least the fourth generation.

602 Ties of kinship became evident in ceremonies such as
576 funerals and weddings. One Gaelic proverb says, "You
585 know who your relatives are at weddings and funerals."
164 At weddings the onus was on the members of the bridal
(539) party to remember their relatives. "You have to sit and calculate who is closely related, and all those

621 used on different occasions, for example, to discourage
622 deviant behavior or certain marital alliances. Any sign
582 of physical or emotional disability in someone planning to get married invites an attempt by other villagers to
(539) discourage an alliance. According to a Gaelic proverb, "If you want to be praised, die; if you want to be criticised, marry (Ma tha thu airson do sholadh, bassich; ma tha thu airson do chainsadh, pos)." The villagers
621 consider not only the behavior of the person but of his
622 ancestors. The individual is perceived as belonging to
582 a family unit which through many generations has manifested
827 certain physical and behavioral traits. Traits of behavior such as shyness, heavy drinking, stealing and tightfistedness are interpreted as hereditary traits. "It's in the blood (Tha e anns an t'fhuil)." "It's in the people." Particular occupations are also associated with families.
(463) Stornoway, which is not so "urban" as to have a constant turnover of population, contains many examples of occupations passed down through generations.

• 632 In Chapter 3 I mentioned the development of several
578 groups in the crofting township which seem to be in conflict with the township as a strongly bounded system. People who keep only sheep have come to blows with those who keep both sheep and cattle; and a distinction between crofters and non-crofters may be seen. Many persons have preferred

• 632 to neglect crofting and to concentrate on weaving. Those
578 who still participate in crofting activities may neglect their communal obligations, such as going out on the moor after sheep, and may prefer to harvest crops, cut peat or perform other agricultural activities independent of other villagers.

632 Despite these tendencies, certain criteria of firm
178 boundedness are still found in the township network. All
462 the adult males of the township, including non-crofters, are responsible for serving as officers in the township grazing committee. The committee draws up rules for the
(654) organization of communal crofting activities, and applies for grants from the Crofters Commission or Department of Agriculture, for example, to build a new township fence, plant trees as shelter belts for livestock, extend a peat road, or to fence and reseed areas of moorland in "township reseeding schemes" (see Chapter 2). All adult males of
(464) the township are expected to provide labor to implement such plans.

632 Township meetings, chaired by the clerk of the
571 grazing committee, are held twice a year. A vote is
666 taken when any decision is to be made. The vote is usually unanimous, as all discussion, argument and persuasion have occurred before the meeting, and those who disagree

• 632 with the decision which they know is to be made usually
571 do not attend the meeting. Thus, apparent consensus is
666 always maintained.

632 Changes in the character of the township as social
178 boundary system are apparent in ceremonial occasions such as weddings and funerals, which will be discussed in the following pages.

584 1. Courtship and Marriage: Courtship occurred during the dark hours when the older members of a household had gone to bed. A great deal of courting was done in
(574) company. Because transportation was limited, groups of young people went together to dances; and on other nights, bands of young men would visit a house in which several girls were sleeping together, climb in through a window, and perhaps lie beside the girls, fully dressed, filling the dark with whispered jokes. Such a custom, a form of bundling, was called "night visiting" (ruith na h-oidhche); the male visitor was called carsid na h-oidhche, "companion of the night."

When couples began serious courting, they would meet outside at night, or the girl would let her hrannar (sweetheart) into the house after the old people had gone
(539) to bed. A couple would never consider walking hand in hand along the road during the day. Boys and girls were seated separately in school, went around in separate

164 The image of the island
484 as spiritual home is fostered by The Stornoway Gazette,
823 and by nostalgic songs, most of which were written by
204 islanders who emigrated to Canada in the first quarter
(533) of the century.

• 632 The crofting township as a strongly bounded network
241 continues to exist, although crofting as a socioeconomic pattern which evolved in a situation of limited social and geographical mobility, low cash reserves, and the restriction of a large population to a region of limited resources, is very different from crofting as defined by an office in Inverness. As far as the crofter is concerned, to be defined as a crofter by the Crofters Comm and other government agencies is to have access to resources which affect the environment in which he makes his choices.

241 The individual is faced with the semi-security of
288 crofting and weaving, in contrast with the exciting but risk-laden opportunities offered by the dominant urban-
(654) industrial mainland. Crofting and Harris Tweed have bee protected by government legislation. Various subsidies
(745) and loans are available. In times of unemployment, soci security is available. Extremely important as contribu
621 to boundedness are the non-economic incentives: the
156 individual has a place in a human community; he is give

TABLE 47

Population of Uig Parish 1901 - 1959

1901	1911	1921	1931	1939 (a)	1951	1959 (b)
4,463	4,462	3,956	3,364	3,110	2,718	2,390

(b) Our own survey count.

return of unemployed men and families from the mainland and overseas. Thus we found, in 1959, that the population of Uig was less than in any year since 1811. Nevertheless it was still double that reported to Webster in 1755, before the potato, kelp and fishing led to inflation.

These changes have not affected all parts of the parish at the same time, nor to the same extent. The position is summarised in table 48 and figure 45. Summaries by districts conceal a good deal of the truth; each township has had its individual history and no two are alike. Township figures are given in Appendix E.

TABLE 48

Changes in the relative distribution of population 1841 - 1959
For details by townships see figure 45.

	Proportion of the total in each district in the year: 1841	1891	1931	1951	1959
South Uig District	52	51	31	28	27
Bernera District	16	15	19	18	18
East Loch Roag District	17	23	24	25	25
Carloway District	15	23	26	29	29
	100	100	100	100	100

South Uig, in 1841, had more than half the population of Uig, despite the early clearances. t has now little more than a quarter, and is still declining most rapidly. In Aird and Crowlista, for example, where there were 321 persons in 1891, we counted but 71; in Valtos in the same period the decline was from 480 to 113. Most striking of all, in Ungshader, where 38 persons were living as recently as 1931, we found only 9. Bernera and Bernera Shore have slightly increased their share of the population of Uig, since 1891, although the actual number has fallen from 650 to 424. Clearances never had the same depopulating effect in Bernera as they had in the south, and fishing remained prosperous longer. The re-settlement of Linshader farm by crofters in 1925 had little effect but Bernera itself, despite isolation, has retained its population quite remarkably. Many go away to find work but few leave for ever. The development of lobster fishing has helped.

7 THE PEOPLE

THOUGH there are a number of large island communities in the British Isles, Harris and Lewis have in particular retained their individual characteristics, mainly because the Minch has acted as a buffer against effective infiltration of alien influences. The relative insularity of the north-west Highlands has enhanced this isolation, to preserve what is probably one of the oldest forms of communal life in Britain. It has some unique characteristics which are evident even in these days of sophisticated civilisation. The basis of life, although today the individual is beginning to show face, is a communal spirit, based on team-work. Work undertaken with the willing help of others is easier, lighter and quicker done: livestock is easier handled in a large controlled flock; boats are best rowed with a crew. And the women, with the same inborn communal spirit, once spun yarn together; waulked or fulled the cloth together; and helped each other in childbirth, child-care and the deaths which affected the community.

Several of these teams eventually merged to form what is now called the crofting township. And, though a township may nowadays number 1,000 people, to keep, if not pull, together is still a priority if the social structure is not to fail. Townships have been called in the past, by understanding writers, 'sociable hamlets' and 'little commonwealths'. Though these are of long standing historically, they are still a dynamic form of social integration of the kind found elsewhere only in working-class districts of cities such as Glasgow and Manchester. This is not to say that one must be 'poor' in order to participate in such a society. In the material world, to be poor is to be without money; in a crofting society, lack of money, although this commodity has tended in recent years to assume for itself an out-of-proportion standing and status, does not necessarily mean destitution; for help to keep the body together is always to hand, though the donor may never be seen or known.

8 STORNOWAY

STORNOWAY is the only real town in the Hebrides. Some even say that it is the only real town in the world, as its basic living patterns are those of the countryside from which it sprang. It has always been held in high regard by the islanders. In the past it was regarded as one of the most important places in the civilised world: a saying attributed to a primitive native has passed into a proverb: *'steornabhagh mhor a' chaisteal —baile 's modha 'th'air an t-saoghal gu leir ach Bail'-ath-Cliath an Eirinn—'s iongantach nach eil an Righ fhein a' tighinn a comhnuigh ann!'* ('Stornoway the great, with its Castle, the largest town in the wide world, except Dublin in Ireland; surprising it is that the King himself does not reside therein!') The affectionate name for the town is 'Portrona', Port of Seals, which it is. A son of Stornoway once said, 'The founder of Portrona must have been some sea rover with a good eye for a refuge from the storm and the peril of his calling. No matter what winds rage outside, within the bay the mariner may drop his anchor, furl his sails, and take his ease.'

When the Vikings first came to the western isles of what was later in history to become Scotland, they found a sandy spit of land on which they could beach their longships in a sheltered bay. It was, however, more than a haven; it was a place in which to settle down and rear the first of many generations. Later the Norse-derived MacLeods took advantage of an outcrop of rock beside the beach to build a fortress. Later again a greenheart pier, and later still a concrete wharf, have given the town the outward symbols of economic and social significance.

Stornoway owes its origin to the Stornoway Beds, a sedimentary formation much younger than the Lewisian gneiss. These Beds have had two effects. First, their existence and formation allowed a deep indentation, giving a good harbour with a protecting isthmus not far way. The harbour itself is due to the erosion of these

2: Thompson H-4, 5 (no date) 1973 ES10 Highland Scots ES10
Lewis and Harris

rocks about intrusions or dykes of more resistant crinanite. Second, the better nature of the soil derived from the weatherings of the sandstones and conglomerates has aided reclamation and cultivation.

In the long years of its existence the town has been a focal point of island history, fanning out to many corners of the world, where it has been merged with the wider history of Britain, the Commonwealth and elsewhere. Detached as it was from the rest of Scotland by the Minch, Lewis often went its own way. In the reign of Queen Elizabeth, when England and Sweden plotted against the Scottish crown, the emissaries of these countries met in Stornoway. Later, in April 1719, a council of war was held in a room in Stornoway to plan the overthrow of the Hanoverian dynasty of Britain; included in the assembly were the Earl of Seaforth, the Marquis of Tulibardine, George Keith, the hereditary Earl Marshal of Scotland, and his younger brother James, who was to become the famous Marshal Keith. Prince Charles Edward, though not setting foot in the town, looked at its twinkling lights from across the Bay, at Arnish, while his pilot tried to obtain a boat to take the royal fugitive to France.

The harbour has seen many kinds of ships on its waters. In the twenties, the *Metagama*, the *Marloch*, and the *Canada* came to take away almost a generation of young Lewis folk to the new lands across the seas, because their own island could not support them. The *Iolaire* sank within sight and sound of the harbour mouth and dragged about 200 Lewismen with her into an island memory. The *Cervona*, of Dundee, dropped her anchor just by Arnish lighthouse in July 1904, carrying survivors from the emigrant ship *Norge*, sunk at Rockall with appalling loss of life. The *Victoria and Albert* visited Stornoway in September 1902, the first visit to the town by a reigning monarch. That was a great day, the result of a letter from Provost Anderson of Stornoway in which he pointed out to His Majesty, King Edward, that with less than 30,000 inhabitants Lewis had 2,300 men in the Royal Naval Reserve, trained at the local Battery, the largest in Britain. There were also 1,100 men in the Seaforth & Cameron Militia, all of whom volunteered for foreign service in 1899, and 900 of whom did garrison duty in Egypt. Between 300 and 400 Lewis-

2: Thompson H-4, 5 (no date) 1973 ES10 Highland Scots ES10
Lewis and Harris

men served in the various regiments at the front in South Africa, and over 300 in the Royal Navy.

In 1796 there were sixty-seven slated inhabited houses in the burgh, twenty-six of which had been built since 1784. Before this date most of the houses followed the constructional pattern of those found in rural Lewis. In 1838,

> Stornoway was, within the last twenty years, only a small fishing village, but from the spirited and patriotic exertions of Lord Seaforth, the proprietor, and the grant of irredeemable feus for building, it has become a place of considerable importance as a fishing station. It has a post office; and a packet sails regularly once a week with mail and passengers. No place in the North of Scotland, and in an insulated situation also, has made more rapid strides at improvement, both in a domestic and commercial point of view, than Stornoway.

COMMUNICATIONS

Mention of the sailing packet indicates the tedious manner in which mails came to the town for subsequent distribution in the island. Letters went by mailcoach north to Dingwall, thence by mail-gig west to Achnasheen. Because there was no road from Achnasheen to Poolewe, about thirty miles away, they had to be carried on horseback. The weekly sailing packet then picked up the bags, for which cargo the owners were paid £150 per annum. A letter from London to Stornoway cost 1s 5½d; the smallest enclosure made it double that amount. The mail-packet was often held up by bad weather. It was a wind-blown sailing ship that brought Stornoway the result of the Battle of Trafalgar and the death of Nelson, an event in which a number of Lewismen also took part and died; in St Columba's churchyard at Eye there can still be seen a Trafalgar officer's gravestone. A fortnight after this news arrived, the packet from Poolewe brought its stale message.

In 1844 seventy boats, ranging from 15 to 150 tons, were working out from Stornoway. The *Gazetteer* for Scotland for that year says, 'The grand trade of the place consists in the exchange of the produce of the fisheries and the kelp shores, for British manufactured goods and foreign produce.

factured goods and foreign produce. There is a Branch office of the National Bank of Scotland, two friendly societies, four inns, and so many as about a score of dram shops.' The annual burgh revenue was £17 3s and the expenditure £15 17s 6d. The town boasted ten streets, a saw mill, a mill for carding wool, a corn mill, a very large malt barn and mill, and an extensive distillery. These buildings were constructed 'in a style not much inferior to the best buildings of their class in Scotland . . . A stranger on arriving at it by any route, or from any quarter, is surprised to see so large and flourishing a place in so remote and uninviting a corner. Its broad field of houses, its capacious bay, and spacious piers, its occasional crowd of shipping, and stir of trade and gaiety, and the vicinity to it of the aristocratic mansion of Seaforth-lodge, render it a striking and very welcome relief to the prevailing dreariness, sterility and inertion of the rude country in which it is nestled.'

In 1901, when the West Highland line was opened, the return fare from Mallaig to Stornoway by MacBrayne's steamers was 14s 6d. One could go from Glasgow to Stornoway by steamer for 31s 6d return. A *Guide* for that year indicated that Stornoway had three hotels, six churches and a Court House, singled out for specific mention for some reason. A Ross-shire *Directory* of 1914 describes the Nicholson Institute as one of the four Junior Student Centres in the county. Its Leaving Certificate results were the best in the north of Scotland, with a total of 95 higher and 234 lower passes, and no less than 20 passes in Higher Science.

Stornoway is a Burgh of Barony, dating from 18 October 1607. It had, of course, been a town of sorts long before the Charter was granted by James VI; the Charter was executed under the Great Seal conveying equal shares to three of the leaders of the Fife Adventurers. Under the Police Act of 1862 Stornoway became a Police Burgh. A bank agent in the town was appointed first Chief Magistrate on 31 December 1863. Under the 1892 Act, the designation 'Town Council' superseded that of 'Burgh Commission' and the Chief Magistrate assumed the title of Provost, the senior and junior magistrates becoming known as senior and junior bailies. The present Municipal Buildings were opened in 1929. The previous building was only an idea in 1897; it took

STORNOWAY The previous building was only an idea in 1897; it took shape when Dr Andrew Carnegie offered to contribute £1,000 towards the construction of a library, provided the town adopted the Public Libraries Act. This was done, and the Council decided to incorporate the library into a larger structure, erected at a cost of £11,000 and opened in September 1905 by Lord Roseberry. Carnegie increased his contribution to £3,500, with other large donations from public-spirited industrialists of the time (eg Coats of Paisley, who also financed school libraries in the island).

Being a seaport, the sea has been basic to the town's livelihood. In the eighteenth century trade flourished between Stornoway and the Baltic, Scandinavia, Holland, France and the north of Ireland; and in the first half of the nineteenth century, fish was exported as far away as ports on the Mediterranean. The advent of steam killed the Stornoway sailing craft. At one time in its history, the shipyard (at Matheson's Patent Slip, now the site of the textile mill) turned out many fine vessels. The scent of tar and pitch, the crunch of a busy grindstone, the shaping of a ship's timbers, the steaming of her planks, the driving of pins and bolts, the music of mallet and caulking-iron, the buzz from the saw-pits and the riggers aloft, all gave the town a sense of at-one-ness with the waters in the bay. Then there were the schooners, brigs and barques of foreigners who put in for repairs or for merchandise. It was a time of glory that has now gone as surely as the sail has disappeared from the high seas. Ship-masters, ship-owners and sailors all added colour and variety in the streets as they mingled with the local population—which numbered 1,000 in 1801. Stornoway captains were world-known for their skippering: MacLeods, MacIvers, MacKenzies, Ryries, MacLeans, Morisons, Allans. These were the names that were once reeled off to be paired with the famous ships of the day: *Sir Launcelot, D. L. MacKenzie*, and *Assaye*.

While large numbers of its sons were sailing the high seas, many in ships of Stornoway origin, the town began to take on the first look of a port, with piers. On 9 August 1864, Sir James Matheson subscribed the instrument which took the Stornoway Harbour Commission into being. The following year, on 29 June 1865, the Commission was incorporated by Act of Parliament. Matheson had shown a great interest in the development of the existing

harbour facilities. But his efforts to promote the town as an industrial centre were opposed, a dispute arising between him and parties who claimed interest in the quays which already existed; his action to set up the Harbour Commission and to acquire the Crown's interest in the shores of Stornoway Bay *ex adverso* found local opposition. He succeeded in quelling the doubts and the resulting counter-actions, however, and then, with the decks cleared, the Commission lost no time in getting developments under weigh. Authorisation to borrow up to £10,000 was obtained and work put in hand on building a timber wharf, 150 ft long, filling in certain areas for fish-curing and other purposes, and constructing sheds, works buildings and warehouses. By 1881 this work had been completed and, with the expansion of the herring industry, the Commission sought to increase its borrowing by £20,000; in 1892, further powers for borrowing the sum of £55,000 were sought and obtained. By the turn of the century all the works authorised by the 1892 Order were completed: they met the berthing needs of the fishing industry and also the reclaimed areas on South Beach, North Beach and the Cromwell Street quays were used continuously during the season as fish-curing stations, proving essential factors in the development of that industry.

Before the 1914-18 war ended, Lord Leverhulme had become proprietor of the island and, as such, a member of the Harbour Commission. He proposed further development of the existing facilities, to line up with his scheme for establishing Stornoway as a centre for industrial activity based on fishing. Plans were prepared, and a permanent way for a railway (linking the canning factory at Inaclete with the harbour) was formed. But the scheme did not materialise before he abandoned Lewis for Harris. Before he left, however, he conveyed free to the Harbour Commission considerable property round the inner shores of Stornoway Bay. At this stage the Commission promoted a New Harbour Order, passed by Parliament as the Stornoway Harbour Confirmation Act, 1926, in which provision was made for the increase of the Commission's borrowing powers (up to £70,000) and the setting up of a contingency fund of £10,000. Further improvements were put in hand. Another Order (1947) was obtained and

78

"Family worship" is considered an important part
71 of daily life. Prayers should be said before meals
82 and teas, and the head of the household should read
93 passages from the Bible to the assembled members of the household every morning and evening. The practice of
78 "reading the books" prevails in households headed by
92 older men, but is less common among families headed by younger men.

94 3. The Clique of the Converted: The second network
32 within the religious sphere is a special religious in-
21 group, the clique of the converted (curamach). This clique constitutes a relatively strongly bounded system which to some extent competes with the township boundary system. Owen (Rees 1960) has noted that as persons become more involved with religion in the Protestant Hebrides, they tend to remove themselves from community life.

Intense involvement with the church sometimes conflicts with township activities since people may attend Communions at times when a fank is planned, leaving the work to be done by others. When elders of the church are present at activities, such as fanks, which are otherwise usually boisterous and full of humor, behavior tends to be "properly" restrained.

Chapter 7

Conclusions:

Summary and Theoretical Considerations

A. Summary

105 Crofting townships of the Highlands and Islands of
[131] Scotland are within a few hours' travel of the major cities
[484] of Britain. An extremely high percentage of the young
[873] people in the crofting counties attend universities and other institutions of higher education. Politically,
[641] administratively, economically and in other ways, the crofting population participates in the larger urban-industrial society of Britain.

105 Despite this participation, the township-qua-village-
•632 community is a relatively strongly bounded system. This
621 thesis investigates factors contributing to the strong
[121] boundedness. From a relatively self-sufficient economic
105 unit using agricultural practices suited to the extensive
178 cultivation of marginal land by smallholders, the township
632 has during recent decades changed to one dependent on
241 goods and services provided by the larger society.

105 Crofting activities nevertheless persist, in part because
241 of the incentives offered by government bodies such as the
654 Crofters Commission and the Department of Agriculture. The

The
105 fact that crofting townships are located on marginal
241 land is one reason that the larger society is not motivated
654 to exploit the land. The Crofters Holding Act of 1886
[311] and subsequent legislation ensured protection of and
[671] incentives for continued maintenance of crofting and the crofting township.

Protective government legislation, grants and loans for housing, subsidies for rearing livestock, relatively low taxes, and the economic protection provided by a socialistic government in times of crisis have helped to maintain a core of crofting families for many generations.

105 The predominance of older persons in the township is
162 striking, but many of the younger people who have left
•632 the island to work on the mainland return frequently,
166 contribute part of their salary to the remaining family
434 members, and plan eventually to marry and settle down in
584 the village or to retire there. Long-term residence of
[621] kin-linked families in a small area has in itself contributed to the boundedness of the township network.

105 The policy of the government, through developmental
241 agencies such as the Highlands and Islands Development
654 Board, has been to support economic strategies that
632 complement rather than interfere with the functioning of the crofting township with its small holdings and communal
000 practices. The Harris Tweed industry is lauded as an

105 The Harris Tweed industry is lauded as an
241 industry which is compatible with crofting. Because
788
•632 weavers are self-employed, they can set their own schedule of work and thus continue to participate in croft work and fulfill various township obligations. The effects
[121] of this industry on the township as a social boundary
[434] system were investigated. The income available from
[463] weaving is unpredictable, which encourages the retention of crofting practices and other patterns of behavior, such as "occupational pluralism," that were found to be
[476] adaptive in the past. Such strategies also strengthen
[182] township boundaries; for example, they encourage mutual
[434] aid and communal township practices. But weaving also
[407] offers a high level of income; and some weavers, preferring to spend most of their time weaving, have neglected crofting, or have invested in tractors or other motorized transport which enables them to harvest crops, cut peat and perform other activities independent of other township members.

105 The fundamentalist Free Church constitutes an important
621 boundary-maintaining mechanism, serving to exclude various
795 external influences of the larger society from the township.
632 However, a smaller network of persons engaged in the
184 religious sphere of social activity, a subsystem within
105 the township system, also exists which has the appearance
794 of a firmly bounded system. These are members of the clique
621
632
184

105 of the converted, who occasionally neglect township and
794 neighborly duties in favor of religious activities. The
621
•632 increase in private transportation during the past 25 year
184 has facilitated the maintenance of closer ties within the
[494] clique. The existence of such a strongly bounded subsyste is an example of a trend toward the weakening of the township as a social boundary system, but this trend is countered by other factors that strengthen or help preserv the township as a bounded system.

105 People come and go from the township, but this appear
632 to maintain rather than weaken township boundaries because
621 behavior different from that prescribed within the townshi
166 can be performed outside it, and conformist behavior
184 reassumed upon reentry. Those unable to conform with standards of behavior prescribed within the township are not likely to return.

[528] Township members who have settled away from the islan come back periodically for recreation and a sense of
[829] belonging. They increase the value of the township and its way of life in the eyes of the inhabitants, and provid them with subject matter for conversation until the next holiday season, when the exiles again return.

105 The boundedness of the township is thus a qualified
632 boundedness that, over the past 100 years and especially
621 since the second world war, has decreased in strength but
184 is nevertheless strong today.
[178]

is nevertheless strong today. The relatively strong boundedness derives from a number of factors. Important among these are economic adaptations to modern conditions, which consist in part of the retention in modified form of traditional economic activities in response to various constraints and incentives presented by larger British society. Also important are institutionalized bonds of affect, particularly of kinship and community, and ties of religious affiliation and identification. These ties continue to be functionally important in part because of the geographical and social marginality of the crofting township. This combination of factors has resulted in the persistence of a relatively strongly bounded system which retains distinctive features in an extensively urbanized and industrialized nation.

B. Theoretical Considerations

In the United States, the concept of "peasant" has provided the main conceptual tool by which rural communities which are structurally integrated with the larger nation-state may be studied (cf. Foster 1967, Wolf 1966). The Scottish crofting township has some of the characteristics of a closed corporate peasant community (Wolf 1957), but it is difficult to apply the word "peasant" to such a community. Cultivation for subsistence is minimal, and in

Cultivation for subsistence is minimal, and in part stems from government-defined privileges and duties regarding maintenance of a croft. The Harris Tweed industry, which is restricted to the Outer Hebrides and thus is protected from competition, has provided work for a large number of islanders. Many of the younger members of croft families live in cities on the mainland, and send part of their wages home; they return regularly to the island, and many plan to retire there. Thus the township supplies urban workers who remain very much attached to the rural townships, which are composed of aged family members and a rural proletariat. The standard of living is high, and many crofters have accumulated savings, although much of this surplus is used by the men for alcoholic drinks.

In Britain, rural communities have been interpreted as lying somewhere along a rural-urban continuum (cf. Southall 1959, Frankenberg 1966). In 1959, Southall presented "an operational theory of role" by which he suggested that heterogeneous societies may be analyzed and compared. He developed the concept "density of role texture" to describe societies which lie along a continuum from rural to urban. Frankenberg (1966) uses Southall's concept along with other concepts to present a more complete model of an urban-rural continuum. The "models" of both Southall and Frankenberg are essentially lists

THE CROFTER

The pursuit of agricultural processes, their growth, development and improvement, to establish a foundation for a secure society has never been easy on the island. The unyielding nature of the base rock, Archaean gneiss, its hardness, its non-porous property, have all contributed to the resultant pattern and character of society which emerged. Though one is tempted to define crofting as an agricultural activity, it is also something much more intangible: a way of life. To quote the Napier Report on *The condition of the crofters and cottars in the Highlands and Islands of Scotland* (1884): 'Habit and local affection bear so great a sway in the actions of mankind, that Highlanders will be found who would rather be proprietors in the mountains of Skye, or the wastes of Lewis, than on the fertile plains of Manitoba.' 'There is the Island of Lewis, with poor, peaty soil covering the Archaean gneiss, but with a crowded, lively, vivid community,' said the Taylor commision in 1955 (Commission of Inquiry into Crofting Holdings).

The Highland crofter is the subject of an extensive literature. A special authority, the Crofters Commission, exists solely for the purpose of caring for his needs. He has special rights and privileges which are safeguarded by the Land Court. Crofters' unions have formed themselves into a strong federated wall for the system's defence.

Socially, the term 'crofter' means, on the island at any rate, a landholder who cultivates his own (arable) holding, his croft. He shares the common pastures with his fellow-crofters, each of whom has a right to carry a sum of so much stock, the 'souming'. These common pastures or grazings are a social link of some considerable significance, forming the basis for the crofting township, as distinct from the communities set up under the influence of some agricultural land use such as hamlet or village, where there are both small-holders and true farms, and the only communal land is the village green or common. For instance, outside the crofting counties area the main unit of Scots life in the country is the farm, with its tied cottages. Then come the full-time small-holdings important in the north-east and the southern Highlands.

of larger and more economic working units of over 30 acres of arable land is also apparent in the southern Hebrides, the west mainland of Ross & Cromarty, Argyll (mainland and islands) and Caithness.

The acreage of common grazings held per holding varies from under 50 to some 200. The crofts, as already mentioned, are in townships, of which the island has 168, half being fenced and half consisting of individually fenced crofts. During the winter most of the crofts are laid open for winter grazing by sheep of general ownership. Manure resources are mainly dung, seaweed, shell sand and of course artificials where necessary.

A new aspect of crofting in Lewis is its extension into forestry. A recent survey by the Forestry Commission indicated that under 400 acres of the land not being used for crofting were suitable for afforestation, and that these acres were made up from twenty-three different plots. At Garynahine Estate can be seen the beginnings of a real afforestation unit of some 500 acres, a scheme of the utmost significance for the economic future of Lewis and for the relationship between crofter and landlord. Too often in the past this relationship has been biting, hard and inflexible; in particular the crofter was understandably unwilling to release good land for planting trees. But the crofters of Callernish agreed that the right of usage of 285 acres of the common grazings belonging to their township should revert to the landlord, this land being thrown in with 220 acres of the Garynahine Estate. Labour comes from the affected township and others in the area.

FISHING

Early beginnings

It is the humble herring that has contributed so much to the island's economy and its history. At a very early date in history, the Hebridean fishings were worked by Frenchmen and Spaniards who must have found them rich enough to repay the long journey and weeks away from home in the cold Minch waters. It was not, however, until the end of the sixteenth century that the wealth of the Minch was really discovered, this time by the fishermen on the mainland of Scotland who copied the tricks of their trade

178 As the thirties mark a transition between early condi-
241 tions prevailing until 1919 and those of 1947–53 (Appendix I), the present tense is used.

311 Of the Island's 528,000 acres, including deer forests
• 632 on the Harris border partly grazed, there are 24,000 acres of arable and grass land. Barvas parish leads with 6500 acres, then come Stornoway, Uig and Lochs, Harris being last with 3300 acres. Roughly one-third of the Island's arable and grass land, or 32 per cent, is permanent grass, chiefly machar, with a maximum of 39 per cent in Uig, but a minimum of 9 per cent in rocky
311 Lochs, most of this on one small farm. About 10 per cent of the arable and grass land area is given to hay
242 production; of this, rather less than one-third is rotation hay grown on the plough rigs or parks, and rather more than two-thirds is hay from permanent grass. Lochs, lacking machar, has 20 per cent hay, while Barvas, better
[632] off for machar, has only 4 per cent. Even this proportion of rotation hay shows an increase on the crofts since 1919. Stornoway parish, it will be noted, occupies an intermediate place, but if the facts for Point (Eye) district were contrasted with those for the villages along the machar, the differences between them would emerge clearly. As it is, they can be guessed from the vegetation map showing
311 the machar. Oats is the chief crop, and occupies 33 per
243 cent or just one-third of the arable and grass of the Island; excluding the permanent grass, it constitutes half the crop.

311 In Lochs it occupies only one-quarter of arable and grass.
243 Barley, mostly four-row, or bere, is less important as a food today than formerly, and now occupies only 6 per cent, and, though it reaches 13 per cent in Barvas, with its
• [632] machar, hardly any is grown in Lochs. Rye (*seagal*), still found in the machars of the Uists, is little grown in the Lews. Potatoes grow well everywhere, occupying about 15 per cent of the area, though townships with plentiful machar land grow most. Turnips are being gradually introduced, and though their liability to disease has somewhat discouraged the crofters, the proportion is now about
311 2·3 per cent. Cabbages occupy a small area (1 per cent),
244 latterly along with lettuces, carrots and the like.

Rotation hay and turnips being almost unused up to
241 1919, oats was grown repeatedly before rotation with barley or potatoes, and with no bare fallow. While heavy manuring maintained the fertility, the crop by July was ablaze with corn marigold (and other weeds) through which the thin oats struggled to rear its head. Thickly sown, the return was exceedingly small. Except for the machar (if any) there was no 'out-field' as elsewhere in old Scotland.

The smallness of the crofts and the poorness of the crops explain the very small total return. Hence little oats is now ground for meal and the potatoes do not last
[198] through the year, though few are sold. The low out-turn
[246] also explains why even fodder is scarce, though much more of the crop is secured for wintering than formerly. Summing up, a croft of 6 acres—though a little too large to be quite typical—includes a couple of acres of grass and hay, almost as much of oats, and the remainder bears potatoes and barley, with turnips, cabbages and garden produce.

[174] In the past, the cropped land was unfenced and un-
[178] walled. At present, the rule is to encourage the con-

241 struction of a single ring fence round the croft land, which also circumscribes a good deal of rough grass, the ground
[178] being generally rough in parts. Individual crofts are fenced only where exceptionally large, or when the pos-
[654] sessor is unusually enterprising or is isolated. Depart-
• [632] mental help is given in the provision of fencing materials for a township, the crofters supplying labour. As the
233 animals are allowed to graze freely in winter, this limits
241 crops to those sown and harvested in the summer half-year —a serious matter for any man of enterprise who cannot afford a fence of his own. Cattle kept on the croft when the fields are under crops have to be either tethered or driven to a common pasture. A drystone dyke may enclose a small patch of garden, rarely well tended, the school gardens providing a laudable exception.

233 Shortly before 1939, the stock included under 1000 agricultural horses and well over 10,000 cattle (of which more than 6500 were milch-cows), but practically no pigs. Sheep number 42,000 ewes, or 94,000 ewes and followers in June. Thus there are 2·5 cattle on an average holding, of which more than 1·5 are milch cows; and there are
233 half a score ewes or about a score of sheep in June. The
178 size and the quality of the cattle have greatly improved since first I visited the island in 1919; at that time the mongrel Highland breed must have been the very poorest in Britain. The Blackface sheep are small, either through underfeeding or because of traces left from the old, smaller Hebridean breed, or from both causes. On an average there is, or was, one horse, or pony, to every five or six
23 crofter holdings, but their number is much reduced.
233 Actually, such Island averages for horses and sheep are somewhat misleading. In particular, either there are more
[182] horses than the average in a given district, or almost none,

361 it command and make it the leading settlement of the
366 Hebrides, with a population fluctuating around 5000.[1]
162

2. Aspects and Problems of the Burgh

361 The little town pleases by its views over the harbours,
• 632 outer or inner—sheltering perhaps a steamer or two and the clustered fishing vessels—across to the wooded skyline and the beautiful grounds of the Castle, a-flower in spring with rhododendrons. Or framed in trees from the Castle policies, the harbour and even the roofs and
[342] smoke of the houses are not unpleasing (Plate II). But the town's chief charm is its setting, not itself, though its plain dwellings with 'harled' or rough-cast walls and slate
[146] roofs are simple and inoffensive. In rehousing, the Local
656 Authority had respected Scottish domestic features. But the greater use of local materials, labour and skill is surely desirable in the Island with its many half-employed men, who need such work to maintain income, health and morale.
[362] As is to be expected in view of low incomes, and the extremely primitive housing in the country, urban housing
[162] is inadequate. In Stornoway burgh in 1931, 44 per cent, or nearly half the population, still dwelt in houses of one to three rooms, 17 per cent in four (including attics often with no dormer windows), 20 per cent in five or six, and 18 per cent in seven rooms and over. There has been improvement up to 1939, and after 1945, but much remains to be done.

369 Turning to cultural life, profound differences divide
632 the town from the country about it. Whereas in the townships of rural Lewis the people are almost purely natives

[1] The burghal area was extended in 1935. At the census of 1951 its population stood at 4950. This showed an increase of 15·9 per cent above the population enumerated in the same area in 1931.

369 of the place, even the schoolmaster and ministers being
• 632 mostly Islanders, in Stornoway an important minority of the officials and business men hail from the mainland, and some of them from the Lowlands. New blood has undoubtedly been needed to promote enterprise, to foresee new possibilities, and even, at times, to make the best of the past. At the same time, the cleavage between town and country is marked in ways of thought and feeling as in
369 livelihood. To take a single criterion, that of speech, most
632 of the children of the town speak no Gaelic and many
197 hardly understand it. While the percentage of Gaelic speakers was 95 in the three outlying parishes in 1931, in the burgh only 70 per cent could still speak the old tongue. By 1951 the ratio, still almost unchanged in the outlying parishes and townships, had considerably lowered in the burgh.

369 The attempt to harmonise the interests of country and
632 town forms a hopeful aspect of the activities both of the Stornoway Trust, which holds the rural and urban property
656 presented to the people of Stornoway parish by the first Lord Leverhulme, and of the Lewis Association, formed
[427] in 1943 to undertake studies of the Island to guide action
654 for the future. The maintenance of the town's prosperity
228 will depend greatly upon its industries of fishing and of spinning; and these are almost inseparable from the
288 maintenance of the rural population for whom Stornoway acts as regional centre, and who weave with the yarn spun in the mills. Unity in constructive purpose could go far to build up the prosperity of the community.

361 With the recognition of the need for planning aroused
369 by the problems which faced the country with the return
632 of peace, it is proposed, at the centre of the Burgh, to rebuild the whole of the peninsular area of Point Street,

361 by co-operation of three authorities: the Town Council,
369 the Piers and Harbour Commission, and the Stornoway
• 632 Trust as owner of property, including Lews Castle with its grounds. The social situation is of quite exceptional
[656] interest, and an attempt to describe some of its features is
[654] made in Appendix II, on the Stornoway Trust and the Lewis Association.

(c) CHANGES IN ISLAND POPULATION, AND THE FUTURE

1. From 1801 to 1939

175 Until the middle of the eighteenth century, the growth
162 of population was periodically checked or even set back by famines and epidemics, such as smallpox, or by warfare.
[731] In 1801 the total population of the Outer Hebrides (in round numbers) was 21,700, and in 1831 it was 32,000. Of this total, Lewis carried 9200 and Harris 3000 in 1801 and, a generation later, in 1831, respectively 14,500 and 3900. In the graph (Fig. 12) the curve showing the average for the five landward or rural parishes of the Island (excluding Stornoway Burgh) indicates the fairly steady numerical increase there, almost to the close of the
[731] century. Following the evictions after 1831 and the potato famine of 1846–48, emigration caused a fall in the southern islands (*e.g.* in South Uist, Fig. 12). Forty years later, in 1871, the Outer Hebridean total reached nearly 40,000, of which Lewis alone, with 21,000, now gave more than half the total, and Harris—in spite of an intervening drop owing to evictions—4800. By 1901, in spite of losses in the southern isles, the total for the Outer Hebrides reached a peak of 46,200. Of this, Lewis already contributed almost

174 of the Norsemen, lay a succession of earlier periods. A
623 phase of primitive settlements is traceable in archaeo-
172 logical remains and in recent and contemporary survivals.
174 It is shown in the physical race-traits distinguishing those in one part of the Island from those in another. Fragments of tradition telling of the first Christian missionaries survived the Norse invasions and settlements, dated from A.D. 800 or before, down to Haco's defeat on the Clyde at Largs in 1256. These fragments can be linked to chronicles and to later tradition, on which they throw fresh light.

[144] A survey of the archaeology has been published,[1] but comparatively little, as yet, on race. Yet different communities are distinguished by marked racial types or strains. Although many, indeed most, of the race-strains of the Island must have entered it in prehistoric times, some are linked to tradition, and history accounts for the more
[141] recent immigrants. The striking element of race in the Outer Hebrides is a broad-headed type prevailing from Barra to the Lews, accompanied by medium stature and dark hair; it is also found across the Northern Minch. But within the Island are notable differences.

829 Variety of race being accentuated by difference in ways, the communities still comment pointedly upon one
[538] another! For instance, an old saying is not forgotten: "The folk of Cladach, but the gentlemen of Uig!" (*Muinntir a' Chladaich, ach daoin' uasaile Uig*),
[433] 'Cladach' being the western 'Beach' district possessing
• 632 ploughland but poor fishing, which covers the modern
[133] parish of Barvas (excluding the north-west cliff-promontory
[113]

ONTINUED FROM PRECEDING FICHE

the present harbour facilities are the result of this, with a causeway to Goat Island—a small snippet of land off the Newton shore—the King Edward Wharf extension to give a depth of 24 ft at low water, and the construction on Goat Island of a slipway and slipway jetty.

The present facilities are valued at several million pounds; they evoke, however, a blank stare of disbelief. Much of the industry for which the quays were first envisaged has now gone. The days of 300-400 fishing boats and the landing of several thousands of crans each week, with the attendant bustle and activity, belong to the past. The harbour remains reasonably active, with a considerable extent and variety of shipping: general traffic due to the Harris Tweed industry has continued to increase in recent years. The introduction of the ferry service direct from Skye to Tarbert, Harris, has however had perceptible effects.

When Leverhulme parted company with the people of Lewis, his gesture of farewell offered the island to its people. This brought into being an agency for the people of Stornoway and its rural areas, so that they were in effect in control of their own future to a degree unique in Britain. The Stornoway Trust was formed in 1924. Besides property in the burgh and its suburbs, including the Castle and its park or policies, the Trust owns virtually the whole of the landward area of the parish, from Arnish Moor northwards to the township of Tolsta. Freshwater fishings are in its hands, as are the resources of the sea and inshore fishings on the shorelands. During its first five years the Trust was faced with a growing deficit, though this was redressed partly through agricultural derating and partly through the registration of the Trust as a charity, thus exempting it from income-tax demands.

The Town Council, the Harbour Commission, and the Trust have overlapping representation, for harmonious work on behalf of the community. Indeed, by the conditions of the Deed of Trust drawn up by Leverhulme (in 1923-4), the Stornoway Trust must include the Provost of the burgh as its chairman, together with magistrates and councillors. Throughout the years of its existence, the Trust has sought to increase its usefulness, but at the beginning decisions were often taken piecemeal. Portions of the property were

sold, one such causing legal history. The chief garage proprietor in the town applied to use for his business a site he had purchased at a road junction near the western end of the town, close to the principal new housing schemes and opposite the main gate leading into the Castle grounds. It was a mistake in planning, and public disapproval began to make itself felt. The Trust, in an effort to redress the situation, sought to distrain the garage proprietor from extended use of the area. The parties went to law, and the case was fought through the courts until, in the House of Lords, the Trust finally lost and had to pay a bill of some £4,000, equivalent to a fine of £4 to £5 from every family in the burgh. The Trust drew its lesson, and since has formulated a more alert and constructive policy.

The town is well served by its shopping centre, with multiple stores jostling for custom with smaller private business concerns. Prosperity for all, however, depends on the well-being of the Harris Tweed industry. If there are recessions, as there have been in the past, the tills rattle spasmodically. Also standing to suffer are others such as the bus companies (who provide the efficient town services and link up Stornoway with the rural areas), the builders and the haulage contractors. In the ever-present climate of unemployment it is the policy of the mills to employ male labour, despite the fact that women would be cheaper. The mills, run by natives or by Lewis-born incomers of the second and third generation, realise a social obligation in recognising that in Lewis the strong tradition is that the man should be the head of the family in every sense. The mills also carry a proportion of surplus labour to offset the unpredictability of those workers who, with crofts to look after, occasionally have to take a day off 'at the peats' or some such activity. This is another of the island's distinctive traditions.

On Cromwell Street is the shop of James MacKenzie & Sons Limited, dealing in hardware, furniture and china. Nothing unusual in that, at first sight: yet it is another unique aspect of life in Lewis, being conducted as a charity for the benefit of, among others, the aged and infirm persons of Stornoway. The business was established in 1830, on its present site. In 1964, the then principal shareholder presented the building and the business as a

going concern to a trust which was set up to receive the gift and whose first object is to assist aged and infirm residents in the burgh. In effect, all profits earned by the shop are passed to the trust for distribution to those in need.

Almost half the houses in Stornoway were built by the local authority. The Town Council has never been afraid of rooting out unfit houses. By 1937, under the 1930 Slum Clearance Act, one person in four in the town lived in a council house. The housing schemes, though large, have still that element of community with personality, something often lacking in newly developed areas of other towns and cities. The Council also supports private housing by taking up sites, clearing and servicing them and then feuing them to private owners. The rents policy is to have no housing deficit beyond the statutory rate contribution (which works out at between £6,000 and £7,000 per annum). The Council's tenants co-operate with rent collection to a unique degree: collection figures are something like 99 per cent and on occasion 100 per cent. A vigorous housing policy is important to the town, as its population is now over 5,300 and still growing, mainly at the expense of the rural areas. Development plans at present envisage a 1981 population of about 9,100 persons within the parish boundary and including the burgh.

Stornoway is an island town and is an island's town: its rhythms of life are those of the island, regular and timed by nature, but with an added syncopation—the result of an urban outlook. In this context, Gaelic is the language, though English is the lingua franca. Deeper still in the methods used for communication is a kind of patois based on Gaelicised English, Anglicised Gaelic, with some other words that defy investigation into their origin. Many words find their natural forebears in Scots, American and the maritime tongues of Europe, which might be expected in view of Stornoway's importance as a sea-port of significance a century or two ago. The Stornoway language, as spoken by true-born natives, recognisable anywhere by another native, reflects the life of the cosmopolitan, sea-faring people.

Apart from its industrial opportunities, Stornoway has many of the more sophisticated urban facilities that people everywhere seem to crave, particularly with regard to education. The senior

Before the making of roads, it was ease of sailing which united island peoples and their territories. One can wade or drive, at low tide, over the fords that unite the Isle of Benbecula with the two Uists, North and South: in fact, a bridge now connects Benbecula with South Uist. But only the roughest of hill tracks led through the hills of North Harris from the 'Tarbert' or Isthmus of Harris to the nearest habitation at the head of Loch Seaforth or Loch Erisort, in the Lews. This is a distance of some twenty miles, or a fair day's tramp for an unloaded man, and far too much for a return journey in one day. Hence separation of territory and name was natural. This separation no longer exists as there is now a good 'bus service from Rodel via Tarbert to Stornoway which links Harris with the daily Kyle to Stornoway steamer. In this book, the Island, or the Islanders, refers to Lewis-and-Harris with its people, as one.

Lewis is included in Ross-shire (of which the county town is Dingwall, north of Inverness) and Harris in Inverness-shire, together with the rest of the 'Long Island'. The county boundary cuts across the six-mile isthmus north of the hills of North Harris, from the in-reaching Loch Seaforth WNW. to Loch Resort (Fig. 8). All the Outer Hebrides are now included in the Parliamentary constituency of the Western Isles. Proposals to unite the Island under one District Council, or the Outer Hebrides under one County Council, are more favourably viewed in Stornoway than in Harris or the Southern Isles. Harris forms one civil parish, while Lewis is divided into four: Stornoway, Barvas, Uig and Lochs. The Lewis parish boundaries traversing the moors are inset in Fig. 8 so that their trends can be readily grasped, and the inhabited portions of the parishes quickly located (p. 50).

131 (1) Stornoway stretches from the town north to Tolsta;
632 (2) Barvas from the north of the Island southwards, past Barvas village (WNW. of Stornoway) five miles further to Bragar;
(3) Uig covers the rest of the south-west coast; and
(4) Lochs, the remainder of the south-east coast.

131 Seen from the sea, the Island chiefly presents dark,
133 gneissic, heath-fringed cliffs whose steep walls become gentle slopes towards the south as we enter the bays, sea lochs and firths which run far inland (Plates I to IV). As one sails northward along the east coast of Lewis, there are few hills to be seen, and these are below 1000 feet; most of the island is rolling moor, rarely rising above 300 feet. Here and there new houses stand out, the 'white houses' (*tighean geala*), which, however, are usually grey
342 or even dark in colour. These dwellings have generally been stone-built and were often slate-roofed; asbestos roofs are now common. Yet even when dark, these new cottages are conspicuous beside the low 'black houses' with their rounded forms of wall and roof, and with thatch overspread by a faint haze of blue peat reek, like the bloom
133 upon a fruit. Their plots of corn, though each may be so
[243] tiny as to appear but a spot at a distance, together form a bright patch against the dark brown moor. In the sketch which forms the Key to the Map of Vegetation and Settlements (Fig. 8), an attempt has been made to bring the map and the landscape alive to the mind's eye, from the hills of North Harris north-eastward to the Butt of Lewis.

131 Turning the north cape of Lewis, 'the Butt', and sailing
133 southwards along the west coast, we see hills increasing in height in the Uig district, rising to those of Harris with

public health and general administration, and has offices in Stornoway. Stornoway itself is largely looked after by a Town Council which deals with the property of the burgh, makes and administers byelaws and imposes burgh rates. The police are under County administration, each burgh paying an annual contribution for their services; the law is administered by a sheriff-principal and two sheriff-substitutes, one of whom holds court in Stornoway. Each parish has a local committee of management.

The political history of the Western Isles, and no less Harris and Lewis, reflects the agrarian troubles. Before 1917, when Lewis was a Parliamentary part of Ross & Cromarty, and Harris part of Inverness, the electorate was both Liberal and Radical; traditionally there has been a significant anti-Tory vote. In 1917, the Boundary Commission for Scotland set up the Parliamentary County of Inverness and Ross & Cromarty, with three divisions: Inverness, Ross & Cromarty and the Western Isles. In 1918 the Western Isles voted for the first time as a Parliamentary constituency of its own, and showed a predominant Liberal sympathy; the returned candidate was also standing for the reform of the Land Law.

In the General Election of 1923 a Liberal candidate was again returned, with a repeat performance in 1929. In the latter election however, the Socialist came in second place. In the crisis or scare election of 1931, the Labour Party did not contest the seat, which was won by a Liberal-National candidate opposed by a full-blooded Conservative. In 1935 the Labour candidate, a native of Lewis, was returned with a 1,345 majority. This Member retained his seat through all subsequent elections losing it only in 1970 to a member of the Scottish National Party, who became a lone Home Ruler in the House. Labour, Conservative and Scottish National parties are represented in the constituency, with a small Liberal showing. The revision of local authorities has given virtual autonomy to the Western Isles.

PUBLIC SERVICES

The lack of adequate social and public services has been cited by some authorities as a factor encouraging people to leave the

Let us begin with the economic and ficance of the Highlands and Isles with concerned. Economically the crofters' the narrow interrupted belt of improved la which is generally fronted by the sea and it and is backed by the Crofters' Grazings (C on the map). Some 700 crofting tow munities are found in Zetland, the Nort and the Western Isles, each with its Co the line C also encloses a small area d grazings. the township; and to each were allotted the rights of the common grazing and the fishing grounds. For more than a century the croft has been held individually, though in the townships the common grazing is still held in common. Beyond these ' homely ' limits lie wider horizons, in the past those of seafaring and of droving or the chase, and today of fishing and gillieing at home, or of ocean journeys, urban occupations or colonisation.

In the Lowland regions each symbol represents 100 holdings. For (A), ' mixed and dairy farming ', the particular type of symbol shows the average number of workers employed on a farm-holding in each county. On each farm the employed workers form what may be called the ' Labour-Team '. A team may be ' small ', ' medium ' or ' large '. The Scottish averages of these three types (indicated in the inset key to the map) are roughly three, five and seven workers per team. Four ' casual ' workers are counted as equivalent to one ' permanent ' worker, but farmers' wives are excluded. Under (B), for the same Lowland counties and areas, full-time small-holdings are shown separately. The Scottish average of less than one full-time worker employed, most often a son or daughter of the small-holder, is typical of all the counties.

As to the relative importance of the different classes of farms and small-holdings in Scotland, true agricultural land-holders number 68,000, of which fully one-third hold part-time holdings (like the Island crofters), one-third ' full-time farms ', and rather fewer (one-fifth) hold ' full-time small-holdings '. The remainder accounts for other types of less importance. The farms predominate in terms of improved land, full-time employment, and of course of production. As to area, farms cover 80 per cent of agricultural land. The farmers employ nearly 90,000 workers,

secondary school, the 'Nicolson', has had since its inception a formidable academic record Back in 1907 work from the school was included in the educational section of an International Exhibition held in Christchurch, New Zealand: this was appropriate because emigrants from the west Highlands, notably from Harris and Lewis, were among the pioneers of New Zealand education a century ago. In 1957 new extensions were opened, costing about £300,000 and making the school the largest of its kind in the Highlands area. It is co-educational, its primary and junior secondary departments taking only Stornoway children and its senior secondary department catering for those from both Stornoway and rural Lewis. Many board out in the town during the week, returning home at weekends.

In providing social facilities, the town has placed itself in the position of an agent for those things deemed necessary for life, and is a middle-ground between the rural repression of the Free Church and the city abandon of the mainland, with resulting dilemma. The public houses, the cinema, youth clubs, dances and juke boxes are all in direct opposition to the preaching of the Free Church. The result is tension between the town's desire to act as a host for tourists and its wish to fulfil its duty on a religious plane; to instance this, the Stornoway Sabbath is less strict than the Lewis Sabbath. In keeping with the rest of Lewis, social standards are extremely high. Home is the centre of life, as it always was; the sense of community and communal responsibility is there. Divorce is practically unheard of, and the incidence of crime, as such, is extremely low.

121 by help of oral tradition and of the living witness of con-
174 tinuing usage, we can reconstitute Gaelic life from the
178 view-points of both people and chief. Elsewhere, even in Scotland, only fragments of early life are recorded, in
175 parchments written by the lawyers of landlord and king, and almost always from the privileged side. History is
814 indebted to modern lawyers who have deciphered and
127 published the faded documents of their predecessors. But the very training as solicitor-factors which fitted them for this specialised task, in no way prepared them to view life as seen, experienced and felt by the men and women of the past, or even by the elders or youth of the townships today, with whom they have rarely laboured and whose mother tongue they rarely understand.

(A) THE LABOURS OF MAN AND WIFE, AND THE REWARD

621 We have seen that until the nineteenth century the
• 632 township in the main was self-contained. Its people grew,
175 reared or caught their food, and also found the raw materials
[433] for their clothing; they built their own shelter, and cut their own firing. As a result, both men and women had
174 each to develop "a wide range of simple skills", in the
175 apt phrase of a Lewisman, Mr. Donald MacLean, M.A. Beyond the co-operative effort within a family, a farm
462 group, or a body of 'fellow-townsmen'—in which each was competent to take a share according to sex and age—aptitude and family tradition initiated some local division
[463] of labour. The resident smith and the 'caird' (usually a wandering craftsman or tinker) appear in the oldest tales and in the first rent-rolls. In addition there were honorary
[759] tasks. The smith might act as the village surgeon, ready

241 through division of labour or uni

423 rigs. The rigs are numbered and then balloted for by a
632 double ballot. First the men approach the hat in any
241 order and pick out a number: this is to decide the order in which they will approach the hat in the second draw. The second draw then decides the number of the rig. The crofter retains the rig while this particular scatt remains in cultivation, usually for a period of two or three years. The machar is shared by the whole township. The crops grown include a light type of oats, barley, a little rye, and potatoes; and clover may be cut.

423 In the division of the machar for potatoes at Barvas,
244 there are now no such hard-and-fast rules. The Common Grazings Committee select a certain area for cultivation
[624] and each crofter is allowed to take as much land as he requires within this area. This land is only cultivated for one year in six to ten years, and then reverts to grass. If cultivated for two or more years in succession there is a danger of the sand being blown away, and grass would be difficult to establish again. Potatoes are now the only crop
[134] grown on the Barvas machar.

Beyond the machar of the Isles lies the moor with its
175 fringe of reclaimed croft land. By Carmichael's day this
423 was held in individual portions, though, as he said, most of it was once held in 'farms' in run-rig practised by small
241 units, not by the whole township. Why this difference between the arable of the machar and of the moorland? Carmichael did not explain it.

134 Three explanatory points are, first, that the whole
241 cultivated land of the scatt or the machar is continuous, whereas the moorland is hummocky and boggy by turns, and cultivation is therefore patchy; secondly, that, unlike the stony clays, the light shell sand is easily forked or ploughed and needs no 'team' to plough it; and thirdly,

of Ness), while Uig is the most westerly promontory with its natural fishing harbours. The authorship of the proverb may be ascribed to the ladies and gentlemen of Uig; yet the personal appearance of the victims, who are more broad-headed, gives the proverb a physical foundation. Again, the tall men of Ness, dark or fair, and rather longer-headed, still form a group apart from those of Cladach, each having taken root in prehistory, *i.e.* earlier than surviving record.

Such facts correct several current misconceptions as to race and heredity in their relation to Gaelic society, past and possible. First, it is still common to contrast a 'Celtic' with a 'Norse race'. Now, Norse immigrants belonged to several races, and when they arrived, several race-streams were already mixing and eddying in the Isles. After the immigration of Norsemen, the next recorded was in 1611, consisting of gentlemen-tacksmen from Kintail and burghal settlers to Stornoway, who were composed of Gaelic-speaking families from Easter Ross, where the people of today resemble some Scandinavian types rather than typical broad-headed Lewismen.

Second, it follows that no sweeping generalisations can yet be made as to the ways and habits of particular races. The "Celtic race", one reads, have "never taken to the sea" as have the Norsemen.[1] The facts in the Island are that though the men of Ness, with a possible Norse admixture, were considered better fishermen than those of Cladach, and the present generation includes a great number of seamen, their opportunities have been greater —their cape commanding wider fishing grounds and their little port providing relative safety in storm. And the men of Lochs and of the 'Bays' of Harris, though they show

[1] For example, in the Brand Report on Lewis (1902).

CHAPTER V

FAMILY, FARM GROUP AND TOWNSHIP: THE CONTINUING COMMUNITY AND ITS SOCIAL ECONOMY TO 1815

INTRODUCTION (TO CHAPTERS V AND VI)

121 593 476 632 621 THE family, the 'conjoint' or 'farm group' of four or five families, and the larger group clustered in a glen or along a shoreland, are, in ascending order, the three concentric units whose mutual relationships we must visualise to understand the past. Enduring elements of life in family and neighbourhood today, with their own special qualities and limitations, can only be understood in terms of past needs and the relationships they evoked.

121 613 621 [171] Having seen their relationships in family, team and township, we can next turn to the reciprocal relations of the people to their chief or lord, whose position dominates European, indeed world, history and prehistory. Here our concern must be the meaning of 'clanship' to the chiefs, the joint farm-groups (or 'small tenantry') and, latterly, the tacksmen placed above them.

121 174 178 [184] We may find, throughout this study, that features and functions which at first sight seem peculiar to the Island are really local variants, more perfectly crystallised, of forms which we know existed at earlier periods in Scotland and in much of northern and western Britain. In the Isles,

134 that no initial reclamation had been needed on the scatt.
241 In each year of cultivation, it is true, manures by a sort, principally seaweed and sooty sods from the roof, are applied; but they form a temporary improvement only for the crop to be taken, and do not constitute reclamation. After manuring, the grasses and clovers are simply turned over and the land, 'rested' and manured by cattle, straight-way gives its best crop.

175 It is otherwise with what is won from the moorland. 311 As Dean Monro wrote of the western Highlands in 1549: "In this country all is peat moss-land at the sea coast" (the long machars of the west of Uist give place to rocky coasts round much of Lewis), "and the place where he wins his peats this year, there he can not win the next year; after that he guids it weill with sea-ware". Even where the slopes are fairly smooth, the peat land has not the uniformity of the machar and the continuity of its arable strips. In addition to sea-ware, sand may be brought by creel or by pony pannier to reclaim peat, forming a heavy burden. Moreover, the first crop is always a poor one, and may be almost lost. Although in his brief notes Monro used the singular "the peat", he knew that the peat was usually cut co-operatively by teams. Hence most of the hard labour of reclamation may, indeed must, have been done co-operatively too, but by small teams, not by the members of a whole township together.

233 The sharing of common pastures is the last, but im-
423 portant, feature of land holding in common. The two kinds of pasture required were, firstly, those close at hand, animals being tethered or herded in them during the season, and secondly, the more distant summer pastures.
632 The people of certain townships, which were without a large outrun close at hand, had to go some distance to

233 reach their shielings. From Point district (Fye Peninsula)
423 the cattle are still brought inland to the moors south-west
of Stornoway. And from Bernera on the west the cattle
632 are swum to the hills of the main island, just as they once were swum from Bute to the hill-pastures of Cowal in Argyllshire across the Kyle at the 'Strait of the Swimming', Colintraive (Caol-an-t-snaimh). Nothing could be more natural, indeed inevitable, than pasture in common where large, open moors were to be found. The number of animals allowed to each holding was duly apportioned and then, as now, was known as the summing or 'sounting', still checked at the annual gathering (*cosgardh*).

423 Thus a cluster of conjoint farms shared "the grass on
621 the hills and the tillage on the ploughed lands" (*Fair air beinn agus feighinn air machair*). Along the shore, sea-ware, drift-
433 wood and the like were allotted, too. And, as Carmichael
175 put it, there was even "run-rig at sea", for the fishing
311 banks were allotted among the crews. Many of
178 these rights are still shared by the members of a township. But any crew can now fish freely where they choose, and no township can legally keep away strange boats, nor even steamers beyond the three-mile limit. This loss of communal rights stands in the way of remunerative fish-farming and its promise.

621 Profound social implications distinguished these three
423 concentric circles of community: the family; the farm-team
613 and boat's crew; and the larger, township group. These
241 implications concerned labour, duty and right. The labour
of reclamation gave a 'right' to the land thus won from the
476 moor; and the duty of labour required, for fruits equitably
622 shared, gave the farm-team and fishing crew cohesion on land or sea—team and crew working for a common purpose. On the other hand, as individual sharers in the common

621 pastures of machar and moor, each man had not so much
423 a 'common interest' or duty as, individually, a 'like
632 interest' or right. As now, each unit, whether team or individual, would tend to desire a maximum stock for itself, perhaps hoping it would have "the luck to rear" a little more than its apportioned sounting, at the risk of the over-stocking which results in common loss. But though need, greed or rivalry offered temptations, morality invited careful sharing and was enforced by common interest.

423 The chief distinction between team and township was that
476 the tasks of the farm-team were constructive and, like that
632 of the boat's crew, active and co-operative. It is true that in the township certain tasks were co-operative, such as the wolf scaring of old times or the fox 'hunting' or shooting on mainland moors today. The modern practice of sheep is also done together. But no constructive effort was involved in the allotment of shares on the machar or of stock on the moor, which were—and remain—matters merely for communal control, not communal effort.

501 Now, the quality of a group alters with its quantity. The intimate cohesion of a very small group of no more than half a dozen members, diminishes with an increase in number; but increase brings a countervailing gain in diversity. Ten or a dozen people tend to break up into sub-groups, whether for small jobs or to enjoy conversation. The smallness of a group limits the number of relationships; an increase in number multiplies sub-groups, and life is enriched. After living long with fewer than half a dozen acquaintances, the same subjects keep cropping up in talk, the same tales are re-told, too often, and people cannot get away from one another's idiosyncrasies! A very small addition turns the scale by renewing variety. Here lay the social value of a township and neighbourhood,

621 embracing several hamlets. Yet the strength of com-
476 munity life sprang from co-operation in the farm-team and
632 in the boat's crew.

108 With the passing of the joint farm the greatest disci-
461 plinary factor for work in common passed away from
476 agriculture. The fact that fishing still remained as a social discipline, and actually developed in importance as the farm-team declined and was abolished, was to prove all the more significant to the vitality of social life until 1914 and even to the present.

(b) THE COMMUNITY ORGANISED: STEERSMAN AND CONSTABLE

621 As small groups of two to half a dozen men could manage
their agricultural affairs informally, by common consent,
622 no official was formally chosen to manage the affairs of the fellow-workers on a farm. Where prompt decisions are needed, however, even a small group should be led: a boat's crew therefore choose their helmsman-skipper and obey him at sea. And where several farm-groups made up a township, more formal deliberations were required, and to carry out their decisions they chose a responsible man, the constable.

175 Of the crofters' manner of deciding communal affairs
621 in Uist, Carmichael wrote, in 1884, that these meetings
181 "were highly interesting, as showing the ability of the people, their logical and legal acumen, their readiness of speech, their humour, their invariable courtesy towards one another. There was one regular official known as the constable on whom there lay the chief executive responsibility. When a crofter is elected constable of his town-land, he takes off his shoes and stockings and, taking

175 lordly rank: a working, equalitarian democracy dominated
by an aristocracy proudly refusing to work. The fascina-
632 tion of Gaelic community is, first, that its elements stand out so clearly, and, secondly, that links were forged in
170 citizenship which made its living chain, though heavy, a
171 thing that shone with pride, and beauty too.
621

(c) CLANSHIP, COMMON DESCENT AND CLAN-HELP (CUIDEACHD)

621 To what extent is it now possible to disentangle the two
contrasted elements of the lord or chief and the farm-teams
172 and townships? Prehistory is hard to unravel; but the
621 successive waves of conquest flung upon the Island shores
have left their jetsam, unmistakably. The circle of huts
197 found near a broch or commanding *dun* recalls the tenants' village grouped close to the castle of a chief; from early history down to the 'Forty-five, and suggests a primitive
173 form of feudalism or clanship. Traditions add their
part. In Uist one may still hear the ancient heroic lays
621 traditionally ascribed to Ossian, Oisean, son of Fionn or
631 Fingal—lays of which Macpherson's sonorous prose gave free rendering. The Fingalian tales differ from the lays, being frankly fantastic. Lewis had its own cycle of Fingalian tales; examples are given by W. C. Mackenzie (1919). Both lays and legends tell of an aristocracy or warrior class, the Fenians, of their enjoyment of the chase, and of their relative comfort, with wealth in gold and silver, in bannered and embroidered tents, as contrasted with riches implies the existence of a community to feed and clothe the huntsmen. The traditions of the Cuchulainn cycle, with closer approximation to historical and
197 archaeological truth, tell the same tale. Historically, in-

CHAPTER VI

CLANSHIP: PEOPLE, CHIEF AND TACKSMEN

(a) COMMUNAL EQUALITY AND LORDLY PRIVILEGE

175 THE equalitarian customs of hamlet and township
632 astonish many to whom the crofting villages are
647 unknown and whose picture of the Gaelic past is
631 derived from tales of the 'Forty-five. The widespread historic fact of lordship over a subject peasantry has obscured that of peasant-neighbourhood, more ancient, it would seem, and, in the Isles, still more enduring. The very existence of 'rural democracies' such as those just described has been doubted by certain scholars on the theoretic ground that they would be humanly unworkable! Yet it is none the less true that the peasants as clansfolk gave loyalty to their chief. The fervent loyalty
644 given to the exiled kinsmen-kings, the Stewarts, was a scarlet thread interwoven—or entangled—in the homespun
538 web of community, of clanship. Wherever the Gaelic is spoken, the Jacobite songs are sung with passion, and their echo has gone round the world.

171 So in the life of the Gael, without doubt—and in varying degree throughout Britain and the rest of Europe—we have to envisage a composite, perhaps a contradictory, state of things, in which communal equality is overlaid by
182 lordly rank: a working, equalitarian democracy dominated by an aristocracy proudly refusing to work. The fascination of Gaelic community is, first, that its elements stand out so clearly, and, secondly, that links were forged in clanship which made its living chain, though heavy, a thing that shone with pride, and beauty too.

(a) COMMUNAL EQUALITY AND LORDLY PRIVILEGE

175 THE equalitarian customs of hamlet and township
632 astonish many to whom the crofting villages are
647 unknown and whose picture of the Gaelic past is
631 derived from tales of the 'Forty-five. The widespread historic fact of lordship over a subject peasantry has obscured that of peasant-neighbourhood, more ancient, it would seem, and, in the Isles, still more enduring. The very existence of 'rural democracies' such as those just described has been doubted by certain scholars on the theoretic ground that they would be humanly unworkable! Yet it is none the less true that the peasants as clansfolk gave loyalty to their chief. The fervent loyalty
644 given to the exiled kinsmen-kings, the Stewarts, was a scarlet thread interwoven—or entangled—in the homespun
538 web of community, of clanship. Wherever the Gaelic is spoken, the Jacobite songs are sung with passion, and their echo has gone round the world.

171 So in the life of the Gael, without doubt—and in varying degree throughout Britain and the rest of Europe—we have to envisage a composite, perhaps a contradictory, state of things, in which communal equality is overlaid by

175 the legal recognition, improvement and enlargement of the
654 township', defined as a farm, or part of a farm, occupied
in common or division by several tenants, three or more in
632 number. The executive officer of the township, the Con-
644 stable, was to be elected annually by the community.

The Crofters' Holdings (Scotland) Act of 1886 did
175 embody three of the chief recommendations made, but the
671 first, the recognition of the township, was omitted. The
671 Crofters Act gave security of tenure, compensation for
477 improvements, and some facilities for enlargement of hold-
ings. Security was perpetual in consideration of the crofter; the crofter was not compelled to act in his own interest;
632 The Act discarded the core of the Napier Commission's scheme, that of "a recognised local community, the town-ship, with its constable, office-bearer, of agreements with the proprietor. Although this was not a recommendation of the Commission, the Act also provided for official revision of rents. A 'fair rent' was to be proportionate to the
829 value of the holding, together with the value for improvements, was to be fixed on application to a body of the three Commissioners, 'the Crofters Commission'. In Lewis between 1887 and 1912 this brought a lowering of the rent by over a quarter and the cancelling of two-thirds of arrears accumulated earlier. The rental for a 'croft' was to be below £30; this figure was raised to £50 in 1911, except in Lewis, where £30 remained the limit in order to allow the excessive congestion to be relieved by division even of small farms.

The passing of the Small Landholders' Act of 1911 completed the code known as the Landholders' Acts, 1886–1911. The Land Court replaced the Crofters' Com-
647 mission. The Department (then still the Board) of Agriculture took over the powers of the Congested Districts

175 Board, created in 1897 to develop agriculture, fishing and
671 home industries, to form new holdings, to assist migration,
421 and to provide public works such as roads, bridges and
647 piers. These powers were further extended by the Land Settlement (Scotland) Act of 1919, passed to provide land for ex-Servicemen.[1]

The Crofters' Act granted to the individual crofter most of the rights advocated by the Napier Commission, and other advantages besides, but it did not impose upon him the corresponding duties. As Day wrote, "The land-
632 holding was conceived to be in the interests of the crofter; the crofter was not compelled to act in his own interest"
632 The Act discarded the core of the Napier Commission's scheme, that of "a recognised local community, the town-ship, with its constable, office-bearer, of agreements with the proprietor. Although this was not a recommendation of the Commission, the Act also provided for official revision of rents. A 'fair rent' was to be proportionate to the
829 value of the holding, together with the value for improvements, was to be fixed on application to a body of the three Commissioners, 'the Crofters Commission'. In Lewis between 1887 and 1912 this brought a lowering of the rent by over a quarter and the cancelling of two-thirds of arrears accumulated earlier. The rental for a 'croft' was to be below £30; this figure was raised to £50 in 1911, except in Lewis, where £30 remained the limit in order to allow the excessive congestion to be relieved by division even of small farms.

The passing of the Small Landholders' Act of 1911 completed the code known as the Landholders' Acts, 1886–1911. The Land Court replaced the Crofters' Com-
647 mission. The Department (then still the Board) of Agriculture took over the powers of the Congested Districts

[1] A useful summary of the legislation is given by the Rt. Hon. Chrimes's Report, 1938, pp. 17-21, and a searching review in J. P. Day's *Public Administration in the Highlands and Islands of Scotland*, 1918, a work of real social insight.

The Act of 1919 is still the current code under which land settlement schemes may be undertaken in Scotland; but the Agriculture (Scotland) Act 1948 included new powers to allow the creation of holdings up to 75 acres in extent and £150 in rental. After the Second World War a special emergency code was in force in regard to settlement of ex-Servicemen and little progress has been made in carrying out schemes, despite many unfulfilled applications in the Hebrides and elsewhere where the demand for crofts exceeds the supply.

195 death of Sir James had left his widow in possession of the
423 estate, a lady with little training for its responsibilities.
668 In south-east Lewis, in November 1887, a body of landless men attempted to settle on the peninsula of Park, Loch Seaforth, after which some of the illegal settlers or raiders were tried and acquitted, and fourteen small crofts with outrun were provided. In January 1888, 300 men marched from Barvas to petition Lady Matheson that the sheep farm of Galson should be allotted to some of them at a fair valuation, as they could not live on their tiny plots. Lady Matheson refused to consider the petition until the arrears of rent due by Barvas tenants were paid. Less than a week after, sheep were driven off Aignish (Eye) and police, reinforced by marines and soldiers, arrested eleven men. Two days later, more sheep runs were invaded, fences demolished, and sheep driven off. On January 20, 500
(701) marines were ordered to Lewis (of whom 200 actually
(687) sailed). On February 2, the Aignish raiders were found guilty and sentenced to terms of from nine to fifteen months' imprisonment. After this the disturbances gradually passed away. Yet the seeds of trouble only lay dormant; they were to spring up a generation later, and again after the war of 1914-18.

195 In defending the Napier Commission's plan to recog-
632 nise the township, one may accept their definition of it as
427 a farm held by tenants, singly or in common. Yet it must
[241] be remembered that the word 'farm' had come to have a very elastic meaning. The joint farm-group was once the active group for labour in common; but if the 'township' included several joint-farms, as it generally had in the Island, its people formed a relatively 'passive' community. Members of the township enjoyed rights in common, and shared in duties of observance; but they had seldom to

co-operate in active endeavour. It was all the more
632 important to have an elected 'official', the Constable,
427 one of themselves but placed in authority. There could be no restitution of the old joint farms where they had
[241] been broken down by migration. Yet it should have been
[674] still possible to extend the old spirit to the larger townships, as the Commissioners held.

195 Again, the constitution of the township is bound up
632 with the rights of common pasture upon the moor all the
423 year, and in winter even on unfenced arable; but the
671 Crofters' Act failed to regulate the rights and obligations of Common Grazings. It slackened the authority of the estate without restoring the hold of the tenant community upon its members. After five years the Government began to recognise the mistake, and passed the first Crofters' Common Grazings Regulation Act, permitting the crofters to elect a Common Grazings Committee. But it was ill-considered; most of all because non-crofters, that is, cottars and squatters without legal tenure, were not bound by the Regulations. On one hand they could not get permission to 'resume' (or enclose) a portion of the outrun, in order to reclaim it as a croft, without first obtaining the unanimous consent of the township's crofters; and in large
[233] townships there might always be an objector. Yet each cottar could, and did, put on stock, a cow or two and a few sheep, so nullifying the possibility of discipline.

In 1908 a second Act was passed; but twenty years had allowed tradition to lapse and difficulties to accumulate. In Isle Scalpay (Tarbert) for instance, by 1909 there were only forty legitimate crofters, but eighty cottars; and the legal crofters would not take part in depriving any
(416) cottar of such grazing liberties as he exercised. All were
(462) neighbours and most were relations, and their principle

195 was to share; the children needed milk and the women
632 wool to work, while the men fished. As the Crofters'
423 Commission put it at the time, "Necessity has no law and
671 . . . it is scarcely possible to carry out . . . the Grazings Acts in this island". The position remains little changed. Still, in spite of sixty years' delay, and the law's failure to restore an executive, the Constable, to perform specified duties as a member of the community, the Grazings Committees do exercise useful functions with credit. They form nucleus with which proprietor, Government or co-operative agency actually deal, and the voluntary Clerk may shoulder considerable responsibility.

195 With regard to small occupiers paying less than £6
423 rent per annum and holding less than 10 acres and 250
632 acres of souming (or share of pasture), the Napier Commission declined to recommend the bestowal of rights or immunities tending "to fix them in a condition from which they ought to be resolutely though gently withdrawn". The Act, however, did grant small occupiers immunity from eviction, and made it hard for either landlord, State or fellow-crofters even to refuse house sites or fresh holdings, particularly in the crowded Lewis. The squatter continues; indeed he is favoured, by escaping the payment of rent and rates though he shares in benefits. The ratepayers are proportionately, and unjustly, handicapped. But as isolation has diminished, landless squatters have been allowed to 'resume' portions of the common grazing for new holdings, as by common consent at Ness and in Lochs, after Lord Leverhulme's death.

195 A further recommendation of the Napier Commission
632 was to aid emigration. Now Sir James Matheson's aid in
423 1863 proved successful, but his later efforts met with no
671 response. There were then, and still may be, in the Island

(c) SLOW CHANGE: 1925–39

1. The Land, the Sea, and the Loom

423 When Leverhulme parted company with the people of
632 Lewis his gesture of farewell was one of generosity; the
431 offer of Lewis to its people. The Stornoway Trust was
623 formed, and this accepted the gift of the adjacent crofting township of the Parish, and of the Castle and its beautiful Park or 'policies'. In crofting townships, however, the people declined the offered gift of land, finding that they could not afford the augmentation of rates entailed by acceptance. So the remainder of the estate was offered for sale in several lots, which were bought by individuals
423 and have proved safe investments. The letting of sporting
632 rights adds a further, albeit a variable, return of income to
427 that of the rents received. It is indeed anomalous that a crofting estate, such as a Lewis parish can yield a good
[624] return to a purchaser, yet that the crofter-occupiers themselves would lose by receiving it as a gift.[1] Much-needed improvements in housing would also be discouraged, for fear of increase in their rates. It is true that if (under existing laws of assessment) all the farmers and crofters, cottars and squatters of a county were to become owners at the same moment, the total increase in assessments would either be repaid in greater services or met by lowered rates

[1] The resources in question belonged to Chapter IX (or, more accurately, to the 'small landholder'), as occupier of an agricultural holding, can only be assessed at three-eighths of the occupier's half of the assessment, on his Fair Rent, *i.e.* at less than a quarter of the whole rental. Although he may have built a year or two before, other buildings he is not assessed at their full value; neither is his landlord. Were he to become owner he would then be liable to assessment both as occupier and as owner, on the full annual value of land and of buildings (not, with deduction of five-eighths on the agricultural value as occupier only.

↓ (see pp. 320-323 - analysis)

423 —or by a compromise between. But as it is, if one crofter,
431 or a small group of crofters like those of a township or
[17] parish of Lewis, were to become owner-occupiers (even by
632 gift), they would be penalised as compared to others.
632 Hence the Lewismen preferred to go on paying rent as
824 statutory crofting tenants. Leverhulme sold the land and received the price; the new owners paid for it and received an investment; and the only 'loser' on this curious transaction was the Local Authority, the County, which failed to make more in rates!

[623] Further reasons why the great majority of crofters declined Leverhulme's offer have been given by the Lewis Association's Economic Committee (1944):

(a) As individual proprietors, they would lose the advantages of the jurisdiction of the Scottish Land Court in dealing with their disputes, and any litigation would take a more costly form.

(b) They would be debarred from obtaining loans from the Department of Agriculture for Scotland for the improvement of their holdings or houses; as the Department would no longer have the "Corner Stone" of a landlord to fall back upon in the event of remuneration.

(c) The crofters were afraid that as individual proprietors they would forfeit their share of the Common Grazing rights.

(d) Should they wish to quit their holdings they would be compelled to find a buyer in the open market, instead of renouncing to their landlords and getting valuation.

(e) There is a feeling among Lewis crofters that they prefer to have a landlord before whom they can lay their difficulties and disputes, and who will attend to their wants; an authority that relieves them of responsibility.

(181) As the historical evidence has shown, a lack of responsi-
[624] bility has been greatly due to the undermining and then the
[195] abolition of the authority of the township's own elected Constable.

178 2110. The average under potatoes declined steadily: 3940,
431 3730, 1650. Barley dwindled from 250 acres to 130, and
241 130. Turnips reached a maximum of 510 acres in 1939, but were not worth noting by 1953. These crop acreages reflect the change in stock-rearing, with the decline in the number of
178 cattle but the great increase in the number of sheep. Taking
431 the three successive totals for 1918, 1939 and 1953, cattle
231 numbered 13,620, 9060 and 6540 head; but this diminution by more than half was chiefly due to the small number of bullocks reared. Cows and heifers, 7650 in 1918, still stood at about 4500 in 1953, and they are now of far better quality in weight and milk production. The totals of sheep are successively, 78,150, 114,330, 185,860; by use of mainland rams their average weight has increased, while the wool is rather more abundant but coarser. Taking the Lewis Association's equivalent of 1 cattle beast to 8 sheep, the livestock carry increased by nearly 25 per cent; and if we add the increased value of the cattle the livestock income counts for very much more. Horses, it is true, fell to 380 by 1953; as before, most had been bought in from Uist, not bred. Hence a new charge on agriculture, the purchase and use of the 65 tractors owned by farmers and crofters, and their running costs, is relatively less heavy than it would be in a horse-breeding area. The poultry are still deplorably few: 86,460, or about 20 per croft.

632 The Table on p. 316 sums up the conditions, fairly accurately
[1] somewhat stabilised for the time being, parish by parish, and invites comparison with Chapter II, pp. 67-68.

178 (b) and (c) *Peat-moss and Peat-building.*—While *peat-*
222 *cutting* is still important, more coal is used than formerly, and
314 hence the peat is valued here much as in 1938. *Housing* is
[1] more important; Local Authority housing by the Burgh
178 struggles to meet the need of a growing urban and 'suburban'
178 population as in other towns in Britain, but with an additional
362 "remote area subsidy" to meet mainland contractors' extra
[1] costs. There is little truly rural housing by the County Council and rents are too high for the houses to be fully occupied. The
[2] figures for Stornoway Burgh for the ten years 1945-54 exceed
[162] 315

(a) THE STORNOWAY TRUST: A COMMUNAL OPPORTUNITY

632 The people of Stornoway town and rural parish are in a
178 position to control their own future to a degree unusual in
[1] Britain since the general loss of common lands in the eighteenth
632 century. Three or four bodies or groups are important in
[1] local governance, and in addition to these an effort to arouse
632 citizenship has taken shape in the Lewis Association. As elec-
423 where, the Town Council acts for the burgh and, it should be
632 added, the Grazing Committees for the townships, the District
423 Council and County Council acting for wider spheres. The
361 Harbour Trust has its special charge. In addition, the fact of
[1] public ownership is important, as vested in the Stornoway Trust. Besides property in the burgh and its suburbs, including the Castle and its park or policies, the Trust owns virtually the whole lands(and area of the parish, from Arnish Moor north to Tolsta. It should not be forgotten that the resources of the sea are public property and that the inshore fishings, owing to a considerable measure of protection, are virtually in the possession of the coastal communities. Freshwater fishing is also in the hands of the Trust. Thus, not only building property but essential sources of production on land and sea are in proximal possession. The Trust was formed in 1924.

673 During the first five years of its existence the Trust was
[1] burdened with a growing deficit, but since 1929 it accumulated
433 a credit balance, due partly to agricultural derating and partly to the registration of the Trust as a charity and the resulting relief from income tax. Possession without provision can do little, however, and hence the need for the citizens of town and country to regroup themselves as thinkers for the common

	37	5,236	91,300	6,999	23	663	(102)	62

NOTE: *Individual holdings include only those not using the common pastures; the 'common' pasture' figure is their rough grazing.

**These include individual holdings, as defined, and all cottars, squatters, feuars and allotment holders having more than a quarter acre of cultivation or a cow or 5 sheep. Their holdings are included in 'Inbye'.

sists of the sporting estates of Grimersta, Scaliscro, Morsgail and Uig Lodge, on some of which a few cattle and sheep may be grazed, and a few small farms.

There are 37 crofting townships. In area they extend from 9,000 acres (Linshader) to about 500 acres (Croir, excluding de facto shares in Bernera Shielings). The number of crofter tenants ranged from 4 in Ungshadir and Earshadir to 61 in Breasclete, and the average amount of land available to each crofter is 7.2 acres of inbye and 126 acres of common pasture (table 10). Averages are misleading. As the table shows, between districts the amount of land available per crofter varies from about 50 to 500 acres; as between townships the range is even wider (table 11). To some extent this contrast is the result of resettlement schemes which, in general, attempted to provide new holdings sufficient to yield a family living. The extent to which they were successful in this respect was limited by political pressure, especially in the 1920's, to provide the maximum number of holdings. Nevertheless the re-settled holdings have twice the average areas of both inbye and common pasture (13.3 against 7.2 acres, and 225 against 126 acres, respectively).

TABLE 10

Average acreage of land available for each holding and working unit.

CROFTING DISTRICTS:	INBYE LAND: Holdings	INBYE LAND: Working Units	COMMON PASTURES: Holdings	COMMON PASTURES: Working Units	NUMBER OF: Holdings	NUMBER OF: Working Units
Atlantic Coast	4.7	8.8	285	529	51	28
Uig Bay	10.1	14.8	255	367	62	43
Valtos-Reef	5.4	7.8	118	171	74	51

Non-crofting holdings	17.9	17.9	-	-	23	22
	7.2	9.0	126	157	699	580

NOTE: The distinction between "holdings" and "working units" is explained in the text.

Even amongst the old-established townships there is a tremendous range in amount of land available per tenant, the southern districts being best placed and those in the north worst, a situation which still remains. Indeed, the contrast in land available as between tenants (table 11) is a fundamental one; surprisingly, it is not on the whole reflected by a corresponding contrast in stock carried. Together with the rarity of effective fences between or within township pastures, the impossibility of properly hefting sheep to the hills when each crofter keeps his own little pack, and the excessive sheep/cattle ratio, this gives rise to serious problems which will be examined in Part III.

Land A

192 The circular, corbelled stone "beehive" huts, some still in good repair, are of uncertain date. The best preserved are on the Morsgail Deer Forest, in remote situations which make it almost certain that they were only occupied seasonally; those on the Garynahine common pasture are associated with assymmetrically ridged, curving, lazybeds. This, however, need not imply permanent occupation of the site, nor does it solve the problem of age; such lazy-beds are certainly old, possibly pre-potato (c.1790 here) - but the huts do not decay with age and may be very much older.

195 429 [64] Early in the eighteenth century the present area of the parish of Uig was held from the Seaforth clan chief by 26 tacksmen, whose names are recorded in the judicial-rental of 1718, (Fig.4). They, presumably, had sub-tenants but of these there is no record. Elsewhere in Lewis the same rental records many small tenants holding direct off the chief but in Uig, apparently, the tacksman and sub-tenant system remained intact. Although we cannot be certain of their precise extent, the distribution of the tacks coincides fairly well with that of the better agricultural ground (Fig.2). * Five of them [241] cluster round Uig bay, four were in the Valtos-Reef area, and three around the strait of Little Bernera. All these districts have machair; together they accounted for three quarters of the meal and more than half the sheep and money rents. What is more, these rents represented 27% of the total rental of Lewis, whereas by 1887 Uig yielded only 17% [178] of the rental and by 1901 the proportion was reduced to 14%. The relative decline of Uig is largely due to the growth of Stornoway; this shift in the centre of gravity of Lewis [369] has tended to exaggerate the remoteness and isolation of Uig in the present century.

161 175 [632] 407 499 200 By the end of the eighteenth century the tacksmen seem to have disappeared; at any rate they are not mentioned in the remarkably detailed account of the parish given in the Old Statistical Account, 1792. Meanwhile the small tenants had multiplied: whereas in 1755 the old parish * had supported 1,312 persons, in 1792 the minister recorded 1,898. At this time there was neither plough nor cart in the parish. The minister was cultivating potatoes and his family were eating them

TABLE 3

AVERAGE STOCK HELD BY EACH FAMILY

162 178 233 422

Note: the figures for both dates refer to the area of the old parish.

[632] * The old parish of Uig excluded the Loch Carloway district, from Kirivick north; this area lay in Lochs parish until 1891. Unless the old parish is specified figures quoted have been corrected to conform with the modern boundaries.

1. [See p. 2 - analyst]

195 429 311 a well cultivated small farm, a striking example of what can be done with this unpromising terrain. It is probably true that one of the objects of forming farms was to introduce improved methods and so set an example to the small tenants. The contrast, today, between Garynahine Farm and the nearby crofts, suggests that more than example is required.

TABLE 4

POPULATION CHANGES 1841-1851

161 162 175

District	1841	1851	Change	(%)

(2) Reef -180 (-96%).
(3) Carnish - 60 (-36%) - but completely cleared before 1861.

(Township figures are not available before 1841).

The birth of the crofting landscape.

195 429 311 632 A further mid-nineteenth century attempt to improve the productivity of the small-tenants' holdings was the lotting of runrig lands to form individual crofts. In a report to Seaforth c.1800, the Rev. Headwick had recommended the abolition of runrig* and some lotting of crofts took place about 1811 ** - about which time runrig was being abolished in North and South Uist - but many townships in Uig, as elsewhere in Lewis, escaped this lotting. In Bernera, Kirkibost was probably lotted at this time and the crofts fenced; in 1852, despite clearance, the first Ordnance surveyors were able to record the old fences (which were used as the croft divisions when Kirkibost was re-settled in 1878). The now much divided crofts of Kneep (see also fig.22) are probably of the same date. Reef appears, also, to have been lotted early, for the remnants of fences recorded by the Ordnance Surveyors in 1850-1852, (Reef was cleared in 1850), show crofts of the same [621] general form as those of Kirkibost, and quite unlike those of the 1850 lotting. Consequently, in many townships until this date, the houses remained huddled together in tight little groups, often inter-communicating one with another. The groups, or clachans, were usually set in the midst of the arable land. The runrig system had certain disadvantages, but, as a basic agricultural structure for small holders, it had two considerable advantages which may be relevant to modern conditions. Firstly, it was flexible: within it the individual's holdings varied in size and rent and it was possible, at the periodic re-allocation, to adjust the size according to family needs. An elderly person did not need to be burdened with a holding larger than he required, or was able, to cultivate; a young man with a

[113] ** Report.... on the Condition of the Cottar Population of the Lewis. (C.5265), 1888, p.37

* The essence of runrig was that any individual's arable land was in many pieces, scattered promiscuously amongst those of his neighbours. Periodic re-allocation of pieces was usual, but the period varied and in some cases was infrequent.

Figure 6.

Figure 7.

Figures 6 and 7

THE LOTTING OF BREASCLETE

Figure 6 shows the irregular clusters of old houses and patches of arable land (hatched) within the infield dyke. On the right the first of the new houses, standing in a row each on its own 'lot' (or 'croft'), are shown.

Figure 7, from the contemporary Factor's notebook, shows the new crofts as lotted in 1856. Note that these were not fenced.

/p. 14/

195 growing family could increase the size of his holding. Secondly, in the absence of fences
427 a certain discipline of agricultural management had to be maintained; moreover the
311 proprietor, through the factor, grounds officers and township constables, saw to it that
● 632 it was. This "good husbandry", albeit at a rather low level, was maintained in the interests of tenants and land-owner alike. After the arable land was lotted permanently to individuals, there was less flixibility and less need for communal management. But the absence of fences between the new lots, or crofts, meant that they were still common land during the winter months. In some cases the proprietors paid the tenants to erect fences round the newly lotted inbye land of the whole township but, even when a ring fence existed, stock was allowed to graze indiscriminately within it from November until April.

It is fortunate that the first Ordnance surveyors were at work in Lewis just as the lotting was coming into effect. The new lots were not divided by fences, therefore they were not marked by the surveyors, but in several townships they arrived in time to plot the clachans and in some - Breasclete, for example (fig. 6) - the first edition six-inch maps show some of the new houses, neatly spaced out on the new lots. The arrangement of the latter is recorded in the Factor's sketch books, of which fig. 7 is an example.

175 Thus whilst we have little evidence of the appearance of the former rural landscape,
632 we have an excellent record of the birth of the new. The characteristic units of the new
178 lotting were townships divided into long narrow strips, arranged parallel and fan-wise more or less in the direction of steepest slope. Such an arrangement was simple to lay out; it tended to give everyone a fair share of the land of each kind - ill-drained and well-drained, high and low. And, if a road or track passed through the township it was usually possible to give each lot or croft direct access to it without the necessity for side-roads.
[367] Consequently the houses, when re-built, were usually put on the crofts. A dispersed pattern of settlement replaced the little huddles of the clachans. The extent to which it was dispersed depended on the width of the lots; the greater the number of tenants to be accommodated in a given area, the narrower were the lots. In extreme cases they might be as little as 20-30 yards in width and then the houses, aligned along the road or access track might form a virtually continuous terrace or street.

CHAPTER THREE

THE CROFTING STRUCTURE

427 In the parish of Uig about 90% of the families are crofters. That is to say, they owe their presence in Uig to their hereditary tenancy of a small-holding of croft status. To these holdings they have a deep attachment; many of them have been inherited through
[428] several generations. Others were obtained more recently during the process of re-settlement of farm land which followed the Napier Commission report and 1886 Act. Many older crofters regard the resettled townships as the fruits of a hard-won victory. Nevertheless, we have seen, very few of the holdings are in fact more than 110 years
[165] old. And, whilst some families can certainly trace their ancestors in the district for several centuries, there has always been a good deal of movement between townships. Thus the claim that they occupy holdings which were carved out of the barren moor by the toil and sweat of their ancestors is, in most cases, metaphor rather than strict truth.

iff, Kneep, Uigean and Reef - some of which shared common pastures.
of the nineteenth century and earlier, apparently, than the 1850 lotting
Lewis, crofts were allotted in each of the clachan areas: Valtos and
n pasture and so became one township; similarly Kneep and Uigean

that the croft boundaries were not accepted by the crofters. Certain
n groups of crofts (usually three in number) are discernable today,
divisions a certain regularity of distribution of strips persists, but

195 the crofts at Kneep are still highly fragmented: the fifteen crofts comprise over one hundr
311 and eighty separate arable plots. The lotted crofts at Reef were cleared in 1842 to provid
427 land for a sheep farm. Plans to clear the remainder of the Valtos peninsula were thwarte
228 by the Fisheries Board because Valtos and Kneep were then good centres for the white fish
50 industry. As late as 1892 Valtos and Kneep had forty boats, providing employment for on
464 hundred and forty-five men. Valtos with thirty-two boats and one hundred and twenty
fisher-men was second only to Carloway as a fishing centre in Uig. With the prosperity
of the fishing industry, the population of Valtos and Kneep had risen rapidly - from 467 in
1841 to 659 in 1891. Some, at least, of the subdivisions of Kneep date from this period.
Reef was scheduled by the Deer Forest Commission (1896) for resettlement by crofters
and in 1908 an attempt was made to do this, but agricultural experts advised against it, on
the grounds of poor water supply, scarcity of arable land (only ninety-three acres old aral
and the risk that, if cultivated, the machair would suffer wind erosion. Nevertheless, in
1921, Reef was resettled by ex-servicemen from Valtos and Kneep. At the time the shee
233 farm was only carrying a stock of one hundred and seventy sheep - less than half the croft
sheep stock in 1959.

427 Tables 15 - 18 summarise the more significant points of the economy of the Valtos
178 peninsula. Table 16 illustrates the fact that the economy is in decline. Only two-thirds
the total possible units are being worked. Many of the crofters have abandoned their cro
162 and the younger generations are unwilling to take over. Of those remaining to work the
crofts 18% are over sixty-five, and a further 47% are between forty-five and sixty-four.

CHAPTER FOUR

THE ATLANTIC COAST

(Brenish, Islivig, and Mangersta)

by

Pamela M. Gough.

131 Brenish, Islivig and Mangersta are situated in the extreme south-west of Lewis, on the Atlantic coast of the parish of Uig and forty miles from Stornoway.

133 Brenish has a south-westerly aspect whilst Islivick faces north-west; in both the elevation of the crofts decreases seawards from about 125 ft. in the east to 50 - 25 ft. in the west. Only one croft in Islivig, and the eight most southerly crofts in Brenish, run to the sea - the rest obtain some shelter from a line of low hills about 300 yards wide and rising to a little over 100 feet, which forms their western boundary. The land terminates in low cliffs from 25' - 100' in height, and a rocky foreshore. Behind these townships to the east a range of mountains from 1,500' - 1,800' in height and dominated by the highest hill in Lewis, Mealisval, (1,885'), gives protection from easterly influences.

Mangersta lies to the north of these mountains; here the crofts lie in a sheltered
134 valley to the west of which the land rises to over 200 feet. The valley opens southwards to the sea where there is a sandy beach and machair. The crofts range from about 150 feet to 100 feet above sea level; those nearest the sea have soils which contain a substantial proportion of machair sand.

Soils are generally deep, and there are few rocky outcrops on the crofts which are fairly level. In Brenish and Islivig the soils are mainly peaty, becoming wetter in the west. Where visible the sub-soil is gravel or stony boulder clay. In Mangersta the transition from peaty soils on the northern crofts to sandy soils on the southern crofts, is marked by the increasingly continuous cultivation, drains being unneccessary on the latter.

137 There are no trees or shrubs, and vegetation consists of marshy grass moors in the Mealasta area with a considerable amount of cotton grass bog further north. West and south of Mangersta the machair area is characterised by a calceole plant community similar in content to that found in many parts of the chalk and limestone areas of England.

361 Brenish and Islivig are old settlements, never cleared. In both, the sites of the
[172] original clachans can still be seen clustered around the mouths of their respective streams. The houses are now situated at the east end of the crofts, near to the road.

175 To the south, Mealasta - cleared in the 1840's to make a sheep farm - was divided in
632 1921 to give enlargements to the common grazings of both Brenish and Mangersta. The
311 arable land was divided into twenty-nine shares as enlargements to Brenish crofts, and is held in a modified form of runrig.

Mangersta was cleared in 1837 to make a farm; subsequently fishermen-cottars settled on the farm but they moved to Dun Carloway in 1873. In 1910, however, a new township of thirteen crofts was set up by the Congested Districts Board; the new settlers were cottars, mainly from Brenish.

/p. 60/

beginning of the resettlement movement which has given the modern crofters of the district almost all the lands formerly occupied by small tenants. This process was completed in the Bernera region soon after 1918, and the problem now - one which is obviously going to become increasingly important - is not to give the crofters more land, but to find active crofters for the existing holdings (see Chapter iii for more detailed information on clearance and resettlement).

The ground plans of the existing settlements vary considerably, depending mainly on the terrain. Where a township is spread along a fairly straight coast the natural tendency is for the croft boundaries to run at right angles to the coast and for each house to be set on its own croft. The best examples of this are Hacklete and Kirkibost, where an early nineteenth century (i.e. pre-clearance) lotting was readopted when the township was re-settled in 1878. Linshader, Lundale, Cruilvig and Earshader also follow the same type of layout as nearly as possible, but Tobson, with the exception of Valasay, is intermediate between a lotted and an unconsolidated township. Croir also differs: it was laid out in 1921 but the disposition of the potential arable forbade a coastwise organisation. The site of Breaclete is greatly broken by lochs and a sea inlet, and consequently an essentially regular layout based along a main Loch Breaclete - Loch Beg Breaclete axis, appears somewhat complicated. The accompanying diagrams contrast the control exercised by physical conditions at Croir with the subordination of physical conditions to a simple lotting plan at Hacklete, (Figure 28).

Within the townships, with the exception of Kirkibost, the distribution of settlement seems to have changed little since the original lottings, for in most cases the sites of the old and present dwellings are little further apart than is dictated by constructional problems. It would appear generally that black houses were universal in the nineteenth century except for the farmhouse at 1 Croir (the oldest 'white' house in Bernera), Thula House, (18 Tobson), possibly the tackesman's house at 11 Hacklete, the former farmhouses at 20 Kirkibost and at West Earshader. However, with the establishment of Congested Districts Board and of Board of Agriculture grants, housing was improved, early examples being 5 Hacklete and 10 Breaclete. The resettled townships generally had improved accommodation from the start. Improvement has greatly accelerated since 1951. In most cases at the present time housing is of very high standard, only one blackhouse and one near blackhouse are still occupied.

Water supplies and sanitation are less satisfactory. Most crofts by now have their private water supply, thought it is hoped that mains schemes may be constructed within the next few years. Sanitation varies in standard and in places there are still open ditches, but all the newer houses have water closets. It is worth remarking in this connection that tuberculosis is almost eliminated. Electricity has been available since 1952 to all crofts and most are connected, though not necessarily in every room. Cooking is sometimes by electricity but more commonly by Calor gas and a peat-fired range or stove (open or enclosed). Peat is cheap to those able to gather it themselves. Where, however, help is needed to carry the cut and dried peats to the nearest road, difficulties may arise. The cost of hiring labour for peat cutting may be such that it is cheaper to buy coal.

Access to Bernera by road is now comparatively easy. Where formerly Loch Roag provided the highway of communication, the road built to Earshader after the Great War, and the £87,000 bridge to Bernera Island, built in 1953, have caused a revaluation of sites. Linshader is approached by a tarred branch road and the other Berners shore townships lie upon the narrow and twisting main road, though four of the six Lundale crofts have no connection with it, and two of the Cruivig crofts, and West Earshader, are somewhat isolated. On Bernera Island the old cart track from the pier at Barraglom across to Tobson and Croir has been somewhat re-aligned since the construction of the bridge. This is a good tarred road, as is part of the branch to crofts 3...8 Croir. The old road to Kirkibost was tarred in 1959, though three outlying crofts near Barraglom were still without a road suited to vehicles, and the branch within Breaclete remained untarred. There is a new road to Hacklete from Breaclete which provides tolerable, though circuitous, communication. Valasay is one of the most isolated settlements in Bernera, linked with Breaclete rather than with Tobson by the footbridge and causeway paid for by Congested Districts Board grant about 1903.

Crofts and Commons

A crofting area normally consists of the croft land proper - the inbye (arable and unimproved land, and various common grazings. Table 20 summarises the situation in Bernera. Kirkibost has by far the largest inbye and the Bernera island townships generally are larger than those of Bernera Shore. That the positions are reversed with regard to common grazings is due to the limited hill of Croir and the very extensive hill of Linshader. The Bernera island townships would, however, be much worse off (or hill land had they not various special common grazings (except Croir) and did they not share in the 4,341 acre of the Barvas shielings on the mainland. It is possible to calculate the appropriate shieling share for each township on the basis that, though the theoretical sums for each township and common grazing are exact, in fact all working units may send animals to the

POPULATION: AGE and SEX composition

permanent grass. The pre-eminence of the Carloway area is then only a relative one where the decline in cultivation is taking place at a slower rate. Isolation, the decline in fishing and the lack of alternative employment leading to a greater decline in population may explain the more rapid decline in the Valtos area. Whether Carloway will see a similar decline remains to be seen.

Table 35

Stock carried as a proportion of total soum of each township - Carloway district, August 1959

TOWNSHIP	All Stock	Cattle	Sheep*
Carloway	63%	53%	70%
Carloway Park	87%	64%	119%
Borroweston	74%	15%	121%
Garenin	97%	30%	160%
Knock Carloway	64%	30%	90%
Kirivick	73%	25%	124%
Dun Carloway	104%	21%	187%

* As recorded in some cases these figures are too low (see Appendix C (2)); the maximum error is probably around 10%.

Table 35 summarises the agricultural system; further details of the relations between size of unit, status of tenant, stock of cultivation, will be found in Appendix C (3), (4), (5) and (6). Though the total soumings (that is the conversion of both cattle and sheep units to 'cow units' expressed as a percentage of the soumings) never fall below 60% the sheep souming is exceeded in five townships and that grossly in two cases. Once again however this is not as serious as it is in the Valtos area where soumings are exceeded by up to three times the figure allowed. Nor does the mere statistical analysis reveal all the picture for it is essential that a proportionate number of cattle be kept so that the grazing of both cattle and sheep may regulate the growth of the grass. As it is, the relative and absolute increase in the numbers of sheep is having a serious effect on the quality of the pastures.

Sheep are given less attention that the cattle whether they need it or not and few of the present generation are prepared to tolerate the life of the shieling in its old form where the cattle were taken in the summer. In consequence the grazing on the outer moor is almost entirely given up to sheep. The shielings are now only marked by small broken stone mounds which were once the shelters and by the small surrounding areas of greener sward. The changing aspect of the hill landscape has already been mentioned.

Comparison of the totals given in Appendix C (1) shows how the present pattern is developing. 167 milk cows are being raised on 171 agricultural units and with these are 113 calves. Appendices C (5) and C (6) indicate that the agricultural unit farming the basis

Notes: (a) The total areas of common and inbye land for each township are given in the text.

(b) Croft holdings include duplicate tenancies; other holdings include de facto holdings such as cottars and squattars if carrying crops or stock; effective agricultural units include only holdings with at least a cow, or five sheep, or half an acre of cultivation; duplicate tenancies and privately sub-let crofts are not counted twice.

(c) Soumings have been calculated according to the rent operative at the date when the regulations were made unless some other date is specified.

(d) Additional sheep figures are given in Appendix C(2).

(d) The sheep totals are known to be incomplete but the proportions are as re

(e) Where an alternative figure is shown beneath the sum there is doubt as regulation.

423 shielings, and that therefore the shieling area per township is in proportion to the number
427 of working units in that township (total, 88 working units on the Island). If these shares
311 are deducted it will be seen that only Kirkibost and Tobson common grazings exceed in
632 area those of Londale, the smallest of the Bernera Shore grazings, and that even this is
no longer so if the special grazings, mainly later enlargements, are further deducted.
(698) All this serves to emphasize the relative crowding on Bernera Island and the consequent
vital importance to most working units of the shielings. This has probably increased in
the last decade with the construction of the bridge, for whereas previously there was a
biannual ferrying operation to the mainland, tedious, unpleasant, and exhausting for both
beast and man, nowadays driving to the hills is an easy matter.

A somewhat different picture emerges when land is related to tenants and working
units (table 21). If the inbye per croft tenant is calculated it is seen that Croir has the
largest, (29 acres), rivalled only by Londale, (26 acres), Hacklete, Kirkibost, Earshader,
and Crulivig form an intermediate group (11 to 16 acres), while Breaclete, Tobson and
Linshader have but eight acres or less. However, the average area of inbye is more
revealing if calculated in relation to working units: then the Bernera Island townships are
seen to range from 7 acres (Breaclete) to 33 (Croir) while only Londale has more than
20 acres, the others having 16 or less. For the whole Island the average of inbye per
tenant (11.2 acres) is close to that for the Shore (12.8 acres) and the inbye per working
unit (13.5 acres: 13.3 acres) is almost identical. Thus, there is considerable variation
in the amount of inbye land available per tenant and the amalgamation of tenancies into
working units does not seriously change this distribution.

None of the Bernera Island townships has as much common grazing per tenant, nor
per working unit, as any of the Bernera Shore townships, (little more than 100 acres as
opposed to never less than 160 acres). The Bernera Shore townships as a group have
about five times more pasture per tenant and per working unit than those of Bernera
Island. Breaclete stands out as the township with the greatest shortage of land.

The various forms of subdivision and amalgamation of crofts and parts of crofts, or
other holdings, are summarised in Table 22. In the small township of Bernera Shore
only Earshader, with four crofters, has non-crofting holdings with stock; there is little
amalgamation. In Bernera Island, however, only Hacklete has the same number of
working units as of registered croft holders and Breaclete, the township with the greatest
shortage of land, is also the township with the greatest degree of unofficial change and
intermission. In contrast, Tobson, in spite of its unconsolidated plan, presents a simple
picture. Breaclete also has the largest number of feus, including the only feus not
functioning as agricultural units. This emphasizes its function as a centre for the Island.
(548) It has both manses, both churches, the War Memorial, the school and the District Nurse.

(18) These changes must however be seen in perspective. The Bernera region has not
(427) suffered from the type of amalgamation which is the result of decay and which facilitates
further decay; the actual change is not very great. The number of agricultural working
units is 98% of the number of crofters-tenants. It is illuminating to compare the region
with Sutherland where many former crofts, quite abandoned to rough pasture, have been
taken off the rental. Apart from changes due to clearance, the Bernera region has
none of either type. Of 575 holdings examined in thirty-one townships in Sutherland,
amalgamation has reduced the number of effective crofting units to only 437, i.e. 76% of
the formal figure. Amalgamations by family co-operation are comparatively few in
Sutherland (26 out of 173 known examples) whereas subletting is common. A further brief
example may be taken from one of the Shetland islands where amalgamation has reduced
the original number of holdings from something like 350 to about 250 working units.

TABLE 23

SHORE TOTAL	1	-	4	-	4 **	12	2	4	13.3
DISTRICT	3	2	15	11	19 **		13	16	13.5

Once the interchanges are understood and the numbers of working units accepted, it
is possible to analyze the relative inbye sizes of the agricultural units, (table 23). Croir
and Londale have the highest average size and highest modal mean; and the other
townships with the exceptions of Breaclete, Tobson and Linshader, falling in the 10.1-15
acre class. On Bernera Shore, Linshader has the smallest working unit but the range
of variation even there is comparatively small, whereas on Bernera Island, except in the
resettled township of Croir, there is always a range of five or six categories. Hence
the occasional divergence between the modal and arithmetic means. Again this is the
cause and sign of a greater degree of adjustment on Bernera Island.

423 Stock - potential and actual.*
427 The croft is in almost every case primarily a stock raising unit and cultivation apart
from certain items - particularly potatoes for domestic use - is connected with stock
231 rearing. The basis of the stock system is the soum, the share of the common pasture
311 in terms of horses, cattle and sheep. The largest total soums (more than two hundred
632 cow-units) are held by Hacklete, Kirkibost and Tobson; all the other townships have a
hundred or less cow-units (Table 24). This has some relation to the size of common
grazing. The very large area of Linshader is that of the former farm: the present

* Details of actual stock and souming for each township will be found in Appendix A.

231 soum is less than the capacity of the grazing and represents the Land Court's estimate
235 of the stock the crofters would be able to keep: the consequent discrepancy and retro-
423 gression in total stocking is a typical result of the replacement of commercial farms by
427 crofting subjects (c.f. page 25 above). It is better however to consider the area of
311 common grazing and soum combined: in fact, the average acreage per cow-unit is fairly
632 uniform for Bernera Island, (8.7 acres). Bernera Shore has a wider variation of from
11.6 to 100.5 acres per cow-unit: obviously, either the Bernera Island townships grazings,
particularly Bernera shielings, were originally estimated as of superior value, or, for
whatever cause, the common grazings of Bernera Shore are relatively under-used. How
is this reflected in practice?

TABLE 25

Bernera District

Comparison of soums and actual stock,

by township.

	Average soum per working unit	Actual stock per working unit	Soum held per working unit	Working units with less than 50% of their soum
Bearclete	6.5	5.5	84%	19%
Croir	6.2	7.0	114%	nil
Hacklete	12.9	9.5	73%	25%
Kirkibost	10.8	6.7	63%	29%
Tobson	13.3	6.3	46%	58%
BERNERA ISLAND	10.6	5.5	66%	43%
Earshader	6.3	10.9	174%	nil
Crulivig	8.4	11.8	140%	nil
Londale	9.0	10.4	86%	nil
Linshader	10.6	10.2	96%	22%
BERNERA SHORE	9.8	11.6	114%	8%
BERNERA DISTRICT	10.6	6.5	75%	25%

Note: all soums and stock are calculated in "cow units", using the sheep equivalences as
given in the Grazing Regulations.

423 Hacklete, Kirkibost and Tobson have by far the largest total holdings of stock but are
427 eclipsed in regard to percentage of soum actually held by Breaclete, Croir and all the
311 Bernera Shore townships. In fact the average percentage soum held is 66% on the Island
632 as against 114% on the Shore. If efficiency is interpreted in terms of stock rearing
therefore, Tobson is less than 50% efficient, Hacklete and Kirkibost 50% to 75% Breaclete
Linshader and Londale 75 to 100%, and the rest 100% to 175% efficient, the average
falling at 75%.

It is also interesting to remark the area of common grazing per cow-unit actually
held. This shows that, in effect, the Bernera Island townships, as might be expected
from their use of one main common grazing, have much the same amount of land per beast
The Bernera Shore townships apparently enjoy rather larger areas of land per cow-unit;
the excessively large area shown for Linshader indicates understocking.

(427) Figure 29 summarizes the incidence of soums and actual stock carried. It will be
seen that, although there are some crofts with soums of under five and over fifteen cow-
units, the majority lie between those limits with a marked peak in the 7.5 to 10 cow-unit
class. The largest soums seem to be under-utilized. Figure 28 shows the percentage of
the soum held. Almost a quarter of the working units have less than 50% of their soum
and must therefore be considered as inefficient in their chief function of stock raising,
about one third have 50 - 100% and rather less than 1/3 have over 100%

The incidence from township to township varies (table 25) but generally the Bernera
Shore townships have more uniform individual soums than the older and larger Island
townships, though the range of size of stock holdings and percentage of soums held is
more comparable. Table 25 shows the average soum per croft or working unit. Breaclete
and Croir are similar with only just over half the average for the rest of Bernera Island.
None of the Bernera Shore townships have soums as large as the bigger Island ones, and
one of them, Earshader has no more than Breaclete or Croir. Kirkibost and Tobson
stand out as far the most generously treated township, but is this justified in practice?

Expressed in terms of cow units, (table 25) the total soums reveal that, on Bernera
Island, only Croir is really efficient with just over 100% of its soum: Breaclete,
Hacklete and Kirkibost are satisfactory - and no more - with 50 - 80%; but Tobson has
only 45% of its soum. This is a very much poorer showing than that for the Bernera Shore
townships, only one of which drops much below 100%. Therefore on the Shore the soums,
though smaller, are better taken up than on the Island. Further it is clear that, of the
individual working units on Bernera Island, some of those of Croir are unsatisfactory,
three out of sixteen at Breaclete are not satisfactory, five out of twenty at Hacklete,
eight out of twenty-eight at Kirkibost and eleven out of nineteen at Tobson, whereas on
Bernera Shore there are only two unsatisfactory units - at Linshader - one of which is
presently vacant with a dispute over the tenancy.

231 But so far, only the total soum has been considered: in fact it is necessary to consider
235 the elements of that soum, for in order to maintain the pasture one must have a stock
suitably balanced as between cattle and sheep. When the soums were originally calcu-
311 lated this was borne in mind and were every one fully occupied in the proportions
originally planned, the balance of grazing would presumably be satisfactory. Table 26
shows the stock equivalents in sheep units. In Croir the soum would indicate a marked
preponderance of cattle +, in Linshader (with its extensive hill lands) of sheep; otherwise
there is a rough balance in the soumings between large and small horned beasts.
(656) Occasionally there are special permissive or restrictive clauses in the regulations. For
instance, on Breaclete township common grazing, "...a landholder...shall be entitled to
graze thereon, free of charge, during summer and autumn, two hoggs for every pound
sterling of rent, for replacing the cast ewes...". Similarly, in Linshader horses are
not allowed on a fenced area of 800 acres, and on Little Bernera horses are specifically
disallowed. But generally the various classes of stock have clear equivalents which are
freely interchangeable. How does this work in practice?

(698) Editorial Note: this was probably because, when the Land Court determined the soums,
Croir had no share in Bernera Shielings. This now calls for adjustment, which should
be made when the Crofters Commission re-enact the local Grazing Regulations.

TABLE 26

Bernera District

Souming calculated in sheep units

231
235
311
632

	Basic soums in sheep units				
	Horses	Cattle	Horses & Cattle	Sheep	Special Grazings
Breaclete	-	9	9	8	8
Croir	-	21	21	12	-
Hacklete	-	9	9	8	8
Kirkibost	-	9	9	8	-
Tobson	-	9	9	8	16
Earshader	-	21	21	26	1
Crulivig	-	21	21	27	-
Londale	-	28	28	32	-
Linshader	6	7	13	30	-

Table 27 shows the cattle soum and holding: there is a marked similarity between the
Island townships, (all holding about one third of their soum), and the Shore townships,
three of which range from 96% to 100% and only one of which, Londale, has less than 60%.
That these averages are not obstructive is proved by the fact that the scatter of percentages
of cattle-soum held per working unit is less wide for the Bernera Island townships than for
those of the Bernera Shore, bearing in mind the smaller number of units in the latter.

It is a little difficult to account for this, particularly when it is observed (Table 28)
that there is no correlation with the percentages of the sheep stock held; the Island town-
ships vary from having half their soum of sheep (Tobson) to double (Croir), and those of
the Shore from a shortage for sheep in everywhere high and non-sheep-keeping crofters to a
number of overstockings for sheep in everywhere high and sheep-keeping crofters; and
rare, there are 10 agricultural units with no cattle and 25 with only one cattle beast.

August, 1959

SHORE	5	1	9	2	4	1	2	1	-	60%
DISTRICT	9	25	51	11	8	1	3	1	-	37%

231 is probable that the constant but rather low incidence of cattle on the Island is governed
233 by two factors: first the shortage of common grazings near the township and the neglect
311 of the only alternative source, the shielings, and second, the memory of past isolation -
632 and the present impossibility otherwise of getting milk save from a neighbour - which makes a milch-cow a necessary part of the equipment of almost every household. On the mainland, where the common grazings are contiguous with the inbye, summer grazing of cattle is much easier particularly, as in Crulivig and Linshader, where there are special fences to divide the near and far pastures (cf. the old Norwegian spring-autumn and high summer seters.

We may compare fifteen Sutherland townships, in which 89% of the stock held is sheep
[178] with the Bernera District in which 80% of the total stock is sheep. That this balance of stock is not old-established is revealed by comparison with the stock figures collected for

231 the Napier Commission in 1883; these show that the Bernera region now keeps le
233 half the former number of full grown cattle beasts but only a slightly higher perce
311 of sheep. It is an unavoidable conclusion that resettlement and enlargement has
632 to greater agricultural efficiency: since it was carried out for social and not econ
reasons, this is perhaps not unreasonable, but it augurs ill for the future of a com
[128] which must be largely dependent on agriculture.

Land Use and Cultivation*.

241 Before considering the details of stock management it is well to review land-u
[231] cultivation is subsidiary to, and directed at, stock keeping. Few crofts have no

241 198 The area under cultivation has contracted in the past twenty years. Before 1939 most crofts had about twice as much land under cultivation and at Valtos some were cultivating small patches outside the township fence. The cultivation of the common machair at Cliff ceased in 1939. The land had been "too long in labour" (potatoes had been planted on the same ground for nearly one hundred years), and the soil had been affected by over-liberal applications of sulphate of ammonia which replaced the traditional soot-impregnated thatch from the black-houses. Moreover the Cliff machair was particularly vulnerable to "blow-outs" after ploughing. Cultivation of the Kneep common arable has all but ceased, and the fifty-two acres of arable machair in the township of Reef have been untouched since the 1930s. It is noticeable that the common machair cultivation and the shieling economy [231] ended about the same time. Smaller numbers of better-quality cattle were needed to meet the daily milk requirements of the croft; a much smaller area of cultivation was therefore needed to provide winter fodder and consequently more land was available on the croft for potato cultivation. Consequently the more distant machair was replaced by cultivation within the croft.

433 178 Contraction and decline of the economy is common to all three townships, but the form and cause of this decline is different for each, and where the township consists of two separate settlement nuclei there is frequently a difference between the two parts:

632 427 361 311 The township of Valtos is in two distinct parts: crofts 1 - 34 are a succession of narrow strips about ½ mile in length stretching from the shore to about 200' O.D.. The boundaries of the outer crofts (nos. 1 and 34) if projected to a point on Pabay, form an angle of 45°, so that the crofts are narrower at the shore (40 - 70') than at the upper limit (100 - 180'). Of these 34 crofts, 19 are in so-called runrig, eight in pairs and one group of three. (Fig. 21) Cultivation is carried out on numerous intermixed small patches, held permanently; the grazings are interchanged at the year end. Fragmentation imposes a severe limitation on the economic efficiency of the croft. None of the crofts at Valtos is individually fenced [241] though some groups of two or three are fenced together. With the contraction of cultivation only the less steep areas are cultivated, to facilitate ploughing.[1] As a result, the bulk of the cultivated plots are to be found at either end of the croft - near the shore and on the hill top against the township fence.

The remaining five crofts of Valtos, and a squatter, are at Cliff in the valley separating the Valtos peninsula from that of Aird. Here the crofts are fenced, more compact and slightly larger (4.8 acres as against 3.8 acres) and they occupy more level terrain than [24] those in Valtos. Two of the crofts are worked in runrig - these being situated on the machair. The houses are set back about a hundred yards from the road, along the western township fence.

Kneep township is again in two parts: Crofts 16 - 18 together with the Manse and two cottars, are situated across the neck of the Glebe promontory, on the south side of the peninsula. The five legal crofts are today worked as three units, fenced, reasonably compact and with holdings of exceptional size for the area - average 15.1 acres. Crofts [243] 1 - 15 at Kneep on the northern side of the peninsula adjoin those of Valtos. Here is a climax of land fragmentation, which imposes severe limits upon croft efficiency. Twelve of the fifteen crofts are worked; of these only numbers 4 and 5 are compact homogenous crofts; numbers 3 and 6 are compact except that part of the land which lies within their boundaries belongs to croft no. 13. The remaining eight crofts comprise a hundred and eight separate plots of croftland and fifty-two separate plots on the common machair. One croft with 2.8 acres arable the average size of each piece is a mere 0.15 acres! [243] The grazing land on the croft is divided into strips running across the slope, which are interchanged each year, whilst a large part of the common grazing lands are divided into

1. Pre-1939 much of Valtos was cultivated in lazy beds - by spade. Today 9% is cultivated by spade: 43% by horse plough + 48% by tractor.

CHAPTER EIGHT

LITTLE LOCH ROAG DISTRICT

(Meavaig, Caryshader, Ungshader, Geshader, Enac

by

Annie Heawood.

133
133
134

Little Loch Roag is a narrow sea loch extending southwards from Loch Roag proper. It has been formed by glacial erosion n.n.e. to s.s.w. lines of weakness characteristic of the Lewisi generally steep-sided, recent glaciation left much ground morai preserved on the less steep slopes, provides arable land for sev or near its western shores. The eastern shore is the more rug small townships once existed there is now only the small farm ar Scaliscro. At the head of the loch is an estate cottage for Mors large mansion with extensive fishing and shooting rights, grandl inland from the main road.

361
633
365

The district here described includes Gisla, near the head of Ungshader, and Geshader, on the western shores of Loch Roag strung out on or close to the main road. Meavaig, like Gisla, functions as something of a metropolis for south Uig; it has the functions include registrar and receiver of wrecks it has two chu change, the district doctor and manse, and a petrol pump. At t was also the base for the 'bus service. Its metropolitan functio the road replaced a ferry boat service from Callanish; here the some date in the 1920s, and here, too, the estate kept coach and Uig lodge, three miles further west.

361
365
633

There is no record of the original settlement of the four crof Gisla, which was a township (or 'joint farm') of five crofters unt modern houses and bungalows have been built, many with easier the old black houses, now often used as byres. Water supply do serious problem because of the extensive moorland gathering gr are not at present any water-supply schemes. Electricity is, o Caryshader and Enaclete are on the main Stornoway road being s 'bus and by vans selling meat, groceries and fish at least once a sub-post-office. Geshader is less fortunate since, although var must be met at the junction of the unsurfaced track and the main the school serving this district also stands. The track has been so that it now reaches all the houses. Ungshader, however, is has had similar delivery arrangements, it is now a dying settlen inaccessibility.

427
632
311

The crofts are mostly regular in shape on the landward side the land is very broken as in northern Enaclete. In Caryshader crofts which at present are worked as eleven units; one is used by its owner-occupier and there is one squatter on the common there are eleven crofts, each worked independantly; Ungshader

lets and Gisla).

has four crofts but the

427 632 311 joint tenants of one have moved to Geshader while continuing to work the Ungshader land. Another is preparing to move to Enaclete and yet another lives on a feu at Loch Chroistean Cottage. At present, three working units remain. Enaclete consists of nine crofts with ten units, one being rented by joint tenants.

221 The rhythm of work is similar to that in other parts of western Uig. Potatoes and oats are planted in April followed by lambing and peat cutting in May. In June and July the sheep are shorn and subsequently sent to the common grazings. In August the peats are carted, once they are dry, by lorry direct to the crofts. Hay-making follows. The lambs are weaned in September, harvest is then carried in and tupping and statutory dipping take place in November. The sheep are then returned to the township grazing though the lambs may be fed with hay on the croft. There is little regular crop rotation and only a small number of crofters seem to undersow oats, thus improving the quality of future hay crops. Gardens are not important and only provide for family needs but Caryshader particularly has a number, some growing flowers as well as vegetables. Fertilisers vary widely from croft to croft as well township to township. Enaclete potatoes are still grown near the shore and thrive on seaweed; those of Caryshader are usually fed on artificials. 241

231 Most crofters keep one milk cow with a calf; a few rear a young beast for the autumn sales in Caryshader. However, some now rely on their neighbours for milk in return for grazing and one croft has turned to goats, as giving less trouble. The bull for the whole district is a beef shorthorn and is kept on Geshader -Ungshader common grazing as it is completely fenced; and Geshader is responsible for its upkeep.

233 Lambing seems to have been generally good in 1959 but it was not easy to get exact figures. The Morsgail Estate and Gisla farm also run considerable flocks. The common pastures total 3,119 acres with an enlargement, formerly used as shielings, of 1,215 acres for Enaclete, Geshader and Ungshader near Loch Suainaval, and for Caryshader 88 acres on Floday island. The shielings have been disused since the war. Peat is normally cut to the west of the road but at least one elderly tenant in Geshader has kept a section of his croft for this purpose to save the effort of working further afield. [344]

241 178 231 Generally speaking the land now cropped only represents one third to one half of that worked by spade 20 - 50 years ago when the crofting population was larger and when much greater numbers of cattle were kept through the winter, thus requiring more potatoes and more oats. The cattle numbers are much less than the total souming but sheep are in excess. In Enaclete, at least, overgrazing by sheep has caused a decline in grazing quality.

464 Clearly in these townships, apart from the very few crofts still fully cultivated, the means of livelihood is sought elsewhere. At present there are altogether fifty-three men in the working age group (15 - 64) in all four townships. Of these fourteen are away, nine permanently and five periodically. Thirty have regular or periodic employment besides crofting and of these seven work at Gisla on the hydro-electric scheme, seven weave, some of them part-time, four hire out vans, two do post-office work and others have varied occupations while only three are full-time crofters. At present there are few men in the Merchant Navy and fishing does not provide an occupation although many share rowing-boats in their spare time, and fish for domestic use.

162 [164] The population as a whole is ageing and of the group between 15 and 64, forty-four (roughly 30%) work away permanently or have emigrated. It is noticeable that there are few crofts worked by people with young families

000 In conclusion it may be re-emphasised that the fate of the crofting townships depends mor

strips running across the slope, which are interchanged each year, whilst a large part of the common grazing lands are divided into interchangeable sections ("quarters") to accommodate each of the groups of crofts. See Figures 22 and 23.

The cultivable croftland at Kneep is relatively flat and the natural drainage is poorly developed; the quality of this land, depends to a very great extent on the upkeep of a dyke running across the croftland from a small marshy loch to the sea. This dyke has not been cleaned for several years, and as a result a large area has been invaded by reeds. Other parts of the croftland have been similarly overrun by 'wild rhubarb'. Such deterioration is almost inevitable when land is so fragmented.

The crofts at Reef are grouped in three separate localities. Crofts 1, 2 and 3, on the edge of the machair have probably never been occupied since the crofts were allotted in 1921 and are now used only for grazing. The main body of the crofts (nos. 3 - 13) face south - they are more compact than those in Valtos and Reef, but they vary in size from 2.9 to 13.25 acres and their boundaries are irregular in shape. Two crofts (14 and 15) are separated from the main parts of Reef: they are both small (2.5 acres) but the size is compensated by their situation on the level terrain of the machair. The old farm house is used as the dwelling for both 14 and 15. Much of the cultivation at Reef, except on the machair crofts, is on lazy beds - but many of these have decayed with the advent of horse and tractor ploughing; 35% of the land is cultivated by spade, and the remainder by horse plough.

The crofting economy is probably at its lowest ebb in Reef. Only eight of the fifteen crofts are occupied and of these five are worked by disabled crofters or crofters over sixty-five. The Reef crofts were settled in 1921 by returning ex-servicemen and today seven are being worked by the original settlers; there is little evidence of a desire among the younger generation to succeed to the crofts.

Until 1956, crofters on Reef used to graze both sheep and young cattle on the Flannan Islands, fifteen miles west of Uig.

Fig. 24 shows the age/sex structure of the population in the three townships. It tells a story familiar to crofting townships: 55% of the resident population are over forty-five years of age; 9% of the total population are permanently away; and since 1939 the population has declined by at least 15% as the result of emigration alone. But perhaps the most significant fact is the very small proportion of women of a child-bearing age and the consequence that only three children are being born each year to replace the older generations.

By their very position, the townships of the Valtos peninsula are isolated. Fifty years ago communication with the rest of Lewis was by boat. The road to Valtos and Kneep was built originally to bring the mails from the pier at Meavaig; the motor road to Reef was completed in 1956. Shopping facilities are provided at Valtos, for the people at Valtos and Kneep, and at Meavaig which serves Reef, Uigean and Cliff. These are supplemented by travelling shops which call once per week, by Indian dealers and by the local 'bus-driver who makes purchases in Stornoway on behalf of customers on the peninsula. The school for the whole area is situated mid-way between Cliff and Valtos and two kirks and the doctor's house lie at the junction of the Valtos and Reef roads.

361 at Carloway Bridge. In addition to the main settlement which is irregularly disposed on either side of the two roads, a group of Swedish timber Council houses has been built in a somewhat forbidding situation on the common pasture adjoining the 'Pentland' road.

427 311 The thirty three registered crofts and thirteen feus or allotments (of which only five are non-agricultural) are worked in thirty four units. Three of the tenants of the Swedish houses have crofts, two in Knock Carloway and one in Upper Carloway.

311 The land use figures show that Knock Carloway has a much greater percentage of permanent grass than has Borrowston on the opposite shore of the loch. These figures reflect not only the less rewarding physical environment on the south shore, but also the lower intensity of cultivation which bears a direct relationship to the type, number and quality of the stock. The township has less than the total number of animals permitted by the souming though the higher figure for sheep than cattle reflects the general trend for the area. No horses are kept but the township has the bull which serves the area - a privately owned beef-shorthorn.

464 286 632 Weaving remains the major occupation but the emphasis is less heavy than in the other townships for the community services centred here employ a number of the inhabitants. It may be that here lies part of the answer to the problems of the community as a whole: but even if employment in services were to be increased it could never be very significant in a district with a total population of only 600.

KIRIVICK

361 162 133 Adjoining Knock Carloway is the small township of Kirivick which has forty one permanent residents. It occupies the least rewarding agricultural environment of the area. Crofts 1 to 13 rise from the shore of Loch Carloway on the broken hill face to the Carloway-Breasclete road, whilst number 14 occupies the head of a small valley which was once part of the common pasture beyond the road.

361 133 The houses are set back from the road occasionally sheltering in the lee of the frequent knolls of bare rock which are exposed on the croft land. These rock surfaces together with the irregular deposition of the drift account for the fragmentation of the cultivated strips in small hand-dug lazy beds on the upper parts of the crofts inaccessible to the tractor.

361 427 311 There are fourteen crofts, three feus and one squatter settlement and all but two of these are fenced. Two of the crofts are held in 'fixed runrig' and the small sections in which the land is cultivated are shown in figure 41 which also illustrates the regular distribution of sections between the two. Though it used to be the normal practice the crofts are not now open to common grazing in the winter.

311 The restricted amount of land available for common grazing ensured the continued use of the shielings until 1939; small patches were cultivated on the common grazing about forty years ago and this fact too is the only recorded instance of a practice that was a community by the size of the working unit and the land available. At the moment there is no proposal for reseeding of any part of the common pasture* because of the difficulty of getting access for tractors. As in the case of Knock Carloway the total souming is not exceeded, but the sheep stock is 25% above the sheep soum.

162 The population figures emphasise the problem of the whole of this southern area and here is the most extreme case of incipient decline. There are two fulltime crofters, six crofters who weave and five crofters over sixty five. Seventy per cent of the population is over 45 and only two children attend the school neither of whom is likely to take up crofting.

1,[Figure 42--Analyst]
A

Figure 43

162 632

POPULATION: AGE and SEX composition

permanent grass. The pre-eminence of the Carloway area is then only a relative one where the decline in cultivation is taking place at a slower rate. Isolation, the decline in fishing and the lack of alternative employment leading to a greater decline in population may explain the more rapid decline in the Valtos area. Whether Carloway will see a similar decline remains to be seen.

Table 35

Stock carried as a proportion of total soum of each township - Carloway district, August 1959

TOWNSHIP	All Stock	Cattle	Sheep*
Carloway	63%	53%	70%
Carloway Park	87%	64%	119%
Borrowston	74%	15%	121%
Garenin	97%	30%	160%
Knock Carloway	64%	30%	90%
Kirivick	73%	25%	124%
Dun Carloway	104%	21%	187%

* As recorded in some cases these figures are too low (see Appendix C (2)): the maximum error is probably around 10%.

Table 35 summarises the agricultural system; further details of the relations between size of unit, status of tenant, stock of cultivation, will be found in Appendix C (3), (4), (5) and (6). Though the total soumings (that is the conversion of both cattle and sheep units to 'cow units' expressed as a percentage of the souming) never fall below 60% the sheep souming is exceeded in five townships and that grossly in two cases. Once again however this is not as serious as it is in the Valtos area where soumings are exceeded by up to three times the figure allowed. Nor does the mere statistical analysis reveal all the picture for it is essential that a proportionate number of cattle be kept so that the grazing of both cattle and sheep may regulate the growth of the grass. As it is, the relative and absolute increase in the numbers of sheep is having a serious effect on the quality of the pastures.

Sheep are given less attention that the cattle whether they need it or not and few of the present generation are prepared to tolerate the life of the shieling in its old form where the cattle were taken in the summer. In consequence the grazing on the outer moor is almost entirely given up to sheep. The shielings are now only marked by small broken stone mounds which were once the shelters and by the small surrounding areas of greener sward. The changing aspect of the hill landscape has already been mentioned.

Comparison of the totals given in Appendix C (1) shows how the present pattern is developing. 167 milk cows are being raised on 171 agricultural units and with these are 113 calves. Appendixes C (5) and C (6) indicate that the agricultural unit farming the basis of farming is the single milk cow and annual calf which carries a subsidy if it passes the inspector of the Department of Agriculture. A few crofters are raising young beasts for sale but there is a general unwillingness to grow more fodder to raise cattle for an uncertain market which may be affected at any moment by an increase in transport costs which are already high. Without the subsidy such enterprises would hardly be possible at all and indeed one could say this of many aspects of life in the island today. Some of the calves are wintered, but the usual practice is to sell off late in the year.

tion at all, but even fewer have more than 2.6 acres (table 29). Expressed as a percentage, le more than a quarter of the total inbye area is even "old arable", of which only about two-rds is cultivated. Oats are every-where the most important crop: they are used almost clusively for fodder. Potatoes, mainly for domestic use, are the only other significant op; the absence of turnips is noteworthy. The crops are in general subject to some sort rotation within the physical limits of each croft unit; oats are usually undersown with grass en the arable is to be left unploughed for a period but the "sown grass for pasture" is gely reseeded pasture land. The rest of the croft is left for pasture and hay, and, in ny cases the cutting of peat - a sure sign of agricultural decline. The inbye economy ends upon so many unpredictable variables that it becomes extremely difficult to generalise out the areas thus used. Forty-seven gardens exist in the Bernera region, but many of them almost 'notional' and others are merely potato patches: perhaps half-a-dozen are at all l cultivated, for flowers or food.

The main change in the crops grown, apart from the introduction of sown grass, has n in the corn crops, where barley has been completely displaced by oats. Barley was wn up to 1936 - at least in Crulivig - and gave a good crop. It used to be pulled, (not thed), stacked, then the ears cut off with a sickle and the stalks used for thatching. bably the disappearance of thatch and the replacement of barley bread by the products of town bakery account for the decline in barley. Fewer potatoes are grown than formerly: directly reflects the decline in population. The absence of turnips is due at least in t to the heavy incidence of finger-and-toe disease.

The fertilisers used in the past were dung and sea-ware. The sea-ware, mainly bladderwrack, and the tough stems of oar weed, was, wherever possible, simply gathered from the beach, though in the more sheltered areas, particularly along Bernera Shore, it was actually cut and towed in rafts to the crofts. There seems to have been little rigid allocation of the rights in sea-ware. In Breaclete each croft had its own stretch of shore and possibly in Tobson, but elsewhere there seems to have been plenty for every-one. The actual gathering in March was a long, strenuous and unpleasant task. The application of sea-ware seems to have been rather rough and ready; certainly there was no careful selection of different types for different crops and purposes: presumably it was merely gathered, mixed with dung to facilitate the rotting, and spread on the arable after sowing. It is reckoned now that about 160 creels are necessary to the acre in Earshader and Lundale.

CHAPTER TEN

EAST LOCH ROAG DISTRICT

(Garynahine, Callanish, Breasclete, and Tolsta Chaolis)

GARYNAHINE by Anne Iredale and Jennifer Oxenbury.

131 632 133 Garynahine is a townships of twelve crofts which are situated on the eastern arm of Loch Ceann Thulabhig. The crofts nowhere extend more than one-third of a mile from the coast. There is a hinterland of about 1,800 acres of common grazing, which is mostly about 100 ft above sea-level, though it rises to 200 ft in a few isolated areas; the crofts are lower, and maximum elevation is 80 ft.

134 Most of the croft land is drained by the stream Allt Mhurchaidh which flows through all but two of the crofts. But the soils are heavy, and several crofters cut peat on their crofts. Many crofters complained that their land was too peaty for cultivation.

361 The crofts form a regular pattern beside the south side of the main road from Stornoway to Breasclete, with two small feus and a 21 acre freeholding on the north side of the road. In addition there is a farm (Garynahine Lodge) of 400 acres east of the crofts, and likewise stretching along the south side of the Stornoway road. The main road to Uig passes through the farm, dividing the cultivated area in the west from the grazing section.

195 361 The regular lay-out of the crofts dates from the formation of the township in 1935. On the same site, but long cleared, there had been an older village about the same size i.e. twelve crofts, known to be in existence in the 1850's. The crofts were in a similar position, but were a different shape, and the ruins of some of the croft houses still remain. This village was completely burnt out one gusty winter evening when, it is said, a spark from a crofter's pipe was blown onto one of the thatched roofs, and the wind quickly spread the blaze to consume the entire village. The crofters left the area, many going to the neighbouring township of Callanish; Garynahine then became one large farm until 1935 when the land was re-allocated into crofts. The new crofters came from a variety of areas, several coming from Crulivig, others from Breasclete and Callanish. The owners of the farm had also opened an hotel which prospered until 1945 when the farm was sold to its present owner Admiral Drummond, who has since used the house of a 241 private house. Nine acres of the farm land is cultivated, and the remaining 391 acres 311 are used for grazing. In contrast to the usual practice in this area the oats have been undersown with rye grass. Another beneficial innovation at the farm is the introduction of shelter belts. Trees have been successfully planted, making it possible to produce good crops of soft fruits such as raspberries, strawberries etc. Both the crops and the stock on the farm are of a high standard, showing that with capital and correct management the land can be remarkably productive.

In contrast to the large scale economy of the farm, the twelve crofts (ten operative units) are each between 4.6 and 6.2 acres, and the total reputed arable is 67.3 acres. In all there are only 9.5 acres under crop (oats 6 acres and potatoes 3.5 acres), and 2.25 acres under sown grass. The crofts are worked either by spade, horse (hire from croft 40 Callanish) or by tractor (hire from the Lodge). The seasonal rhythm of cultivation and of stock rearing is that in Callanish.

Enquiries soon reveal that crofting is not the main occupation of the croft tenants. Another indication of the declining interest in the land is the fencing of the crofts. All were fenced when they were formed in 1935; since then there has been no refencing. Now a grant is available to pay 75% of the cost of re-fencing but little has been done.

234 Stock totals (see Appendix C) have declined recently and this trend will probably continue. There are only four cows and two calves in the township (plus six at the farm).

Table 33

CROFTER TENANTS: (No.)
56
61
43
12
7
-

Since 1939,
166 462 54 people have emigrated whereas only 4 have immigrated. Most of the girls have to leave home when they finish school as there is no employment locally. Many of them go into domestic service or nursing in Glasgow. Many of the younger men also spend time away from home, often in the Merchant Navy. Breasclete is also the temporary home of the families of lighthousemen on duty in the Flannan Isles.

288 Although the people live and work on the croft, weaving the Harris Tweed provides the main source of income. This is a rather irregular occupation owing to the uncertain demand for the tweed, and although the men are nominally self-employed they rely on the mills to supply them with work. The tweed is woven on treadle looms, which, with ancillary equipment such as bobbin winders, are all owned by the crofters.

[458] As 1959 was a good year for the tweed industry, there was an air of prosperity in the township, and with the aid of government housing grants many new bungalows were being erected. But should there be a slump, the crofts would be unable to support the population and most of the bread-winners will have to leave.

TOLSTA CHAOLAIS by Roger H. Thomas.

131 133 361 The township of Tolsta Chaolais lies in a shallow glaciated depression occupied by Loch a' Bhaile and Loch Shader. Most of the crofts are situated near the shore of these lochs, for westwards to the sea the terrain is too rocky and irregular for either settlement or cultivation, whilst to the east of Loch a' Bhaile the land slopes precipitously from 250 ft. to the loch shore. As Figure 36 shows settlement takes advantage of the more gentle drift-covered slopes, generally of small extent.

137 [241] Cultivation is very noticeably limited to three areas - along the west shore of Loch a' Bhaile, along the north-east shore of Loch Shader, and in the valley of the small stream draining from the north into the head of Loch a' Bhaile. Most of the croft land is composed of rock outcrops, rarely exceeding 100 ft. in height, separated by damp depressions frequently filled by reeds and rushes; bracken was apparent only on three crofts. In particular, the area between the two lochs is badly in need of draining and is largely colonised by reeds and very coarse grasses, of no use whatsoever as pasture. One enterprising person suggested that the township should hire a ditching machine - this could certainly be put to use with great advantage.

632 311 427 The settlement comprises 43 registered crofts, 6 feus, 2 squatters, 1 cottar, and 2 holiday bungalows, with the croft holdings aligned north-east/south-west between the two lochs and the sea, except for nos. 28 and 29. The 53 holdings are unofficially amalgamated in various ways and so reduced to 35 operative agricultural units. The acreage of crofts varies from 2.2 to 20.75 acres - a considerable variation. Fencing of the crofts - except for 1A, B, and C, and 12A, B, and C which are held 'run-rig' - was carried out between 1945 and 1950, whilst in 1946 the common pasture of 2,700 acres was fenced into two parks - an inner and an outer one, the division coinciding with the Carloway to Breasclete road. An area stretching from crofts 18A to 21 has, however, been most haphazardly divided. The seaward halves of some five crofts were redivided amongst seventeen crofts in the southern [illegible] of the township to compensate them for lack of grazing area within their own croft [illegible]ndaries. This division is said to date from about 1886.

241 [407] Most of the cultivation is carried out with hired tractor, although two crofts owned small mechanical cultivators. Ploughing by tractor and horse, as opposed to spade cultivation, depends either on the urgency of the operation, or on the accessibility of the plot, for any small patches of cultivation on the rougher terrain are dug by spade, as

(b) Effective agricultural units a

District	Proportion of units grouped according to area of inbye land: 0 - 5 acres	5 - 10 acres	10 - 50 acres
South Uig	33%	34%	33%
Berneray	15%	30%	56%
East Loch Roag	33%	39%	28%
Carloway	61%	30%	10%
WHOLE PARISH	30%	32%	30%

[128] Note: About 20 units omitted for lack of data.

(c) Summary (excluding Carloway, see note)

	Proportion of holdings (generally registered crofts):	Proportion of agricultur
Under 8 acres	72%	47%
8 acres and over	28%	53%
All holdings/units	100% (474)	100% (

[128] Note: The Carloway district is here excluded because about 30 small de facto agricultural units without crofter status obscure the effect of unof amalgamation of crofter-tenancies.

Sources: Appendices A(3) and (4) and C(3) a

[Seaforthhead]

161 Table XVII reinforces the idea that there is a striking dichotomy between the agricultural
162 and fishing townships. The former are characterised by a more stable population trend,
166 significantly fewer of the population in permanent employment forth of Park, and a smaller loss by
169 migration. In the fishing townships, where growth and decline have been equally meteoric,
194 there is a larger proportion of persons in permanent employment furth of Park, and migration
225 losses have been greater. It is also significant that there is a smaller natural increase of
552 0.5 per cent in the agricultural townships. The only township which shows a natural decrease over this period is Calbost, one of the fishing townships.

SEAFORTHHEAD AND SHIELDERNISH

Rachel A. Hirst

131 Seafortthead and Shielderniah are separated by 4,485 acres of rough grazing, the former lying on the northern shore of Loch Seaforth and the latter on the southern shore of Loch Erisort.

SEAFORTHHEAD

135 Seafortthead, the most isolated of all the Park townships, consists of three crofts and a
361 gamekeeper's holding. The township boundary is situated between the 50 and 75 foot contours which at their furthest extent are only 150 yards from the shore. Immediately behind the road the land rises very steeply in rough uncultivable moorland covered with many boulders but generally below the road the land slopes gently at about 5-10 degrees, in places being
[247] completely flat. Here, however, the lazy-beds are very boggy and rushes have appeared in the ten years since cultivation ceased.

134 The soils are deep near the shore due to soil creep; higher up they are very thin and peat
157 accumulates to at least 3 feet both below and above the road. There is little cover; bracken is rare, but silverweed and heather, moorland sedges and grasses soon colonise disused lazy-beds.

241 Legally there are three crofts but only one is still cropped, the other two being used solely
[255] for grazing. There is, however, a gamekeeper's holding within the township boundary worked as a croft. The other two crofts are used as ancillary grazings to holdings in Airidhvruach and Baialian and have not been lived on for forty years and ten years respectively.

[244] The chief crops are oats and potatoes, though the gamekeeper had a patch of turnips and the other croft had grown them during the last few years until 'finger and toe' developed.
[407] Patches, about half an acre in extent, are drained with stone drains and ploughed by tractor, after which potatoes are grown to clean the soil, followed by oats for one year and then sown hay
[314] for three to four years. This is not strictly adhered to and several lazy-beds appeared to be in natural hay. There is no peat-cutting on the crofts as peat is secured just outside the township fence on the common pasture. Lambing has been poor for the past two years being
[251] only 50 per cent in 1958; the stock carried is twice the sheep soum. The cattle, Highland and Ayrshire or Shorthorn crosses, are below the soum, but previously nine cows and followers have been kept.

161 There has been a great decrease in population and cultivation since the resettlement in
162 1886. In Seafortthead and Shielderniah as a whole, there were twelve crofters before the
241
178

[Seaforthhead] [Shielderniah] [Habost]

161 suppression of the original townships opposed to six today. As a result, many lazy-beds, now
162 given over to natural grass, are being gradually encroached on by heather and juncus. Out
241 of the present population of twenty-three, one is permanently away and two have migrated
178 since 1939. There is a more healthy population structure, with a large number of males between 15 and 44, due to a large family having returned home and six children, five of school age.

361 In Seafortthead and Shielderniah all settlement is below the road and house-sites are on
[509] slight elevations. At Seafortthead is the reputed hunting lodge of the Seaforth's,'Seaforth Castle',
[505] now ruined, but still showing signs of abnormal size and arrangement. When first settled,
[491] communication was by ferry (1820). Now a cart-track, deeply rutted, to Eisken Lodge gives
[378] access to the Tarbert-Stornoway road two-and-a-half miles away.

SHIELDERNISH

131 Shielderniah, also consisting of three crofts, is better situated on the Park and South Loche
361 road. The three houses are situated on a well-drained northerly slope, half-way between the
552 road and the shore, but the three crofts are on better land and greater accessibility has led to better management and new ideas.

241 Cultivation in isolated patches reaches up to nearly 100 feet and the lazy-beds have been put
311 together to permit ploughing by horse or tractor. One croft grows neither oats nor potatoes,
[246] preferring to enclose two one-acre parks, re-seed them, cut the hay in June, and wean the
[251] lambs on the aftermath. By next year, this crofter hopes to have enclosed and re-seeded a
[244] further acre and will then use the three in rotation. The other two crofts grow both oats and potatoes and one is also sowing down. The crofts average fourteen acres in size but although gentle slopes are extensive, the major part of the crofts is in permanent pasture. The total
[322] stocking of the Shielderniah crofts is below the souming. Fishing is now only for domestic use
[288] though there is a small jetty on No. 1. Part-time weaving is performed on two of the six crofts.

The future pattern would appear to progress to more grazing and less cultivation. Two out of the six crofts - both at Seafortthead - are worked from outside the township and this isolated township, being difficult of access and having little cultivable land, is better suited to grazing. Shielderniah appears more suitable for enclosing parks for fattening lambs, as soils are deeper and slopes gentler, making the use of a tractor feasible. More could be got out of the crofts especially with fertilising and re-seeding for hay and pasture and growing
[125] fodder crops for wintering. It is hoped to fence the common securely, and then stock will be renewed - a great necessity. Daily communication with Stornoway also means that Shielderniah is better placed than Seafortthead for a flourishing settlement. The crofts are certainly of a workable size - provided part-time work, such as weaving, is maintained, along with the grants from the Crofter's Commission.

HABOST

Rachel A Hirst

131 Habost is scattered around a small bay on the south shore of Loch Erisort. Settlement
133 stretches for over a mile encroaching on three small hills separated by wide, well-drained
241 valleys which soon rise to the dominating Craigeal (225 feet). Slopes are varied but tend to
361 flatten out at about 100 feet near the road and on this flat, most of the cultivation takes place. Nearer the shore, slopes are much steeper and on the hills there are bare rock faces and thin
[154] soils.

[Habost]

134 Drift is found near the shore and laps round the three hills nearly up to the road, predominantly heavy clay with small boulders; this is replaced above the road by peaty loam on rock. At one time, here was grown on the heavy drift. There is peat accumulation on the flat land near the road to a depth of about six feet and there are one or two peat banks. Vegetation is poor; there is no bracken or cover and within the crofts, moorland grasses and
137 sedges predominate on rough land, though there are many lazy-beds sown down to clover and cock's foot. On the hills heather predominates.

195 Habost is the oldest township in Park. In 1843 Maclennan came from Shielderniah and
[492] took what are now Nos. 9, 10, 11, 12 and 13 and Aileen Tailear came from Taransay, Harris,
552 to No. 7. By 1886 there were thirteen crofts; in 1907 four cottars were recorded, three being
621 there before 1886; in 1957, No. 11 which had been shared between two brothers since 1906, became legally 11A and 11B making fourteen crofts. There are also fourteen operative units although two are worked from Kershader, both as 'hay and grazing' units, and two are worked as one unit within the township, for there are three non-crofting units.

241 Only sixteen lazy-beds are dug by spade, the rest have been drained with stone drains and
409 ploughed by tractor owned by one crofter who loans it out to Habost and Kershader. There are three 'Croftmasters' (hand-tractors) in the township but these are only heavy enough for
293 bringing in peats, hay and similiar light work. The progressive Habost community has fenced off part of the common grazing, to keep the weaned lambs off the croft from August till November and so save fodder for winter when the croft land is open to grazing.

[249] Oats and potatoes alternate in the rotation, with a little sown grass for hay, sown in enclosed
[246] parks of about one acre. The tendency now is to increase the number of parks, cut the hay in
[251] June and build up the lambs on the new grass. Shell-sand is used to fertilise the parks but
[324] elsewhere artificials, such as superphosphates, 'potato manure', potash, nitro-chalk and lime are used in addition to dung and, near the shore, seaweed. Most of the hay is taken from old lazy-beds.

251 The land is heavily overstocked: the soum is equivalent to 79 cow units, and actual stock is
235 144, whilst the figures for sheep are 191 and 618 respectively, including the sheep stocked in
[452] Park Deer Forest by seven of the Habost tenants. Sales of cattle are held at Garyvard in November
[251] and May and sheep and lambs are sold in Stornoway. Lambing was poor in 1958, 50-75 per cent being general, but many breeding ewes and other sheep have died.

241 The only cultivation on the common land belongs to the unofficial holdings. Behind Craigeal, however, there are some old lazy-beds, a well and ruins of a hut, which has not been used since before 1852. There used to be shielings on the far side of the common on Beinn Bhuidhe and
[317] below Loch na Cista but these have not been used since 1888. Habost is one of the agricultural
[226] townships and fishing is only for domestic use; looms are to be found on only four crofts and
[251] trade is slack. One crofter has a lorry for contracting, carrying peats, fertilisers and stock
[293] to market and two have butcher's rounds in Lochs. There are two small stores.

561 Settlement is scattered, always on elevated ground, and in many cases the new house has
[512] been built in close proximity to the old house site. All have piped water either from the well or
[554] from a rain tank, drinking water being carried in the latter case. Grants from the Crofting Commission are enabling new building and improvements to be carried out.

[Garyvard] [Caversta]

242 At the moment Garyvard appears to be a go-ahead village, carrying out communal schemes
[242] which will benefit the township as a whole. However, the age structure of the population is abnormal
182 since 60 per cent of the population is over 45 years. The future in Garyvard offers young people hard work, little money and no entertainment, making the attractions of the cities and industries of the mainland quite irresistible. Unless some industry can be started the future bodes ill for the area, since most crofters are of the opinion that a weekly wage packet would more than compensate
191 the loss of their independence. Perhaps it is symptomatic of the age of National Assistance and subsidies that man cares more for momentary rewards and the luxuries of life. This is well understood by parents who encourage their children to leave the islands to seek employment either in Britain or within the Commonwealth. The Lewisman is no sentimentalist clinging to dying traditi and a way of life. His present desires have been re-cast as a result of his increasing contact with the world beyond the Hebrides and he is prepared to abandon his home where it defeats his aims and purpose. Unless prosperity can be brought in by way of industry, tourism or increased croft efficiency, possibly through co-operation in working and marketing, it is possible that we are witnessing the end of a community.

CAVERSTA

Helen Mackenzie

181 Caversta lies along a southern inlet of Loch Erisort, five miles from the Minch and is partially sheltered from east winds by the Cromore peninsula and Eilean Chaluim Chille.

193 The physical nature of the terrain is irregular, rising steeply from the water's edge to a level
361 of approximately 225 feet. To the west and to the east, the land slopes to the river estuary and it is here that the settlement occurs. Particularly in the north-west, two marked breaks in slope are visible at 75 feet and 100 feet above the loch, which is here bordered by a 25 foot rock face. The resulting platforms are separated by faces of bare rock. The valley of the Caversta River is a noteworthy feature. Below a small loch, the river follows an irregular course though a wide and shallow moraine-strewn depression and a quarter-of-a-mile from its estuary, has cut through some low hills rising about 30 feet above the depression. At this point, its course becomes steeper as it passes through a small gorge, which is probably an overflow channel.

137 Trees are non-existent and the natural vegetation consists of Sphagnum on the peat bogs in the hollows and grasses and sedges on the gentler slopes. The steeper, less waterlogged slopes, often broken by rocky bluffs, have heather cover; bracken growth is kept in check by heavy grazing.
194 Forty-six acres of land have been reclaimed by clearing heather and removing peat to form the
511 crofts, but the soil, which varies in depth from a few inches to a few feet, is very acid.

The six legal crofts vary in acreage from 4.75 to 8.5 acres and a squatter has 5.5 acres of
125 enclosed land. The township is in two parts: Torista, with the two smallest crofts, lies at the east
241 ern extremity, while the other five holdings, also bounded by a dyke, border Tob Caversta, an
552 inlet of Loch Erisort. The crofts, which run from the shore to the township dyke, were set prior
[125] to 1861, originally the township formed part of Grobeg Farm. The legal units are, in fact, operativ units except that one of the Torista crofts, now unoccupied, is used for wintering lambs by the absentee's brother, a resident of Caversta.

542 There are no occupied black houses remaining in either Torista or Caversta, as during the past fifty years new dwellings have been erected in dressed stone or corrugated iron, usually with roofs of asbestos slate, tarred felt, or corrugated iron. Several old thatched houses are now used as barns and byres.

[Caverstr] [Cromore]

161 The 1914-18 war had a marked effect on the Caverstra population - 16 out of 54 (29 per cent) left after
167 1911 and no re-population took place. Since 1939, seven people have migrated to Stornoway or the
mainland, (16 per cent of the total 1939 population), and six of these were from Toristra (i.e. 50
166 per cent of the 1939 Toristra population); only one family now remains there. The demographic
167 position is becoming more acute for there are no young married couples and no youngsters growing
166 up. The girls have left to marry and most of the men have sought temporary or permanent employ-
ment elsewhere, for with better communications, education and the radio, the pull to the towns has
become stronger. There are now only two people in the township who could be described as full-
time crofters, earning no supplementary income by weaving tweed on commission from the Stronoway
mills.

241 Caversta is not one of the most progressive of the South Lochs townships. Although the crofts
235 are fenced, the common pasture is not visibly delimited from either the Cromore or Garyvard
232 pastures. At present, the grazing is fully stocked according to the soum, but the committee has not
as yet initiated any re-seeding schemes. As the pasture is not of the best quality, some newly sown
grass would benefit every crofter. Lack of manpower may in part account for this deficiency but even
a small acreage of re-seeding would be a great asset.

000 The future position of the township is rather doubtful: it is not the best type of land for mechanisa-
tion and is badly served by communications. The future of Toristra appears to be probably one of
abandonment, unless it is more easily linked with Cromore. The possibility of a good road being
built here is remote, as there is only one family to serve. The main part of Caversta is also open
to question. Amalgamation of the crofts would not necessarily make more efficient units for the
present units are not used to their full extent. Amalgamation with Garyvard might benefit the
township a great deal, as the Caversta population is rather small to flourish in isolation. The future
of Garyvard, Kershader and Habost is one of hope, but unless some change takes place soon, it is
not difficult to see Caversta, and Toristra, following the same course as Calbost and in thirty to
forty years being little more than grazing land.

CROMORE

G. Mary Swindell, B.A., and Dennis F. Fancett, B.A.

131 Cromore is situated on a peninsula between Loch Erisort and Loch Cromore. Approaching it
561 from the access road, Cromore has the appearance of a nucleated settlement, but in fact each
house is situated on the owner's croft. The crofts are so arranged that each has a portion of land
on the more level surface of drift deposits; houses 1 to 20 stand at the junction of the drift and the
134 Lewisian gneiss. Soils are poor and thin, and there are numerous outcrops of barren rock amongst
157 the arable land. The natural vegetation is heather moorland with extensive patches of rushes and
cotton grass, the pattern of most of the 'outrun' around Cromore.

241 The township comprises twenty-seven crofts and there are twenty-seven working units; two
632 crofts are subdivided while another four form double crofts. In addition there are five cottars and
the Schoolhouse fen. Outside the township dyke there are two feus and four squatters. The croft
layout differs from most other townships as each croft is in four non-adjacent pieces, one piece
around the house, another above Creag Cromore and two pieces on another area of enclosed land
on the common. Two crofts on the eastern side of Loch Cromore, have most of their arable land
around the croft-house while three crofts have only one share in the other area of enclosed land.

241 Until this decade all the land around the houses, and much of that above Creag Cromore, was
611 regularly cultivated. Some of the lazy-beds on the higher land are being cut for hay this year but
cultivation is limited to the land around the croft houses and is completely unmechanised. The only
[246] crops at present are oats and potatoes and these are usually grown in rotation. The crofters sowed

[Cromore] [Marivig]

366 butchers' vans call on Wednesday and Friday and a fish van once or twice during the week. Goods
491 are also conveyed by the daily bus. Electricity was brought to the village about four years ago
577 and the inhabitants now look forward to a supply of piped water in about two years' time. At present
512 only three or four houses have bathrooms.

24 The crofts, when worked well, are good enough to provide the existing population with a satis-
434 factory subsistence, but each family unit must have some additional source of income. It seems
229 that the recent subsidies for fishing are good enough to attract fishermen from Cromore and one or
288 two boats might be sent out from the bay if the quay were larger. Weaving has brought prosperity
but, as the Park Association states in its Second Progress Report "there is not sufficient weaving
available for the present number of weavers". The proposal to establish a spinning and processing
plant in the Park District made in the 1957 Report, would undoubtedly be of great value to the
000 people of Cromore. The village is sited in a most picturesque spot and one of the inhabitants
suggested that a hotel built on Crobeg Farm would bring some benefit to the community. However,
even if these three increased sources of income became effective, one wonders whether they would
be sufficient to attract the younger generation, already urbanised by schooldays spent in Stornoway.

MARIVIG

Pamela Gough, B. A.

131 Marivig is situated on the western and south-eastern sides of Loch Marivig, a small triangular
sea loch opening to the north-east and sheltered from storms and swells by Torray Island, making
the loch an ideal anchorage and harbour.

133 The land rises steeply from the shore of the loch for twenty-five feet to fifty feet, then slopes
more gradually and irregularly, with frequent precipitous rock outcrops, for two hundred to
five hundred yards to rise steeply to a line of low hills, two hundred and fifty feet to three hundred
feet high, surrounding the loch. All crofts thus have an easterly or north-easterly aspect, not
particularly favourable for agriculture, and only one has any appreciable area of level land
134 uninterrupted by rock outcrops. Soils, derived from glacial drift, are unevenly distributed, thin,
and very stony, and cultivable areas are thus small and widely dispersed.

157 The surrounding hills, which form part of the eight hundred and sixty-three acres of common
grazing, are mainly covered with heather, moor grass or sphagnum bog, while the lower areas
within the township are grassy, but drainage is poor, and rushes are widespread. Bracken is not
yet a problem, and only small areas exist, mainly on the lower slopes of the western side of the
loch. A few rowans and willows survive here also, but otherwise the area is devoid of cover.

241 There are twenty-four registered crofts in Marivig, twenty-two being inhabited, one vacant
692 and worked by another crofter, and one worked from a house on the common. With the exception
of two crofts, one of which is on the common, all the boundaries run from the township dyke, which
closely follows the two hundred foot contour, to the sea in radial fashion (Fig. 4). The size of the crofts
varies from 1.25 acres to 22.25 acres but only seven crofts and less than four or more than eight
acres in size. No croft has more than three acres of land which has ever been cultivated, and
few now cultivate more than one acre. There are thirteen cottars and squatters, five houses being
on the common, three of them cultivating small areas adjacent to their houses.

241 Cultivation is exclusively by spade on the 'lazy-bed' system. Owing to the rocky nature of the
246 terrain, the 'lazy-beds' are narrow, often only one or two yards wide. Potatoes and oats are
244 grown in rotation, and hay taken from lazy beds left fallow. Very few crofters sow grass for hay
237 or undersow their crops. Dung and seaweed are used as fertilisers, with potato fertiliser as the
824 most general 'artificial'. Small enclosed gardens, often somewhat neglected, produce lettuce,
carrots, cabbage and soft fruits on about half the crofts, but no garden produce is marketed.

[Gr-vir] [Glengr-vir]

241 beds are now covered by sphagnum moss and heather. Other lazy-beds are permanently in natural
237 hay; only thirty per cent of the land classified as 'old arable' is now in oats and potatoes. If
natural hay is added, one hundred and thirteen acres of crops are taken from an area greater than
the so-called old arable; this suggests that the cultivated area was pushed beyond the limits of the
old arable (ninety acres) after 1850-52. As in all the fishing townships the area of sown grass is
infinitesimal for only four of the fifty-eight operative units actually sow grass. The wintering
capacity of the crofts could be greatly increased by the general adoption of the practice of under-
sowing.

124 There are forty-three legal crofts in Gravir but nine are sub-let, in every case to relatives.
425 All the crofts are taken up and there is evident pressure of population on the land. In addition
to the crofts, there are a further ten cottars, and squatters and feuars, besides the fifteen legal
Glengravir crofts (ten operative units) which have no share in the Gravir common. The common
132 has been encroached on by several feus for Gravir is the functional centre of Park: the Free
046 Church of Scotland and Manse, the doctor, one of the two district nurses and two of the missionaries
159 (assistant ministers) are all located in Gravir.
793

Gravir and Glengravir thus have fifty-eight legal crofts and fifty-six operative units. Less than
233 half of the crofts with grazing rights are fully stocked and one quarter have under fifty per cent of
511 the soum, including five without any stock. The common pasture of 2,652 acres is in general of
poor grazing quality, dominated by the less nutritive species of grass and poorly drained. In 1957,
a ten acre plot was fenced and re-seeded: only twelve of the operative units participated in this
reclamation work, and the ages of the participants ranged between 27 and 58 years; this is sig-
nificant as aged tenants are unable to carry out such work. This scheme could be extended
annually; if potential improvements to the crofts are limited, pasture amelioration is virtually
635 without limits. Re-seeding on a large scale would enable better stock to be kept rather than greater
numbers; at present the sheep stock is over two hundred per cent of the sheep soum, and a ewe and
lamb sell for as little as £2 10s to £3 10s, an indication of the consequences of over-stocking. The
cattle stock is below the souming and this paucity of cattle is one of the notable changes in the agri-
culture since the 1930's for at that time as many as six cattle were kept on the larger crofts. The
total stock kept in Gravir and Glengravir exceeds the souming by thirty-five per cent.

231 The great majority of the crofts can certainly not be considered economic units. Judging from
241 the souming of sheep per cow and follower and eight pounds per pound sterling of rent in a township where
434 only seven crofts pay more than £2 rent, they were never intended to be self-supporting agricultural
units. The produce of two cows and sixteen sheep, with potatoes, and in former days, bere or oats,
locally milled by the three Gravir water mills, could scarcely ever have maintained a family.
Fishing was the complementary economic activity, and in 1901 no fewer than nineteen boats and
228 eighty-nine fishermen were registered at Gravir. Today, only one boat fishes commercially for
lobsters.

463 If agriculture is singularly unrewarding, weaving occupies six of the males of insurable age and
298 service occupations a further ten males and five females, but neither weaving nor service occupation
are sufficiently available or attractive to keep the insurable population in the district. Twelve of
166 the males between fifteen and sixty-four years take seasonal employment and forty-six are in
167 permanent employment furth of Lewis, in all sixty per cent of the potential male resident population.

175 The economic problem of Gravir, in common with the other 'fishing' townships, became acute
229 after the fishing industry collapsed after 1914; in the hey-day of the fishing most of the men fished
434 all the year round, locally and on the west and east coast of Scotland. Earnings fluctuated but a
man might make as much as £90 in a good year or as little as £5 in a poor year. Apart from the sal-
of young cattle, and wool surplus to home spinning requirements, the fishing earnings constituted
253 the bulk of the croft income. Today, on the basis of the souming, the income of the largest croft
including subsidies could only be approximately £150 excluding the amount to be set aside for home
consumption of potatoes and milk.

[Orinsay]

361 which rises steeply, exceeding 375 feet in the west and 150 feet to the north and east. From
361 the north-west and north-east two glacially deepened valleys drain southwards, their lower ends
[795] being "drowned" by northward extensions of the loch.

134 Although peat covers most of the surface it is only in the hollows that it is significantly deep.
for even on the gentler slopes the peat cover is frequently so thin as to expose a layer of morainic
sub-soil containing many stones and boulders.

137 Two rowans and a dozen willows represent the only tree growth, but tree stumps frequently
exposed in peat-cuttings suggest that woodland was formerly more evident. Whether this former
woodland disappeared as a result of human action or of climatic change it is not possible to say, but
it is certain that a century of overgrazing has not favoured natural regeneration. Moorland grasses,
sedges and a little poor heather characterise much of the area, and reflect the poor grazing
capacity of much of the moorland. Bracken has established itself in one limited area on a patch
of neglected croft land.

195 Orinsay is unique in Park, for the present township is entirely a twentieth century development.
652 In the early 19th century there was a settlement at the head of the loch, but in 1843 the residents
were removed and the area enclosed and added to Crobeg sheep farm. In 1916, there was a proposal
to establish fourteen crofts, but the applicants were requested to wait until after the war. At the
end of the war the return of many young men with a desire to settle down led to serious overcrowd-
ing in Lemreway. Several of them 'raided' the Orinsay area. At first living in huts, they built
their own houses, and in 1922 the Department of Agriculture intervened, recognising and fencing
off fourteen legal crofts, and at the same time providing a good footpath. Seeing the success of
their neighbours, four other Lemreway families, comprising 26 people, went to Miamreway, about
a mile to the west of Orinsay. Here, however, the Department of Agriculture did not intervene and
with the community remaining isolated, most of the settlers returned to Lemreway within three
years, although one family remained until 1939.

24 Six of the crofts have an area of less than ten acres, six have between ten and fifteen acres,
while the remaining two occupy eighteen and twenty-five acres: the largest croft originally belonged
to the shepherd on the sheep farm. Three of these crofts are not occupied, although worked by
other crofters, with the result that eleven operative units share 16½ acres.

241 Only a small part of the croft acreage is actually cultivable: even less is cultivated in practice.
311 The broken and rocky terrain combined with the peaty soil allows nothing but the cultivation by spade
of tiny lazy-beds. The total area now cultivated does not exceed 25 acres, although in the past it
may have been nearer 40 acres.

241 Oats and potatoes are the staple crops, occupying 9 and 6½ acres respectively in 1958. Individual
246 croft acreages of these crops vary in relation to the requirements for winter stock-feed, and in the
246 case of potatoes, to domestic consumption. Nevertheless to produce even these meagre returns
the soil requires careful preparation. A plentiful supply of seaweed is obtained from the shore and
is the most frequently used fertiliser, while a little sulphate of ammonia is applied. Only two
crofters use lime.

[297] In the last two decades a marked reduction in the amount of oats grown has accompanied a
decrease in the numbers of cattle and an increasing use of hay for fodder. Nevertheless only about
17½ acres of hay altogether are cut, and only five of the crofters sow any grass seed.

231 In August 1958, the township supported only 13 cows, 3 young beasts and 8 calves. Half of the
crofters have a cow and a calf, but three have no cattle at all, and one even used condensed milk,
a sad commentary on the state of crofting in Orinsay, but a phenomenon by no means uncommon in
crofting areas.

1959 - National Register.
1959 - Glasgow University and G.P.O. survey.

175 While the Royal Commission of 1883-6 was investigating Crofting conditions in Scotland, the
423 farm of Seaforthhead and Shieldernish was restored to six crofters. Six years later, the Royal
311 Commission of Enquiry into the Highlands and Islands scheduled the following land as suitable for new crofting townships: Stiemreway, Eilean Calum Cille, Crobeg, and the islands of Orosaidh and Rossaidh, a total area of 153 acres arable and 3,502 acres grazing. A further 165 acres of arable and 40,135 acres of grazing in the Park Deer Forest were scheduled as land suitable for the extension of existing holdings. The Report of the Commission considered "that in the case of Lewis, it cannot be left out of view that the congestion is very great, and the demand by crofters for access to lands now scheduled is of a very urgent nature ..... The Deer Forest Commissioners do not believe that the lands now scheduled are suitable for new holdings: but were these lands occupied as common pasture by crofters, under a properly adjusted system of management, their occupation would be of much advantage to the occupants and more than outweigh the disadvantages."[4] As a result of this recommendation, the islands of Rossaidh, Orosaidh and Iubhairt, in all 90 of the 43,728 acres scheduled, were given to Marivig, Calbost, and Lemreway, respectively, as additions to the common pastures; the sheep farm comprising Crobeg, Oronsay and Stiemreway, and the Deer Forest were left undisturbed.

175 In 1924, after raiding, Oronsay was reconstituted as a crofting township, all but one of the new
423 tenants coming from the overcrowded crofts of Lemreway. An unsuccessful attempt was made by
632 squatters who had built houses at Stiemreway, to have their unofficial lots recognised, but some
311 families remained there till 1945. In 1934, fifteen small lots were cut out of the Gravir common
[163] pasture to relieve pressure on the Gravir crofts: this Department of Agriculture scheme marked the end of a century of population redistribution.

Thus the full recommendations of the Deer Forest Commission have never been implemented, but one can only conclude, after a study of the crofting economy, that greater participation by the crofters in the Deer Forest grazing would bring increased viability to the crofting community.

175 The landscape of Park has thus experienced four formative periods. Of the prehistoric era and
142 the early historical period, when the Norsemen held sway, a few archaeological sites and a large
361 number of place-names remain. From 1660 until the early nineteenth century settlement was
632 slowly established and spread over all the coastal fringe: this period saw the maximum areal distribution of the small tenantry. From 1828 to 1843, eviction stripped the entire area south of Gravir and west of Habost of population, and large scale sheep farming was extended at the expense of the small tenants. The fishing townships from Cromore to Gravir were greatly expanded at
[163] this time. From 1858-1924, three of the cleared townships were reconstituted: the population in the majority of the fishing townships continued to grow till 1911. Since 1924, fifteen new lots have been formed in Park but the population has progressively declined.

The absence of large scale resettlement since 1886 differentiates Park from most other crofting districts, but the exodus of population since 1918 and the existence of a population constantly struggling for viability in an area deficient in resources are features common to the entire crofting area.

[113] 4 Report of the Royal Commission Highlands and Islands, 1892, (often known as the "Deer Forest Commission").

THE PATTERN OF CROFTING

427 Crofting, a distinctive system of land tenure, is confined to Argyllshire, Inverness-shire,
241 Ross and Cromarty, Sutherland, Caithness, Orkney and Shetland, the seven Crofting Counties of
178 Scotland. Small agricultural units sharing rights in common land, usually pasture but in some
423 districts arable land also, survive in 151 out of the 163 parishes, and these holdings form the
477 nearest equivalent to peasant communities in Britain, although only a small minority of crofters own their holdings, and the true subsistence element, implicit in any definition of peasantry, has all but disappeared.

175 Before 1886, the crofter was a tenant-at-will, with no security of tenure, and no right to
427 compensation for improvements. The Crofter's Act of 1886, defined a croft as an agricultural
241 holding in a parish where there existed, or had existed, rights of common grazing, and where the
423 annual rent paid was less than £30. Security of tenure, and compensation for improvements were the main provisions of the 1886 Act; the rent qualification was later raised to £50. In all, there are about 20,000 crofts in Scotland today[1] and Collier[2] estimated the crofting population at
[161] about 100,000. The number of crofts in Park is 215, with population of 908. Thus Park forms
[162] a 1 per cent sample of the crofts, and a 0.9 per cent sample of the estimated crofting population.

Crofting Organisation, Layout, and Settlement.

423 The characteristic settlement unit is the crofting township: Figure 3 illustrates the areal
427 distribution of the 12 townships in Park. Each township comprises two main elements, the
361 individually held croft land, and the common grazings. The number of crofts per township
311 ranges from 6 in Caversta to 43 in Gravir.

632 The individually held croft land (1,839 acres) is partly 'outrun' or permanent pasture and the
233 holdings are usually but not always consolidated - in Gravir (Fig. 4) and Cromore some of the crofts comprise as many as five non-adjacent pieces of land. Each croft is normally separated from neighbouring units by a drystone dyke or fence but in Park, such demarcation is the exception rather than the rule.

The croft land is separated from the common pasture by the township dyke, a stone or turf wall. The Park common pastures consist of 22,023 acres of moor grazing - generally very poor, ill-drained land with a large percentage of bare rock, areas of peat, and numerous lochs. In Park, only Oronsay common pasture is fenced, the limits of the remainder being faintly marked by crumbled turf dykes. Each croft has a defined right of grazing or 'soum' on the common pasture; the 'soum' is the number of beasts which may be pastured, a term comparable to the obsolescent 'gates' of northern England. In Gravir, the soum is 1 cow and follower or young beast up to 6 quarters old (i.e. 18 months), and 8 sheep, per £1 rent. There is also a system of stated equivalences (Gaelic 'coilpeachadh') in most townships whereby substitution of cattle for sheep and sheep for cattle is permissible: in Gravir, the exchange rate is one cow for five sheep. Soumings and equivalences vary throughout Park. In former times, when a subsistence economy prevailed, soumings were enforced but nowadays the majority of the crofters do not even know the souming of their croft.

[113] 1 Crofters' Commission, Annual Report 1958.

[113] 2 Adam Collier, "The Crofting Problem", 1953.

427 241 [227] 423 178 233 Although the croftland is individually held, individual control of the crofts only applies for six months of the year. After the harvest, the croft land reverts to common grazing and the whole township stock graze indiscriminately over the crofts. Thus basically the whole area of the township, the individually held crofts and the common pasture, is common land, and it is clear that the agricultural revolution with its system of enclosure has not yet fully refashioned the Crofting Area.

175 233 Before 1900, there was a third element in the crofting landscape, the shieling (Gaelic - 'airigh'). The sites of the shielings are usually on slopes commanding a view of the surrounding area near a spring or stream and usually two to nine huts belonging to the same township are grouped together on a site; isolated shielings are rather rare. In order to conserve the pasture within the township dyke for wintering and to protect the unfenced crops, the cattle were removed to the hill early in June, and the younger members of the households went out to live in small stone or turf-walled huts to tend the cattle. The milk was either carried back to the township daily or made into butter or cheese at the shieling. The distance of shielings from the crofts varied from one to five miles in Park.

632 The affairs of the townships are managed by the Grazing Committee, elected triennially by the township and presided over by the Clerk of the Committee. The duties of the Committee in the past related mainly to the enforcement of soumings, but are now reduced to the disbursement of subsidies, although responsibility for the maintenance of the township dyke and the care of the township bull (usually lent by the Department of Agriculture but sometimes communally owned) are also the province of the Committee.

[361] [342] [78] The layout of the townships varies with the topography but the majority of the crofts are aligned in strips from the moor to the sea (figures 4 and 5). Most croft houses are built on the crofts; in former times, the majority of the houses were sited on the poorest part of the croft as all the cultivable land was required for crops, but nowadays the houses tend to be sited near the road.

162 361 427 241 [464] The official pattern of crofting is thus one of tenants, each living on his or her croft and sharing in the rights and duties of the township. Table I gives an analysis of the tenants of the 215 Park crofts. It will be noted that only one-fifth of the crofts are tenanted by those in the 15-44 age group: a similar proportion are tenanted by those over 65 years of age. Absentee tenants account for 14 per cent of the total. Women form under 10 per cent of the total, but only one in seven of the women tenants is the sole labour force on the croft. The intrinsic worth of the holdings can be inferred from the fact that two-thirds of the male tenants in the insurable age group take supplementary work, two-fifths of them furth of Lewis. With such a large proportion of the tenants either fully employed in ancillary occupations in Park or elsewhere it is hardly surprising that the theoretical township organisation exists mainly in name alone.

427 241 Each croft, however, is not necessarily an agricultural unit; some are sublet by absentee tenants or by tenants who are too old or too infirm to work their crofts. Of the 215 crofts, one-fifth are wholly or partly sublet. In addition to the legal crofts, there are unofficial holdings which fall into three categories, cottars, squatters and feuars, all legally without grazing rights. A cottar[1] is a person, usually a close relative of the tenant, who builds another house on

1 These are the de facto definitions. Section 34 of the Crofters' Act of 1886 defines a cottar as follows:- "Cottar" means the occupier of a dwelling-house situate in a crofting parish with or without land who pays no rent to the landlord, as also the tenant from year to year of a dwelling house situated in a crofting parish who resides therein, and who pays to the landlord therefor an annual rent not exceeding six pounds in money, whether with or without garden ground, but without arable or pasture land". For fuller treatment, see Scott, J., "The Law of Smallholdings in Scotland," 1933, pages 152-155. [113]

There is no legal definition of a squatter, and the above definition does not include any distinction between houses built on a croft and houses built on the Common Grazings.

a wider applicability of my thesis. The evidence in support of my assertion was collected on the culture history of the Isle of Skye, a part of the area known as the Highlands and Islands of Scotland.

Since I shall frequently speak of the Highlands and Islands in the following pages, we should have a precise definition of th region (Figure 1). Geographically, the Highland boundary should be placed at the Great Highland Fault, a series of geological faults which extend across Scotland from the River Clyde to Stonehaven, south of Aberdeen. Politically and economically, however, this line has receded to the north and west. Since 1883 it has been common in Scotland to equate the Highlands and Island with the "Seven Crofting Counties," those counties in which the predominate form of land use is the crofting system. Crofting may be defined as a system of hereditary tenure of a few acres of arable land combined with common tenure of hill grazings. These counties are: Argyll, Inverness, Ross and Cromarty, Caithness, Sutherland, Orkney, and Zetland. Out of the 163 parishes in these counties only 12 are considered non-crofting.[1] In addition to this shared socio-economic pattern, the seven counties have experienced common economic-geographical influence a century of accelerating population growth, followed by a centu of persistent depopulation.

---

[1] Adam Collier, The Crofting Problem: A Social and Economic Study (Cambridge: Cambridge University Press, 1953), p. 11n. A parish in Scotland is an ecclesiastical district which until 1929 was also a civil unit with self-government in such local affairs as education, relief for the poor and infirm, and health. If the British county is thought of as analogous to an American state, the parish can be thought of as a county, but one devoid of any function.

61 Ducey	E-4,5	(1953-1954)	1956	2310 Highland Scot 2310 Skye

101 The Highlands and Islands are often divided into a Wester and an Eastern subregion. The Western Highlands include all of the Hebrides and, approximately, the western half of the counties of Sutherland, Ross and Cromarty, Inverness, and Argyl This leaves the remainder of the seven crofting counties, including the islands of Orkney and Shetland, to the Eastern [632] Highlands. The seventy-two parishes of the Western Highlands have been isolated by physical barriers from communication with Great Britain. Here, too, differences of race, language, and culture have continued to distinguish the people from the other Scots. With this rudimentary delimitation of the areas in mind, let us briefly review their population cycles.

161 162 When Alexander Webster, then Moderator of the Church of Scotland, compiled his enumeration of the population of Scotland in 1755, the Highlands contained 257,183 people, and the Western Highlands had a population of 114,884. In terms of percentages, the total region, 47 percent of Scotland, had 20.3 percent of Scotland's population, and the subregion, 29 percent of Scotland, had 9.1 percent of the national population. By 1831, despite chronic emigration, the population of the Western Highlands rose to 200,955 (see table 1) but there had been a decline to 8.5 percent of the national total. In 1841 the total Highland population reached a peak of 396,045 but now only 15.1 percent of the Scots were Highlanders. By 1851 depopulation had begun. The Highlanders in the West had decreased in numbers to 190,728 and those in the whole area, to 395,540. From that day to this depopulation has been continuous. Although the 1951 census is still above Webster's

not have crofter status. Thus, despite the rigidity imposed by crofting legislation, the crofting structure is evolving; whether the larger units so formed are agriculturally more productive than the smaller, statutory, units is another question.

Cattle and sheep stocks

The production of cattle and sheep is the main function of the croft, from the agricultural point of view, and the main function of the crofting parish. In this respect a great change has occurred in the last 80 years: about 1880 some 3,300 cattle and 14,000 sheep (of all ages) were kept; in 1959 the corresponding figures were 1,281 and 35,000. This change is by no means the result of the re-settlement of crofters on former farms; in 1879, according to the Report of the Royal Commission on Agriculture, the sheep:cattle ratio was 2.3:1 on the crofting townships and 9.6:1 on the farms: now it is 27:1 over the whole parish. The change (Table 38) has been fairly uniform over the parish except that, whereas sheep stocks generally have more or less trebled, in the Carloway district they have little more than doubled.

The decline of cattle numbers has been at the same rate as that of the human population and this, together with the much lower sheep:cattle ratio on crofting townships than on farms in 1879, suggests that, 80 years ago just as to-day, the main object of cattle keeping was subsistence rather than commerce. The increase in sheep numbers on the other hand is probably no more than a reflection of increasing disregard of the soumings.

If we compare the cattle and sheep stocks with the soumings shown in Table 38 and Appendix E we find that 80 years ago, except in Bernera, there was rough agreement between stock and soum. To-day cattle stocks are around one-third of those allowed by the soum whereas sheep stocks are greatly in excess. Examination of the soumings leads one to question their validity in the light of modern conditions: the sheep soums bear no regular relation to the available areas of common pastures (Appendices A(2) and

to the traditions of the past. I shall discuss this further when I describe the extended family.

The Township. The township is a cooperating economic unit. Communal use of an interest in the common grazing lands gives the township its focus. Living on the several crofts, there will be found an aggregate of nuclear families and unmarried individuals who, especially in the older townships, are related and re-related on both sides. Only in the more modern townships does the degree of relationship become tenuous and finally disappear. In interpersonal activities the neighbors have a rate of interaction second only to that of the nuclear family.

The dominant social trait is the strong emphasis on the ascription of status on the basis of kinship, sex and age. There are no socially valued achieved statuses. The facts are simple. Males enjoy higher prestige than females, and the old men and women are respected by the youth. All of the same age grade and sex are essentially equal. Again we have a parallel with the Irish small farmer.[18]

There is no room for the expression of a role of leadership in economic activities. The governing principle of township administration is so-called primitive democracy. All males have an equal voice in determining the acceptance of any policy or action which concerns the group, and unanimous consent is necessary for the adoption of any change. Although each township has an elected grazing clerk and a grazing

sanction and endowed with privileges and immunities by which self-regulation, stability, expansion, and improvement might be attained. Additional provisions called for the replacement of the repudiated customary usages by national laws of land tenure.

The Crofters' Holdings (Scotland) Act of 1886 embodied many of the Commission's proposals.[80] The crofter became, perhaps, the only class, as a horizontal segment of the population, with a minimal legal definition. He was a pastoral agriculturalist who resided on his holding, the annual rent of which was less than £30, (later raised to £50) in a crofting parish. Such an individual was entitled to a fixed, fair rent, just compensation for improvements made by himself or his predecessors in the same family should he leave his holding, security of tenure, and modified right to bequeath the holding to a member of his family. Except for the statutory conditions that he must not alienate the holding from his family, sublet without consent, or violate the rights of his neighbors or his landlord, including withholding rent and contributing to the deterioration of the land and dwelling, the crofter was given all the privileges of a landowner with few of the responsibilities. A Crofters Commission, with executive functions, was established to carry out the provisions of the act and to assign "available" land to the townships as

---

[80] I owe a debt of gratitude to innumerable government officials in Portree, Edinburgh, Glasgow, and London for their patience and cooperation in providing me with the necessary information to discuss this final period of the history of Skye. The facts are theirs; the interpretation is my own responsibility.

person who left in his youth to return in his old age. The new pattern of emigration not only resulted in a continuation of the persistent depopulation of the island but also, with the return flow which countered emigration of the youth with immigration of the older people, led to striking changes in the age structure of the population. If the population pyramids for the years 1861, 1901, 1931, and 1951 are compared, the significance of the new pattern becomes apparent (see figure 4). The 1861 pyramid has a strong base, despite evictions and death. By 1901 the aging of the population was already marked. There were fewer people in all age groups, but a disproportionate increase in those over sixty-five. Females had joined the exodus. Partly as a result of the emigration of young adults, and partly as a consequence of a declining marriage rate and delayed marriage, the structure was growing top-heavy.

The pyramids for 1931 and 1951 are far from ideal. The differing movements of the population has resulted in a situation in which the society can no longer reproduce itself. Natural increase became a negative factor in the decade 1921-1930. Since then births have exceeded deaths in only one year, 1949. If the population is being maintained in part by the return of exiles, one must not only ask who leaves and why but also who returns and why.

An additional change within this period was the growth of Portree as a trade center and as an administrative "capital." The cycle of population, however, was erratic. In 1891 there were 1,003 people in the village, but in 1921 there were only 793.

In 1951 the population stood at 1,094. There has been a slight shift from the rural areas to the village, but it can hardly be regarded as significant. For one thing, the 1951 figure included an unknown number of workers on the hydro-electric scheme. Then, too, it included children from the Outer Isles who attend school in Portree, not to mention the very large number of newcomers, teachers, government employees, shopkeepers, management personnel in the stores and banks, and tradesmen, to give only a few examples.

The trend toward religious conservatism continued in the fourth period. During the closing years of the preceding period, the Free Church attempted to modify her theology and polity. The old trend toward relaxing the rigor of Presbyterianism, in accordance with the feelings of the other dissenting denominations in Scotland in order to pave the way for union, was renewed by the passing of a Declaratory Act which stated that the Free Church does not teach and does not regard the Confession of Faith as teaching the foreordination of men to death (eternal damnation) irrespective of their sin. Further, that while the Gospel is the ordinary means of salvation, it does not follow that all who die in infancy are lost. The elders, the lay kirk officers, of Skye protested violently.[88] It was popery to make the Church the judge of spiritual affairs. More important, it threatened their prestige status, which had been sanctioned by the interpretation of the religious ethic. In several parishes the elders threatened to withdraw from

[88] The Free Presbyterian Church, History of the Free Presbyterian Church of Scotland, 1893-1933 (Glasgow: R. Adshead and Son, 1933), pp. 96-130.

normally determines the "souming," the number of stock which each tenant is entitled to carry on the common.

The small croft has less than ten acres of arable and improved grass land. The average "souming" is two cows and followers (heifer or bullock calves) and usually ten to twenty sheep. Approximately 2000 of the crofts fall into this classification. The medium croft, representing about 250 land-holding subjects, has between ten and twenty acres of land fit for crop cultivation and improved grass. The typical "souming" is two to seven cows and followers, forty or fifty sheep, and occasionally, a horse. We might recall that the sheep may be either a club stock or a private flock. The large croft consists of almost 100 arable acres and, even more important in the predominately pastoral economy, an independent, self-contained grazing of 200 to well over 1000 acres. These diminutive ranches easily carry ten or more cows and followers and several hundred sheep.

For those who prefer to think in terms of area rather than stock, the relative magnitude of these self-contained holdings may be stressed by adding the fact that only thirty townships on Skye have more than 200 acres of common grazing. There are, for example, Linicro with 729 acres of grazing in 19 shares, Totescore with 500 acres in 12 shares, and Bornesketaig with 273 acres in 47 shares. Over half the townships have less than 100 acres of grazing land.[5]

[5] Ibid., Table 3.

extreme examples, Bornesketaig in Kilmuir consists of 47 crofts held by 35 crofters, but Aird in Sleat has 39 crofters who rent 20 crofts. In one badly subdivided township, Calligary in Sleat, one holding is held in the following shares: four men each have five-twenty-fourths, one has one-sixth, and one has "a part." The whole, indeed, is more than the sum of its parts. Moreover, townships with a balance of crofts and crofters, and even those with fewer crofters than crofts, often show the effects of subdivision. Another Kilmuir township, Herbusta, is laid out in eight holdings. Although there are an equal number of landholders, several of the crofts are divided into half shares. Then, there is Kilvaxter, also a Kilmuir township, with 11 tenants and 12 crofts; one man has three full shares while two others have only half a croft each. Multiple crofts are not necessarily adjacent. Some crofters hold land in two different townships. One of my informants rents two crofts separated by over twenty miles. On foot, it takes him two days to make the trip between his two holdings.

Subdivision, frequently carried to its ludicrous extreme, is not a problem confined to the Highlands of Scotland. All over Europe the traditional laws of succession have had a similar result. In consequence, the governments of all European countries have been striving to initiate reform. Generally, the aim has been to consolidate scattered patches, but almost always the schemes have become more comprehensive, attempting to create economic farms and increase productivity. Since the

where the population has suffered the greatest decline and, therefore, where enlargements, by legal or illegal means, have been the most extensive, crop production has declined the most. Nor has the decline in population, accompanied by land redistribution, altered the fundamental problem.

The cottars (subtenants) have almost disappeared thereby easing the excessive pressure on the land and removing the threat of recurring destitution. Today they are found only in a few scattered dwellings and isolated clusters. Most of them have secured some form of employment or have reached the age when a government pension is sufficient to satisfy their needs. The number of crofters, on the other hand, has increased. If the figures 2043 and 1227 can be accepted as nearly correct for the respective numbers of crofters and cottars in 1886,[15] they have increased at the expense of the latter and, also, the sheep farmer, whom they have replaced.

To briefly summarize the foregoing discussion of the township, let us look at Kilmuir. Table 3 shows the number of crofts and crofters in each of the nine townships together with the acreage and "souming" rights available to each individual. Although replanning during the past fifty years has benefited many of the local residents, crowding upon the land is still apparent.

Township Government. The township system has another marked influence on the economy of the Sgriathanach. By far the largest obstacle in the path of reform is the persistence of primitive democracy, distinguished from the democracy of Western Civilization by the requirement of unanimous consent rather than majority rule. The individual who comes to realize that it is possible to improve on the ways his father did things is deterred from attempting to introduce innovations. He cannot, for example, erect a fence around his croft unless everyone in his township approves such a departure from tradition. The dissenting voice of one old man is sufficient to thwart any plan. Unanimous decisions on all township affairs mean that the most progressive worker must keep pace with the most conservative. This fact goes a long way in explaining the essential agricultural disharmony of Skye, and most of the Highlands, with the rest of Great Britain. It is also a singular example of the incomplete adaptation of the culture to the higher socio-cultural organization.

When coupled with the many limitations on the economy, township government helps the outsider to understand why many younger crofters feel that the primary value of their few arable acres is their use as pasture. Even in townships which have been fenced, the prevailing practice is to open the crofts after the harvest. All winter long the stock is free to graze where it will. "My arable is no use at all, except to winter my sheep," said one young crofter. Another asserted, "I have three crofts and the use of one more, but it's not

worth while to cultivate any of the arable, so I use it for grazing." A case which aptly illustrates the influence of the township system as an agent of conservatism is the breeding of pigs. Although several old crofters told me how many people during the times of the "Clearances" kept a pig, they are rarely found anywhere in the Highlands today. The Biblical injunction against the flesh of swine has been taken literally. The older people simply have a strong aversion to handling pigs. One man, a very successful cattle and sheep breeder, put it this way: "Pigs are filthy brutes. I just don't want to touch them -- I never have kept any and never will." At the same time, there are men who believe that the prices these animals bring at the mainland markets more than compensate for the individual's revulsion, especially as long as the Ministry of Food pays for the cost of transportation. These men cannot try branching out because they have no way to restrict the foraging animals. "Skye is ideal for pigs," one young fellow told me, "but I don't have the freedom to work the croft to suit myself."

Smaller deviations from the traditional methods of land use face the same difficulties. A progressive crofter who attempts to improve the value of his stock by growing scientific mixtures of grasses is always penalized. As soon as the harvest is over, the stock of all his neighbors will show their appreciation by concentrating on his croft, trampling his fields, and overgrazing his grass. Nor is this his only penalty. His neighbors will regard him with skepticism for his departure from the ways handed down from the past.

from the ways handed down from the past. We might note at this time that even the progressive crofter is not always quite en rapport with modern techniques. There was, for example, a man with two calves infested with liver fluke. Convinced that medicine was the only solution, and equally convinced that a person cannot believe everything he reads, he obtained a bottle of liver fluke medicine which was plainly marked: "for sheep only." When asked how his calves responded to the treatment, he responded, "Och, they both died."

Because of the restrictions which the township system imposes, there has been a growing, perceptible rumble of agitation for supplanting unanimous consent with majority rule. Few, however, would go as far as a retired seaman who returned to Skye after forty years. He would like to see the township system abolished. Another small group believe the Sgriathanach would be better off if the Island were given over to communal farms. Most seem to favor the continuation of the present system. Of course, the majority is composed of the conservative old men.

The Aged and the Absentee Crofter

No appraisal of the crofting system is complete without a discussion of two additional factors which have affected the use of the land and the present unsatisfactory economic condition of the Island. One of the factors is the aged tenant, who, as we have just seen, exercises a strong control over the younger men through township government. He has also influenced

In Claigan, for example, the crofters felt they would do better with private flocks than with a club stock. Although each man now has his own sheep on the township grazing, they are cared for like any club stock. The four crofters are needed for success at the dippings, marking, and shearing, and they are always at the fank on these occasions. In larger townships, those with ten or more holdings, the need for all the crofters to help out at the fank is less pressing while the felt need for auxiliary employment is stronger. In consequence, the cooperative work habits run less smoothly. In an attempt at adjustment, many townships have resorted to paying the share holders for their labor from the profits. To the best of my knowledge, only one township has witnessed the total suppression of the cooperative spirit; all the crofters are too busy with full-time employment to bother with the steadily declining sheep stock.

Nevertheless, it has become commonplace for the crofters to complain of at least one individual in the township who does not pull his full share, someone who is "trying to sabotage the whole thing."

Independence is a personality trait, but it is best described as a steadfast determination not to conform for the mere sake of conformity when an innovation handed down from the outside commercial world is at stake. The old ways are the best ways, even if only the old men think so. It is the old men who uphold the traditional practices. As long as they do, and as long as unanimous consent is required for any change,

the Highlander will be "independent." As for being "just not cooperative," what the critic really means is that the crofter is unable to cooperate in the ways city people or more sophisticated farmers do. The cooperative movement has come to Skye, but it was not a local venture. The Scottish Cooperative and Wholesale Society opened its shops, without shareholders. The distinction between the crofters' simple cooperation and sophisticated cooperation, including capital investment, does not invariably hold.[11] There are sheep stock clubs. Government loans, of course, provided the initial capital.

In dealing with the topic of cooperation, as any part of the economic aspect of the culture of the Sgiathanach, the basic importance of the township again and again emerges. Only a few crofts exist apart from a township. A more detailed analysis of the township system and the pressures it imposes on the crofter is, therefore, in order.

The Township

The efficient unit in the local economy is the township, the modern equivalent of the joint-tenants' and tacksmen's farms. Each township consists of a variable number of individual holdings, the low-lying arable and improved grass land held under hereditary tenure, and a more or less extensive area of rough, unimproved hill grazing held in common. The common, concurrent right of each crofter to use the hill grazing under the "souming" principle gives the township its focus.

[11] Cf. Darling and Morley, loc. cit.

361 632 162 The number of holdings which can be carved from the land in any one place and the proximity of these clusters of crofts to each other are determined to a large degree by the limiting influences of the environment. Landforms, climate, and soil have always restricted settlement to the coastal fringe and a few internal glens. Although the Sgiathanach has abandoned his former dependence on a subsistence economy, the original cultural adjustment, these natural features continue to exert a negative influence. Each man must have some arable land to provide winter feed for his cattle and to winter his sheep.

If the low-lying area is small and isolated, only a few holdings can be laid out. If the fertile area is large, the influence of the environment is less direct. In either case social and economic factors are important. The small isolated townships are invariably unsuccessful. A few, like Point of Sleat, are completely empty. Others are all but derelict. There is Kylerhea in Sleat where no children have been born in over fifteen years. Suisinish in Strath, a township well remembered from the days of the "Clearances," when a minister's sheep replaced the inhabitants, is now inhabited by an old man and his two elderly bachelor sons. All of these failing townships are at the end of a road. Whereas the 476 231 162 minimum size was once four able-bodied men, the number in a plough team or a boat crew,[12] it is now three. This functional trio is indispensible for the care of a sheep stock large enough to be worth keeping. Even three families do seem to satisfy the social minimum.

[12] Ibid., pp. 1-2.

632 621 233 476 162 The maximum is harder to determine, economically. There is some limit to the number who can stock a common grazing with individually owned stock without becoming involved in complicated entanglements over right, obligations, and questions of ownership. The few townships containing more than thirty crofts in the Western Highlands (91 out of 957),[13] and the negligible number on Skye (only ten), suggests that less than thirty holdings per township, no matter how much fertile land surrounds the cluster, has been found to be the optimum. Most of the townships contain between five and twenty crofts. The fact that many large, adjacent townships, such as Bornesketaig in Kilmuir and all those in the Braes, are losing their population is a reflection of a many faceted condition we have been exploring throughout this chapter--the vast majority of the crofts are too small to provide an adequate livelihood. One of the primary causes for this state of affairs would seem to be overcrowding on the land.

162 632 621 427 241 Congestion. In almost all but the recently established or replanned townships, congestion is a legacy of the increase in population during the first century of the modern period, often aggravated by coerced subdivision during the period of the "Clearances." Because of this, over-all statistics have little meaning. It is quite correct to say there are some 2300 crofts on Skye and approximately 2200 crofters, but this does not mean each family has a croft to itself. To take

[13] Ibid., table 1.

CHAPTER VI

THE ISLANDERS' SOCIETY

The Units of Social Organization

Since the Sgiathanach has consistently been more bound to his locality groups than the relatively mobile members of the main stream of Western Society, I think that we shall find a pause to review the character of the social systems which are primarily based on territoriality a valuable aid to our understanding of how cultural continuity has been preserved. By now we are all well aware of the fact that the township is the efficient economic unit. It is also a social entity. The members of each township display a consciousness of common interest, symbolized by the communal hill grazing; and their inter-personal relationships, reflecting ties of kinship and friendship, reveal a rate of interaction second only to those of the crofting family. In most of the townships, the people are related and re-related on both sides by descent and marriage. Laid out along the coast or in a fertile glen, with the cottages on the individual crofts, it has a discernible form. The township is a small cluster of five to twenty homes; approximately an equal number of garden-like farms, stretching out behind the houses; and,

tourists, and newcomers who carry with them ideas of reform. Further, as well as being mutually dependent commercially, the crofters and the villagers interact formally and informally in social, political, and, especially, religious activities. The consciousness of common interest of the villagers, however, stems more from a knowledge that they are different from the crofters than from any common symbol. The 1000 villagers are from diverse backgrounds. They find solidarity in being different rather than in "neighboring" or all attending the same church. The village also lacks the time depth of the rural settlements, being a creation of an individual in the last century.

For community I prefer an inclusive definition on the order of Redfield's.[8] A community is characterized by conventional understandings, the occupation of a territory, and the possession of a culture. Thus, we shall refer to the Isle of Skye as the community.

It will be noted that I have not used the term parish. Although the parish was once important politically and religiously, as the older baronies were replaced, it lost these functions in 1929.[9] People reside within parishes and they, along with their crops and stock, are enumerated by parishes, but the parish is now little more than a statistical convenience. Church organization and political administrative units cross-cut and override parish boundaries. Indeed, I doubt if the people ever thought of themselves as members of a parish.

newcomers to the neighborhood, if not the island. Let us 559
now turn to Portree to see how important status is in this 182
alien village.

The Trade-Center Village

We come now to a consideration of the trade center 632 ●
village of Portree. We have seen how this small settlement
was created by a landlord in the early nineteenth century
and how it has been fostered by the government. We have
also seen how the village has assumed a host of important
functions. Primarily, it exists to serve the rural neighbor- 632
hoods and to provide a link with the outside world. For the 368
crofting neighborhoods it is, in order of importance, an
administrative, economic, religious, and social center. Here
are found the Ministry of Labor, the Department of Agriculture,
the National Assistance Board, the sanitary and road engineers,
the local Registrar, the central police headquarters, the
main post office and telephone exchange, the court of the
justice of the peace, and the seldom functioning sheriff's
court. It is to Portree that the Land Court comes to decide
on such important matters as rents and succession to the
croft. As a seat of education, Portree's influence extends
even wider, for it is the only secondary school in all of the
islands of the county of Inverness. For people on the southern
end of the island the village exists only for administrative
purposes.

The crofters of northern Skye are dependent upon the 600

633 CITIES--political organization of urban aggregates larger than towns (e.g., cities, metropolitan districts); governmental personnel (e.g., executive, advisory, administrative, legislative); mode of selection (e.g., appointment, election, hereditary succession); jurisdiction, authority, prerogatives, functions, and activities associated with each position; etc. See also:
Settlements and urban and rural contrasts . . 36 Political machines. 687

Period IV (1886 - 1953)

*175 *178 648 The year 1886 is a chronological hinge in the culture history of the Sgiathanach. The British government began to play a positive, continuing role in local affairs for the first time in history. Hitherto, the interest of the government had been confined to proscriptions, recruiting, and taxation, occasionally interspersed with relief for the destitute. With the change in policy, we enter the realm of the contemporary culture; therefore, all I wish to do is indicate the direction the processes, which we have been following, took under the national attempt to rechannel them. The major trends to be [72] noted are two. The proprietors' influence in determining how [182] the land was to be used was curtailed, and, with a redirection of the commercialization of the estates, many of the traits and complexes characteristic of the traditional culture assumed renewed importance.

*175 *178 657 423 671 621 632 Since the Napier Commission had been mainly concerned with the disregard of the customary rights of the crofters and their inconsiderate treatment by proprietors, the recommendations which were presented to Parliament sought a land reformation within the framework of local custom.[79] Unlike the Continental Commune, a local, self-governing body, the Highland township had never legally existed. Elsewhere in Scotland this communal agricultural unit had been replaced by individual farm occupancy, just as had been happening on Skye. The major proposal was a retrogressive step; the township system should be given legal

Crofting Neighborhood. The crofting neighborhood con- 621
s of an aggregate of individuals and nuclear families 632
dwell in several townships, standing in close spatial 571
imity. It is, therefore, natural that the ties of common
dence and kinship should continue to operate. The im-
ant distinguishing features between the township and the
er social entity are two: (1) cooperation in agricultural
pastoral activities is replaced by mutual aid, and (2)
e is a greater wealth of formal and informal inter-
onal activities in which the people associate.

There are invariably established social circles within 621
h the individuals habitually move. One always consists 571
he individual's kinsmen, "his people," his family of 602
ntation, and "his close friends," all other relatives within
fourth degree of relationship.

public health and general administration, and has offices in Stornoway. Stornoway itself is largely looked after by a Town Council which deals with the property of the burgh, makes and administers byelaws and imposes burgh rates. The police are under County administration, each burgh paying an annual contribution for their services; the law is administered by a sheriff-principal and two sheriff-substitutes, one of whom holds court in Stornoway. Each parish has a local committee of management.

The political history of the Western Isles, and no less Harris and Lewis, reflects the agrarian troubles. Before 1917, when Lewis was a Parliamentary part of Ross & Cromarty, and Harris part of Inverness, the electorate was both Liberal and Radical; traditionally there has been a significant anti-Tory vote. In 1917, the Boundary Commission for Scotland set up the Parliamentary County of Inverness and Ross & Cromarty, with three divisions: Inverness, Ross & Cromarty and the Western Isles. In 1918 the Western Isles voted for the first time as a Parliamentary constituency of its own, and showed a predominant Liberal sympathy; the returned candidate was also standing for the reform of the Land Law.

In the General Election of 1923 a Liberal candidate was again returned, with a repeat performance in 1929. In the latter election however, the Socialist came in second place. In the crisis or scare election of 1931, the Labour Party did not contest the seat, which was won by a Liberal-National candidate opposed by a full-blooded Conservative. In 1935 the Labour candidate, a native of Lewis, was returned with a 1,345 majority. This Member retained his seat through all subsequent elections losing it only in 1970 to a member of the Scottish National Party, who became a lone Home Ruler in the House. Labour, Conservative and Scottish National parties are represented in the constituency, with a small Liberal showing. The revision of local authorities has given virtual autonomy to the Western Isles.

PUBLIC SERVICES

The lack of adequate social and public services has been cited by some authorities as a factor encouraging people to leave the

Before the making of roads, it was ease of sailing which united island peoples and their territories. One can wade or drive, at low tide, over the fords that unite the Isle of Benbecula with the two Uists, North and South: in fact, a bridge now connects Benbecula with South Uist. But only the roughest of hill tracks led through the hills of North Harris from the 'Tarbert' or Isthmus of Harris to the nearest habitation at the head of Loch Seaforth or Loch Erisort, in the Lews. This is a distance of some twenty miles, or a fair day's tramp for an unloaded man, and far too much for a return journey in one day. Hence separation of territory and name was natural. This separation no longer exists as there is now a good 'bus service from Rodel via Tarbert to Stornoway which links Harris with the daily Kyle to Stornoway steamer. In this book, the Island, or the Islanders, refers to Lewis-and-Harris with its people, as one.

Lewis is included in Ross-shire (of which the county town is Dingwall, north of Inverness) and Harris in Inverness-shire, together with the rest of the 'Long Island'. The county boundary cuts across the six-mile isthmus north of the hills of North Harris, from the in-reaching Loch Seaforth WNW. to Loch Resort (Fig. 8). All the Outer Hebrides are now included in the Parliamentary constituency of the Western Isles. Proposals to unite the Island under one District Council, or the Outer Hebrides under one County Council, are more favourably viewed in Stornoway than in Harris or the Southern Isles. Harris forms one civil parish, while Lewis is divided into four: Stornoway, Barvas, Uig and Lochs. The Lewis parish boundaries traversing the moors are inset in Fig. 8 so that their trends can be readily grasped, and the inhabited portions of the parishes quickly located (p. 50).

a wider applicability of my thesis. The evidence in support of my assertion was collected on the culture history of the Isle of Skye, a part of the area known as the Highlands and Islands of Scotland.

Since I shall frequently speak of the Highlands and Islands in the following pages, we should have a precise definition of the region (Figure 1). Geographically, the Highland boundary should be placed at the Great Highland Fault, a series of geological faults which extend across Scotland from the River Clyde to Stonehaven, south of Aberdeen. Politically and economically, however, this line has receded to the north and west. Since 1883 it has been common in Scotland to equate the Highlands and Islands with the "Seven Crofting Counties," those counties in which the predominate form of land use is the crofting system. Crofting may be defined as a system of hereditary tenure of a few acres of arable land combined with common tenure of hill grazings. These counties are: Argyll, Inverness, Ross and Cromarty, Caithness, Sutherland, Orkney, and Zetland. Out of the 163 parishes in these counties only 12 are considered non-crofting.[1] In addition to this shared socio-economic pattern, the seven counties have experienced common economic-geographical influences, a century of accelerating population growth, followed by a century of persistent depopulation.

[1] Adam Collier, The Crofting Problem: A Social and Economic Study (Cambridge: Cambridge University Press, 1953), p. 11n. A parish in Scotland is an ecclesiastical district which until 1929 was also a civil unit with self-government in such local affairs as education, relief for the poor and infirm, and health. If the British county is thought of as analogous to an American state, the parish can be thought of as a county, but one devoid of any function.

Chapter 7

Conclusions:

Summary and Theoretical Considerations

A. Summary

Crofting townships of the Highlands and Islands of Scotland are within a few hours' travel of the major cities of Britain. An extremely high percentage of the young people in the crofting counties attend universities and other institutions of higher education. Politically, administratively, economically and in other ways, the crofting population participates in the larger urban-industrial society of Britain.

Despite this participation, the township-qua-village-community is a relatively strongly bounded system. This thesis investigates factors contributing to the strong boundedness. From a relatively self-sufficient economic unit using agricultural practices suited to the extensive cultivation of marginal land by smallholders, the township has during recent decades changed to one dependent on goods and services provided by the larger society. Crofting activities nevertheless persist, in part because of the incentives offered by government bodies such as the Crofters Commission and the Department of Agriculture. The

warfare—destroyed its intimate tie with the home, with peace. The web the women had dyed, spun, woven and waulked together ceased to be a sacrament when the tartan was proscribed to men except when worn as a uniform with "England's cruel red".

The framers of this law, which stood on the statute book for over forty years, took full cognisance of what they did. Appended to the Act of 1747 was an oath which reversed every benediction said by the women at their work: "I . . . do swear, as I shall answer to God at the great day of judgment, I have not, nor shall have, any gun, sword, pistol or arm whatever, and never use tartan, plaid or any part of the Highland garb; and if I do, may I be cursed in my undertaking, family and property—may I never see my wife and children, father, mother, relations—may I be killed in battle as a coward and be without Christian burial in a strange land, far from the graves of my forebears and kindred; may this come across me if I break my oath". This Act, as law and symbol, struck full at the sacramental life of family, neighbour-team and clan community, in which labour and prayer had been indissolubly bound.[1]

(c) WORSHIP, CONGREGATIONAL AND PERSONAL: THE BOOK AND THE WORD

Little remains of the tradition of worship in the tiny oratories, chapels or 'temples' whose ruins stud the shores

[1] The collaboration of friends in Lewis may allow mention of the Gaelic version of A. Geddes, *The Spirit of the Tartan, a Song Drama* (English Version); *Souvenir Programme and Book of Songs* (Outlook Tower, Edinburgh, 1932). In this the spirit of this labour sequence embodied in its songs and runes is dramatised in its setting of custom and history. The Gaelic version was prepared by the generous labours of James Thomson, M.A., Bayble, and the late Duncan Macdonald, M.A., Sandwick, Lewis.

642

642 CONSTITUTION--prevailing system governing the distribution of political power and authority; extent of agreement or disagreement between formal constitutional provisions and actual practice; rights, privileges, and powers assigned or delegated to each organ of government, including the power to alter their distribution; centralisation and diffusion of power; constitutional principles (e.g., separation of powers); temporary relaxations or extensions of political authority (e.g., interregnums, war powers); form of the state (e.g., empire, union, federal republic, U.N. trusteeships, colony proletcorate); form of rule (e.g., autocratic, oligarchic, aristocratic, theocratic, democratic); type of constitution (e.g., written, unwritten); framing and amending of constitutions; constitutional law; etc. See also:

APPENDIX III

23 good. In response to this realisation, and encouraged too by
33 the growth and prosperity of the tweed industry, the Lewis
Association sprang into being in 1942–43. The Association's
aims are survey, planning and the initiation of action for the
public welfare, economic, social and spiritual. Something
should be said of each of these bodies in turn.

23 The membership of the Town Council, Harbour Trust and
Stornoway Trust overlap, the Town being represented on both
33 Trusts. Indeed by the conditions of the Deed of Trust drawn
433 up by Leverhulme (in 1923–24), the Stornoway Trust must
361 include the Provost of the Burgh as its Chairman, together with
Magistrates and Councillors. For some time past the Provosts
and Councillors have been chosen from the more important
369 business men of the town. Indeed as a result of the constitu-
tion of the Stornoway Trust, urban interests and outlooks might
easily gain undue preponderance at the expense of rural needs.
Nevertheless two members with strong rural ties were elected
to the Trust in recent years.

In view of the growing burden of deficit, the Trust felt
unable to frame a general policy, still less to carry it into action.
To meet the deficit, the Trust sold portions of properties without
reference to any general plan of town or country. Even after
the Trust began to accumulate a favourable balance, hand-to-
mouth decisions continued to be made, undirected by any
clear policy. The most lamentable case occurred when a
garage site was given to the chief Stornoway bus proprietor at
a road junction near the western entrance to the town, close
to the principal new housing schemes and opposite the main
gate of Lews Castle and the Lady Lever Park. The palpable
mistake in siting soon caused strong public criticism. The
Trust repented, and sought to distrain the garage proprietor
(686) from extended use of the area. The parties went to law and
the case was fought through the courts until, in a final decision
reached in the House of Lords, the Trust lost and had to pay a
bill of some £4000. The lesson of defeat in the court was severe,
capped as it was by the equivalent of a fine of £4 or £5 from
every family in the burgh. Coming at a time when the need

APPENDIX III

623 for planning preceded by adequate survey became publicly
633 recognised, this crisis seems to have caused a change to con-
433 structive policy on the part of the Trust. It led to the election
361 of a new member of the Trust on a planning platform, and to a
general searching of heart and mind in the community.

(184) Meantime the movement for town planning which had
spread from the bombed cities to the rest of the country, led
to a closer co-ordination of planning aims between the Trust
and the Town Council, and there is real hope of progress in
collaboration with the County Council as the statutory planning
authority.

In brief, the opportunity arose for the Trust to frame
a comprehensive policy, one binding together the objects
separately listed in the Deed, "to promote the material and
social welfare of the community". The 'material' provisions
of the Deed allow for the promotion of industry—including
fishing, of course—of agriculture and afforestation, and of
communications by land, sea and air. Medical service is not
forgotten. The encouragement of social life and education is
foreseen, and bursaries may be provided to enable deserving
scholars to proceed to secondary schools and universities.

185 It is felt by far-sighted citizens that these aims should be
properly co-ordinated. Development of resources and social
life, they feel, could be combined with education and training
deliberately designed to equip young people to return to the
Island and use their capacities to serve their own community.
(311) Thus among the development schemes which have been
mooted are the reclamation of peat, the reclamation of the
sandy inlet just north of Stornoway, and local afforestation.
(871) All these technical jobs require training, at the levels of engineer
and skilled foreman or working hand. Bursaries might take
(168) the form of education for such rural tasks. The 'export' of
talent may be necessary when no outlet is possible at home,
but in the end it can drain away the community's youth.
Hence a policy for the return of talent is required. For fishing,
for industry and particularly for the weaving arts, training is
required in preparation for possible careers at home. Lastly

634

634 DISTRICTS--political organization of moderately extensive territories embracing a number of settlements or municipalities (e.g., a subtribe, an English or American county, a French department); governmental personnel (e.g., executive, advisory, administrative, legislative); mode of selection (e.g., appointment, election, hereditary succession); jurisdiction, authority, prerogatives, functions, and activities associated with each position; etc.

The Seven Crofting Counties of Scotland

634 The Outer Hebrides, a chain of islands over a
[131] hundred miles long which lie to the northwest of the Scottish mainland, are part of "Ross and Cromarty" and "Inverness," two of the seven crofting counties of Scotland (see Map A). The seven crofting counties
[103] (Argyll, Inverness, Ross and Cromarty, Sutherland, Caithness, Orkney and Shetland) constitute the scenically beautiful but agriculturally marginal land often referred to as the Highlands and Islands of Scotland.
101 The word "Highland" also refers to features of social
197 life such as crofting tenure, strong community feeling and Gaelic-speaking which are characteristic of many communities in both the Highlands and Islands as well as in cities such as Glasgow in which persons from the Highlands and Islands have settled. For example, a Gaelic speaker whose parents came from the Islands and settled in Glasgow may be called a "Glasgow Highlander." The first four crofting counties listed above have a large percentage of Gaelic speakers. In the national
[162] census of 1961, 82.3% of the 32,607 inhabitants of the Outer Hebrides were Gaelic speakers.

131 Lewis and Harris, a single body of land which is
133 sometimes referred to as two islands because the mountainous southern section called Harris differs markedly from the flat, northern moorland of Lewis, is the northernmost island in the Outer Hebrides (see Map B).

000 24,863 acres. The value of this boggy property, as
423 far as the landlords are concerned, is determined by
427 its fishing potential. The landlords generally reside
226 away from their property, and brave the buffeting gales several times a year to return to fish for trout and
[463] salmon. For the rest of the year they hire river-
[685] watchers to prevent their tenants from poaching. As
[171] in Wales (Emmett 1964), the islanders continue to poach, in part as an expression of their identity as independent countrymen, a minority group in a nation-state.

161 Lewis is the most populated area in the Outer
162 Hebrides, containing 21,934 of the 32,607 Outer Hebrideans
634 numbered in the 1961 census. It is part of the County of Ross and Cromarty, whose headquarters are on the
632 mainland near Inverness. Lewis has four administrative areas called civil parishes in which births, deaths and other vital statistics are recorded. Stornoway
[197] parish is the largest, containing the town of Stornoway on the east side of the island in which many non-Gaelic speakers live. Of the other three parishes, the largest
[162] is Barvas which stretches along the west side of the
[197] island and contains 4,331 persons, of whom 94.6% are Gaelic speakers. The people of Stornoway refer to someone
[186] from the west side as a <u>siarach</u> (west-sider), a term which connotes rusticity.

CONTINUED FROM PRECEDING FICHE

175 much of Britain and Europe until about 1700. A modern
511 parallel may be found in Asiatic lands with the frequency
162 of famines alternating with periods of recovery or, in others,
171 the long-drawn misery of chronic under-nutrition and endemic disease. In modern Europe, only international
[731] or civil war can now bring such extreme widespread misery. And as peace brings partial healing, so in the Island past, when good seasons returned after famines, the life of the family renewed itself.[1]

175 The narrow margin of survival even in good seasons,
593 the risks of the bread-winner's death and of his family's destitution, and the need of co-operation in so many tasks made the family too small, weak and precarious a unit to stand alone. Even with relatively little division (or specialisation) of labour, and in spite of its apparent self-sufficiency, the family had perforce to link itself with wider circles of community life.

(B) JOINT LABOUR BY SMALL TEAMS: THE EVIDENCE OF TENURE IN 1715–26

175 Romance is hidden among the rent-rolls of the Seaforth
241 estates, all of which were forfeited when the Earl rose for
427 'King James VIII' in 1715. For of the rents withheld from the government until 1720, on the mainland at least
• [642] the loyal clansmen paid a considerable portion to their
[613] exiled chief, styled 'Marquis' by 'King James'. But the

[1] The 'ups and downs' of a peasantry living on the margin of subsistence and subject to severe disease can be studied in India, 1871–1941, where the 'net' or mean change has to be correlated with the 'variability'.
[113] This wide problem was reviewed in a series of papers to 1948; "The Social and Psychological Significance of Variability in Regional Changes of Population", with examples taken from Indian villages. (A. Geddes, *Human Relations*, Vol. 1, 2, 1947–48; cf. *Geog. Rev.* 1942 and 1948; and *Geog. Journal*, 3, vol. 98, 1941).

175 might be thought) in cured fish. Here is a sample Deposi-
241 tion from Borve (W. Lewis), a township then composed of
427 five hamlet-farms, or 'pennylands', with their share of
436 outrun, peats and fishing grounds over the whole and known as Five-Penny Borve.

> Donald McGillimichaell, William McHomas, Gillichallum McCoilog, and John McConnell in five penny land of Borrow and Parish of Cladach afor[d] MAKE OATH severally that neither of them has any Tack of their possessions, But that each of them pay yearly to ye above Mr. Zachary McAuly for behoof of ye Countes (of Seaforth) for[d] Nyne Pounds Scots (*i.e.* 15/- sterling), Two Bolls one Lipie meall, Fifteen pound weight of Butter, and three-fourths of a mutton. Depone they and each of them are someqt in arrear but know not the Particullars, and this is ye truth as they and each of them shall answer to God, and depone they can't write.
>
> (Signed) DAVID BETHUNE
> (Sheriff Substitute of Ross).

175 The only point on which these good fellows must have
241 had to face qualms in 'answering to God' was their lapse
427 of memory as to 'Particullars of arrears'! None of the 222 small tenants could remember this! Although the
451 Chamberlain or Factor, Zachary MacAulay, denied it, he may have exhorted or compelled payment of rent in order
• [642] to forward it to the exiled 'Marquis'. Mainland rents
[613] were actually despatched to France from Leith in broad daylight under an armed guard of clansmen! At the same time, neither MacAulay nor the joint tenants were of Clan Kenneth, the MacKenzies. MacAulay himself was a man of high character—and a poet too—and not one to collect rents in order to embezzle them. His affirmation has the ring of truth, with little alloy. To the Government Commissioners he wrote that what made it impossible for Lewis peasant-fishers to have paid rent in full during civil war,

CHAPTER VI

CLANSHIP: PEOPLE, CHIEF AND TACKSMEN

(A) COMMUNAL EQUALITY AND LORDLY PRIVILEGE

175 THE equalitarian customs of hamlet and township
632 astonish many to whom the crofting villages are unknown and whose picture of the Gaelic past is
• 642 derived from tales of the 'Forty-five. The widespread
631 historic fact of lordship over a subject peasantry has obscured that of peasant-neighbourhood, more ancient, it would seem, and, in the Isles, still more enduring. The very existence of 'rural democracies' such as those just described has been doubted by certain scholars on the theoretic ground that they would be humanly unwork-
[614] able! Yet it is none the less true that the peasants as clansfolk gave loyalty to their chief. The fervent loyalty given to the exiled kinsmen-kings, the Stewarts, was a scarlet thread interwoven—or entangled—in the homespun
[533] web of community, of clanship. Wherever the Gaelic is spoken, the Jacobite songs are sung with passion, and their echo has gone round the world.

[171] So in the life of the Gael, without doubt—and in varying degree throughout Britain and the rest of Europe—we have to envisage a composite, perhaps a contradictory, state of things, in which communal equality is overlaid by

175 631 632 642 [171] [621]

lordly rank: a working, equalitarian democracy dominated by an aristocracy proudly refusing to work. The fascination of Gaelic community is, first, that its elements stand out so clearly, and, secondly, that links were forged in clanship which made its living chain, though heavy, a thing that shone with pride, and beauty too.

(B) CLANSHIP, COMMON DESCENT AND CLAN-HELP ('CUIDEACHY')

621 172 621 177 173 621 631 [177]

To what extent is it now possible to disentangle the two contrasted elements of the lord or chief and the farm-teams and townships? Prehistory is hard to unravel; but the successive waves of conquest flung upon the Island shores have left their jetsam, unmistakably. The circle of huts found near a broch or commanding *dùn* recalls the tenants' village grouped close to the castle of a chief, from early history down to the 'Forty-five, and suggests a primitive form of feudalism or of clanship. Traditions add their part. In Uist one may still hear the ancient heroic lays traditionally ascribed to Ossian, Oisean, son of Fionn or Fingal—lays of which Macpherson's sonorous prose gave free rendering. The Fingalian tales differ from the lays, being frankly fantastic. Lewis had its own cycle of Fingalian tales; examples are given by W. C. Mackenzie (1919). Both lays and legends tell of an aristocracy or warrior class, the Fenians, of their enjoyment of the chase, and of their relative comfort, with wealth in gold and silver, in banners and flowing mantles. The chase combined with riches implies the existence of a community to feed and clothe the huntsmen. The traditions of the Cuchulainn cycle, with closer approximation to historical and archaeological truth, tell the same tale. Historically, in-

175 614 577 621

principle of duty-right or *coir*. Further, in so far as chief and people claimed unity as the children, the clan, of one ancestor, they had crystallised a fair ideal, realised by an exchange of services ('cuideachy'). Gaelic clanship was not without its Lowland counterpart in 'kindness' which linked those of one 'kind'—'kinsfolk' and neighbours—to their ferm-toun and parish, to one another, and to the laird. Tyranny and betrayal by chief and laird make one share the bitterness of grief once felt as competition for scarce land broke up 'kindness'. Yet the people's endeavour and attainment in the past give hope for the future.

175 614 621 622 [642]

All have heard of the hereditary Highland chief and many have read of the gentlemen-farmers, but too few have heard of team and crew, and township-parliament. It is time we learned not only of the aristocratic chief but of the chosen helmsman and the democratic constable. So long as the fallacy is repeated that the Highlanders "never co-operated, and could not act together except under the orders of a chief", so long will it be easy to add, "and they never will"! Historic truth may have much to teach for the renewal of leadership for life together. And beyond the Highlands, the example of this aristo-democracy, at its worst and its best, may contribute to new concepts of community.

643

643 CHIEF EXECUTIVE--type of executive (e.g., paramount chief, king, president); plural executives (e.g., peace chief and war leader, king and chief priest, constitutional monarch and prime minister, triumvirate, executive council); authority (e.g., supreme, nominal, dependent upon personal qualities); prestige (e.g., sanctity of person, divine descent); functions (e.g., administrative, judicial, military, religious); prerogatives; symbols of office; mode of selection (e.g., by election, seniority, matrilineal or patrilineal succession); qualifications (e.g., age, sex, rank, wealth, prowess, piety); installation; termination of tenure (e.g., deposition, expiration of term, killing of divine king); etc. See also:

Mortuary rites 764, 766

175 in the following two centuries as clan rivalry, with its claims and
[614] counter-claims for territorial and other rights, was predominant. Generally, what could not be taken by intermarriage was snatched by fiercer means.

Though these times generated a tradition of extraordinary richness, one must wonder what would have been the result had more attention been spared for the development of the island. Progress was retarded. The lawlessness was not worse than that endemic on much of the Scottish and English mainland or in Europe, but the island was of course more cut off from the gradual infiltration of civilising agencies and influences; at some times in its history it was found to be more than a century behind even the rest of Scotland.

MOVEMENTS TOWARD CIVILISATION

175 And what was the Scots Government in Edinburgh doing about
657 the Western Isles? In the Middle Ages, the answer is very little.
614 It had enough troubles of its own without endeavouring to police the clan warfare in that remote part of the kingdom; in any case the islands of the west were difficult to get to and probably best left alone. This attitude did not hold indefinitely. Once the semblance of peaceful conditions was established throughout the Scottish mainland, attention was duly focused further afield. In 1506 Stornoway Castle was beseiged and captured by the Earl of Huntly—the first time cannon and gunpowder were used in the Western Isles, and the first of a number of punitive expeditions arranged to bring the unruly clans to heel.

175 One of the leaders of disorder at this time was Roderic Mac-
657 Leod of Lewis, and it was to parley with him that no less a person
614 than James V decided to visit the island. In 1540 James, with
643 devastating swiftness, determined to quell these fighting chiefs once and for all, arrived to examine conditions on the spot. Titles to land were closely looked at and the equivalent of our 'small print' read carefully. All the chiefs who owned anything in the islands were forced to accompany the King on his tour of inspection. No doubt this close contact resulted in James becoming as fluent in the Gaelic language as his father had been in his time.

For Gaelic was still spoken in most parts of Scotland, and it was 175*
the language which the chiefs themselves understood to the last 657
fine shade. James's visit was followed by a period of unusual calm, 614
ensured by the detention of hostages; in Lewis, the brew of trouble 643 •
had been turned down to a simmer.

After the death of the chief of the Lewis MacLeods, Roderic, 175*
however, rival dynastic claims turned up the heat again. New- [614]
comers appeared on the scene: the MacKenzies of Kintail. Carefully they manipulated the events of history, indeed twisted them, until with the Crown on their side they had established beyond doubt that they were legally entitled to Lewis. In many ways, Lewis was fortunate in its new proprietor, Kenneth MacKenzie, Lord Kintail. Both he and his successor, Colin, the first Earl of Seaforth, were enlightened men, of different calibre from those they had displaced. They were in close contact with the immediate outside world, the emerging Scotland; and they were familiar with the amenities which that world offered. They were also aware of the needs of a community little removed from the early phases of cultural progress. In particular Seaforth, a man of ability and foresight, recognised, as did others before him, that the prosperity of the island had to be based on fish. He was also aware of the value of strong connections with Church and education. The Lewis historian, W. C. MacKenzie, writes:

> At the end of the seventeenth century, the picture we have of Lewis is that of a people pursuing their avocations in peace, but not in plenty. The Seaforths had been extravagant, and the people had to pay for their extravagances; they were politicians, and the people had to pay for their politics. Yet, it is clear that, besides establishing orderly Government in the island, they had done a good deal to rescue the people from the slough of ignorance and incivility in which they found themselves immersed. But in the sphere of economics their policy apparently was of little service to the community.

Under the Seaforths, Lewis became involved in external affairs. 175*
During the times of the Covenanting troubles, it sent a contingent 648
to the Battle of Auldearn, where the Covenanters were defeated by Montrose. At the Battle of Worcester, one of the two leaders of the thousand MacLeods taking part in that 'stiff fight' was

so literate as to have drawn up a bond, unaided and with a re- 175* 212
markable degree of legal precision.

It was not until Lewis belonged to the Seaforth family that 175*
anything in the nature of education generally came the way of 871
the common folk of the island. John Morison, a native of Lewis, who wrote about 1680, says:

> Onlie for the tyme the countris is possessed and saglie governed by the Earle of Seaforth, by whose industrious care and benevolence the people, formerly inclined to rudeness and barbarity, are reduced to civilitie, much understanding and knowledge by the flourishing schooll planted and maintained by the said Earle all the tyme in the toun of Stornoway. And not onlie the people of the Lews, but also those of the nixt adjacent Isles. The gentlemens sons and daughters are bred in that schooll to the great good and comfort of that people; so that there are few families but at least the maister can read and write: I do remember in my own tyme that there was not three in all the countrie that knew A. b. by A Bible.

Martin Martin mentions this Stornoway school as teaching both Latin and English. During the eighteenth century a school for teaching both these subjects with writing and arithmetic was established.

Martin also indicates that it was never considered necessary [562]
or desirable to educate girls, whether they were common folk or daughters of the upper classes, unless they were daughters of chiefs and next in line to succeed their father, there being no male issue before them. Towards the close of the eighteenth century, efforts were made to educate the children of the island. Parochial schools had by that time been established; the Society in Scotland for Propagating Christian Knowledge and the Gaelic School Society supported several. Clergymen of the period, however, claimed that the advantages of education were not appreciated; as a consequence, the schools were not well attended.

The SSPCK had its origins in 1701, when a few private gentlemen met in Edinburgh and resolved to establish schools in the Highlands and Islands, and to appeal to the public for subscriptions for the purpose. They had a fitful beginning, but Queen [643] •
Anne encouraged the scheme by royal proclamation and sub-

* 175 scriptions flowed in. In 1709 the Queen granted Letters Patent
871 under the Great Seal for erecting certain of the subscribers into
• [643] a corporation. Thus did the SSPCK come into being, with an initial capital fund of £1,000. Its progress was rapid. In 1711, it supported twelve schools; in 1795, 323 schools. In addition to paying the teachers' salaries, the Society supplied the children with school books, established public libraries in various parishes, and defrayed the expenses of printing Gaelic Bibles and other books.

Harris here enters in an interesting sideline. In the records of
[217] the Presbytery of Mull, 1730, it is reported that 'Mr M'Aula . . . carried off the library to Harris, because he was not paid for his expenses in bringing them [the books of the Society] to Coll.' This MacAulay was the great-grandfather of the English man of letters, Lord MacAulay.

The Gaelic School Society was founded in 1811 and existed until 1892. It supported a large number of schools, as the desire for education had exceeded the capacity of the SSPCK. In 1796
[874] there were two schools and a spinning school in the parish of Stornoway. The minister of Barvas, writing in that year, says
[794] that there had not been a parochial school in that parish for many years, but that there was a Society school at Ness, attended by about twenty pupils, instead of treble that number had all the
[874] children been made to attend. The minister of Uig stated that three spinning schools were established there by Lady Seaforth, but he does not refer to ordinary schools in his parish at that time.
[794] According to the minister of Lochs, a parochial school was built there in 1795, and a Society school some three years earlier.

By the middle of the nineteenth century matters had improved considerably, though there were still complaints that education was not appreciated. In fact, education tended to be discouraged
[829] for a very practical reason. Back in 1811 an observer in the island stated in his report that the great mass of the Lewis people would not send their children to school. 'When reproached on this head they answer "If we give them education, they will leave us."' Seventy-two years later (1883), the Napier Commission was told that 'Sir James (Matheson) supported and contributed to seventeen schools in the Island, many of which he built with teachers'

rocks about intrusions or dykes of more resistant crinanite. Second, the better nature of the soil derived from the weatherings of the sandstones and conglomerates has aided reclamation and cultivation.

In the long years of its existence the town has been a focal point of island history, fanning out to many corners of the world, where it has been merged with the wider history of Britain, the Commonwealth and elsewhere. Detached as it was from the rest of Scotland by the Minch, Lewis often went its own way. In the reign of Queen Elizabeth, when England and Sweden plotted against the Scottish crown, the emissaries of these countries met in Stornoway. Later, in April 1719, a council of war was held in a room in Stornoway to plan the overthrow of the Hanoverian dynasty of Britain; included in the assembly were the Earl of Seaforth, the Marquis of Tulibardine, George Keith, the hereditary Earl Marshal of Scotland, and his younger brother James, who was to become the famous Marshal Keith. Prince Charles Edward, though not setting foot in the town, looked at its twinkling lights from across the Bay, at Arnish, while his pilot tried to obtain a boat to take the royal fugitive to France.

The harbour has seen many kinds of ships on its waters. In the twenties, the *Metagama*, the *Marloch*, and the *Canada* came to take away almost a generation of young Lewis folk to the new lands across the seas, because their own island could not support them. The *Iolaire* sank within sight and sound of the harbour mouth and dragged about 200 Lewismen with her into an island memory. The *Cervona*, of Dundee, dropped her anchor just by Arnish lighthouse in July 1904, carrying survivors from the emigrant ship *Norge*, sunk at Rockall with appalling loss of life. The *Victoria and Albert* visited Stornoway in September 1902, the first visit to the town by a reigning monarch. That was a great day, the result of a letter from Provost Anderson of Stornoway in which he pointed out to His Majesty, King Edward, that with less than 30,000 inhabitants Lewis had 2,300 men in the Royal Naval Reserve, trained at the local Battery, the largest in Britain. There were also 1,100 men in the Seaforth & Cameron Militia, all of whom volunteered for foreign service in 1899, and 900 of whom did garrison duty in Egypt. Between 300 and 400 Lewis-

644

644 EXECUTIVE HOUSEHOLD--executive residence and domestic establishment; guards, servants, and retainers; court personnel (e.g., number, characteristics, mode of selection, activities, prerogatives); court etiquette and ceremonial; special status and functions of executive's relatives; etc. See also:

with his spouse. The knight, the first Stewart Earl of Menteith, had died four years after his wife, in 1294. Medieval sculpture was then attaining its height, as this monument, in spite of the ravages of time, bears witness. The following year, 1295, saw the commencement of "the three hundred years war" with its repeated destruction of Scottish arts and traditions of peace. Under King Alexander III, "that Scotland led in luve and law", peace within the kingdom of Scots allowed a union embracing Gaelic Christian traditions and Scoto-Norman arts. After his death this became all but impossible. So far as scholars can tell me, this almost unnoticed monument remains unique in Christendom, indeed in the world.[1] The arts of Scotland, hitherto in touch with European achievement, were shattered by invasions, and Gaelic tradition was only to be maintained by the very poor, whose debtors, for all time, we have become.

At the approach of death God's mercy and peace were sought. Latterly Roman Catholic prayers stressed the wish for Confession to a priest, followed by Supreme Unction for the attainment of 'Happy death', *Bas sona*.[2] In early times confession seems to have been made as willingly to the 'Soul-friend', followed by Benediction. When death had come, the mourners sang of sleep and home. In Lewis today funerals are conducted in silence to the graveside, where the last service is held; but

[1] *A unique medieval tomb at Inchmahome: a cultural link.* (Geddes, 1952.)

[2] It would be of deep interest to compare the attitudes to death found in 'Spiritual Songs' by Protestant Gaels like Buchanan or Grant, with songs on death which, though maybe of post-Reformation date, are of Roman Catholic origin (*e.g.* in Fr. Allan Macdonald's collection, poems on the Day of Judgment, and of Wrath; on age and on death; and on Purgatory: pp. 31, 85, 146; 34, 19, 21; 27). Some have much in common, both by virtue of the earlier traditions they shared and still more because of parallel trends of Reformation and Counter-Reformation. Cf. *Carmina*.

175 which heartened them for resistance in common against
829 landlord and State, both in the agitation for reform of the Land Laws during the next ten years and in their demands for 'the return' of sheep farms to crofting, which continued until all these were divided soon after 1919 and the ex-Servicemen's return.

175 Expenditure of capital in Lewis during more than a generation, from the purchase of the estate in 1844 down
423 to the death of Sir James in 1878, helped to maintain the
• 646 people and provide relief in bad seasons. It left Lewis greatly improved in roads and paths, in sea communica-
175 tions and in buildings of various sorts. Two real efforts had been made to utilise Lewis peat, industrially for paraffin
646 oil, and agriculturally by reclamation. Given the resources
311 and knowledge of a century ago, these attempts did their
[161] initiator credit. Yet failure left the Islanders to continue crofting without either an additional occupation or the extension of croft land, even at the high population density (per acre of arable) which Matheson had found on his purchase in 1844.

175 Subdivision of crofts was the first result. A father
423 would simply divide his croft between himself and a son, who might not even be entered on the rent-roll of the estate, and the two would inevitably need more stock than before upon the common. The second result was simply 'squatting': the building of a house, perhaps with a tiny kailyard, on a piece of the 'skinned' land. As building went on overcrowding old sites, filth accumulated and springs were contaminated, crofting was hindered and cows became fewer per family, in spite of overstocking. By 1886 about two-thirds the number of the cottars and squatters found in 1914 were already in occupation. In 1914 there were over 3000 statutory crofts in Lewis, their

159 conclusion—undoubtedly a sound one—that the most
433 effective action for commercial fisheries (as then known)
228 must be taken at one Island centre, Stornoway. As a direct result he considered how to feed the growing town, in particular how to give its children fresh milk. He saw the farms round Broad Bay ready to be turned to high-class dairy farms, if capitalised, and for this purpose they were swiftly scheduled in his mind.

159 "His early days were happy ones"—wrote his son—
433 "but they were not to last for long. He encountered the first obstacle on his path in the late summer of 1918, when
423 the Scottish Board of Agriculture declared its intention to
[647] take over the few remaining farms in the Island for crofts." By this declaration the Board spoke for many Islesmen in the Forces. The voices of Servicemen, not those of either a Government or a philanthropic millionaire, counted over-
[727] whelmingly, on the Island and beyond. When the war was over and the men came home, many set about examining their boats and fitting them up with motors, and in a few months the evening's departure for the fishing from Stornoway had lost some of the picturesqueness of the old, stately procession of sail moving out to the Minch at sunset, but had gained in efficiency as the motorised boats went puffing out to find the shoals, sure of return without delay after the catch was hauled in. Yet fishing was still precarious: there might be no catch, and even if there were, prices were a gamble. Hence many a cottar-fisherman wished to ensure a home for himself and applied for a croft, with his eyes on the farms. Farms were few, and not enough to go round more than some 10 to 15 per cent of squatters and cottars. Still, a promise is a promise: the farms were there, why not have them and be done with it? Knowing this feeling in the Island, aware of its support

(c) House-building. — From 1920 to 1940 the Department of

APPENDIX I

647 Agriculture advanced loans for the erection of 760 new houses
654 and the repair of 220 other houses. This, with the erection
746 or repair of 40 steadings, may be taken as the equivalent of
362 1000 houses in the 20 years of peace, of which three-fourths
356 were new. Rural building was at its height in the early 'thirties,
but 1938 was a typical year. Taking the value of each house
as £600 and subtracting half for imported materials, we may
434 assume that for 50 houses built that year the labour given
362 produced an output of £15,000. In addition, some house-
356 building and repair was done without State aid, for which a
guess of £15,000 may be made. Such sums may not appear
[435] large, but they correspond to the enduring fulfilment of a prime
need, a 'real wage', of importance when compared to rents
and costs elsewhere. Of the expenditure on house-building
in Stornoway burgh during 1938, the value may be assessed as
£10,000, of which £9000 was for Local Authority housing.
Most of the total was produced by local labour.

(iii) *Fishing Industry—Net Output and Earnings*

434 (*a*) For 1938 the total catches, prices and quantities of
228 fresh cured fish landed in Stornoway District show a value of
nearly £100,000 (£98,000) for the herring catch, and of £162,400
for the cured herring. Our problem is to estimate what fraction
of these sums may be included in the net output of the Island
[127] industry proper. The Fishery Board's *Statistical Tables* and
Annual Report extract the produce brought in by local boats
from the total, separating it from that due to 'strangers', and
so permitting a fairly reliable estimate, checked by local enquiry.

228 Of the herring taken, nearly 80 per cent were caught in the
summer fishing, June to August (*Annual Report*, p. 13). The
501 week of maximum local activity in herring fishing for Stornoway
District may be taken to be characteristic of this pre-war period
(Table 8). There were then 111 steam-boats engaged; and as
only five were locally registered (at Stornoway itself), the
remaining 106 were strangers. There were also 66 motor-
boats engaged and though 81 motor herring-boats are locally

175 Board, created in 1897 to develop agriculture, fishing and
671 home industries, to form new holdings, to assist migration,
427 and to provide public works such as roads, bridges and
[647] piers. These powers were further extended by the Land Settlement (Scotland) Act of 1919, passed to provide land for ex-Servicemen.[1]

The Crofters' Act granted to the individual crofter most of the rights advocated by the Napier Commission, and other advantages besides, but it did not impose upon him the corresponding duties. As Day wrote, "The landlord was compelled to act in the interests of the crofter; the crofter was not compelled to act in his own interest". [632] The Act discarded the core of the Napier Commission's scheme, that of "a recognised local community, the township, with an executive officer, the Constable, working for the improvement of the township, by fencing, draining and other works, with the assistance of the proprietor", the whole scheme enforceable by "legal compulsion on either [829] side". As a Gael might say, the Act discarded *duty-right* of members of the community to one another.

175 As a result, peace did not descend upon the Island at
423 once. The demand for land continued, followed up by attempts to settle upon it, in spite of police and armed force.
[668] A legal victory was to be pressed home. In Lewis the

[113] [1] A useful summary of the legislation is given by the Scot. Econ. Committee's Report, 1938, pp. 17-21, and a searching review in J. P. Day's *Public Administration in the Highlands and Islands of Scotland*, 1918, a work of real social insight.

The Act of 1919 is still the main enactment under which land settlement schemes may be undertaken in Scotland; but the Agriculture (Scotland) Act 1948 included new provision to allow the creation of holdings up to 75 acres in extent and £150 in rental. After the Second World War a more cautious policy was adopted in regard to settlement of ex-Servicemen and little progress has been made in carrying out schemes, despite many unfulfilled applications in the Hebrides and elsewhere where the demand for crofts exceeds the supply.

some whose feelings and interests opposed emigration. Free Church ministers foresaw that the beliefs they had introduced would be shaken by travel; and their income, like that of the merchants, would have disappeared as a result of depopulation. The Congested Districts Board, however, sponsored two schemes of colonisation in 1888–89. In the first scheme thirty families, and in the second, fifty families were taken to Canada, mostly from the Island.[1] The first and smaller group repaid their loans and received their lands; but the second failed to do so, and the State was only reimbursed by sale of the land.

The story of the schemes suggests the lack of four elements needed for success: promptitude in organisation; sympathy with strictness, and a sufficiency of funds; a year's experience of new conditions or technical guidance, rather than segregation of the inexperienced without leadership; and choice of vocation as farmer or as farm servant. Many a crofter-emigrant has succeeded as a shepherd and farm hand or as an independent farmer; but not every Islesman, particularly a cottar or landless squatter, is fit to conduct a farm. Technically, an all-round experience of part-time crofting and fishing by rule of thumb does not train a man for farming in a new environment without even a year's apprenticeship. Success is possible in schemes which overcome initial difficulties by providing training, companionship and community life, in a suitable physical environment.

One further principle of communal life was the spiritual, which Parliament and administration failed to grasp. The most significant evidence in the Napier Commission was that of A. Carmichael; and from this the Commissioners

[1] J. P. Day, 1918, pp. 123-125, from Reports of Congested Districts Board, and Crofters and Colonisation Commissioners (Fifteenth Report).

APPENDIX II

2110. The acreage under potatoes declined steadily: 3940, 3730, 1650. Barley dwindled from 2350 acres to 1340, and 130. Turnips reached a maximum of 510 acres in 1939, but were not worth noting by 1953. These crop acreages reflect the change in stock-rearing, with the decline in the number of cattle but the great increase in the number of sheep. Taking the three successive totals for 1918, 1939 and 1953, cattle numbered 13,620, 9060 and 6540 head; but this diminution by more than half was chiefly due to the small number of bullocks reared. Cows and heifers, 7650 in 1918, still stood at about 4500 in 1953, and they are now of far better quality in weight and milk production. The totals of sheep were successively, 78,150, 114,330, 185,860; by use of mainland rams their average weight has increased, while the wool is rather more abundant but coarser. Taking the Lewis Association's equivalent of 1 cattle beast to 8 sheep, the livestock carry increased by nearly 25 per cent; and if we add the increased value of the cattle the livestock increase counts for very much more. Horses, it is true, fell to 380 by 1953; as before, most had been bought in from Uist, not bred. Hence a new charge on agriculture, the purchase and use of the 65 tractors owned by farmers and crofters, and their running costs, is relatively less heavy than it would be in a horse-breeding area. The poultry are still deplorably few: 86,460, or about 20 per croft.

The Table on p. 316 sums up the conditions, apparently somewhat stabilised for the time being, parish by parish, and invites comparison with Chapter II, pp. 67-68.

(b) and (c) *Peat-making and House-building.*—While *peat-cutting* is still important, more coal is used than formerly, and hence the peat is valued here much as in 1938. *Housing* is most important; Local Authority housing by the Burgh struggles to meet the need of a growing urban and 'suburban' population as in other towns in Britain, but with an additional "remote area subsidy" to meet mainland contractors' extra costs. There is little truly rural housing by the County Council and rents are too high for the houses to be fully occupied. The figures for Stornoway Burgh for the ten years 1945–54 exceed

APPENDIX II

300 houses, with nearly 30 built by "private enterprise"; in addition the Local Authorities built 140 in the immediate 'suburbs' (of which 50 were temporary), a total of over 470 and an average of, say, 47. Another 115 were built in the rural townships. If we give a round total of £125,000 as the value

for an average year (such as 1953) for Local Authority Housing, we may allot half this to net output of local materials and to wages earned by Lewismen, some £65,000, of which rural wages were a small fraction, say £20,000.

For crofters and cottars, however, in 1953, a fairly typical year, there was much local effort and achievement, by help of 180 loans and grants from the Department of Agriculture for Scotland, totalling £81,000 for new houses or house improvements (with a very few steadings). £80,000 may be allotted to local materials and to labour paid or given by householders themselves.

Chapter 1

INTRODUCTION

648 Scottish crofting townships in the Outer Hebrides,
014 in which I did anthropological fieldwork for fourteen
months in 1970-71, participate extensively in the
political, educational, economic and administrative
181 systems of larger British society. Despite this partici-
pation, the township presents various anomalous features,
i.e., features which are inconsistent with what we would
expect given our conceptions of the conditions of a
modern, urban-industrial nation-state. The expectation
that township members will manifest values and beliefs
congruent with those prevalent in larger British society,
and that patterns of economic specialization and
individualization will be found among persons working
in the available industries, is not fulfilled. Crofters
continue to work small plots of land and engage in
communal township activities even while employed by
large industrial firms. Distinct patterns of value and
belief persist, and are evident even in the use of new
ideas and material goods.

121 This thesis attempts to describe and interpret
the seemingly anomalous survival of crofting and crofting

241 continuing investment in crofting activities is the
654 availability of various subsidies which, in the form
of fencing grants, calf subsidies, and so on, are
available to other agriculturalists as well as to
crofters. The certainty of support which subsidy offers
is important in the decision-making of crofters because
of their generally fluctuating, low-level income, in
contrast to the decision-making of farmers who keep
sheep or cattle on a large scale. The latter are likely
to be more affected by market prices. Many Lewis crofters
648 indicate that they would hesitate to support Britain's
entry into the European Economic Community, despite the
higher level of prices for beef, because their subsidies
might be jeopardized. Subsidies can be important as
incentives for specialized production, but do not them-
selves sustain crofting as a socioeconomic pattern.
178 And in general, despite the incentives, all agricultural
production is declining in the face of more appealing
alternatives available to the emerging generations.

178 A decline in township communalism, or an increase
241 in the individuation of agricultural practices, is
496 another index of change in economic strategy. The
fencing of individual land and purchase of personal
farming machinery are everyday occurrences in the life

175 On one of the crofts along the strand are the
228 ruins of two curing houses, where the fish were salted
348 and dried. Ling, cod, skate and halibut were cured
439 and sold to local merchants for export. "The same as
171 they do in Iceland this very day. That was the main
175 industry. Then the English came with their steam
648 trawlers; they ruined the fishing here, and then went
228 west to Iceland and the Faroes. In Iceland they get
fined for poaching, but here the trawlers often ignore
433 the three-mile limit. But the fishing was the mainstay
here, before the Harris Tweed came along."

175 One man returned from sailing in 1932 and bought a
228 boat for L24. He had 32 lobster pots, and made L7 one
435 June by selling the lobsters at a shilling apiece.
501 Another man, who returned from the United States in 1934
454 because of the depression, bought a share in a 14-foot
491 boat. It was made in Ness, at the northern tip of Lewis,
434 and cost about L14. He and his partners went out every
night possible; the fish provided an important part of
their income. The boat was sold in the 50's. "It wasn't
175 being kept up anyway." Around World War II there were as
228 many as twenty boats; men fished at night, after a day's
501 work. Today there are four 12-foot boats in Shawbost,
178 each shared by four or five men. The boats are used
501 intensively for fishing during certain times of the year,
228

233 829 648 654 Most of these people look askance at the idea of Britain joining the European Economic Community. "If the Common Market comes, that means no more subsidy for livestock. That'll mean the end of crofting. They'll get good prices for their beef, but feeding stuff will be very expensive."

"I don't know much about the Common Market, but I'm against it. They'll do away with the subsidies. If it weren't for the subsidies, most people just wouldn't bother with cattle and sheep; it wouldn't be worth their while, the feeding stuff is getting so [246] expensive. The people here used to take in a hundred bags or so of potatoes to feed the stock. But the climate is so bad you don't know what kind of a return you're going to get, and the work is so hard it just isn't worth the bother, so people prefer to buy feeding stuff. And if you spend more on feeding your animals than you get for them, what's the use? Of course we've been here all our lives. It would be hard to leave. But if the weaving goes--"

"I was talking to my cousin in Glasgow. He says the cattle are going to be the big thing with the Common Market. The price of beef is going to go up. I don't think people here can keep cattle if they don't get the subsidy. They can't keep enough cattle, and they can't be sure of a good price every year."

175 261 [132] [443] During a huge snow-fall that occurred on Lewis in the 1950's, the mobile grocery vans and other supply vehicles could not come out to the west side, and a group of men had to make an expedition into town for provisions, after which many families made certain that they always had a good supply of meal, salted [404] mackerel and herring. Many villagers have gotten deep [365] freezers to store beef and mutton; others say they do not trust the freezers, that a failure in electricity--which occasionally happens in this region of gales and far-away repairmen--would bring disaster if they depended fully on them for keeping their meat. When the tweed 458 226 industry is going through one of its periodic depressions, more men go out more often to fish. "I've been going out every night for the last week or so. I don't have a tweed, and I won't have one for the next six weeks. I don't know what I'm going to do; maybe I'll go back to sea. Three of us caught one hundred mackerel last [251] night. I salted my share, and didn't give any of them away. These are the hard times. We're going to need them during the next six weeks."

233 [654] A few people raise beef cattle, depending largely on subsidies for encouragement to do so. A few are [234] beginning to keep cows again for milk, giving as their [435] reasons that freight charges make the bottled milk too [434] • [648]

233 234 435 434 • 648 costly, that the Common Market will soon drive up milk prices, and that income from the weaving has become too uncertain.

412 178 Many tools and techniques associated with crofting have disappeared: the flail for threshing oats (two pieces of wood joined with leather); the sheepskin stretched over wood with holes burned into it, to separate chaff and grain; rope made of plaited heather and straw. 241 Each spring the byre was cleaned of its accumulated dung [221] and urine, and this was turned into the ground along [237] with seaweed. Such tools and techniques remain among [824] the older villagers as a "memory culture" which may be [173] mobilized under changed conditions, as when alternatives [887] to crofting are no longer available or are too costly. However, the longer crofting is neglected, the less it will provide an alternative strategy. "The artificial 241 824 fertilizers are ruining the land; that's why the turnips are full of maggots and the potatoes turn to [233] water." As the rushes grow and clog the drains and streams--rushes that used to be eaten by the horses and cattle and which are now left untouched by the sheep--the land becomes unfit even for grazing. "I'd rather work the land than the blinkin' loom, but we tried the potatoes, turnips and cabbage last year, and lost them all to the maggots. You lose heart after that."

241 178 Crofting constitutes a dormant strategy which can be mobilized if deterioration of land has not proceeded too far, and if the skills of land use are not lost by succeeding generations who have grown up in an environment which presented them with more appealing strategies.

B. Social Marginality

166 464 1. Linguistic Distinctiveness: Social marginality began when the Highlander had to leave his place of origin and go to the cities of the south in search of [197] employment. The feature which most distinguished him was his Gaelic speech.

101 186 In Glasgow the common word for Highlander is "teuchter," a slang word with derogatory implications • 648 which, according to one theory, developed when Gaelic speakers coming into English-speaking cities mispronounce the word "sugar" so that it sounded like "teuchter." [829] (Glasgow Highlanders have developed their own defensive explanation: when the civilized Highlanders came down among the uneducated barbarians of the south, they came as tutors, a word which their uneducated Lowland pupils mispronounced.) According to a university student from the islands, the word was once used by the English to refer to the Scottish Lowlanders.

575 organization receives a large proportion of its funds
197 from the Scottish Education Department, whose statutory
186 duty is to foster the speaking of Gaelic in Gaelic-
[659] speaking areas. In 1970-71 a series of evening meetings were sponsored by An Comunn in Stornoway; but the serious meetings, such as readings of Gaelic poetry, were attended largely by schoolmasters.

Associations which sponsor Highland dancing and the opportunity to get together with other Gaelic speakers thrive in Glasgow, London, Toronto and Detroit, everywhere
• [648] but in the Gaelic-speaking Highlands. Such associations serve important functions in situations of interaction between Gaelic speakers and members of the dominant society; they provide identity and self-defense against those who react to them as members of a lower-status minority group.

535 A girl who teaches Gaelic in Glasgow and comes home
186 to the island only for holidays never goes to the island
648 dances, but loves going to the dances sponsored by the Lewis and Harris Society in Glasgow. All the young people from the islands come, and dance away accumulated insults in a fiery sense of belonging.

464 A girl who worked in hotels on the mainland found
197 herself speaking Gaelic with her fellow workmates who
186 came from Lewis or other Gaelic-speaking areas, although
571

172

Artist's impression of some of the twelfth-century walrus-ivory chess pieces found at Uig in 1831

as beaker ware, from its distinctive shape, were recovered. The diet of these early Harris folk appears to have been largely shellfish, particularly limpets. The house of the latest period is ruined; three courses of walling were revealed.

103 Placenames have often been a mirror of history. The biggest
• 648 event in Harris and Lewis's history was the Norse invasion, commemorated in the names of many townships that still exist: Ness (nes, headland), Arnish (Ari's ness), Erisort (Eri's firth), Carloway (Karli's bay). But the Gaelic is there too: Loch Shell (Sealg, chase or hunt, thus endorsing Dean Monro's statement that this loch bordered a deer-forest), and similar topographical features. While the Norse names are to be found on the island coasts (the bosts and stads), the Gaelic names are largely found in the interior (eg, Airidhs—sheilings).

FIRE AND SWORD

FIRE AND SWORD

ecorded history begins with the Icelandic sagas. In 1098 Magnus releg plundered Lewis and devastated the island with both fire d sword. A skald named Bjorr Cripplehand, who accompanied agnus on the expedition, reported that 'Fire played in the fig-es of Liodhus; it mounted up to heaven. Far and wide the ople were driven to flight. The fire gushed out of the houses.' e *Irish Annals* tell us that Skye was pillaged by the Norse in 4, and no doubt Lewis did not escape their attentions, then or rlier. Towards the end of the ninth century a stream of Norse k left their homes to start the work of colonisation. Iceland, e Faroes, the Orkneys, the Shetlands and the Hebrides soon came thriving communities in which the earlier native popula-n were as thralls, serving ruthless masters.

By about AD 1000, the island, with others as far south as Man, s in the sure and steady grip of men of Scandinavian or semi-andinavian origin, who were destined to become premier ns such as Clan Donald. It was not until the Battle of Largs in 63 that this grip was loosened. In 1266 the Western Isles ere ceded by Norway to Scotland, following which event the elic people and their former Norse masters were soon to be erged in the marriage bed. As for the common language, it was e Celtic elements which took over after, one supposes, some nerations of suppression. The result in any case was a highly dividual people, strong in character, and resilient enough to ke the rough times with the smooth.

In the thirteenth century, Harris was in the possession of the acLeods of Harris, and Lewis belonged to three powerful clans: e Morisons in Ness, the MacAulays in Uig, and the MacLeods Lewis in the remainder of the island. Other smaller clans were e MacIvers, the MacRaes, and the Nicolsons. The Harris Mac-eods were allied by kinship to the Lewis MacLeods, though the lationship was to become quite distant—and their destiny more rtunate. History from this time is one of disputes, internecine arfare, murders, and similar crises deemed to be of the highest portance by the clans, both inside the island and between the anders and strangers. An enormous amount of blood was spilled

MOVEMENTS TOWARDS CIVILISATION

For Gaelic was still spoken in most parts of Scotland, and it was the language which the chiefs themselves understood to the last fine shade. James's visit was followed by a period of unusual calm, ensured by the detention of hostages; in Lewis, the brew of trouble had been turned down to a simmer.

After the death of the chief of the Lewis MacLeods, Roderic, however, rival dynastic claims turned up the heat again. New-comers appeared on the scene: the MacKenzies of Kintail. Carefully they manipulated the events of history, indeed twisted them, until with the Crown on their side they had established beyond doubt that they were legally entitled to Lewis. In many ways, Lewis was fortunate in its new proprietor, Kenneth MacKenzie, Lord Kintail. Both he and his successor, Colin, the first Earl of Seaforth, were enlightened men, of different calibre from those they had displaced. They were in close contact with the immediate outside world, the emerging Scotland; and they were familiar with the amenities which that world offered. They were also aware of the needs of a community little removed from the early phases of cultural progress. In particular Seaforth, a man of ability and foresight, recognised, as did others before him, that the prosperity of the island had to be based on fish. He was also aware of the value of strong connections with Church and education. The Lewis historian, W. C. MacKenzie, writes:

> At the end of the seventeenth century, the picture we have of Lewis is that of a people pursuing their avocations in peace, but not in plenty. The Seaforths had been extravagant, and the people had to pay for their extravagances; they were politicians, and the people had to pay for their politics. Yet, it is clear that, besides establishing orderly Government in the island, they had done a good deal to rescue the people from the slough of ignorance and incivility in which they found themselves immersed. But in the sphere of economics their policy apparently was of little service to the community.

Under the Seaforths, Lewis became involved in external affairs. During the times of the Covenanting troubles, it sent a contingent to the Battle of Auldearn, where the Covenanters were defeated by Montrose. At the Battle of Worcester, one of the two leaders of the thousand MacLeods taking part in that 'stiff fight' was

HISTORY

Norman MacLeod, of Bernera, Harris. The result of the Seaforth family becoming involved in royalist activities was that Lewis was occupied by a Cromwellian garrison. Their station was close by old Stornoway Castle, now a heap of rubble under Stornoway's modern quays; and later a fort was built from the stones of the Castle, broken down by the English. The affair of the 'Fifteen', 1715, again brought Lewis into prominence. And a considerable part of the force raised for the Earl of Mar was recruited there. Four years later, plans for yet another Rising were hatched out at Seaforth Lodge, near where Lews Castle now stands. Only indirectly was Lewis involved in the last rising, the 'Forty-five'. Prince Charles Edward, a fugitive, reached Stornoway in search of a ship which would get him away from the cold western islands to the warmth of France. He met an indifferent welcome. The townspeople, weary of past punishment, gave him no help; nor, despite the large reward on the Prince's head, did they do him harm or betray him. Today, at Arnish Point, at the mouth of Stornoway Bay, a cairn commemorates the visit of that ill-fated man, the falling star in the Stuart firmament.

THE FIFE ADVENTURERS

One of the main episodes in Lewis history in the early years of the island's emergence as an area worthy of commercial exploitation was the expedition of the Fife Adventurers. Towards the end of the sixteenth century, the name of Lewis was being mentioned in the same breath as 'profit'. At that time, Lewis was in a state of anarchy. The deeds, misdeeds, and defiance of both law and order by Roderick MacLeod, chief, were enough to inspire any central authority with a zeal to convert the island and bring it to heel. And if, by happy chance, it were to become profitable to the converters, they would be well rewarded. The 'civilisation' of a territory has often been forcible, bringing the inhabitants suddenly and painfully into a new air of living, in which the things that it seemed reasonable to do yesterday are done today on pain of death. In Scotland at that time, recognition of the law and the Church were the prime factors of civilisation, such as it was, the marks of superiority. Lewis, on the other hand, had a barbarous

they could. Winter winds and the damp climate brought many to an early deathbed; dysentery ran rife. A message was sent south to obtain relief, but the messenger was captured at sea by one of the MacLeods. Again a message was sent. And hardly had this errand of mercy sailed out of sight than the MacLeods descended on the 'toun' with 'two hundred barbarous, bludie, and wiket Hielandmen' to attack the Adventurers and kill twenty-two of them, burn some property and make off with livestock. In fact, the methods which the Adventurers had hoped to used on the islanders to 'civilise' them were now being turned on themselves, to prevent the resented conversion. They left Lewis in a black cloud of despair. In 1605 they made another attempt. Again they were met by the MacLeods under the leadership of Neil MacLeod, who prevented all endeavours to establish a Fife colony on the island. Four years later a last bid was made to bring the island and its resources under their control. And again they failed.

In 1610, after the collapse of the third colonisation attempt by the Adventurers, they sold their charter rights to Kenneth MacKenzie of Kintail who, from the very beginning of the scheme, had veered hot and cold to the Crown, the Adventurers, and the Lewismen. His reward for his craft was Lewis—though it took him a further two years to reduce the MacLeods to accepting him as the new owner of the island.

UNDER THE COMMONWEALTH

Cromwell and England: the two names are so allied that it seems to strain fiction to link Cromwell and Lewis, more particularly Stornoway. Yet the main shopping street in the town has been, from about the 1820s, 'Cromwell Street'; when, or why, or who, changed its former title of 'Dempster Street' are matters lost forever. Cromwell himself was never in Lewis, but he did once take an interest in it.

The island took his attention, firstly, because its owner, a youth of sixteen who was later Earl of Seaforth, was 'playing rex' there. When Scotland was subjugated by the English Commonwealth, and the administration was placed in the hands of General Monk,

a group of Highland Royalists refused to submit. Among them was the youthful Seaforth. At the time he was rich; he belonged to a powerful and influential family; and he could call up many hundreds of claymores. He could hardly be ignored.

The second factor which disturbed Cromwell was the island's position. When the war between the Commonwealth and Holland broke out, it was seen that co-operation between Highland malcontents and the Dutch could prove to be a source of great danger for England; Stornoway had the best harbour on the west coast of Scotland and, as Cromwell wrote, the Dutch 'had an eye on it'. Events were accelerated by an incident in Stornoway harbour in May 1653, when Seaforth caused some offence to the captain of a privateer, the *Fortune*. When Seaforth discovered the vessel to be in the employ of the Commonwealth, he arrested the boat's crew and offered them terms of surrender. Captain Brassie replied with a couple of broadsides on the town and sailed away to complain to Colonel Lilburn, who had succeeded Monk as commander-in-chief in Scotland. An example had to be made; defiance of the Commonwealth had to be put down. 'I doubt nott,' he reported to Cromwell, 'but what wee may be able to doe uppon that island, will soe startle the whole Highlands and Islands that wee shall nott bee much troubled with them in such like cases hereafter. Undoubtedly to make the Lord Seaforth and his island (called the Lewes) exemplary will bee a very great advantage to the peace of this nation.'

Under the command of Colonel Cobbet, a military force, with warships and provision ships, was sent from Leith to take possession of Lewis. Some resistance was put down with a bit of trouble. A report in a contemporary London newspaper indicates that an attack by the Lewismen (who had fled to the hills, and who were armed with bows and arrows) was so fierce that the English were 'constrained to make face about'. The resistance was overcome, however, and Cobbet placed Lewis in the charge of a Major Crispe and a garrison of four companies. This garrison settled down to the task of making Lewis secure against possible attacks by the Dutch. A fort was built in Stornoway, and some armouring was undertaken at the small Goat Island in Stornoway Bay. A ground-plan of the 'Cromwellian' fortifications is in Wor-

HISTORY

*175 cester College, Oxford University, with an estimated date of 1653, 648 the year in which the English garrison was placed in Lewis. Nothing now remains of that fort built by Crispe's soldiers, though the whole area on the small point of land, present-day Point Street, is redolent of historical atmosphere, despite new buildings.

RELIGIOUS HISTORY

*175 Ecclesiology is a horse of many different colours in the island. Tradition goes right back to the early stirrings of Christianity in Scotland. Indeed, one of the most important religious sites on the [346] island is St Columba's at Eye, near Aignish, some seven miles from Stornoway. Though the name might suggest it, there is no proof that the Gaelic abbot visited Lewis. But it is more than likely that a follower of his did so in his name. Part of the church at Eye is Norman, which gives an approximate date of origin, though it is necessary to take some account of the long interval between a development phase in one country and its adoption in another country quite insulated from change, as were the Outer [173] Isles in medieval times. According to tradition, the church was built on the site of a cell occupied by the Celtic saint Catan, who is believed to have lived in the sixth or seventh century. Possibly this is the same Catan to whom a shrine is dedicated at Mealasta, in Uig, close by which the remains of a nunnery have been found, called by a Gaelic name meaning 'the house of the old black women'.

*175 St Columba's is mentioned in records from 1506, when it is 346 described as a 'rectory'. At present, though in a ruined state, it still shows its former strength of character, both as a building, a place of sanctuary, and a place of worship. It has also been called [764] the Valhalla of Lewis, for tradition says that some nineteen Chiefs of Siol Torquil, the MacLeods of Lewis, are buried in its grounds. William, the fifth Earl of Seaforth, also found there an uneasy bed beside the enemies of his ancestors, who wrested Lewis from the MacLeods.

Another significant church is St Olaf's, or St Molua's at Eoropie, at the Butt of Lewis. Recorded evidence first indicates the existence of the church in 1630, where it occurs in a report

ISLAND REGIMENTS

At the turn of the eighteenth and nineteenth 175* centuries, many villages in the north of Scotland suffered from 702 the attentions of ship-borne press-gangs, who swooped down on unsuspecting communities and whisked away the best of the males they could find. Lewis did not escape this enforced service. Local traditions have much to say about compulsion, though not by press-gang. Young men were pressed into service through personal influence, by bribe or by blackmail. However, in the case of the Seaforth Highlanders, the raising of recruits was by appeal to the men of the clan and the clan adherents.

The first battalion of Seaforths was raised in December 1777 175* by Kenneth, the sixth Earl of Seaforth. By far the greater num- 702 ber of soldiers were from the MacKenzie estates on the mainland: 704 from Applecross, Kintail, and Lochalsh. Few Lewismen served among the soldiers of Coinneach Og, as the Earl was called. The real beginning of the Seaforth Regiment was in March 1793, when a Letter of Service was granted to Lord Seaforth. The chief himself personally toured his estates for recruits, to offer the King's Shilling. His visit to Lewis was at first regarded with some suspicion; he even met some active opposition in Uig, which was overcome by his explanation of the country's need to counteract the widespread effects of the high tide of the social revolution begun in France. In 1804, another battalion was raised; some 200 Lewismen volunteered, a fact recounted in tradition with great pride. The history of the regiment in those early formative years is [726] detailed with battles in many parts of the world: Nimogen in [648] Holland, Quiberon Bay in Brittany, Cape Town, India (Assaye is remembered in a Stornoway street name), Java, Messina, and so on.

In Egypt, many a Lewis lad found himself face to face with 175* the Turks, and subsequently in a slave market in Cairo. One of 704 the old soldiers of Uig has left traditions of his seven years' ex- 648 perience as a prisoner of the Turks. Some youths who had volunteered for service early in life were so ignorant of their island's geography that they found themselves in Stornoway on their return looking around for a guide to show them the way across the moors to their long-left homes. The hot, white sun of Egypt [727] brought loss of sight to many soldiers, who returned to a Lewis which they could never see again. Some who were blinded at

SINCE THE SECOND WAR

pared to make fishing their career, together with financial assist- 228
ance to those who satisfactorily completed their training and 452
who wished to acquire boats of their own. This Scheme is now 664
run by the Highlands & Islands Development Board. The Board's participation in the expansion of the fishing potential around the island has been first-class, with commensurate results from an investment of some £500,000.

Illegal fishing

Like goldfields, the seas around the island have always attracted 685
the unscrupulous, those for whom the word 'conservation' has no 226
meaning, and who are careless of the dangers of over-fishing. 175*
Illegal trawling began around the year 1894 and by now has [185]
drastically impoverished the inshore fishings to which the Harris and Lewis crofters once looked for a supplement to diet and income. The rapid adoption of efficient trawlers was attended by an increasing number of reports of their poaching within the three-mile territorial limit. Though the islanders tried many times to involve the Government's cruisers for the protection of their shores, the poaching went on, and still continues today. Even some of the violence which attended the early attempts to clear the scum from the sea, as it were, continues, part and parcel of the island's sea-life.

Fish processing

A former freezing plant in Stornoway, run by the Herring 228
Industry Board has been converted into a fish-processing factory.
This facility, of great value to the port, is run by Rolf Olsen A/S, [648] •
a long-established Norwegian company with a successful background in fish processing. The company has received investment aid from the Highlands & Islands Development Board, the Highland Fund and the Stornoway Trust; the latter's interest is significant in that it is the first time in which the funds of the Trust have been invested in a private concern, to help retain Stornoway as a successful fishing port.

The most regular shore-side as distinct from maritime industry is the processing of prawns (scampi, or *nephrops norvegicus*). Two firms buy the prawns at the pierhead, shell, cook and freeze them,

STORNOWAY

rocks about intrusions or dykes of more resistant crinanite. Second, 632
the better nature of the soil derived from the weatherings of the 133
sandstones and conglomerates has aided reclamation and cultivation.

In the long years of its existence the town has been a focal point 175*
of island history, fanning out to many corners of the world, where 632
it has been merged with the wider history of Britain, the Commonwealth and elsewhere. Detached as it was from the rest of [181]
Scotland by the Minch, Lewis often went its own way. In the 175*
reign of Queen Elizabeth, when England and Sweden plotted 632
against the Scottish crown, the emissaries of these countries met 648 •
in Stornoway. Later, in April 1719, a council of war was held in a room in Stornoway to plan the overthrow of the Hanoverian dynasty of Britain; included in the assembly were the Earl of Seaforth, the Marquis of Tulibardine, George Keith, the hereditary Earl Marshal of Scotland, and his younger brother James, who was to become the famous Marshal Keith. Prince Charles Edward, though not setting foot in the town, looked at its twinkling lights from across the Bay, at Arnish, while his pilot tried to obtain a boat to take the royal fugitive to France.

The harbour has seen many kinds of ships on its waters. In 504
the twenties, the *Metagama*, the *Marloch*, and the *Canada* came 501
to take away almost a generation of young Lewis folk to the new 632
lands across the seas, because their own island could not support [167]
them. The *Iolaire* sank within sight and sound of the harbour mouth and dragged about 200 Lewismen with her into an island memory. The *Cervona*, of Dundee, dropped her anchor just by Arnish lighthouse in July 1904, carrying survivors from the emigrant ship *Norge*, sunk at Rockall with appalling loss of life. [143]
The *Victoria and Albert* visited Stornoway in September 1902, 701
the first visit to the town by a reigning monarch. That was a great day, the result of a letter from Provost Anderson of Stornoway in which he pointed out to His Majesty, King Edward, that with less than 30,000 inhabitants Lewis had 2,300 men in the Royal Naval Reserve, trained at the local Battery, the largest in Britain. There were also 1,100 men in the Seaforth & Cameron Militia, all of whom volunteered for foreign service in 1899, and 900 of whom did garrison duty in Egypt. Between 300 and 400 Lewis-

COMMUNICATIONS

secondary school, the 'Nicolson', has had since its inception a 632
formidable academic record. Back in 1907 work from the school 871
was included in the educational section of an International Ex- [648] •
hibition held in Christchurch, New Zealand: this was appropriate [167]
because emigrants from the west Highlands, notably from Harris and Lewis, were among the pioneers of New Zealand education a century ago. In 1957 new extensions were opened, costing about £300,000 and making the school the largest of its kind in the Highlands area. It is co-educational, its primary and junior secondary departments taking only Stornoway children and its senior secondary department catering for those from both Stornoway and rural Lewis. Many board out in the town during the week, returning home at weekends.

In providing social facilities, the town has placed itself in the 632
position of an agent for those things deemed necessary for life, 368
and is a middle-ground between the rural repression of the Free 77
Church and the city abandon of the mainland, with resulting 183
dilemma. The public houses, the cinema, youth clubs, dances and [369]
juke boxes are all in direct opposition to the preaching of the Free Church. The result is tension between the town's desire to act as [184]
a host for tourists and its wish to fulfil its duty on a religious plane; to instance this, the Stornoway Sabbath is less strict than the Lewis Sabbath. In keeping with the rest of Lewis, social standards are extremely high. Home is the centre of life, as it [592]
always was; the sense of community and communal responsibility 586
is there. Divorce is practically unheard of, and the incidence of 674
crime, as such, is extremely low.

174 ready to leap fore or aft: "Quick to move as the mountain
614 hare . . . or the hounds after him; quick to climb as a
501 squirrel in the spring-time". Then comes the stirring
539 evocation of the storm, testing each man's mettle and the
577 discipline of all, until at last, their ship battered and themselves bruised and weary but undaunted, the crew reach Islay and round the sheltering point of Carrickfergus. There, with thanks to the High King, they drop anchor, the *birlinn* rides in peace, and all find meat and drink and rest.

175 As at sea, so in war, loyalty could rise to heroism in
614 individuals and corps. Young men were attached to their
721 chiefs by chivalrous leadership in warfare, both before
703 1745 and later. The Highlanders' high character contrasted with that of most Regiments of the Line, too often disciplined with the lash while demoralised by debauchery. From Lewis the Islesmen went out to the Seaforth or the Ross-shire Highlanders. General David Stewart of Garth, historian of the Highland regiments and people, wrote of these two regiments that again and again their courage and coolness in battle were proved.[1]

175 Not less striking was the record of Gaels among civil
• 618 populations, whether in Britain, as in the 'Forty-five, or abroad. In Germany in 1761 and 1762 much was said of the Highlanders' kindness, "for the boors were much better treated by those savages than by the polished English and French". Similarly in the Low Countries in 1814 and 1815, they were *enfants de la famille* and "kind as well as brave". The mayor of Brussels declared that they "called forth the attachment and esteem of all", and the inhabitants requested him "to endeavour to detain the 78th (2nd battalion Ross-shire) regiment of Scotchmen in the town, [113] and to prevent their being replaced by other troops".

175 private naturally addressed him in Gaelic by his Christian
703 name, and writes of him with the warmth and respect due
[551] to an elderly relation. Something of this mutual regard remains; and young Englishmen of education have told me of their surprised admiration for the character of the best traditional type of 'Regular' Scottish, and particularly Highland, non-commissioned officer, before and during the two world wars.

175 Such bravery and character abroad led Stewart to the
829 conviction that their foundation must be the character of the peasantry at home. He held that the Highlanders' home life demanded support, and having served with the Sutherland Highlanders, he felt the deepest grief and anger at the clearances of the Sutherland estates by an English
[727] proprietor. When Stewart remarked that a few deaths mattered little when compared to the nation's renown, for this 'endures for ever', he referred to deaths in battle, which he analysed as typically of 1 to 2 per cent of the men. Whereas upon long voyages or in unhealthy stations, 25 per cent of soldiers or civilians might die of disease.

175 Yet, to the Gael, discipline did not mean blind sub-
703 mission to injustice. "Accustomed to obey their im-
614 mediate chiefs, who durst not break a compact with them, and to have promises punctually fulfilled, implicit submission was not yielded when they had rights to preserve." For the bond by which, of old, the Highlanders "were held to their superiors and one another" was "the bond
• [648] of fidelity and affection. . . . In later times, when they entered the King's service, they considered themselves as contracting parties", and resented breaches of faith. Of eight mutinies in as many regiments, that of the Seaforth in 1778 should be instanced here. The regiment included many Lewismen, with Mackenzies and Macraes, and also

175 some 200 men enlisted at Perth. When, shortly after they
703 had been embodied, the men were quartered in Leith prior
614 to embarkation, complaints arose about infringement of engagements. "The regiment refused to embark, and
• 648 marching out of Leith, with pipes playing and two plaids fixed on poles instead of colours, took a position on Arthur's Seat at Dunsappie, of which they kept possession for several days." The inhabitants of Edinburgh, who had encouraged them, supplied them with provisions and ammunition. "After much negotiation, a proper understanding was brought about . . . and they marched down the hill . . . with pipes playing and with the Earls of Seaforth and Dunmore, and General Skene, at their head. They entered Leith, and went on board the transports
[721] with the greatest readiness. . . ." None of the men were tried or confined. Seaforth, as their colonel, set out with them to India—although his fortune and title would have allowed him ease at home, or the purchase of higher military rank. His death on the long voyage contributed to the men's "prostration of mind which made them succumb more easily to the effects of disease", scurvy, of which 230 out of 1100 fit men died before reaching Madras, and others soon after. As we have told, the survivors fought with disciplined courage.

175 To a chief, recruitment was financially important, for
702 he, and not only the recruits, received a handsome bounty.
614 Simultaneously it provided him with a commission without the cost of purchase—previous training and promotion being considered unnecessary. The clansmen knew these facts of bounty and command, and generally responded to an appeal. When Stewart of Garth was recruiting for the Ross-shire Regiment, a band of young Lewismen joined it for half the bounty offered by a Lowland regiment!

286 warfare—destroyed its intimate tie with the home, with
532 peace. The web the women had dyed, spun, woven and
614 waulked together ceased to be a sacrament when the tartan
714 was proscribed to men except when worn as a uniform with
[178] "England's cruel red".

• [648] The framers of this law, which stood on the statute book for over forty years, took full cognisance of what they
175 did. Appended to the Act of 1747 was an oath which
648 reversed every benediction said by the women at their work: "I . . . do swear, as I shall answer to God at
286 the great day of judgment, I have not, nor shall have, any
291 gun, sword, pistol or arm whatever, and never use tartan,
782 plaid or any part of the Highland garb; and if I do,
641 may I be cursed in my undertaking, family and property—may I never see my wife and children, father, mother, relations—may I be killed in battle as a coward and be without Christian burial in a strange land, far from the graves of my forebears and kindred; may this come across me if I break my oath". This Act, as law and symbol, struck full at the sacramental life of family, neighbour-team and clan community, in which labour and prayer had been indissolubly bound.[1]

(c) WORSHIP, CONGREGATIONAL AND PERSONAL: THE BOOK AND THE WORD

178 Little remains of the tradition of worship in the tiny
771 oratories, chapels or 'temples' whose ruins stud the shores

[1] The collaboration of friends in Lewis may allow mention of the Gaelic
346 version of A. Geddes, *The Spirit of the Tartan, a Song Drama* (English
172 Version); *Souvenir Programme and Book of Songs* (Outlook Tower, Edin-
burgh, 1932). In this the spirit of this labour sequence embodied in its
[113] songs and runes is dramatised in its setting of custom and history. The Gaelic version was prepared by the generous labours of James Thomson, M.A., Bayble, and the late Duncan Macdonald, M.A., Sandwick, Lewis.

175 visited the chapel of St. Rona. It was fenced, and was
814 swept every day, suggesting daily worship; and the Lord's
771 Prayer, Creed and Ten Commandments were repeated
there every Sunday morning. This led Martin to say that
[788] the people had no vices; and indeed the Gael's own
prayers insist upon the beauty of virtues rather than on
the evil of vices. In Lewis at that time (1695) there were
two ministers, at Stornoway and at Barvas; and the Barvas
minister visited Rona yearly. Isolated though they were
from their fellow-Lewismen, the Rona folk thus had annual
contact with organised religion, such as was lacking even
on the main island during periods of stress in Scotland.
[648] Invasions, repeated destruction and prolonged intrigue by
the Norsemen or the English Kings, led to, and intensified,
[798] internal strife. And in Lewis forty years of warring inter-
regnum had followed the 'Reformation'.

175 These and other notes of worship given by Martin,
771 such as those of the Lewismen's devotions when touching
at the Flannan Isles, show that the worshippers relied
798 greatly upon themselves and one another. They did so
even after their primitive Christian modes of worship had
been blamed and derided by Reformers, and the new modes
in their turn condemned by such ordained priests as secretly
made their way north from Armagh to Uist, Harris and
probably to Lewis. How much more stable must their
community's faith have been before the tragic upheavals
[797] which began at the Reformation. Some four centuries
earlier, the Roman Church supplanted the institutions
developed by the early Celtic missionaries from regional
and rural growth, by a formal organisation developed upon
an imperial and civic model. Thus they may already have
shaken faith by undermining the authority of communal
[795] sanctions and traditions. But the break caused by medieval

779 with his spouse. The knight, the first Stewart Earl of
764 Menteith, had died four years after his wife, in 1294.
532 Medieval sculpture was then attaining its height, as this
monument, in spite of the ravages of time, bears witness.
175 The following year, 1295, saw the commencement of "the
three hundred years war" with its repeated destruction
644 of Scottish arts and traditions of peace. Under King
[829] Alexander III, "that Scotland led in luve and law", peace
within the kingdom of Scots allowed a union embracing
• [648] Gaelic Christian traditions and Scoto-Norman arts. After
his death this became all but impossible. So far as scholars
181 can tell me, this almost unnoticed monument remains
764 unique in Christendom, indeed in the world.[1] The arts
of Scotland, hitherto in touch with European achievement,
were shattered by invasions, and Gaelic tradition was only
to be maintained by the very poor, whose debtors, for all
time, we have become.

763 At the approach of death God's mercy and peace were
782 sought. Latterly Roman Catholic prayers stressed the
wish for Confession to a priest, followed by Supreme
Unction for the attainment of 'Happy death', *Bas sona*.[2]
[174] In early times confession seems to have been made as
willingly to the 'Soul-friend', followed by Benediction.
When death had come, the mourners sang of sleep and
764 home. In Lewis today funerals are conducted in silence
to the graveside, where the last service is held; but

[113] [1] *A unique medieval tomb at Inchmahome: a cultural link.* (Geddes, 1952.)
[2] It would be of deep interest to compare the attitudes to death found in 'Spiritual Songs' by Protestant Gaels like Buchanan or Grant, with songs on death which, though maybe of post-Reformation date, are of Roman Catholic origin (*e.g.* in Fr. Allan Macdonald's collection, poems on the Day of Judgment, and of Wrath; on age and on death; and on Purgatory:
[171] pp. 31, 85, 146; 34, 19, 21; 27). Some have much in common, both by virtue of the earlier traditions they shared and still more because of parallel trends of Reformation and Counter-Reformation. Cf. *Carmina*.

175 favour of sheep farmers, in Lewis there had been very few
236 evictions. Early in the days of the sheep-farming boom,
427 one of the Seaforths had been offered ' double rents ', and refused them rather than turn the people away. Later on, when the wars were over, and when the Seaforth fortunes were failing, subtenants and their cattle had been replaced by sheep stock in three tacks around Broad Bay (at Coll and Gress and at Aignish at the base of Eye
[731] Peninsula). The failure of kelp-burning and the potato famine brought acute want in rocky parts of the Isle, and led to the desertion of their homes by certain communities.
175 In 1863, out of a total of forty crofters in a township of
16 Barvas parish, more than half emigrated by help of Sir James Matheson. Local resettlement was aided by Sir
[423] James, who provided horses and implements for Uig people who moved to Shawbost (6 miles north of Loch Roag). Abandoned places became farms; and although agricultural prices fell and Sir James made little profit from the erection of buildings and the drainage, dyking and fencing on farms, land was improved, and better stock was bred, of which some was available to improve that of crofters,
175 too. Twenty years later, however, increasing numbers
427 increased the demand for crofts, and the people sought to reoccupy their forebears' land. In this, the Lewismen
[171] shared in a widespread movement, extending from the Scottish Isles to Wales and Ireland.

175 As a result of the real sufferings of the people in the
654 Highlands and Isles, and of the growing interest in the land shown in the country and in Parliament, where Irish
• [648] members made themselves the crofters' allies, the Government in 1883 appointed a Royal Commission of Enquiry under a fair-minded judge, Lord Napier. As a remedy, the Commissioners recommended measures based upon

000 to one another, to the landlord and to the State would hav
been profoundly different.

(2) STATE AID, THE LAND, AND THE CROFTERS RESPONSE

175 Until 1914 the congestion in each Island townshi
162 dotted between the wide, lonely moors, had increased, an
362 it was still increasing. To every two legal crofters, eithe
a cottar or a landless squatter was to be found, on th
175 ' skinned land ' outside the crofts. Parliament, in 1886
656 had discarded the Napier Commission's recommendation
• 648 to give powers to extend the crofts from portions of th
common, or to supply a house site and garden space fo
[362] men of independent occupations such as fishermen. Thi
congestion embarrassed Government and local services.

427 The associated rating system was also at fault; indee
656 it has still to be put right. For instance, a crofter's son—
able to make a living, say, as a fisherman, and about t
marry but having no croft—was penalised by high rates
should he take up his proper status of a legal cottar at
small rent. Throughout the crofting counties, the lega
crofter, as an agricultural landholder, was (and is) de-rated
and had only to pay one-eighth the rates for a non-agri
cultural holding of the same rental. Only since 1938 ha
the value of the house been assessed. A recognised cotta
paying rent to an estate was rated as owner and occupier
being treated in fact as a feuar; [1] and as such he had t
bear a heavy burden of rates, possibly of over 30s. in the £

HISTORY

175 Some who were blinded at
704 Rosetta were granted a pension of about £30 per annum, with
648 an allowance of £12 per annum for a guide to lead them
727 about.
729 On 21 December 1859, 'a public meeting of the Inhabitants
175 of Stornoway was held in the Mason Hall to consider the pro-
702 priety of organising an Artillery Volunteer Corps for the defence
704 of this Island'. About a month later, Sir James Matheson, Baronet of Achany, and Member of Parliament for the Lews, was asked to tender to Her Majesty the services of eighty-one gentlemen who wished to form the corps. The unit eventually formed was the 1st Company in the County of Ross and held the 44th place in the Artillery Volunteer Force of Great Britain. After many ups and downs in its history, this corps exists today as the Ross Battery.

For more than half a century the activities of the corps were peaceful. The only highlight was its participation in the famous Wet Review at Edinburgh, on the occasion of Queen Victoria's Jubilee. Matching the rain which lashed down in sheets from the sky, a sewer burst open in the centre of the parade ground. Company after company divided ranks as they approached the disagreeable fountain in their path. But Lt John N. Anderson, later Provost of Stornoway, gave the order 'Right into it!' Amid a great roaring of cheers from the watching crowds, the Stornoway Volunteers marched straight on in perfect order. It was perhaps prophetic of the sterner tests to come.

175 The unit was one of the Royal Garrison Artillery in 1908 when
704 it was reformed as the Ross Mountain Battery of the 4th High-
726 land (Mountain) Brigade. Later, as a regular division, the battery
648 was the first field artillery to be landed at Cape Helles, in the Gallipoli campaign. At Suvla Bay, it lost 50 per cent of its strength in two days. At Ismailia it mustered again to fight against the Turks in the Canal area, but it was not allowed to remain to assist in driving back the enemy. Instead, it was moved to Salonika to help the mountain batteries, now much depleted by malaria. The final move was to Bulgaria, where the Lewismen were the first gunners, if not the first British troops, to enter that country.

175 Before, during, and for a time after, the first world war, the
702 Ross Battery had close ties with the Nicolson Institute. To quote
704 from a past Rector of the school:

CROFTING CHANGES

of larger and more economic working units of over 30 acres of 241
arable land is also apparent in the southern Hebrides, the west 311
mainland of Ross & Cromarty, Argyll (mainland and islands) and 178
Caithness.

The acreage of common grazings held per holding varies from
under 50 to some 200. The crofts, as already mentioned, are in [632]
townships, of which the island has 168, half being fenced and half consisting of individually fenced crofts. During the winter most of the crofts are laid open for winter grazing by sheep of general ownership. Manure resources are mainly dung, seaweed, shell sand and of course artificials where necessary.

A new aspect of crofting in Lewis is its extension into forestry. 311
A recent survey by the Forestry Commission indicated that under 313
400 acres of the land not being used for crofting were suitable for 178
afforestation, and that these acres were made up from twenty-three different plots. At Garynahine Estate can be seen the beginnings of a real afforestation unit of some 500 acres, a scheme of the utmost significance for the economic future of Lewis and for the relationship between crofter and landlord. Too often in the past this relationship has been biting, hard and inflexible; in particular the crofter was understandably unwilling to release good land for planting trees. But the crofters of Callernish agreed that the right of usage of 285 acres of the common grazings belonging to their township should revert to the landlord, this land being thrown in with 220 acres of the Garynahine Estate. Labour comes from the affected township and others in the area.

FISHING

Early beginnings

226
It is the humble herring that has contributed so much to the 175*
island's economy and its history. At a very early date in history, [648]
the Hebridean fishings were worked by Frenchmen and Spaniards who must have found them rich enough to repay the long journey and weeks away from home in the cold Minch waters. It was not, however, until the end of the sixteenth century that the wealth of the Minch was really discovered, this time by the fishermen on the mainland of Scotland who copied the tricks of their trade

226 from the enterprising Dutch. Dutch fishing-busses were constantly
*175 off the island coast as early as the reign of James V. In 1594 the
[648] Hollanders made their first recorded visit to Lewis; they had a licence from Scotland's James VI which allowed them to fish outside a limit of twenty-eight miles.

228 It was, indeed, partly the success of the Dutch fishings which
*175 attracted the Gentlemen Adventurers of Fife, backed by the King in their unsuccessful endeavours to colonise Lewis. James VI's son, Charles I, was similarly enticed by the Minch, proposals being put forward for the purchase of Lewis by the Crown and for the formation of a new corporation, under English auspices, which would develop the island's fisheries. The corporation, founded in 1633, was the 'Company of the General Fishery of Great Britain and Ireland' and its main seat of operation was to be in Lewis. As Lord Seaforth was owner of the island at the time, he was invited to join the company's board, so that he could, with his influence, 'keep the islanders in awe'. One of the fishing stations set up in the Hebrides was on the island of Hermetray in the Sound of Harris. Martin Martin, writing of this island at the close of the same century, says that he saw 'the foundation of a house built by the English, in King Charles the First's time, for one of their magazines to lay up the cask, salt, etc, for carrying on the fishery, which was then begun in the Western Islands; but this design miscarried because of the civil wars which then broke out.' The scheme indeed fell flat (in 1640), and though Charles II tried to revive it on a commercial basis, lack of capital caused it again to come to nothing.

228 Where were the islanders in all this activity to develop the
*175 fishings around them? Strangely, there was a definite disinclina-
648 tion to fish until the Dutch, by their example, illustrated how fish could become a new factor in their economy. Lord Seaforth was vitally interested on his own account. When he acquired Lewis (in 1610) he set about establishing what amounted to a principality quite independent of recognised authority; and in contravention of the laws and privileges of Royal Burghs, he set up Stornoway as a fishing port, introducing a number of Dutch fishermen to prosecute the fishings in the Minch. In 1629, the Commissioners of Royal Burghs complained to the Privy Council

of Lord Seaforth's conduct in this matter. They alleged that he 228
'draiv in hither an number of strangers who daylie resorts to and 175*
fra Holland to the Lewes and continent next adjacent (the Ross 648
mainland presumably) and has caused them be answered of all such commodities as these bounds affords, as nameli with fishes and beeves quhilkis with the hyde and tallow, with manie utheris commodities they transport to Holland.'

To satisfy the Royal Burghs, Seaforth had some of his Dutch friends sent away. But several Dutch families remained in Stornoway until the outbreak of hostilities between England and Holland in 1653.

228 In Harris, similar efforts were promoted by Captain Alexander
175* MacLeod, who in 1779 bought Harris, together with St Kilda,
[425] for £15,000 from the commissioners acting on behalf of General Norman MacLeod. The latter had, in 1772, inherited from his grandfather both the chiefship of Harris and a debt on the property amounting to some £50,000. Captain MacLeod, who skippered the East Indiaman *Mansfield*, did much to stimulate better conditions in Harris, and advocated the generation of a fishing industry. In the face of opposition and ridicule he showed by practical example what could be done to make a success of the herring fishings, introducing a number of east-coast fishermen with Orkney trawls to teach the inhabitants, and reaping a good harvest from the fishings off Rodel, despite the dismal auguries uttered by the Harris-folk. He improved the local harbour [503]
accommodation and erected a storehouse for salt, casks and the [488]
like, he built a factory for spinning woollen and cotton thread, [288]
and twine for herring-nets; he advanced money to those fishermen [452]
who were interested for the purchase of boats and gear; and he [427]
provided them with rent-free cottages with a ground-patch on which they could grow potatoes. He built roads between the [491]
village of Tarbert and the two jetties he made there, and he [346]
erected a schoolhouse and an inn. But all this hard work to put [485]
Harris on some realistic economic basis came to little. The native population were slow to appreciate the potential income lying about them.

The potential of the sea was of course eventually realised, particularly where the fishing grounds were favourable, Stornoway

r about it; the Lewismen, said an official indictment, had 'given 175*
emselves over to all kynd of barbaritie and inhumanitie', and 648
ey were 'voyd of ony knawledge of God or His religion'. Thus
e people of Lewis had something coming to them.

For some time King James VI of Scotland (James I of Eng-
nd) had been concerned with the problem of bringing the Mac-
eods of Lewis into an awareness of his authority. His 'maill' and
ressum', the duties owed to him by the MacLeods, were long
verdue; there was nothing for it but to go and collect. The fact
at Lewis had been described to him as 'inrychit with ane in-
edibill fertilitie of cornis and store of fischeingis and utheris
ecessaris, surpassing far the plenty of any pairt of the inland'
robably inspired his scheme to gather it all within the hem of his
oak. Whether he was aware of the true level of the island's pro-
uce is not known; though the sea was rich indeed. In any event,
e scheme was nothing if not predatory. The 'civilisation' motive
as a veneer to cover up any action deemed necessary to secure
e island for the Crown. A contract was drawn up between the
ing and the Adventurers. These men, drawn largely from Fife,
ere also inspired by the supposed El Dorado lying just beyond
e mountains of the Highlands and the waters of the Minch.
n adventure it was thought, for Lewis was as remote to the Fifers
s the Americas were to the Spaniards; and an adventure it proved
be. The Adventurers landed in November 1598. Lewis showed
em little signs of welcome. Cold, high winds, rain, bleak cliffs,
nd a Gaelic-speaking people whom they could not understand
et them; and to compensate for the chill of the season, Mac-
eod of Lewis gave them a warm-up fight. But the mercenaries
hich the Adventurers brought with them proved the better men
r a time.

Resistance overcome, the incomers established themselves as
est they could. They built a 'prettie toun' in the part of Storno-
ay known as South Beach, facing Stornoway Bay. That small
urve of land is still there today, probably as it was almost 400
ears ago. Food ran short. The Adventurers had thought that this
nd of milk and plenty would supply them with sufficient pro-
isions on arrival; so they had brought only emergency stores.
tarvation forced them to obtain what they could locally, as best

COMMUNITY FROM PAST TO PRESENT PT. II

For a year or two after the war many men and women returning from the Services, the sea or the factories found employment in the Stornoway Harris Tweed industry. This included work in the spinning mills and hand-weaving at home (work in which the wives and children also helped by this family is jobs such as bobbin winding. Few fishermen dared to sink capital in new boats and gear, and risk losses such as those sustained after 1920. Few women wished to return to the hard work of the pre-war days. The whaling station, built on West Loch Tarbert before 1914 and open for a short time between the wars, was reopened in 1950, and employed some 30 men for 18 months before it closed in 1952. Crofting was lightened by some mechanised cultivation. The war-time conscripts who had of fields had ceased, though some harbour-work and road-making was assisted by government grants.

In 1949 the Harris Tweed industry, now the Islanders' main source for earning, was crippled by the imposition of a 66⅔ per cent purchase tax on hand-woven Harris Tweeds. Parliament decided that as a non-utility product, its export sales alone could be exempt from tax. Viewing the position of the tweed industry in Britain as a whole, there were strong arguments for the extension of the tax to Harris Tweeds: the high-grade industry of the Scottish Border or the manufacture of the Wool Riding should not be subjected to unfair handicap. At the same time the stopping of a handicraft practised by peasant or artisan favours mass-production to the loss or ruin of traditional and experimental workmanship or design to which, in the end, the mass-production is dependent for inspiration. The obvious economic handicaps of Island hand-weaving may surely permit some leniency. The report trade in Harris Tweed, in which the impondorable 'sentimental

ON & BETWEEN TWO WARS, AND AFTER

value' is important, is an appreciable dollar-earning asset; and because of the flourishing Harris Tweed industry, factoring must be stabilised by sales at home.

These and other facts suggest that if some share of taxation had to be imposed in the national interest, it should have been done by steps to prevent the growth of readjustment in manufacturing and of adaptation to the carefully fostered market. What seems indefensible, even in the national interest, was the imposition of the full 66⅔ purchase tax. As a result of this blow, the crofter's web could not be sold, and lay, a prey to moths, in his home, while the mill owner's stock piled up in the warehouse. 'Hand-looms', newly bought or hired, lay idle in the crofts, or the sheds and the machinery of the mills stood idle. The hand-weavers with their helpers and the employees in the mills, their savings spent, began to seek work beyond the Island. As the season of April 1950 was approaching, the prospects had been falling as workers trickled away by every steamer. Some adjustment was made, it is true, late in 1951; but the case of the small independent weaver remained as hard as ever.

The amount of tweed stamped with the Orb Trade Mark, which diminished slowly from 4,484,000 standard yards in 1948 to 4,140,000 in 1949 and 3,780,000 in 1950, fell when the tax was imposed to 2,800,000 in 1951. In 1952 there was a recovery, maintained in 1953. Over 5,000,000 yards will have been stamped in 1954.

ses journey ever to the Capital of Skyer which stands on Portree Loch.

The Village of Portree, as stated earlier, represents the only successful attempt to introduce a modicum of settlement to the island. It was created by a landlord in the early nineteenth century and has been fostered by the national and county government, especially within the last twenty years. Nothing has distributed the English and the Lowland Scots more widely than the alien nature of town life in the national heritage of the Scottish Gaels. Ever since the nineteenth century the Sutherlands have been resisting the introduction of villages. The decision of the Sutherland family, generations ago, that only slightly less element in its determination that the country people should have a farm, if not a burgh, come what may.

Portree is a village of the nineteenth century, the population has been falling as workers trickled away by every steamer. Some adjustment was made, it is true, late in 1951; but the case of the small independent weaver remained as hard as ever.

The amount of tweed stamped with the Orb Trade Mark, which diminished slowly from 4,484,000 standard yards in 1948 to 4,140,000 in 1949 and 3,780,000 in 1950, fell when the tax was imposed to 2,800,000 in 1951. In 1952 there was a recovery, maintained in 1953. Over 5,000,000 yards will have been stamped in 1954.

ployment. In 1911 the first alterations in the traditional system of land use were made. A religious revival was underway. The former social hierarchy had almost disappeared, and population growth accelerated. The year 1911 witnessed a cultural upheaval and a rejuvenation of the culture. The alien element had been broken by schism. Famine was widespread. Large scale commercial farming was replacing the subsistence economy, and the population began to decline. In 1911 the government passed the first law specifically designed for the Highlands since the beginning of the modern period. Commercial farming was restricted in favour of the traditional economy. Within a few years religious schism again appeared. Population decline accelerated and the age structure began to be modified in the direction of an aging population.

Period I (1745 - 1911)

The failure of the 'Forty-five' is popularly regarded as the beginning of the end of the Highland way of life. Contemporary sanity and the heralding of the beginning of the modern period of Highland history. In reality, the break with the past was not as sudden or complete as is commonly thought. The clan organization had undergone pre-front modification and functionally was in a state of decay before the abortive rebellion provoked the British government to abandon the semi-de jure. The event was only the catalyst which hastened the political and economic assimilation of the region with the Lowlands of Scotland. In retrospect, the reforms and innovations which

shattered the social organization, economic system and pattern of religious life formerly characteristic of the Isle of Skye can in many cases be traced well back of the 'Forty-five.' The crucial fact is that only after this date did they assume importance. Moreover, many traits which typified the culture in the days when a belief in clan brotherhood was an all pervading regulator of human relationships persisted with varying intensity and duration, and the form of the culture was maintained.

The British government was determined to shatter the remaining vestiges of clan authority, which had acquired an synonymous with hostility to peace and to settled habits of industry. The clansmen, rebels and loyalists alike, were pressed and forbidden to wear their distinctive dress. Redundatory jurisdictions, the heritable jurisdictions and sheriff-substitutes replaced the local barons' courts. The disaffected chiefs were deprived of their estates. In short, the political and military power of the clan chiefs was broken. The English believed they had emasculated and emasculated and poverty-stricken people from the yoke of arbitrary and tyrannical power.[2]

Where formerly such men was restricted and protected by his chief and clansmen there was a void. The system of justice for the island was placed under a single sheriff-substitute.[3] Beyond his presence, the influence of the British Government

Was felt only when men were enlisted into the armed forces, or when fiscal enactments were enforced.[4] But in there any indication that the people were inclined to look to the government for assistance. Social control was strong enough to deal with transgressors. In Dalriadic period, for example, the ministrel reported that "for four thirty persons have been expelled for theft, not by sentence of the magistrate, but by the united efforts of the better sort of inhabitants."[5]

The Highlands of Scotland did not in themselves have any effect on the day to day life of the people. We must, then, turn to the attitudes and policies of the former clan chiefs to find the source of the disruption. The government had been fomal progressive and, in consequence, some of their dignity and influence the chiefs had two functions left to them. They still had the authority of the estate and the sheriff and sheriff-substitutes replaced the local barons' courts. The disaffected chiefs were deprived of their estates. In short, the political and military power of the clan chiefs was broken. The English believed they had emasculated and emasculated and poverty-stricken people from the yoke of arbitrary and tyrannical power.[2]

Where formerly such men was restricted and protected by his chief and clansmen there was a void. The system of justice for the island was placed under a single sheriff-substitute.[3] Beyond his presence, the influence of the British Government

dynamic evangelical form of worship in preference to the moderate, humanistic preaching of their own ministers.

Period IV (1811-1845)

The year 1811 marks a turning point in the culture history of the Isle of Skye. During the second period the processes we have observed in the initial period gained strength and began to unfold in their characteristic forms. By this time the Industrial Revolution was nearly 100 years old. Skye, Britain was on the verge of its leading in the world. Population of the area and her commercial empire was her major concern. Since the government remained disinterested in the Highlands, the sources for culture change must spend in sought in the attitudes and policies of the local landlords.

Exercising their legal power to separate and remove the inferior tenants, the landlords, in the interest of economy, [illegible] the proprietors began a reorganization of their estates.[24] between 1811 and 1831 enough was virtually abolished.[25] In the Lowlands and Britain multiple alienation of the traditional system of land use and tenure had only been a step in the direction of a more sweeping reform, consolidation of

By 1861 there was a small crescent of houses along the shore, about twenty in number, and on the raised terrace there was a new tax, a church, a post office, a hotel, several shops, and a street of houses. The population had grown to 400 or 500. The existence of the village depended on the steamer cattle market and the fishing industry, which was in the hands of merchants.

Following the establishment of Portree and accompanying the gradual decline in self-sufficiency, the island was brought into closer contact with Great Britain by an extension of regular means of communication.[6] Regular communications, of course, are a prerequisite for commercialization. There must be a market for the products of the region and a means of transport to the market. Without such access no man can specialize; with it the Islanders had been diminished to specialize. The old three rents, the bailie rents which had served them well for many centuries, were now supplemented by rents in the lowland sense of the term. By the end of the period most of the more accessible crofts had been connected with Portree and the mainland, and a steamer had entered regular service between Portree and Glasgow. These factors paved the way for the introduction of commercial sheep farming.

[6] George and Peter Anderson, Guide to the Highlands and Islands of Scotland (4th ed.), Edinburgh: Adam and Charles Black, 1863, pp. 1-2; Donald Sutherland, op. cit., p. 1.

While the process of commercialization proceeded apace the institutional efforts of the people to maintain their traditional way of life, events in Great Britain were beginning to have a pronounced adverse effect on the local economy. The end of the century witnessed the population at the lowest ebb. Although the drowing trade remained brisk, the value of the stock declined markedly.[7] An increase in the number of cattle on the peninsula was a means to maintain an economic equilibrium, the people, however, in the region of the contemporary outlaws; therefore, all I wish to do is indicate the direction the processes, which we have been following, took under the national attempt to redressed them. The major trends to be noted are two. The proprietors' influence in determining how the Highlands should be developed, and, with a relaxation of the commercialization of the estates, many of the crofts and cottages characteristic of the traditional culture assumed renewed vigor.

Since the Ryder Commission had been mainly concerned with the disregard of the customary rights of the crofters and their inconsiderate treatment by proprietors, the recommendations which were pice steel to Parliament sought a land reformation within the framework of local mutual.[8] Unlike the Continental Commons, a local, self-governing body, the Highland township had never legally existed. Elsewhere in Scotland this communal agricultural unit had been replaced by individual farm occupancy, but in the Lowlands and Britain the Highlands was a retrogressive step; the township should be given legal

[7] Major Scott, pp. 7-17.

The year 1886 is a chronological hinge in the culture history of the Highlands. The British government began to take an active interest in the Highland affairs for the first time in history. Hitherto, the interest of the government had been confined to prosecuting, restricting, and taxation, occasionally interspersed with relief for the destitution. With the change in policy, we enter the realm of the contemporary culture; therefore, all I wish to do is indicate the direction the processes, which we have been following, took under the national attempt to redressed them. The major trends to be noted are two. The proprietors' influence in determining how the Highlands should be developed, and, with a relaxation of the commercialization of the estates, many of the crofts and cottages characteristic of the traditional culture assumed renewed vigor.

(21) being determined by conditions of culture, such as political and economic conditions. Under conditions of gradual centralization of economic and political systems, the geographically marginal crofting areas lag the most and strategies of survival of which pseudo agrarian commercial with development or other aspects of governmental processes.

18 Before the North of Scotland Hydro-Electric Board to operate in the crofting counties, not more than one croft in every hundred had electricity; but by the end of 1951, one in every six holdings had been supplied (Taylor 1954: 20). "The light" came to Shawbost in 1953. Before then, the islanders used Tilley lamps, a Canadian invention; and before then, double-wick paraffin lamps. Piped water came a few years later, around 1955; it was brought from a nearby loch, and the construction work gave temporary jobs to local people. The availability of these services facilitated the building of county council houses, which many welcomed as providing a relief to the congestion caused in part by rules against building more than one house on a croft. But, paradoxically, with larger, better homes and all these services came a decrease in the advantages of living in a crofting township: property was assessed and people began paying rates or taxes.

(24) The Harris Tweed industry has provided a higher standard of living, but income from this source is inconsistent. The standards produced during prosperous times cannot be met during difficult times. Many crowded houses with indoor plumbing are more heatily taxed than small, older ones. Some "luxuries" have become a car and a television once gotten are difficult to give up. A weaver must pay for his insurance stamp, which amounts to over £70 a year; and income tax takes a large percentage of a person's income, in large lump sums which are paid twice a year rather than in small amounts throughout the year. When income fluctuates, any constant demand for monetary outlay constitutes a liability. (p. 9)

To many persons outside the island concerned with Highland and Island development, Lewis has a reputation for "subsidy-grabbing." According to one official, "The people are too used to getting subsidies. They tend to sit back and rely on the subsidies, which makes it difficult to develop the place."

"We pay tax," said one weaver. "Why not get back what we can in subsidy?"

Income tax collectors shake their heads in despair at the thought of trying to get a true estimate of a crofter's income, except for jobs such as weaving for

(25) which official records are kept by the mills. If you say jokingly to a fisherman who has brought in a large catch that he should put some money aside for the income tax man, he is likely to reply, "We'll have to catch six first." A tradesman may be earning large sums of money doing local work as a skilled specialist at the same time that he is collecting social security. A man may move in and out of a number of different jobs and never report his income. "Occupational pluralism" (C. Brox 1966) rather than economic specialization has developed as a strategy in various countries along the North Atlantic rim, including Iceland, the Faroes, northern Norway and Newfoundland, as well as the west coast and islands of Scotland. In these marginal areas, income from specialized occupations is, in the long run, more stable than income from farming.

In times of national economic depression, strikes, shifts between socialist and conservative governments, and other crises, crofting provides an alternative strategy. During late last war, many islanders who had left the island (including some who had been quite prosperous in the cities) returned to spend the duration of the war in the village, glad of the relative security provided by the relative abundance of food and less strict rationing. During a huge snow-fall that occurred on

Resins taxes were first levied on whisky in 1814, and stills of less than 500-gallon capacity were prohibited. Small, illegal distillation continued for a long time after 1814, and throughout the Highlands and Islands tales are told of "the excise men" and how he was outwitted. The Island of Pabbay in the Sound of Harris was evacuated in 1843, supposedly because of illegal distillation that was being carried on there. The ruins of old distilling houses are found throughout Shawbost. Villagers say that these were used in the time of their grandfather or great-grandfather to distill whisky for occasions such as weddings.

In Shawbost, until recent times whisky was associated mainly with special ceremonial occasions: the birth of a child, weddings, and wakes. When a baby was born, the male guests would leave the house to wait for the news coming to see the baby. Having whisky at a funeral was so important that many a widow sold her cow to provide it, so that people would not say it was a bad funeral.

A curse was uttered against all night in the house of the deceased has stopped, probably in part because a prayer meeting lasting from midnight until 2 a.m. was introduced with the intention, according to one minister, of preventing the wake from becoming too joyful on occasion. Whisky was abundant at New Year's, and at weddings. "The dance

(159) is over. All of a sudden I know I had to get back. I drove everybody crazy trying to get a ship back as soon as possible. And the day I arrived in a British port, my brother—the one who had been staying with my parents—left the island. Over all those miles, did they somehow let me know? I don't know. It's best not to talk about it.

"I was going to leave the island the first year after I got back. I didn't like the weaving. But it's hard to leave parents who are old. I was caught here by circumstances. I was trained not to think of the future. I kept busy. I built the house myself, learning to do the bricklaying and joinery work as I went along. The weaving isn't too bad, except you have to be careful you don't earn too much, or you'll end up in the poorhouse. I had to pay £90 in tax this year. The tweeds don't come regularly, especially in the winter. Sometimes I have to go out and beseech the wives give you credit. You don't need money all the time. The worst thing is the drink. Some people can live on 15 a week and a Bible, but I can't."

Calliam's brother lived with him for years. They kept a lot of sheep and shared the weaving. Their father died and then their mother died after a long illness. As though the most important rite to the island had been broken, Calliam's brother then left the island, taking advantage of a six-month course offered by the Labor Exchange. He

(160) noisily triumphant yet unassuming way. He does not kill any of his sheep for home consumption.

His involvement with the croft is a "hobby" because the output does not compare with the income he receives from weaving. Whereas he might make as much as £100 from his crofting activities, his income from weaving is over £600.

(161) £7-800 a year. As a married man, he can earn as much as £8,5,6 without paying income tax.

(162) Income:

Sheep:	127/—	(three sheep sold to the slaughterhouse at £42 apiece)
	1/6	(one "Blackface" for the three sheep that were sold)
	16/10	(Subsidy of 1/- shillings each for 11 shearings and six sheep)
	22/10	(Subsidy of 2/- shillings for 11 ewes and six lambs)
	17/6	(Subsidy of 1/- shilling for 17 Cattle Show)
	1/6	(Fourteen fleece sold to the Wool Board at 2/- shillings per fleece)
	1,00/14	(Subsidy of 1/- shilling for 14 lambs at 1/- per fleece. The island breed sells for less than the Blackface, but has strong appetites for the fleece for two years. Many crofters prefer not to keep sheep, but, if they sell their fleeces to the mill, they can buy sheep-ewes in Britain who have high spirits, because of the location of the Harris Tweed mills on the island. But if they "go-off" in Britain, the mill will refuse to buy the fleece.)

(163) Cattle: 126/— (Calf sold)
1/6 (Subsidy for the calf)
1/- (Subsidy for the cow)
1,57/10
Total: 1,215/14

THE ISLAND HOME

(164) ewing and fishing, the fall in population would probably be small, if any, in 1941. This fall in the total figure was not so much a decrease in the number of families as in the size of family. The land was only then following the restriction of population begun half a century before in the rest of Protestant Britain, though the causes, social and economic, are very dissimilar. Actually, little did occur to change either the rural situation or that of Stornoway, until the outbreak of war in 1939.

(165) Since 1931 there had been no real decrease: Lewis is a land also of home-building, and of rents and abandonment; of increase of holdings, not diminution, and even of agricultural improvement. No doubt 'artificial' causes were at work: free loans, grants and unemployment insurance and assistance—once known as 'the dole'—and, secondly, the Government's policy of making the land of a man of exceptional prosperity, that when he laid his head on a pillow "he could hear on the one side the clacking of his corn mill and on the other side of him the bubble of his still." What more could the good man want? Nevertheless, the increase of distillation was not only the direct result of the prosperity in the island, but men and women in the prime of life, so that the question of resources, livelihood and population in Lewis needs to be re-examined afresh.

(166) The emigration which took place from 1929 to 1951 followed directly upon the boom and the unemployment in the Island's Harris tweed industry. This crisis resulted from the imposition in 1929 of a Purchase Tax on handwoven Harris tweed of 66⅔ per cent. If the tax had been maintained and no adequate adjustment made, the effects on population would have been far-reaching.

ECONOMIC CHANGES: 1750–1919

(175) About the seventeenth century there was introduced the making of aqua vitae, usige-beatha or 'whisky', and addition of the ancient drink of home-brewed beer or ale (lionn), a pleasant brew still tolerated by the Excise. In the rest of Protestant Britain, though the causes, social and economic, are very dissimilar. Actually, little did occur to change either the rural situation or that of Stornoway, until the outbreak of war in 1939.

(176) Since 1931 there had been no real decrease: Lewis is a land also of home-building, and of rents and abandonment; of increase of holdings, not diminution, and even of agricultural improvement. No doubt 'artificial' causes were at work: free loans, grants and unemployment insurance and assistance—once known as 'the dole'—and, secondly, the Government's policy of making the land of a man of exceptional prosperity, that when he laid his head on a pillow "he could hear on the one side the clacking of his corn mill and on the other side of him the bubble of his still." What more could the good man want? Nevertheless, the increase of distillation was not only the direct result of the prosperity in the island, but men and women in the prime of life, so that the question of resources, livelihood and population in Lewis needs to be re-examined afresh.

(177) The emigration which took place from 1929 to 1951 followed directly upon the boom and the unemployment in the Island's Harris tweed industry. This crisis resulted from the imposition in 1929 of a Purchase Tax on handwoven Harris tweed of 66⅔ per cent. If the tax had been maintained and no adequate adjustment made, the effects on population would have been far-reaching.

COMMUNITY FROM PAST TO PRESENT PT. II

(178) For a year or two after the war many men and women returning from the Services, the sea or the factories found employment in the flourishing Harris Tweed industry. This included work in the spinning mills and hand-weaving factories—work in which the male weaver was helped by his family in jobs such as bobbin winding. Few fishermen dared to sink capital in new boats and gear, and risk losses such as those of the years after 1920. Few women wished to return to the hard, uncertain work of gutting. The whaling station, built on West Loch Tarbert before 1914 and open for a short time between the wars, was reopened in 1950 and employed some 30 men for 18 months before it closed in 1952. Crofting was hindered by some mechanised cultivation. The war-time construction of air-fields had ceased, though some harbour-work and road-making was sustained by Government grants.

(179) In 1949 the Harris Tweed industry, now the Islanders' main source for earning, was employed by 1,500 persons and a 662 per cent purchase tax on hand-woven Harris Tweeds. Fashions had changed so that as a non-utility product, its export sales alone could be expected to fall from 1,500,000 yards (in kind or by sale), followed by legislation prohibiting all but large mills, first encouraged the Islanders in a tame for strong drink, then tempted them to smuggling and breaking the law.[1] Seaforth started two distilleries at Stornoway, importing barley for the purpose. By 1891 these had ceased the illicit stills, but they were closed about 1890.[2]

From a precisely narrow margin of subsistence, periodically overstepped in famine, the Islanders passed to a larger measure of production for sale, and in the second half of the eighteenth century population increased. Its

[2] Ibid.

BETWEEN TWO WARS, AND AFTER

value[1] is important, in an appreciable dollar-earning asset and because of the fluctuating export market, its manufacturing must be stabilized by sales at home.

These and other factors underlie the plea that if some share of taxation had to be imposed in the national interest it should have been done by steps to permit of readjustment in manufacturing and of adaptation to the carefully fostered market. What seems indefensible, even in the national interest, was the imposition of the full 66⅔ purchase tax. As a result of this blow, the crofter's web could not be sold and by, a prey to moths, in his home, while the mill owner's stock piled up in his warehouse. Hand-loom "newly bought or partly paid for, lay rusting in the sheds and the machinery of the mills was idle. The hand-weavers with their helpers and the employees in the mills, their savings spent, began to seek work beyond the Island. As the Minister of Agriculture, Mr. Hudson, stated, there had been falling as workers trickled away by every steamer. Some adjustment was made, it is true, late in 1951 in the case of the small independent weaver remained as hard as ever.

The amount of tweed stamped with the Orb Trade Mark, which diminished slowly from 4,464,000 standard yards in 1948 to 4,211,000 in 1949 and 3,780,000 in 1950, fell when the tax was imposed to 2,800,000 in 1951. In 1952 there was a recovery, maintained in 1953. Over 5,000,000 yards will have been stamped in 1954.

COMMUNICATIONS

491 and footpaths. Until this time, the greater part of the district of
• 653 Park was accessible only on foot. Roads were 'at best rough nar-
*175 row paths where rushes and grass grew between the tracks'. The Act improved the old *frith-rathad* (rough tracks) to such an extent that, says a report of 1902, 'a marked improvement has taken place in school attendance by their formation'. The opening up of the island certainly benefited the people. Though the moor tracks
491 might give a more direct route to Stornoway, the roads at least
493 offered a hard surface for horse-drawn cars and carts. The num-
bers of vehicles accordingly rose, and for long after the turn of
*175 the century the horse enjoyed a monopoly. Motor cars were beginning to be read about in the days-late newspapers brought to the island, but not until 1917 were the first complaints heard about cars tearing up the surfaces of the roads. Slowly but surely the inevitable pioneers emerged with their 'tin lizzies'. By 1925 there were an estimated 250 vehicles in Lewis—and traffic congestion was beginning to be a problem. The relative speed of cars was still something to be wondered at too: it was progress indeed to be able to travel from Ness to Stornoway and back again between a late breakfast and an early tea. But for all this progress, one could still buy a good dog-cart in excellent condition, to seat
[435] six people, for £9. A two-seater trap could be had for £6 10s; a set of harness cost 30s. And as for fuel—the best quality oats were 10s 6d per cwt. Indeed, it was not until 1943 that Stornoway Town Council sold its last horse—and only because no one could be found to look after it.

When Sir James Matheson came to Lewis in 1844 there was only one horse-drawn vehicle on the whole island. By 1872 eighty-seven wheeled vehicles were using his new roads. A pioneer of the wheel-carriage service, D. K. Henderson, began business in the
[205] 1850s. He was the first to carry mails and held a contract for the Stornoway to Tarbert run until the GPO introduced its own vehicles. As the motor took hold Henderson changed over and was the first to establish a motor-transport business on the island. Not all the local vehicles were of recognised makers' designs. A writer in the *Stornoway Gazette* in the mid-twenties commented on the fact that only the engine and the chassis of the local buses were imported. Bodies were then erected by carpenters . . . and

CROFTER INDUSTRIES

according to the amount of barilla (its great competitor, a carbon- 175*
ate of soda made from plant ashes) which found its way into the 824
British market. When the American war interfered with the im- 323
ports the kelp price was as high as £22 per ton. Prices began to 388
decline about 1810, and from 1822 successive reductions in duties 433
on salt and barilla resulted in the decline and demise of the kelp industry. As a consequence great distress appeared in those districts which had founded their whole economy on seaweed.

The weeds of most value to the industry, because they yielded most salts, included *laminaria digitata, laminaria bulbosa, asco-* [137]
phyllum nodosum and *fucus serratus*. One ton of kelp yielded an average of 8 lb of iodine, with certain quantities of chloride of sodium, chloride of potassium, and carbonate of soda. When subjected to special treatment and distillation, 2-3 cwts of sulphate of ammonia, and several gallons of naphtha, paraffin oil, and volatile oil were also derived.

The fishing industry, discussed in the previous chapter, took 175*
over where the kelp-making industry left off and became another 228
king-pin in the island economy. By the end of the last century it seemed set fair for continuing prosperity. In 1900, harbours were [503]
being planned and built with State aid in Uig, at Carloway, Ness [653] •
and Tarbert. Then 1914 came, and with it sweeping changes in international trade. Island fishermen were left workless with [511]
wrecked and rotting fishing boats. In twenty years the number of Scotland's fishermen was halved; the remainder were all but ruined. The islanders' fate mirrored this pattern.

Yet another significant source of income for island families for 175*
almost 200 years came from the men in military service, who 701
either sent money home or returned home with their gratuities 434
and pay. In the wars of the last century many enlisted in the Highland regiments, the Navy and the Merchant Marine. Even today, the income from this external activity is not insignificant.

EIGHTEENTH-CENTURY ECONOMY

175*
Information and statistics about the economy of the island in the 113
middle of the eighteenth century are to be found in Walker's *Economical History of the Hebrides or Western Islands of Scotland*; his MS is in the British Museum.

113

175 perhaps once in a generation, the neighbours were still the
476 best administrators for poor relief. On the whole, this
657 remained true to 1914.

As to financial assistance from the Government, the
175 evidence seems at first bewildering in its contradictions,
657 suggesting utter inconsistency on the part of the people.
Thus, the record of the Lewis-and-Harris fishermen, in
476 repaying loans for the purchase of boats, was the most honourable in the North-west. In 1900, of the total capital on barely 100 loans made to them, 83 per cent had been repaid, whereas on 150 loans elsewhere less than 60 per cent had been repaid.

175 Yet as to the record of Lewismen with regard to assist-
• 653 ance for road-making, the Brand Report was significantly reticent. In 1891 a road was planned direct to Stornoway from Loch Roag on the west coast at Carloway. This short-cut of sixteen miles was to shorten the distance by seven miles and so facilitate the transit of fish landed at Carloway. Crofter labour was employed as a means of 'self-help'. The road was, mistakenly, printed as complete on 'base maps' and other recent 'quarter-inch' maps. By 1901, £15,500 had been spent, a sum which exceeded the estimated cost, but only eight miles of road had been completed and five miles partially made, while three miles were quite incomplete. The estimate having been exceeded and "financial difficulties having arisen"—the contractor had gone bankrupt and the engineer was dismissed—the work came to a standstill, £10,000 more having been estimated as necessary to complete the road.
[181] Of that sum £8000 was granted.[1] But the road was left
[461] unfinished. These figures alone might not condemn

[1] J. P. Day (1918), p. 328. Day added that "the work should now, more than twenty years after its start, be approaching completion"!

175 the work done—or rather not done—by the local labourers;
• 653 for deep peat has misled road engineers elsewhere.
But impartial observers have left no doubt that the work
461 was shirked—partly from the labourers' lack of will,
181 in other words from laziness, and partly from the not unnatural desire that further grants might continue, offering easy money. Inspection revealed deliberate and combined concealment of bad work, road metal being thrown on to give a surface which had no foundation. The Carloway road, which was to help the Loch Roag fishermen by rapid transport of fresh catches, was never completed. The bad work of many contributed to the undoing of all.

175 . How are these two apparently contradictory responses
657 to help to be explained? The answer lies in the completely
653 different methods of expending the grants. A loan to fishermen for a boat was put into their own responsible
121 hands. The hope of profit in which each could share stimulated their enterprise; and where both the private honour of each member and the corporate honour of each crew was at stake, mutual obligation and team-spirit spurred them to work. But road-making—a work many had done for contractors elsewhere as navvies under de-
181 grading conditions—was different. A Gael responds when his imagination is fired, whether for selfish or unselfish ends; but he can also enjoy leisure as to the manner born! Not only was personal skill or effort in road-making of no advantage to an individual; there was little to call out either personal prowess or team-spirit in the work. Moreover, little effort appears to have been made by the administration to arouse ardour. The ultimate advantage of a good road to the people on the west of the Island, as a whole, was clear. Yet since bad work and delay led (at first) to further

175 Thus, towards the end of the nineteenth century, the proprietors were obliged,
427 pressure of population within, and of public opinion without, to made some conce
to their small tenantry. It may be relevant to point out that this was a period of fa
agricultural prices and declining farm rentals; indeed the time was not far off whe
farms would not find tenants at any rental:

TABLE 7

Farm:	Rental at c. 1875/80	Rental at c. 1885/90

125 The crofters of south Uig were in particular difficulty at this time for here fishin
126 declined earlier than elsewhere but the townships remained greatly overcrowded. I
161 Breanish and Islivig had 14 cottar families, (most of them sharing crofts with the of
162 tenants), and three of squatters, i.e. on the common pasture. Here fishing had alm
ceased and the people were almost entirely dependent on their crofts or on employme
231 from home. In Valtos and Kneep there were 21 cottar families; they had 31 cattle a
sheep flocks. Here, too, fishing was on the decline. It was perhaps because of thi
289 commercial weaving was developed in South Uig earlier than in most parts of Lewis.
175 early as 1900 Uig was classed with Harris, by the local committee of the Congested D
tricts Board, as producing a superior quality of tweed. Two 30 gallon iron pots were s
out so that enough wool could be dyed at one boiling to obviate irregular colouring in a
• 653 one tweed. The C. D. B. also made grants for roads, footpaths and "marine works".
Amongst the latter the pier at Valtos (1899) was an attempt to resuscitate local fishing
but it came too late.

175 The Congested Districts Board was the first government agency with funds at its
653 disposal to aid the crofting townships. One of its largest grants went in aid of the Ca
Road (or Pentland Road as it is now known). This scheme arose out of an abortive pr
posal for a railway from Loch Carloway to Stornoway. It was thought that this could
enable trawlers and other large fishing boats to land their catch for quick transport to
Stornoway and so to the mainland whilst the fishing vessels returned to sea with minim
175 delay. The road, an excellently engineered one, is still not properly surfaced. A n
effective C. D. B. - aided scheme was the resettlement of crofters on Mangersta Farm
657 the rent of which had fallen to £70 and which the proprietors were willing to break up.
427 Thirteen new buildings were formed here and the first harvest was taken by the new
settlers in 1911. The crofters' rent was fixed at £73 and the C. D. B. paid £566 in gr
241 to purchase the sheep stock and improvements, and towards the cost of fencing. Abo
the same time the Board paid a grant to the township of Garenin for fencing a substanti
enlargement to their pasture, obtained off Dalbeg. Here, and at Reef farm, small-
holding resettlement schemes were vetoed by the Crofters Commission whose
experts regarded the areas as unsuitable. Both have since been re-settled by crofter

APPENDIX I

128 An effort has been made to separate crofting from other in-
433 come, and also to average the income from the sources given of
162 the total rural households, numbering 4700, composed of those on the 3650 *occupied* crofts plus an estimated 1050 others, namely, cottars and squatters, and 'feuars'—*i.e.* holding land in feu.

434 Finally, to the productive income earned on the Island there should be added that received by earnings sent or brought home to dependants, together with pensions, unemployment relief and the like. I am greatly indebted to the appropriate officials for the figures cited for 1937–38 or the year immediately preceding. These sources average £45 per rural household.
[128] The figures tabled all apply to Lewis alone; but many figures having been obtained for Harris also, conclusions are similar there. The concluding Table (pp. 314-315) bears a note on other sources of income, with a similar table for 1953.

(i) *Tweed Industry*

128 After deducting the cost of wool imported from the main-
434 land and certain other costs, the net productive income was taken to be £307,000. The estimate may still err on the high
288 side but it indicates the prime importance of the industry in the Lews. For 1938 the quantity of tweed stamped, and certified as hand-woven by the Harris Tweed Association Ltd., was 2,830,900 imperial yards, rising in 1939 and 1940 to 4,000,000 yards, though falling thereafter. The value of the tweed produced in 1938 was approximately £500,000. The total wages paid in 1938 amounted to £140,000 (£139,600), rather more than half of which was paid to the weavers working at home. In 1940 this had risen to nearly £200,000, a slightly higher proportion falling to the weavers.

[365] In addition to the wages paid and the price paid for local wool, the industry is a valuable customer of the Electricity Company and directly or indirectly provides much other employment
[651] in the Island. The industry also provided a market for a large quantity of Scottish wool and contributed to taxation.

[458] The productivity and earnings of the industry continued to

APPENDIX I

128
434 be high until 1948. The year 1947 was the peak year for the pro-
288 duction of Harris Tweed, with over 5,000,000 yards (of which 3,765,000 yards were stamped, and some 1,500,000 unstamped).
458 In 1948 the production of unstamped tweed had fallen to 500,000 yards but stamped tweed came to 4,380,000 yards.

[651] Then, in the year 1948 the imposition of a 66⅔ per cent purchase tax struck the industry a crippling blow. The rise in prices of wool increased difficulties, and by 1950 few orders were being booked and men were being paid off. A few small men who had relatively large stocks frozen by the purchase tax were able to sell them off, but this minor compensation for losses was short-lived. The outlook is disquieting.

(ii) *Agriculture, Peat-making and House-building*, 1938

434 (a) *Agriculture.*—The estimated agricultural output shows
241 a total value of £189,100, and of this total the quantity fed to animals was valued at £103,000. This leaves £86,100 as the estimated value of crop produce consumed on the Island. Adding this figure to the gross livestock output we arrive at a total valuation of the agricultural production of Lewis of approximately £194,100. To arrive at the average output per croft there was deducted the farm production, estimated at $\frac{1}{10}$ of the total by calculation from known crop and stock returns. This gives a figure for crofts alone of £184,400. By dividing by 3750, we obtain an average value of the gross annual production by crofters as £49, or say £50. The inclusion of squatters' produce would add so slightly to the total figure as hardly to affect the average for rural households. Outlays being small, most of this net output may be regarded as 'net earnings'.

434 (*b*) *Peat.*—To this sum must be added firing and some share
222 in housing. The peat cut has been valued at £90,000, an average of £24 per croft; it demands much labour. As peat
314 is freely cut by cottars and squatters, etc. (estimated at 1050 or so), the average value might be given as £19 per rural
[372] household. In Stornoway the chief fuel is coal.

(*c*) *House-building.*—From 1920 to 1940 the Department of

241 restore it from the throes of disintegration, but even
427 important was the disinclination of the people to accep
fundamental changes. Indeed, only the following three
essential to crofting distinguish the system from that
teristic during the days of the clan: (1) individual a
land held in compact, permanent plots rather than dispe
and shifting cultivated strips, (2) the payment of a mo
rather than providing services and a share in the produ
the landlord, and (3) legal protection of the tenant fr
potential abuses by the proprietor or an intermediary.

The Croft

427 Land Tenure. The majority of Skye crofters rent a smal
acreage of arable and improved grass land from a landlo
the Department of Agriculture for Scotland. Although t
crofters pay an annual rent, their rather unique form o
tenure, granted under the Crofters' Act of 1886 and sub
sequent legislation, confers upon them almost all the r
of land ownership with few of the responsibilities. Th
crofter has security of tenure, the right to bequeath h
land to a member of his family, and relative freedom in
deciding what use shall be made of the croft. His nomi
rent very often has not been increased since the time o
Crofters Commission. Even where the Land Court has rev
the rents, they are not substantially higher than those
427 at the turn of the century. If his rent is nominal, hi
651 are negligible. In Scotland property tax is paid in equ
shares by the owner and occupier. Thus, as an occupier,

427 crofter pays only half of the assessment, which is based on
651 rental value, and he is granted an additional benefit by having the land devalued seven-eighths for purposes of taxation. The majority pay £3 a year, or less, in rent, and, with a rateable value of 5s, or less, between 1s and 2s in taxes annually. Many pay no taxes.

427 342 423 On his small plot of land the crofter has his cottage. Here we find another rather unique interpretation of the laws of land tenure. Although the crofter is an occupier of the land, he is the owner of his dwelling. If he or one of his ancestors did not build the house, frequently with a grant and/or loan from the government, he will have paid "compensation" to his landlord for the dwelling upon accepting occupancy. Should he, at any time, relinquish his right to the croft, the crofter, in turn, will be entitled to full "compensation" for the value of the improvements on the holding as determined by the Land Court. The crofter's home is not entered on the county valuation roll and, therefore, is not subject to assessment.

427 241 233 In addition to the land under crops and improved grass, the crofter's rent entitles him to a share in the unimproved township grazing lands which are held in common and used under [623] a system of allocation known as "souming." In each township, [624] the collection of individual holdings, the crofters elect a grazing clerk and committee. They determine the number of cattle, sheep, and horses the individual is allowed to put out to graze. Usually each crofter has an equal share, but in

the cash income was £1044 3s 3d for 1952 and £1527 3s 9d for 1953. 427 241 231 434
I do not know the net profit.

Summary. The foregoing facts and figures should make it abundantly clear that a man with less than ten acres of arable land and with a "souming" of less than three or four cows and fifty sheep can expect only a meager and definitely inadequate return for his investment of time and money. Several crofters thought thirty or forty acres were required. This would mean a "souming" of 10 or 12 cows and 200 sheep, if the present proportion of grazing land to cultivated area were maintained. Some said 300 to 500 sheep would be closer to the mark in order to make a good living on the land. The budget for the large croft confirms this view, but even then we have seen crofting to contain a precarious element of risk. Most crofters felt that with twice their present acreage and "souming" they would be faced with a less hopeless proposition.[6] This, of course, would involve a further, coerced reduction in population. But this is all a matter for future planning. What we want to know is the contribution of crofting to the local and national economy.

The Contribution of Crofting to the Economy

If we are to determine the value of agricultural production from crofting, we must consider not only the crops and 231 241 651 657

[6] It is not only the Skyemen who want more land; see The Report of the Commission of Enquiry into Crofting Conditions (Edinburgh: Her Majesty's Stationery Office, 1954), pp. 18-19.

stock grown for local household consumption and export but also the subsidies and grants provided by the national government. I hasten to add that it is impossible to estimate accurately the specific contribution of crofting to the economy of Skye. There is no available means of distinguishing the status of crofter from that of farmer in the annual returns of crops and stock or in the applications of farmers and crofters for subsidies and grants. Before getting down to pounds and shillings, we may find a brief digression to review the acreages of land devoted to crop and stock raising and the yields to be expected helpful in our attempt to understand the many problems under which the Skyeman labors.

The total area of Skye is approximately 447,000 acres. Of this area, 422,415 acres were classified, in 1953, as rough grazing.[7] The land under cultivation, excluding grasses, was only 3,254 acres. There were 6,258 acres of grass intended for use as hay and 12,339 acres of permanent grass or improved pasture. The remainder, about 2,500 acres, was unclassified.

The stock, in 1953, was 1808 dairy cows and heifers, 8,108 cattle, 143,422 sheep, 41,888 fowls, 436 horses, and 319 pigs.[8] The dairy cows are mainly beef breeds which give a low yield of milk. The sheep are primarily the hardy blackface variety but some crofters have cheviots, which produce a finer wool. For each sheep there are about three acres of grazing

[7] Agricultural Returns, June 4, 1953, Department of Agriculture for Scotland, Edinburgh, Scotland (in the files of the Department). These figures include adjacent small isles.

[8] Ibid.

As we shall see in the next chapter, there is hostility between the Portree dwellers and the crofters. One reason for this is the fact that the village pays more in property tax than the rest of the island put together while they receive relatively little in return. The feeling that the crofter is "aye wantin', but never pays a cooper" (a penny in taxes) is not at all unusual.

Summary

If the economic aspect of the culture is judged in terms of the standard of living it affords, it cannot be considered as satisfactory. There are persistent environmental obstacles, among them geographical isolation and an unfavorable climate for pastoral-agriculture. We have seen that few can hope for anything which would approach a desirable income in the surrounding commercial society. The crofters have been caught between two cultural patterns. The old system of land use has persisted. A new system has been superimposed. From this new system, however, the Sgiathanach has accepted few innovations of more recent origin than the eighteenth century, except those of a material or technological nature. Still, he has ceased to be self-sufficient, and, in doing so, he has become dependent on the commercial world for the very essentials of physical existence. For many of the crofters this means seasonal migration in the quest of employment. For some it means part-time or full-time work locally. For a relatively large proportion of the population it means dependence on contributions of their children and government agencies. This dependence has not led to a full

There were, of course, other types of flights before 1948. In 1937, Captain Fresson took the first sick person off the island on charter—the beginning of the air-ambulance service so valuable to the islanders. During World War II, certain RAF mails were flown between Glasgow and Stornoway, on which there were first covers (December 1943, Glasgow/Stornoway; December 1943, Stornoway/Glasgow; and January 1944, Glasgow/Stornoway). The present air services are supplied by BEA and Loganair Ltd. The BEA plane route is Glasgow/Benbecula/Inverness and return. Loganair offer a service Glasgow/Benbecula/Stornoway and return. In recent years this small firm has built up a most valuable inter-island air link.

OVERLAND ROUTES

The history of overland communications in the island is a short one, though it does, like American history, have many characteristic highlights. In early times getting from one place to another was simply a matter of following well-worn tracks across the moorland, skirting lochsides and marshy lands and just taking the shortest distance possible between starting point and destination. Considering the length and breadth of the island, it is surprising that it was not until Sir James Matheson's appearance in Lewis that road-making was undertaken with any determination. This activity stemmed largely from the desire to get something in return for the outlay involved in keeping literal death from starvation clear of the doors of the island folk.

The report of the Rev James Headrick (prepared for Lord Seaforth in 1800 and published about 1820) indicated that the provision of roads would be of great benefit to the island. A footnote in the report (of probable date 1816) urges assistance from Parliament or the Board of Fisheries to complete the road from Stornoway to Loch Roag, which had been begun by Lord Seaforth. There is a bitter complaint that though the Seaforth property bears a large share in the county assessment, 'not a penny of public money has ever been laid out in Lewis'. Another footnote records that the road from Stornoway to Aignish in the east was made in 1815. No large undertakings followed Mr Headrick's

factured goods and foreign produce. There is a Branch office of the National Bank of Scotland, two friendly societies, four inns and so many as about a score of dram shops.' The annual burgh revenue was £17 3s and the expenditure £15 17s 6d. The town boasted ten streets, a saw mill, a mill for carding wool, a corn mill, a very large malt barn and mill, and an extensive distillery. These buildings were constructed 'in a style not much inferior to the best buildings of their class in Scotland . . . A stranger on arriving at it by any route, or from any quarter, is surprised to see so large and flourishing a place in so remote and uninviting a corner. Its broad field of houses, its capacious bay, and spacious piers, its occasional crowd of shipping, and stir of trade and gaiety, and the vicinity to it of the aristocratic mansion of Seaforth-lodge, render it a striking and very welcome relief to the prevailing dreariness, sterility and inertion of the rude country in which it is nestled.'

In 1901, when the West Highland line was opened, the return fare from Mallaig to Stornoway by MacBrayne's steamers was 14s 6d. One could go from Glasgow to Stornoway by steamer for 31s 6d return. A *Guide* for that year indicated that Stornoway had three hotels, six churches and a Court House, singled out for specific mention for some reason. A Ross-shire *Directory* of 1914 describes the Nicholson Institute as one of the four Junior Student Centres in the county. Its Leaving Certificate results were the best in the north of Scotland, with a total of 95 higher and 234 lower passes, and no less than 20 passes in Higher Science.

Stornoway is a Burgh of Barony, dating from 18 October 1607. It had, of course, been a town of sorts long before the Charter was granted by James VI; the Charter was executed under the Great Seal conveying equal shares to three of the leaders of the Fife Adventurers. Under the Police Act of 1862 Stornoway became a Police Burgh. A bank agent in the town was appointed first Chief Magistrate on 31 December 1863. Under the 1892 Act, the designation 'Town Council' superseded that of 'Burgh Commission' and the Chief Magistrate assumed the title of Provost, the senior and junior magistrates becoming known as senior and junior bailies. The present Municipal Buildings were opened in 1929. The previous building was only an idea in 1897; it took

175 From the Napoleonic Wars to 1914 the amount of
228 herring cured on the West Coast of Scotland rose and fell.
251 In 1810–14 the East Coast cure was half the West Coast
458 cure, but the peace of 1815 brought the capture of the Continental markets and the East Coast herring export leapt up. It averaged 500,000 barrels from 1850 to 1870, a million from 1880 to 1900, and one to two million barrels
[439] until 1914. With the decline in the export to the Plantations, the West Coast export fell, to rise by 1890 and reach a peak from 1900 to 1914. Thus, although no more than from a tenth to a fifth of the East Coast yield, that of the West Coast had risen greatly.[1] Of this, the Stornoway cure formed the major part.

175 The chief early type of catch, of white fish (cod, ling
228 and hake), was developed too, and swelled to a peak by 1900, then dwindled and fell. The average Stornoway District catch of white fish for a dozen years to 1900 was valued at over £100,000, much of it caught by local boats, and some of it cured at small 'creeks' (*e.g.* on the west of the Island, on Loch Roag, notably at Carloway). The cure, a strong coarse food, was shipped to Ireland and the Clyde; but after 1900, fresh trawled fish replaced the cured. From £100,000 before 1900 the value fell to little over £10,000 in 1912–13, £1000 in 1920, and half that in 1921—½ per cent of the value in 1900!

Thus the herring fishing became the most important
[471] to the Islanders, at first by employment on East Coast boats.
452 Later they purchased boats and gear for themselves, helped
[652] principally by advances from Island and East Coast curers, though also by State loans.

[1] *Fishery Board for Scotland*, Table 25 (1938), and Table 23: 6000 barrels in 1790–95; 80,000 in 1870–75; 100,000 in 1912, and 160,000 in 1913. For fair comparison with Table 25, about 25 per cent should be added to quantities, as explained in the notes to the Tables, on the 'seastick', and final reduced, or 'bungpacked', state of barrelled herring (listed in Table 23).

623 The Trustees of the Stornoway Trust have not found
423 it easy to meet the cost of keeping up the valuable property
427 of the Castle and Park, nor to carry the burden of its rates,
178 no adequate income being available for the purpose.
874 Today, however, Leverhulme's gift is being put to good use as a Technical College, opened in September 1952.

Division of the available farms, after providing about
311 200 small crofts (of ten acres or so), still left the problem
427 of finding legal homes on legal tenure for the remaining
362 cottars and squatters.[1] The Department of Agriculture
656 arranged to feu plots of 'skinned land' on the outrun of certain townships, including one in the extreme north and others in Lochs. About 200 of these little holdings with potato ground were provided. On the holders' behalf the Department feued land from the owner, after obtaining the consent of the Common Grazings Committee of the township and permission from the Land Court for 'resumption', *i.e.* for enclosure of a portion of the common. The legal and administrative procedure involved may seem disproportionate to the economic value of the holdings. Yet difficulties of law and custom had been allowed to go from bad to worse during the past eighty years; and these difficulties were overcome.

To encourage better housing in the crofting counties,
362 loans are made to 'crofters and fishermen feuars' person-
652 ally. Local stone, or latterly concrete, is used, and much
[347] of the building is done by the 'man of the house' himself, and his friends. From 1920 to 1940, nearly 1200 loans were made in Lewis and Harris for the erection (or improvement) of houses, and in a few cases for the erection

[162] [1] Estimated at 1200 to 1500 shortly before, the open question was whether subdivision during the previous eighty years was to be recognised and accepted.

362 of new steadings. The average amount of loans (totalling
652 £166,000) was under £150; repayment has been satisfactory, and the arrangements made by the Department of Agriculture won general praise among the people. Yet 1200 houses were very far from replacing all the 'black houses', and many more are needed.

433 In terms of cash profit, ten crofters today run their
427 crofts less remuneratively than the farmer they dispos-
241 essed; even together they may show little more total production than the farmer. Nevertheless, these ten crofts each allow a part, at least, of the basis for a country home.
[423] Hence the weight of public opinion supported, nay, insisted on 'giving back' the land to the descendants of those who
654 had worked it sixty or a hundred years before. The State
423 bought the farm stock at a high valuation, and till lately without adequate reform of crofting use and wont. The farms having now been divided, a great emotional issue, which had smouldered for half a century, has been brought to an end. Although the practical results are small, the crofters feel that justice has been done, and that fact may
311 be a great gain. Now that there is no more green reclaimed land to be had, the reclamation of the peat moor, or the grey 'skinned' boulder clay has to be faced.

By financing the renewal of Leverhulme's brief attempt to reclaim deep peat on Arnish Moor, south of Stornoway, the Canadian, T. B. Macaulay, made a resolute attempt to
[241] solve the island's main agricultural problem. Good crops were grown, potatoes and silage produced, and a dairy farm established. But the difficulties called for continuity of effort and research. From the practical point of view of 'demonstration' it had been a mistake to tackle deep and almost level peat, black in colour and viscous in consistency.
[407] There was not the light machinery required for cultivation.

653

653 PUBLIC WORKS—government construction of dams, reservoirs, canals, ship channels, railways, highways, sewers, and public buildings; method of accomplishment (e.g., by labor drafts, by contract with private entrepreneurs); public works policies (e.g., to relieve unemployment, to increase public revenues); maintenance of public works; etc. See also:

Construction contractors	331	River and harbor improvements	603
Public buildings	344	Political graft	687
Sewers	366	Public works programs to relieve unemployment	748

1901, the average was only 5·086, the county average being 3·983. 161
The population was still to reach its peak in Lewis, some 30,000, 162
in 1911. Emigration was at a fairly high rate, some 2,000 every 175*
decade, but this was no relief with births between 8,000 and [167]
9,000 during the same period. In 1894 it was estimated that the number of cottars (or squatters) as distinct from crofters was in the region of 1,000. These people, mostly relatives of crofters, constituted a serious incubus on every crofting township.

Elsewhere in the Highlands, the enlargement of crofting hold- 175*
ings relieved the land-hunger situation. It was not possible for 423
the same to be done in Lewis, and Harris possessed even less 241
useful land to share out. Many applications were made by crofters either for an increase in their own holdings or an increase in the acreage of common grazings held by each township. Though some 500 acres were in fact handed over by the estate management for crofting purposes, there was a steady refusal to diminish the acreage of farms.

The Congested Districts Board was appointed in 1897, super- 175*
vising public works to relieve the people of a certain amount of 657
their ills. It carried on until 1912, when it passed into the newly- 656
formed Board of Agriculture. The Congested Districts Board 423
could have achieved much more than it did. It scraped away 427
only a little of the vast problem. The next major landmark in the 241
history of crofting legislation was the Small Landholders (Scot- [653]
land) Act of 1911. It extended certain provisions introduced for the crofter in 1886, and further increased the class of tenants who benefited by bringing in the tenants of holdings rented at not more than £50 (£30 in Lewis) or not exceeding 50 acres (30 acres in Lewis). The 1911 Act also brought into existence the Scottish Land Court in place of the Crofters Commission. In Lewis, however, the hunger for more land went on unabated and reached a not insignificant peak during the later years of Lord Leverhulme's regime.

A new Crofters Commission was set up in 1955, following on the report of a Commission of Enquiry under the chairmanship of the then Principal T. M. Taylor of Aberdeen University. Fresh provision[2] for the reorganisation, development and regulation of the crofting system in the seven crofting counties of Scotland

many recommendations, and though some road making began in 491
1791, progress was slow; in the course of fifty years, only 45 miles 497
of road were created, less than a mile for each year. When Sir 175*
James Matheson took over in 1844 and planned to open up the island, he started with these 45 miles. On his death in 1878 there were more than 200 miles of road on which, with the necessary connecting bridges, he spent £25,593. 731

In the late autumn of 1882, a great gale swept away the hay 175*
and corn crops. This, added to the complete failure of the potato [146]
harvest, led to distress throughout the island. At a meeting called 653 •
in Stornoway in December it was resolved that a memorial be forwarded to Mr Gladstone, then Prime Minister, craving aid from Government resources, or that some form of public works be started. No immediate response was made to this appeal. However, the matter had been raised, investigations were made and 653
eventually the Western Highlands and Islands (Scotland) Works 175*
Act, 1891, passed into law. It authorised, *inter alia*, the expenditure of a sum not exceeding £15,000 on constructing and improving the road between Carloway and Stornoway, and certain other roads approved by the Secretary for Scotland.

That Carloway was chosen as a terminus from Stornoway is 491
significant. At the time it was probably the best fishing centre on 228
the west coast of Lewis. Loch Carloway, which branches eastward 175*
from the mouth of Loch Roag, is a safe harbour and offers easy access; and any attempt to develop the real fishing potential of the district was a step in the right direction. At the time, the road from Carloway to Stornoway was a wandering one, 23 miles long, badly formed in many parts and ill-suited to heavy traffic. The proposed road was to be only 16 miles long and would, it was said, afford easy and quick access to Stornoway; fish would arrive there in fresh condition, suitable for transportation by boat to southern markets. As soon as the necessary plans were prepared and a contract drawn up, the work started. Progress was rapid, but financial difficulties arose. The contractor went bankrupt and the engineer was dismissed. The undertaking came to a complete standstill. Of the 16 miles, only 8 were completed. About 5 miles were partially made; the remaining 3 miles lay untouched. 491
The 1891 Act brought into existence a number of minor roads 653

178 purposes, to a community which, as an agricultural
311 entity, requires transfusions from the larger society, is accompanied by patterns of specialization and individuation. The following table (Table III)[1] of agricultural statistics for the parish of Barvas demonstrates the change, over the past 100 years, from intensive subsistence agriculture to specialized production. From a broad-based subsistence use of the croft (as revealed by the number of acres cultivated for barley, potatoes and oats; and by the number of cattle, especially milk cows), there emerges a tendency
[231] toward specialized production. The number of sheep,
[236] which require less attention than cattle, has increased
[241] since the late 1920's when the weaving of Harris Tweed
[246] commenced in earnest; and around this time there also occurs a differentiation in cultivation, between the production of barley and potatoes (used largely for human consumption) and the production of oats (used largely for
[231] feeding livestock). After 1931 agricultural returns began to distinguish between beef and dairy cattle. During the past ten years the number of beef cattle in the parish of Barvas has increased.

land is reduced if his application is granted. Also, a group of men in a township may apply to the Crofters Commission for permission to fence off a portion of the common grazing land and improve it as grazing for their mutual use. Grants are available for both schemes. The township reseeding schemes, adopted widely after their introduction, have been superseded by the number of individual apportionments.

The first township reseeding schemes in Lewis were tried as an experiment in Ness, Harris, Barvas and Bragar. "The Department of Agriculture fellow [654] watched us every step because it was an experiment. Oh, there were times we cursed him and wanted him away." In Shawbost, a few interested crofters went around the village to see if others were interested. "We got a bad name for it; no one could see anything to it. But those people got the benefit of it." According to one man, initial reluctance to participate in the schemes was overcome when the agricultural advisor pointed out that if they overstated their costs, they would not have to pay much money themselves.

Between 1959 and 1962, seven township reseeding schemes were developed in North and New Shawbost, and four in South Shawbost. They were intended to give

be removed from the croft.

E. Changing Land Use

311 Darling (1955) described the previous Highland way
175 of life as a well-adapted, ecologically balanced system,
182 in which proper use of land was attempted by limiting
the number of livestock, preserving a proper ratio
between cattle and sheep, and regulating the flow of
stock on the land throughout the year. Dikes (fences
of turf or stone) and drains were communally repaired
178 and cleaned. Although continuity with the previous way
311 of life is evident today, the overall picture is one of
[182] partial use, and misuse, of natural resources. Various
[654] advisors from government organizations and colleges have
been brought in to encourage effective husbandry and
land use.

1. Specialization and Individuation: The change
from an ecologically adapted, internally regulated
community in which land was used intensively for subsistence

288 the automatic shuttle; all other processes have been
178 built into the design of the Hattersley loom (cf.
402 Thomson 1969). In other words, weaving does not entail
288 very specialized skills and is not difficult to learn.
463 A sailor can come home and learn to weave in a short period of time, or pick up the trade again with ease after having been absent from the loom for a long time.
[571] Neighbors substitute for each other when someone is ill
[573] if a tweed is "urgent." Wives help their husbands, and young boys their fathers and uncles. Such low-level specialization and substitutability are complementary to crofting activities and the maintenance of neighborhood ties, and may be seen to favor continuance of the occupation of weaving.

874 The Lews Castle College in Stornoway, established
286 as a technical college in 1953 in a building that was
[469] formerly the home of Sir James Matheson, offers training courses in weaving for adults which last for ten weeks and qualify a person for membership in the Weavers Union (cf. Stornoway Gazette, March 16, 1968). The
[872] college also sends weaving instructors to all the public schools on the island to instruct young boys in the
• 654 rudiments of weaving. The Highlands and Islands
286 Development Board have in the past offered loans and
288 grants with which to purchase looms, and government aid has protected the mills.

592 like to leave the loom for the time it took to look
241 after the sheep."
311
288

592 A fourth household consists of three unmarried
23 siblings in their 40's and 50's who recently sold their
24 cattle and now keep only sheep for their own consumption.
[233] They cultivate a small amount of oats and hay to feed
[246] the sheep during the winter. The brother who was largely
[288] responsible for taking care of the livestock is now
[463] "concentrating on the loom," and his brother works in the mill. Their sister, who used to work in hotels on the mainland, now keeps house for them. Described as a
[409] "self-contained family," they have a tractor and a deep-
[404] freeze and take care of their peat and the harvesting
• 654 of crops by themselves. One of their crofts has become
423 too waterlogged even for grazing and was sold recently to the son of a local crofter, not for agriculture but as a prerequisite for applying to the Department of Agriculture for a housing grant. Only tenants of crofts can apply for such grants. As this particular croft is too wet to be cultivated or used as a house site, the only motive which the new tenant has to become a crofter is to gain access to governmental subsidy.

592 The fifth household is composed of a retired couple
233 and their son and his wife and family. They have no
311 cattle, and use the crofts for grazing sheep.

241 grazing land and he could not transfer such property in
175 a will. Similarly a crofter had no right to his buaile,
423 and could not formally protest if another crofter sought to apportion this land for his own use (see Chapter 2
[829] for a discussion of apportionments). But in both situations, informal understandings superseded legal rights.

241 Various legislative acts which followed the 1886
657 act focussed attention on the crofter. Various matters
175 associated with crofting are handled by a Crofters
• [654] Commission. Crofters have access to grants and loans
[498] to improve land and build fences and homes. They may buy goods at low prices in a nearby cooperative store. As crofts were fenced, land around the townships became scarce and non-crofters found it difficult to keep large numbers of cattle and sheep.

241 Within recent years it has become possible for non-
178 crofters to gain title to the small plots of land on
423 which their houses are built. Some loans are available
[452] to them for building houses. Non-crofters have access
[654] to the various subsidies available to all agriculturalists, such as the subsidies for raising hill sheep and beef
[829] cattle. There is still the feeling, however, that crofters have rights which non-crofters do not have and that in conflicts over scarce goods crofters have

241 the edge over non-crofters. "Squatters can do what
178 they like, cut peats, put sheep and cattle on the common
423 grazing, but this is a privilege, not a right."
829

The clerk of a grazings committee says, "When it comes to an argument between a crofter and a squatter, the crofter always wins. A squatter has rights only with the grazing committee's permission. If one crofter disagrees, the squatter is out."

241 A squatter muses bitterly, "I wanted crofting status
423 because I wanted to get a Department of Agriculture
578 grant to build a house. I work on the peat road; I go to all the fanks. But at a township meeting, they didn't want me to get crofting status. They were afraid I would start grabbing peat banks or apportionments in the common grazing or something. There's your brotherly love for you."

311 4. Subsidies: In the section entitled "Changing
• 654 Land Use" I suggested that the availability of subsidies has encouraged a more specialized investment in agricultural activites.

654 The villagers are keenly aware of outside institutions
829 which give money. They speak to each other about forms
241 which they receive from the Department of Agriculture and the Crofters Commission, in much the same way as they are curious about the number of tweeds which another

• 654 person has. The gigantic bureaucracy of government
829 agencies is mysterious and unpredictable. One can
241 never be certain when or for what reason another economic increment may come. "I used to throw away a form from the Department of Agriculture until I found out from somebody that you could get money with it. You say you're planting so much of your land in oats, and later you fill out another form saying you didn't get a very good return, and they send you a deficiency payment."

For some crofters, the requirements of the subsidies
241 have affected the extent and techniques of agricultural
242 activity. For example, one man used to work his land
654 in the way that his ancestors learned would bring best
178 results: lazybeds were aligned in strips that would drain well and catch the sun, and stones were left in the soil to capture the sun's warmth and thereby facilitate the growth of potatoes. Now he has merged the separate strips, cleared the stones, and divided the land into units that allow him easily to calculate how much he has used for what crops, because to be eligible for a particular grant, a certain percentage of arable land must be ploughed with grass seed and rotated with other crops.

241 The Department of Agriculture and the Crofters
654 Commission often overlap in their subsidy-giving function

241 The Department of Agriculture dispenses subsidies to
• 654 all Scottish farmers, not just to crofters, and handles
[433] about 210,000 claims per year. Lewis produces 0.4%
of the agricultural output of Scotland, and 8.1% of the
agricultural output of the Scottish islands.

654 The major subsidies available to Scottish farmers,
233 including crofters, are for raising hill cattle, beef
calves, and hill and upland sheep. Sheep and cattle
subsidies were made available in 1941, in the early years
of the war, to increase their production. During wartime,
Britain was more dependent than formerly on her own
resources, and attempted to encourage production. Between
[458] the two world wars, agriculture had undergone a recession,
especially in the hills and uplands, because of a number
of events in world economics, such as competition from
New Zealand and Argentina in production of cattle. As
part of the scheme of the postwar Labor government,
agricultural support was made statutory.

For example, a man who keeps hill cattle may receive
L18.70 per cow as well as L5 for each acre cultivated to
feed his cattle during the winter. He receives L5 for
each cow which is tested for brucellosis. In the 1970-71
agricultural year, Shawbost received over L2,000 in sheep
and cattle subsidies, divided among 37 men receiving
subsidies for cattle and 36 men receiving subsidies for
sheep.

• 654 Subsidies for fertilizer and for lime to neutralize
241 acidic soil also originated during wartime, when the
government was trying to control scarce materials.
Agricultural subsidies in the form of cropping grants
and improvement grants are available both to crofters
(from the Crofters Commission) and to others of the same
economic status as crofters (from the Department of
Agriculture). Most of the improvement grants are for
fencing (rather than drainage or other improvements).
To receive a cropping grant, a farmer must sow one-third
of all tilled acres in grass, and apply three hundred-
weights of fertilizer to each acre planted with oats,
barley or wheat. Lewis is in the third or poorest
category of agricultural land designated by the Department
of Agriculture, and receives the highest rate of subsidy
(L11 per acre, as opposed to L5 per acre for good land).

For some people, even the incentive of subsidies
is not sufficient to stimulate them to farm or keep live-
654 stock. "It's too expensive to work the croft. There's
241 not enough return to make it worth it. The Department
829 of Agriculture gives you a subsidy for fertilizer, but
it still costs you something if you're not doing much
of anything else with the land. The croft is a sideline;
it helps you keep busy; you grow some of your own food.
But you've got to make a living some other way."

233 One crofter who gets subsidies says that he keeps
241 sheep and ploughs the land to feed them only as a "hobby."
• 654 He uses the word "hobby" because, in comparison with the
523 income he gets from working regularly in the mill, he
434 does not get a good return for his investment.

233 A crofter who has been weaving all his life says
288 that the income he receives from his cattle and sheep
434 does not compare with the income he receives from weaving.
654 Subsidies are counted as an important part of the income
he receives for the livestock. "Last year I got L28 for
a heifer—not a very good price, but then I got an L11
829 subsidy as well." He does not believe that anyone could
434 make a living from crofting alone. "You say some of the
241 people in Uist are able to make a living at it? They
might be getting social security as well, they're that
sly. Anyway, members of the family are probably sending
money home from sea or from the mainland. You need a
weekly wage. If the tweeds disappear, the only thing a
man could do would be to go to sea." (See Appendix C
for an example of the balance sheet of a croft.)

233 A few families work seriously at rearing cattle for
463 sale in local or town markets. These are usually
composed of several male adults, of which one or more
work in the mill or do weaving and someone is largely
responsible for croft work. Most of these people look

233 Most of these people look
829 askance at the idea of Britain joining the European
648 Economic Community. "If the Common Market comes, that
• 654 means no more subsidy for livestock. That'll mean the
end of crofting. They'll get good prices for their
beef, but feeding stuff will be very expensive."

"I don't know much about the Common Market, but
I'm against it. They'll do away with the subsidies.
If it weren't for the subsidies, most people just
wouldn't bother with cattle and sheep; it wouldn't be
worth their while, the feeding stuff is getting so
[246] expensive. The people here used to take in a hundred
bags or so of potatoes to feed the stock. But the climate
is so bad you don't know what kind of a return you're
going to get, and the work is so hard it just isn't worth
the bother, so people prefer to buy feeding stuff. And
if you spend more on feeding your animals than you get
for them, what's the use? Of course we've been here
all our lives. It would be hard to leave. But if the
weaving goes—"

"I was talking to my cousin in Glasgow. He says
the cattle are going to be the big thing with the Common
Market. The price of beef is going to go up. I don't
think people here can keep cattle if they don't get the
subsidy. They can't keep enough cattle, and they can't
be sure of a good price every year."

632 578 to neglect crofting and to concentrate on weaving. Those who still participate in crofting activities may neglect their communal obligations, such as going out on the moor after sheep, and may prefer to harvest crops, cut peat or perform other agricultural activities independent of other villagers.

632 182 462 Despite these tendencies, certain criteria of firm boundedness are still found in the township network. All the adult males of the township, including non-crofters, are responsible for serving as officers in the township grazing committee. The committee draws up rules for the [654] organization of communal crofting activities, and applies for grants from the Crofters Commission or Department of Agriculture, for example, to build a new township fence, plant trees as shelter belts for livestock, extend a peat road, or to fence and reseed areas of moorland in "township reseeding schemes" (see Chapter 2). All adult males of [464] the township are expected to provide labor to implement such plans.

632 571 666 Township meetings, chaired by the clerk of the grazing committee, are held twice a year. A vote is taken when any decision is to be made. The vote is usually unanimous, as all discussion, argument and persuasion have occurred before the meeting, and those who disagree

288 434 The Harris Tweed industry has provided a higher standard of living, but income from this source is [458] inconsistent. The standards developed during prosperous [342] times cannot be met during difficult times. Many-roomed [336] houses with indoor plumbing are more heavily taxed than [661] smaller, less modern homes; loans must be repayed; [426] a car and a television once gotten are difficult to [745] give up. A weaver must pay for his insurance stamp, [651] which amounts to over L70 a year; and income tax takes a large percentage of a person's income, in large lump sums which are paid twice a year rather than in small amounts throughout the year. When income fluctuates, any constant demand for monetary outlay constitutes a liability.

654 181 To many persons outside the island concerned with Highland and Island development, Lewis has a reputation for "subsidy-grabbing." According to one official, "The people are too used to getting subsidies. They tend to sit back and rely on the subsidies, which makes it difficult to develop the place."

[829] "We pay tax," said one weaver. "Why not get back what we can in subsidy?"

651 434 Income tax collectors shake their heads in despair at the thought of trying to get a true estimate of a crofter's income, except for jobs such as weaving for

166 The image of the island
484 as spiritual home is fostered by The Stornoway Gazette,
823 and by nostalgic songs, most of which were written by
204 islanders who emigrated to Canada in the first quarter
[533] of the century.

632 The crofting township as a strongly bounded network
241 continues to exist, although crofting as a socioeconomic pattern which evolved in a situation of limited social and geographical mobility, low cash reserves, and the restriction of a large population to a region of limited resources, is very different from crofting as defined by an office in Inverness. As far as the crofter is concerned, to be defined as a crofter by the Crofters Commission and other government agencies is to have access to resources which affect the environment in which he makes his choices.

241 The individual is faced with the semi-security of
288 crofting and weaving, in contrast with the exciting but risk-laden opportunities offered by the dominant urban-
• [654] industrial mainland. Crofting and Harris Tweed have been protected by government legislation. Various subsidies
[745] and loans are available. In times of unemployment, social security is available. Extremely important as contributers
621 to boundedness are the non-economic incentives: the
156 individual has a place in a human com[illegible] he is given

Chapter 7

Conclusions:

Summary and Theoretical Considerations

A. Summary

105 Crofting townships of the Highlands and Islands
[131] Scotland are within a few hours' travel of the major
[484] of Britain. An extremely high percentage of the you
[873] people in the crofting counties attend universities
other institutions of higher education. Politically
[641] administratively, economically and in other ways, th
crofting population participates in the larger urban
industrial society of Britain.

105 Despite this participation, the township-qua-vi
632 community is a relatively strongly bounded system.
621 thesis investigates factors contributing to the stro
[121] boundedness. From a relatively self-sufficient econ
105 unit using agricultural practices suited to the exte
178 cultivation of marginal land by smallholders, the to
632 has during recent decades changed to one dependent o
241 goods and services provided by the larger society.
105 Crofting activities nevertheless persist, in part be
241 of the incentives offered by government bodies such
• 654 Crofters Commission and the Department of Agricultur

233 As these quotations bring out, the subsidy enables
654 people to risk rearing cattle under conditions that would otherwise make success very uncertain.

476 5. Communalism: Despite the decline in various
571 agricultural activities and the individuation of land use, some activities persist which require mutual aid.
[484] Conditions of low geographical mobility, in which mutual watchfulness and competitive gamesmanship have developed (see section on "Social Marginality"), contribute to the strong boundedness of the township network. There is still competition over who begins an agricultural
[156] activity at a particular time of the year. No one wants
[221] to be so early that he stands out like an over-eager novice running risks of frost or other bad weather, but there is an element of pride in being the first to
314 harvest potatoes or bring in the peat. Almost everyone
571 cuts peat, a time-consuming and back-breaking job made
476 pleasanter with a large labor force; and every aspect of the activity--the time of cutting and bringing in, the length of time required to cut peats, the size of the peats when dry, the type of meal served to the work crew, the evenness of the final peat stack--is subject to intense scrutiny.

ISLAND LIFE

198 and practical support, could win through to make marks on the
island scene.

A significant event occurred in 1964: the establishment of
185 the Highlands & Islands Development Board. This was Britain's
• 654 first regional development authority run by members who are
433 either full- or part-time. The Board is grant-aided and has two
broad functions: to improve the social and economic condition
of the Highland people and assist in making the region more
significant in a national context. The Board's attention in the
Western Isles has been concentrated in the expansion of the
[198] fishing industry and the development of tourism. In both these
[205] fields there has been a considerable success: upwards of 100,000
visitors per annum visit the islands; and a fleet of over thirty
boats, equipped with the latest gear, operate out of Stornoway.

Also in 1964 was produced the Development Plan for the
433 County of Ross & Cromarty. So far as Lewis was concerned, the
185 Plan was based on an average decrease in population of some
[169] 1,500 persons for every year in the future of the island. This, if
carried to its logical conclusion, will see complete desertion in
fifteen years or so! However, even if nothing further is done to
halt emigration, particularly in the landward areas of the island,
the population will remain around a stable 15,000. The
County Development Plan contains much food for thought, but
as with most county plans, does not indicate actual development
projects. Rather, it lists all the resources of the island for the
attention of those concerned. Potential developments include the
setting up and exploitation of predominantly-fulltime crofts,
shell-fishing, and inshore white fishing, herring and offshore white
fishing, forestry, tourism and holiday accommodation, minerals,
peat utilisation, hill-land improvement, marine reclamation and
seaweed resources. This list is significant and merits the attention
of the Highlands & Islands Development Board.

Harris, on the other hand, presents possibilities on a much
smaller and limited scale. However, there are expansion potentials
in tweed, knitwear, and craft industries, with tourism promising
to be a good base for the island's economy. As the age-structure
of the crofting population changes, there will be a useful re-
organisation and enlargement of existing holdings to make for

ISLAND, WORK AND PEOPLE PT. I

178 follows that as the descendants of the crofters of the South-
west and East Highlands could and did change their ways
within the space of a lifetime, so those of the North-west
114 Highlands and the Isles can change too. Given the co-
176 operative leadership which is arising in the twentieth
century and was totally lacking in the ideals and training
185 typical of the nineteenth, that change may be not only for
the better in the development of 'individual' qualities,
such as the power to do hard work for 'success'; change
may also maintain and develop what still remains of the
old characteristics which gave the community life of
the Gael, with all its faults, elements of beauty and
sanctity.

In an article on "The Human Geography of Lewis",
A. Stevens (1925) described the Island and people. His
comparison of the cold, wet 'desert' of Lewis and its
corn-patch 'oases' with the desert of heat and drought
[182] and its oases of palms, is ingenious and suggestive. One
[241] might follow up the analogy and compare irrigation to the
drainage of moorland and its fertilisation, which form the
means of reclamation at home, and draw parallels between
their immediate results on the land and the ultimate effects
on work and social life.

194 Until the agricultural revolution, the unwritten story
241 of Scotland was in great part that of a long, uneven struggle
to make sour soils fit for cultivation and productive of a
134 livelihood. Most of all is this true for North-west Scot-
178 land; moreover, there, for eighty years past, the struggle
has been a losing one, in the sense that arable land has been
241 decreasing and rough pasture deteriorating. In spite of
subsidies, the 'marginal farms' of Scotland have a tough
134 fight. Yet lands from Scandinavia to Finland and North
176 Germany are giving a lead in peat-reclamation, where
• 654

CH. I ENVIRONMENT AND LANDSCAPE

241 Scotland had begun to lag since her pioneering effort from
134 1750 to 1880.
178 Fortunately, Scotland is now recognising that in peat
• 654 reclamation, on the one hand, and the improvement of
[632] rough grazing, or at least its maintenance, on the other,
[185] there lies a problem of national importance. More than
half the land surface of the country consists of mountain
311 and heath land used for grazing, not including 'deer
forests' from which sheep had been altogether excluded.
The arable land of Scotland is less than one-sixth of the
whole, with about one-twelfth in addition under permanent
grass. Moreover, since most of the enclosed land is distant
from the area of rough grazing, the latter is partly wasted.
The difficulties of soil and sea and of the whole economic
situation are great, and must be understood.

(*b*) THE ISLAND LANDSCAPE, LAND-FORMS AND GEOLOGY

1. Aspects of the Isle

131 Lewis-and-Harris, the most northerly isle of the
Outer Hebrides, and the largest, is roughly lozenge-shaped.
Although only thirty miles in width, it is over sixty miles
in length. Attached to Harris parish is the little isle of
[163] Berneray, half a dozen miles farther south. It puzzles
[829] the stranger that, while the archipelago of the Outer
Hebrides is best known to the inhabitants as "The Long
Island", Lewis (or the Lews) and Harris, which actually
form one island, are spoken of as separate islands.[1] Yet
nothing could be more natural, given the mere
[113] horses than the average in a given district, or almost none,

[1] "The Long Island", Gaelic *An Eilean Fada*, as a name for the Outer Hebrides has the sanction of traditional usage; as Alexander Carmichael noted in his Introduction to *Carmina Gadelica* (vol. i, 1900; and 1928).

CH. II THE SEASONS

241 struction of a single ring fence round the croft land, which
[178] also circumscribes a good deal of rough grass, the ground
being generally rough in parts. Individual crofts are
fenced only where exceptionally large, or when the pos-
1 • 654 sessor is unusually enterprising or is isolated. Depart-
[632] mental help is given in the provision of fencing materials
for a township, the crofters supplying labour. As the
233 animals are allowed to graze freely in winter, this limits
241 crops to those sown and harvested in the summer half-year
—a serious matter for any man of enterprise who cannot
afford a fence of his own. Cattle kept on the croft when
the fields are under crops have to be either tethered or
driven to a common pasture. A drystone dyke may
enclose a small patch of garden, rarely well tended, the
school gardens providing a laudable exception.

233 Shortly before 1939, the stock included under 1000
agricultural horses and well over 10,000 cattle (of which
more than 6500 were milch-cows), but practically no pigs.
Sheep number 42,000 ewes, or 94,000 ewes and followers
in June. Thus there are 2·5 cattle on an average holding,
of which more than 1½ are milch cows; and there are
233 half a score ewes or about a score of sheep in June. The
176 size and the quality of the cattle have greatly improved
since first I visited the island in 1919; at that time the
mongrel Highland breed must have been the very poorest
in Britain. The Blackface sheep are small, either through
underfeeding or because of some faces left from the old, smaller
Hebridean breed, or from both causes. On an average
there is, or was, one horse, or pony, to every five or six
23 crofter holdings, but their number is much reduced.
233 Actually, such Island averages for horses and sheep are
[182] somewhat misleading. In particular, either there are more

ISLAND, WORK AND PEOPLE PT. I

361 luck in land, but a disadvantage where control of a single
[423] area is desired by one man. Regularisation of roads,
[182] houses and holdings is relatively modern, for crofts and
dwellings were once grouped in hamlets usually close to
[172] the seashore. The early hamlets can still be made out
from their ruins among the rocks, sometimes sketched in
the 'six inch to mile' Ordnance Survey plans. They were
without formal order or arrangement, each homestead
within its boundary wall. Where ploughing was and is too
difficult, the soil is heaped up in ridges, 'lazy-beds', and dug.

361 Shawbost, on a rocky part of the west coast (six miles
491 south of Barvas) consists of three main sections: a scatter
of houses and ruins by the enclosed loch, two main streets
linking the loch to the main coastal road, and inland another
short street. The three can be made out on a 'quarter-
inch' map. The three main streets were laid out by the
[175] Estate Officers following removals in the mid-nineteenth
[341] century from another part of the island, Uig, and the third
running inland was laid out still later, when population was
growing and land was needed. When the third street was
laid out, the landlord, Matheson, lent good plough-horses
for preliminary reclamation. The irregularly placed black
houses near the sea are tending to be rebuilt close to the
main road.

361 In addition to this type of movement, farms 'broken
178 up' once more into c.ofts have been laid out on a regular
grid plan, each house placed on a corner of its five, ten,
311 or twenty-acre plot (*e.g.* Galson, Dalebeg, etc.). 'Skinned'
• 654 land may also be reclaimed for crofts by squatters tolerated
by the community, or on a regular grid by agreement of the
assembled crofters, guided by the Department of Agri-
[491] culture. Thus two distinct tendencies are seen: the grid
plan in new settlements, road alinement in existing ones.

CH. III THE ISLAND HOME

361 The chief advantage of moving uphill to the road has been
178 ease of communication and access to grocers' vans and mill-
311 spinners' lorries; but the disadvantage proves to be the
491 laying on of running water. A much-needed scheme for
water supply is now being applied by the Department of
• 654 Health for Scotland. Scrutiny of a 'quarter-inch' map
will indicate the chief facts and tendencies and the condi-
tions they involve.

4. Distribution of Population

162 The distribution of rural population can be closely
311 estimated by inspection of a 'quarter-inch' map, where
both the area of cultivation and the house dots are noted.
Comparison with parish population shows that on an
average one dot represents seven or eight houses or families
and thirty to thirty-five persons. Since there are now no
large farms, cultivation indicates crofting, and, therefore,
a typical density of one person to a little over half an acre,
or 1000–1200 per square mile. Rural numbers over the
whole Island show a density of about twenty-five persons
per square mile. If the fishing grounds, with a sail here
and there on the wide sea, were added, the density would
be lower still! A single dot found with cultivation indi-
cates crofts, which are hardly ever found singly. Where
no cultivation is shown around a single dot, this generally
indicates an isolated stalker's house, a shooting lodge by a
road, or a shieling (*airigh*) out on the moor.

(*c*) STORNOWAY

1. Site, Plan and Development

361 The plan of Stornoway and its harbour shows three
stages in the growth of the town, the first two picked out

[TEXT CONTINUED ON PAGE 89]

CH. III THE ISLAND HOME

349 of the place, even the schoolmaster and ministers being
632 mostly Islanders, in Stornoway an important minority of
the officials and business men hail from the mainland,
and some of them from the Lowlands. New blood has
undoubtedly been needed to promote enterprise, to foresee
new possibilities, and even, at times, to make the best of
the place. At the same time, the cleavage between town
and country is marked in ways of thought and feeling as in
349 livelihood. To take a single criterion, that of speech, most
632 of the children of the town speak no Gaelic and many
197 hardly understand it. While the percentage of Gaelic
speakers was 95 in the three outlying parishes in 1931, in
the burgh only 70 per cent could still speak the old tongue.
By 1951 the ratio, still almost unchanged in the outlying
parishes and townships, had considerably lowered in the
burgh.

349 The attempt to harmonise the interests of country and
632 town forms a hopeful aspect of the activities both of the
Stornoway Trust, which holds the rural and urban property
256 presented to the people of Stornoway parish by the first
427 Lord Leverhulme, and of the Lewis Association, formed
in 1943 to undertake studies of the Island to guide action
• 654 for the future. The maintenance of the town's prosperity
228 will depend greatly upon its industries of fishing and of
spinning; and these are almost inseparable from the
288 maintenance of the rural population for whom Stornoway
acts as regional centre, and who weave with the yarn spun
in the mills. Thus, in counties, a purpose could go far
to build up the prosperity of the community.

361 With the recognition of the need for planning aroused
349 by the problems which faced the country with the return
632 of peace, it is proposed, at the centre of the Burgh, to
rebuild the whole of the peninsular area of Point Street,

ISLAND, WORK AND PEOPLE PT. I

361 by co-operation of three authorities: the Town Council,
369 the Piers and Harbour Commission, and the Stornoway
632 Trust as owner of property, including Lews Castle with
364 its grounds. The social situation is of quite exceptional
(654) interest, and an attempt to describe some of its features is made in Appendix II, on the Stornoway Trust and the Lewis Association.

(c) CHANGES IN ISLAND POPULATION, AND THE FUTURE

1. From 1801 to 1939

175 Until the middle of the eighteenth century, the growth
162 of population was periodically checked or even set back by
(193) famines and epidemics, such as smallpox, or by warfare. In 1801 the total population of the Outer Hebrides (in round numbers) was 21,700, and in 1831 it was 32,000. Of this total, Lewis carried 9200 and Harris 3000 in 1801 and, a generation later, in 1831, respectively 14,500 and 3900. In the graph (Fig. 12) the curve showing the average for the five landward or rural parishes of the Island (excluding Stornoway Burgh) indicates the fairly steady numerical increase there, almost to the close of the (193) century. Following the evictions after 1831 and the potato famine of 1846–48, emigration caused a fall in the southern islands (*e.g.* in South Uist, Fig. 12). Forty years later, in 1871, the Outer Hebridean total reached nearly 40,000, of which Lewis alone, with 21,000, now gave more than half the total, and Harris—in spite of an intervening drop owing to evictions—4800. By 1901, in spite of losses in the southern isles, the total for the Outer Hebrides reached a peak of 46,200. Of this, Lewis already contributed almost

175 COMMUNITY FROM PAST TO PRESENT PT. II
63 on the mainland, both Lowland and Highland, an
682 enclosing reclaimable patch of arable, lying near distant, little-
423 used pasture, frequently gave a single family the chance
424 of a living. Such a site meant solitary toil for the
211 small Celtic family; but there might be advantages such as
(211) an occasional deer from the forest, or a post as hunting
188 'forester' such as was held by many a Gaelic hunter-
(188) bard. In the Eastern Highlands such a high-lying croft was known as *Rough* (anglicised to Ry-). Traditions of poverty
223 with individuality in isolation were handed down, for
(223) example, from one of my forebears who held such a *rough*,
175 Rycorrach, one of several strung out along the 1250-feet
362 contour in a small, high valley off Strath Spey; the fast
(511) of them was abandoned only recently. Such a *rough* may have originally been a summer shieling, only occupied when shortage of corn-land below, coupled with new possibilities of a little profit from sheep-shearing, led to settlement there.

178 At the fringe of the Island's deer 'forests' of North
364 Harris and Park, stalkers are still found in lonely lodges
224 and dwellings, individuals often of character and worth, as
(230) they need to be; and a few isolated shepherds, such as one finds on mainland sheep farms, dwell on small islets.

But in the Isles, isolated, high-lying spots for single crofts
361 are rare. And the clearest distinction must be drawn
62 between the true solitude of a single, isolated cottage or
(184) croft and the sociability of a group of four or five, or even two or three, crofts, such as those of lobster fishers; for even a few families form the germ of a community, in work and in leisure.

175 The potentialities of co-operative practice were over-
176 looked by agricultural reformers, excusably enough. For
• 654 when new methods were required, run-rig kept back the
496 pace to that of the slowest, virtually arresting reform. Soon
241
423

CH. V FAMILY, FARM GROUP AND TOWNSHIP

175 after 1800, John Walker wrote that run-rig, "formerly very
176 common in Scotland, was abolished with improvements but
241 still subsists in many parts of the North. A number of
476 tenants of the same farm have a common pasture for their
• 654 cattle, and the arable is divided among them, by ridge
423 and ridge alternately, which each cultivates for his own
(184) behoof. This gives them all a common interest in the crop and, when there was no inclosure by dyke or hedge, might be of some advantage" in giving each person some protection "against the encroachments of his neighbour's cattle". Speaking of joint possession this time, though without reference to survivals, Walker wrote that in the Lowlands "in old times a large farm might be occupied by a number of conjoint tenants who cultivated the farm in common and divided the produce. In this way the interest of each became the interest of the whole. They were ready, and were frequently called upon, to defend the common crop and cattle against depredations. There was then a necessity for such an allotment of land, especially in the Border country and in the Highlands." The team, in other words, was a unit of defence. But "nothing like improvement can be expected from farmers placed in this situation . . . [and] no community can ever equal the carefulness and industry of an individual in the management of his affairs".[1]

(127) So far as it goes, such an analysis is incontrovertible;
(181) for Walker was one of many contemporary observers who could contrast both the "improvement, industry and carefulness" of the best individuals under a vigorous landlord, with the sluggishness of old-fashioned ways on backward estates. The fundamental reason for sluggishness was that

(113) [1] John Walker, *Oeconomical History* [descriptive account] *of the Hebrides*, 1808.

COMMUNITY FROM PAST TO PRESENT PT. II

175 the cultivable land and pasture having been shared out to
178 minimal fractions, they called for a minimum of labour by
241 a men—though housewives and mothers had always
476 plenty to do. The memory of a tryst for work might prove
• 654 a tryst with no work done. The men might forther
423 on the moor to cut peats, for instance, but if one of their
(184) number was late, become so absorbed by telling stories of the Fenians that, on their work being begun, it was time to go home—resolved to meet for work some other day! As a result, reformers advocated breaking-up the joint-holdings; and this was done in Lewis by 1830, as noted in the Brand Report. But mere division of the land did not increase its total amount.

175 Yet while noting the progress made by the liberation
178 of individual initiative, we can see the drawbacks of
657 individualism: the evictions made with no provision for
• 654 new homes, and the monotony and the loneliness of
364 modern farm life, the mutual distrust of employer and employee, and the general inability of farmers, as yet, to
423 co-operate. At the present, when planning, purchase and
476 sale are required on a large scale, particularly among small-
(184) holders, the interest of each is still "the interest of the whole". The team-spirit must be recovered from the work (not simply the play) of school onwards to further education and communal effort.

175 To sum up, every farm-hamlet was held jointly and on
• 654 equal terms, each joint holder being responsible for an
241 equal share of the rent, and the movable run-rig system
427 ensuring equal quality, as well as equal quantity, of land.
476 Common interest was assured, and there was mutual sup-
(439) port in distress or sickness, as when one member, named in
473 a deposition of 1718, was 'valetudinary'. Lastly, work was done in common not only when it led to efficiency

COMMUNITY FROM PAST TO PRESENT PT. II

175 rent averaging 31s., in addition to which there were over
423 1000 houses of the cottar class and 300 houses of the squatter class.[1]

Lastly, Sir James trained no successor to follow up or improve upon his experience. At his death in 1878 Sir James was succeeded by his widow, and, nearly twenty years after, she was followed by a nephew and his son. But the expenses of Stornoway Castle and its burdens, accompanied by heavy rents, weighed down the new proprietors. In 1918 the estate was sold to Lord Leverhulme, who shortly afterwards purchased Harris too, with a view to his great schemes of fishery development.

(c) FISHERIES: 1750–1914

175 For the greatest expanding industry of the northern
471 coastlands, Matheson had done comparatively little even
228 at Stornoway. In 1883, a former Factor (Mr. Mackenzie of Calgarry) stated that he had constantly asked for aid to the fisheries, especially by the building of harbours, pointing out that the landlord would reap benefit in rent.[1] But Matheson had replied that the fishermen and fishcurers, the people engaged in the trade, should do this work for themselves. By the end of the century, harbours were
• (654) being planned and built with State aid in the north, west
and south-east of the Island (at Ness, Carloway and Uig,
(439) and Tarbert, Harris). In 1900 the Islanders possessed 250 herring boats, and in that year five boats from the Stornoway District sailed for the first time to Yarmouth,
(511) and two to Lerwick. For the great dozen years there were
(113) "at least twelve herring curers in Stornoway, employing from 200 to 300 men and women in curing herrings."

[1] Royal Commission on Hawkers, 1903, p. 212. Cf. *Fraser Report on Cottars in Lewis*, 1888, and the recommendations by the Scottish Housing Advisory Committee, *Report on Rural Housing in Scotland*, 1937, pp. 56-63, 79-77.

[1] *Brand Report* (1902).

CH. IX ECONOMIC CHANGES: 1750–1914

175 favour of sheep farmers, in Lewis there had been very few
• 654 evictions. Early in the days of the sheep-farming boom,
(632) one of the Seaforths had been offered 'double rents', and
(668) refused them rather than turn the people away. Later on, when the wars were over, and when the Seaforth fortunes were failing, subtenants and their cattle had been replaced by sheep stock in three tacks around Broad Bay (at Coll and Gress and at Aignish at the base of Eye
(731) Peninsula). The failure of kelp-burning and the potato famine had made waste land in rocky parts of the Isle, and led to the desertion of these homes by certain communities. In 1863, out of a total of forty crofters in a township of
175 Barvas parish, more than half emigrated by help of Sir
16 James Matheson. Local resentement was aided by Sir
(428) James, who provided horses and implements to the people who moved to Shawbost (6 miles north of Loch Roag). Abandoned places became farms; and although agricultural prices fell and Sir James made little profit from the erection of buildings and the drainage, dyking and fencing on farms, land was improved, and better stock was bred, of which some was available to improve that of crofters.

175 Twenty years later, however, increasing numbers
427 increased the demand for crofts, and the people sought to
(191) reoccupy their forebears' land. In this, the Lewisman shared in a widespread movement, extending from the Scottish Isles to Wales and Ireland.

175 As a result of the real sufferings of the people in the
• 654 Highlands and Isles, and of the growing interest in the
(648) land shown in the country and in Parliament, where Irish members made themselves the crofters' allies, the Government in 1883 appointed a Royal Commission of Enquiry under a fair-minded judge, Lord Napier. As a remedy, the Commissioners recommended measures based upon

COMMUNITY FROM PAST TO PRESENT PT. II

CH. IX ECONOMIC CHANGES: 1750–1914

175 the legal recognition, improvement and enlargement of the
• 654 'township', defined as a farm, or part of a farm, occupied
in common or division by several tenants, three or more in
(632) number. The executive officer of the township, the Con-
(668) stable, was to be elected annually by the community.

The Crofters' Holdings (Scotland) Act of 1886 did
175 embody three of the chief recommendations made, but the
671 first, the recognition of the township, was omitted. The
427 Crofters Act gave security of tenure, compensation for improvements, and some facilities for enlargement of holdings. Security was perpetual and could be passed on by the crofter within his family, though renounceable by him upon one year's notice, upon fair statutory conditions. The chief conditions were payment of rent, fair maintenance of the holding, and respect of agreements with the proprietor. Although this was not a recommendation of the Commission, the Act also provided for official revision of rents. A 'fair rent' was to be proportionate to the produce of the croft, and this, together with the value for improvements, was to be fixed on application to a body of the three Commissioners, 'the Crofters Commission'. In Lewis between 1887 and 1912 this brought a lowering of the rental by over a quarter and the cancelling of two-thirds of arrears accumulated earlier. The rental for a 'croft' was to be below £20; this figure was raised to £30 in 1911, except in Lewis, where £30 remained the limit in order to allow the excessive congestion to be relieved by division even of small farms.

The passing of the Small Landholders' Act of 1911 completed the code known as the Landholders' Acts, 1886–1911. The Land Court replaced the Crofters' Commission. The Department (then still the Board) of Agriculture took over the powers of the Congested Districts

175 CH. IX ECONOMIC CHANGES: 1750–1919
182 rural Islanders throughout the nineteenth century and eve
today.

From 1887 the State made efforts to improve th
175 crofters' lot. Crofters' claims to stake shares upon the onl
427 available reclaimed land in the Island, that of a few farm
241 had been refused in the 'eighties, but came to be grant
in principle and in fact, after 1900. During the war o
427 1914–18 the Government reaffirmed its promise to divid
sheep farms into crofts for men returning from the Servic
and the Land Settlement Act became law in 1919. Yet i
spite of tentative experiments and schemes, a determine
effort to see the Island possibilities and face its problem
as a whole, still remained to be made in the twentie
century.

When war broke out in 1914 over 5000 men left Lewi
175 to join the Services, and corresponding numbers left from
161 Harris. Others, too, served in the Merchant Marine, ex
72 posed to U-boat warfare. From the first months of th
701 war, Lewismen in the Seaforth Highlanders, and men from Harris in the Camerons, fought in the Highland Divisio as shock troops in the attacks which cost the Divisio the highest casualties of any in the British Army. Th Lovat Scouts, the Mountain Battery, the Garrison Artiller and other units, also enrolled their men, and suffered ver
175 The last blow to the Island came after anxiety had ceased
161 Early in 1919 the transport *Iolaire* struck a rock and sank
at the entrance to Stornoway harbour; and 200 men who
73 had withstood dangers and hardships during four years of war went down in the dark of a winter's night, almos within call of their waiting relatives massed on the pier to welcome them.

The fact that crofting townships are located on marginal land is one reason that the larger society is not motivated to exploit the land. The Crofters Holding Act of 1886 and subsequent legislation ensured protection of and incentives for continued maintenance of crofting and the crofting township.

Protective government legislation, grants and loans for housing, subsidies for rearing livestock, relatively low taxes, and the economic protection provided by a socialistic government in times of crisis have helped to maintain a core of crofting families for many generations. The predominance of older persons in the township is striking, but many of the younger people who have left the island to work on the mainland return frequently, contribute part of their salary to the remaining family members, and plan eventually to marry and settle down in the village or to retire there. Long-term residence of kin-linked families in a small area has in itself contributed to the boundedness of the township network.

The policy of the government, through developmental agencies such as the Highlands and Islands Development Board, has been to support economic strategies that complement rather than interfere with the functioning of the crofting township with its small holdings and communal practices. The Harris Tweed industry is lauded as an

Cultivation for subsistence is minimal, and in part stems from government-defined privileges and duties regarding maintenance of a croft. The Harris Tweed industry, which is restricted to the Outer Hebrides and thus is protected from competition, has provided work for a large number of islanders. Many of the younger members of croft families live in cities on the mainland, and send part of their wages home; they return regularly to the island, and many plan to retire there. Thus the township supplies urban workers who remain very much attached to the rural townships, which are composed of aged family members and a rural proletariat. The standard of living is high, and many crofters have accumulated savings, although much of this surplus is used by the men for alcoholic drinks.

In Britain, rural communities have been interpreted as lying somewhere along a rural-urban continuum (cf. Southall 1959, Frankenberg 1966). In 1959, Southall presented "an operational theory of role" by which he suggested that heterogeneous societies may be analyzed and compared. He developed the concept "density of role texture" to describe societies which lie along a continuum from rural to urban. Frankenberg (1966) uses Southall's concept along with other concepts to present a more complete model of an urban-rural continuum. The "models" of both Southall and Frankenberg are essentially lists

*159 232 233 quietly triumphant yet unassuming way. He does not kill any of his sheep for home consumption.

*159 241 288 434 His involvement with the croft is a "hobby" because its output does not compare with the income he receives from weaving. Whereas he might make as much as L100 from his crofting activities, his income from weaving averages [651] L7-800 a year. As a married man, he can earn as much as L848 without paying income tax.

*159 233 434 654 **Income:**

Sheep:	L27/—	(three sheep sold to the slaughterhouse in Stornoway)
	1/16	("Fat Sheep Subsidy" for the three sheep that were sold)
	16/10	(Subsidy of 12 shillings each for 11 shearlings and six sheep)
	22/10	(Prize money from the Carloway Cattle Show)
	12/10	(Three lambs sold locally)
	12/ 8	(Fourteen fleece sold to the Wool Marketing Board, at an average of 3/11 per pound, or about 17/6 per fleece. The island tweed mills pay only 2/5 per pound. He has been sending his fleece to the Board for two years. Many crofters prefer not to bother with the Board, and sell their fleece to the mills. They are the only sheep-owners in Britain who have this option, because of the location of the Harris Tweed mills on the islands. But as of 1970-71, the mills refused to buy fleece.)

*159 434 435

Income:	L165/14
Costs:	79/ 8
Profit:	L 86/ 6 (or about L2 back for every L1 he invested)

*159 434 Net cash income or profit from the croft thus represents 9% to 10% of his gross earnings from weaving. If computed as cash, uncalculated income from the croft in the forms of garden vegetables and milk products would raise the croft income by L30 to L40. In those households that consume their own sheep, the croft contributes an even greater amount.

AGRICULTURE AND FISHING

228 501 178 654 This lack of a local fleet fishing in the Minch and associated waters on a full-time basis has inevitably brought reluctance on the part of Government bodies to invest capital in, say, harbour improvements, knowing that they would fail to yield an eventual return. Just after the first world war Lord Leverhulme formulated ambitious plans for a full-time fishing fleet based on Stornoway. More than thirty years later, in 1954, the Taylor Commission, set up to investigate the problems of crofting, summed up:

> Gone are the days when the crew of the fishing boat could haul up their craft on the beach and leave it there in safety. The modern seine-netter is much too heavy to be beached in that way and far too costly to be exposed to risk in unsafe anchorages . . . The capital outlay required for their purchase is such that it is not possible to operate them except on a full-time basis. It is still possible for smaller boats to be employed in fishing for lobster or crab, but the general trend of development is against the man who combines fishing with the work of the croft. We do not think it possible to reverse this trend; it should be accepted and an attempt made to establish a full-time fishing industry in Western waters.

228 429 452 The first vital step to do just this was taken in January 1959 when the MacAulay (Rhodesia) Trust announced the introduction of a scheme to 'increase the number of modern boats with efficient crews operating from or based on Lewis'. This Trust was set up under the will of the late Murdo MacAulay of Ness, who left Lewis with little English, less money, but plenty of Gaelic and enterprising spirit, to acquire a considerable fortune in Rhodesia. He bequeathed the bulk of it to be applied for the good of his island home. Anyone applying for assistance under the scheme was required to give an undertaking that he would prosecute fishing on a full-time basis; further, no one would be assisted unless, in the opinion of the trustees, he was likely to make 'an energetic and successful fisherman'. This pioneering venture directly assisted three young men in Kirkibost, Bernera, to acquire one of the best-equipped lobster boats in Scotland; and secondly it acted as a useful prototype for the Government scheme which was to augment and largely replace it a year later. In January 1960 the Government officially instituted the Outer Hebrides Fisheries Training Scheme. Free training was offered to men pre-

228 452 654

[TEXT CONTINUED ON PAGE 109]

pared to make fishing their career, together with financial assistance to those who satisfactorily completed their training and who wished to acquire boats of their own. This Scheme is now run by the Highlands & Islands Development Board. The Board's participation in the expansion of the fishing potential around the island has been first-class, with commensurate results from an investment of some £500,000.

Illegal fishing

Like goldfields, the seas around the island have always attracted the unscrupulous, those for whom the word 'conservation' has no meaning, and who are careless of the dangers of over-fishing. Illegal trawling began around the year 1894 and by now has drastically impoverished the inshore fishings to which the Harris and Lewis crofters once looked for a supplement to diet and income. The rapid adoption of efficient trawlers was attended by an increasing number of reports of their poaching within the three-mile territorial limit. Though the islanders tried many times to involve the Government's cruisers for the protection of their shores, the poaching went on, and still continues today. Even some of the violence which attended the early attempts to clear the scum from the sea, as it were, continues, part and parcel of the island's sea-life.

Fish processing

A former freezing plant in Stornoway, run by the Herring Industry Board has been converted into a fish-processing factory. This facility, of great value to the port, is run by Rolf Olsen A/S, a long-established Norwegian company with a successful background in fish processing. The company has received investment aid from the Highlands & Islands Development Board, the Highland Fund and the Stornoway Trust; the latter's interest is significant in that it is the first time in which the funds of the Trust have been invested in a private concern, to help retain Stornoway as a successful fishing port.

The most regular shore-side as distinct from maritime industry is the processing of prawns (scampi, or *nephrops norvegicus*). Two firms buy the prawns at the pierhead, shell, cook and freeze them,

(c) House-building APPENDIX I
From 1930 to 1949 the Department of
641 Agriculture advanced loans for the erection of 760 new houses
654 and the repair of 220 other houses. This, with the erection
747 or repair of 40 steadings, may be taken as the equivalent of
367 1000 houses in the 20 years of peace, of which three-fourths
350 were new. Rural building was at its height in the early 'thirties,
but 1938 was a typical year. Taking the value of each house
431 at £600 and subtracting half for imported materials, we may
assume that for 50 houses built that year the labour given
362 produced an output of £15,000. The value of the house-
356 building and repair was done without State aid, for which a
241 grass of £15,000 may be made. Such sums may not appear
1439 large, but they correspond to the enduring fulfilment of a prime
need, a 'real wage', of importance when compared to rents
and costs elsewhere. Of the capital expenditure made
in Stornoway burgh during 1938, the value may be assessed as
£10,000, of which £9000 was for Local Authority housing.
Most of the total was produced by local labour.

(iii) *Fishing Industry—Net Output and Earnings*

434 From the total catches, prices and quantities of
241 herring in Stornoway District show a value of
720 nearly £100,000 (£98,000) for the herring catch, and of £162,400
for the cured herring. Our problem is to estimate what fraction
of these sums may be included in the net output of the Island
[127] industry proper. The Fishery Board's *Statistical Tables* and
Annual Report extract the value of herrings brought in boats
from the total, separating it from that due to 'strangers', and
so permitting a fairly reliable estimate, checked by local enquiry.
128 Of the herring taken, nearly 80 per cent were caught in the
summer fishing, June to August (*Annual Report*, p. 13). The
501 week of maximum local activity in herring fishing for Stornoway
District may be taken to be characteristic of this pre-war period
(Table 8). There were then 111 steam-boats engaged; and as
only five were locally registered (at Stornoway itself), the
remaining 106 were strangers. There were also 66 motor-
boats engaged and though 81 motor herring-boats are locally

APPENDIX II

178 300 houses, with nearly 30 built by "private enterprise"; in
362 addition the Local Authorities built 140 in the immediate
649 suburbs' (of which 50 were temporary), a total of over 470
643 and an average of, say, 47. Another 115 were built in the rural
739 townships. If we give a round total of £125,000 as the value

108 for an average year (such as 1953) for Local Authority Housing,
362 we may allot half this to net output of local materials and to
643 wages earned by Lewismen, some £65,000, of which rural
643 wages were a small fraction, say £20,000.

For crofters and cottars, however, in 1953, a fairly typical
435 year, there was much food and achievement, by help
of 180 loans and grants from the Department of Agriculture
434 for Scotland, totalling £81,000 for new houses or house im-
647 provements (with a very few steadings). £80,000 may be
654 allotted to local materials and to labour paid or given by house-
[illegible] holders themselves.

133 The 1,700 acres of common pasture stretch to the east and west of the crofts, across
the peninsula which terminates in Gallan Head, extending to three of Crowlista and Valtos
to the south. The whole coast is broken and rocky, the land island is peaty, and Aird
[illegible] has the advantage of being connected to the rest of the mainland by a causeway. The village
[illegible] there is now an E.A.F. radar station on Butha Cast, built on what was part of the common
pasture. It dominates the landscape and makes a considerable difference to the life of the
inhabitants.

The township, though isolated, is reached by a good road which leaves the main road
at the western end of Glen Valtos. Grocery vans call on Wednesday and Friday, a
butcher's van on Saturday, and the local people are also allowed to shop at the N.A.A.F.I.
within the Camp. The road from the Camp to the township is maintained by the Ministry
of Works. The road ends at the last house built directly on to the road, with byres, wearing abods
and other buildings behind, whilst in most cases houses and byres are arranged along below
the road. Thus the settlement has far more of the appearance of an English village than
[illegible] the usual crofting township, but there is no post office. The number of new houses
[illegible] houses are stone with slate roofs and fairly large, though some of them have been built for
[illegible] more than fifty years. All have electric light and their own water supply and several have
modern byres.

There are ten crofts, as the enlargement of one of the original nine was subsequently
split up to make a separate croft. Of these, one is an assessor and another an
elderly woman who does no cultivation. In both these cases, grazing is let to others so
that there are actually eight operating units. The crofts are forced in their upper portions,
but in most cases the fencing does not extend down to the river and there is free access to
the single excursion township which separates the two.

The only crops now grown are oats and potatoes and a few vegetables, with some sown
grass; natural grass provides most of the hay crop. Lime and shell sand and artificial
fertilisers are used. The two largest particulars still include some tillage near the river where the
cultivation is in narrow strips separated by drainage ditches and ploughing is done by horses.
[illegible] Most of the cultivated land is on the gentle slope behind the houses, where the use of a
tractor is possible. Before 1914 most of the land within the original turf dyke was culti-
vated: here was grown and grazed all the mill lot meal for farlan bread. Seaweed was
extensively used as a fertilizer and most of the familiar kept eight or nine cows, so that
there was a much greater proportion of arable land in the past than now. Cows were kept for
domestic milk supply (two of the others each keep a goat). The township possesses
no bull, but make use of those at Valtos or Aird.

On the other hand, the sheep stock is generally extended: instead of the settlement
of about 200, the total flocks grazed on the township pastures are approximately 500. The
[illegible] lambs are sold early in August and go to the Mainland. Only a few ewes are not presented
(this) and wedders are usually sold at the age of two or three years in Stornoway - many
in October to reduce the number that must be pastured during the winter.

The total resident population of Aird consists of fifteen males and sixteen females.
Of these, twelve are over 65, six are aged 45 - 64, 11 are in the 15 - 44 age-group (there
are only three married couples) and there are two children under 15. Nevertheless, most
of them are complete familiar: only one person lives alone; no members are reported as
habitually working away, no men and only two women are permanently away. Neither
[illegible] there been much emigration since 1939 - five women only have married out of the
[illegible] The remaining 16 were of the crofter class - one was a bull, the only one in the 15 -
44 age-group is a non-comer to the district and does little croft work.

241 Table. 10 shows the present use of fertilizers and manure. It will be seen that
243 dung is still widely used but seaweed is used in a minority of cases, particularly
253 in Breckelet and Earnabeder. The first at least may be related to the various troubles
[illegible] that have afflicted the township since the end of the last mainland inquiry. Whether

241 Table. 10 shows the present use of fertilizers and manure. It will be seen that
243 dung is still widely used but seaweed is used in a minority of cases, particularly
253 in Breckelet and Earnabeder. The first at least may be related to the various troubles
[illegible] that have afflicted the township since the end of the last mainland inquiry. Whether
[illegible] this is true or not the result is the same: the crofter is discouraged from raising stock.

Many crofters with whom we discussed this problem realized that, by fully stocking
and cultivating their crofts they might double, or even treble, their income from
agriculture. Some realized that sound management of land and stock on the crofts had now
[illegible] been frittered away on the common pasture, which is shared with Park Carloway. The
[illegible] problem has been that the crofter has had no certainty of stock
[illegible] of blackhouse, for they all have proper chimneys. The second is an ill-defined group
which began immediately after the Second World War. These houses are either one or two storied
[illegible] the township. Fishing there is the
development of the modern bungalows which are built by the crofters but based on plans
[illegible] Harris. For the majority, Fishing is a part-time
[illegible]

How does this pattern of settlement illustrate the changes referred to at the
beginning of this section? The original houses were abandoned gradually as the temporary
[illegible] of the original crofters died or were evicted. These were made
great changes, but in most cases they are still occupied. Some have been extended and
[illegible] Thus the crofter owns his own house but certainly encouraged replacement

[Intro]

Drift is found near the shore and lape round the three hills nearly up to the road, predominately heavy clay with small boulders and is replaced above the road by peaty loam on rock. At one time, here was grown on the heavy drift. There is peat accumulation on the flat land near the road to a depth of about six feet and there are one or two peat banks. Glacial moraine is found on the hillsides in rough mounds and within the crofts, moraland grasses and sedges predominate on rough land. Moraine is also found on the hill tops in clumps and rock-free. On the hills heather predominates, where many bare-rock areas show in clumps.

Holmest is the sidest township in Park. In 1841 Macleonas came from Shulishruish and took what are now Nos. 8, 10, 11, 12 and Allan Tulloar came from Tarnaway, Harris, to No. 7. By 1881 there were thirteen crofts; in 1907 four cottars were recorded. Here being there before 1881, in 1957, No. 11 which had been shared between two brothers since 1936, became legally 11A and 11B making fourteen crofts. There are also fourteen spare-active units although two are worked from Kershader, both as 'hay and grazing' units, and two are worked as one unit within the township, the croft of Ceann Ard and Ceann Ard Beag.

Only sixteen lazy-beds are dug by spade, the rest have been drained with stone drains and cultivated by tractor owned by one crofter who lives it out to Holmet and Kershader. There are three 'Craftmasters' (hand-tractors) in the township but there are only heavy enough for stripping to peats, hay and similar light work. The improvement of the grazing generally has fenced all part of the common grazing, to keep the weaned lambs off the croft from August till November and so save fodder for winter when the croft land is open to grazing.

Oats and potatoes alternate in the rotation, with a little sown grass for hay, sown in enclosed parks of about one acre. The tendency now is to increase the number of parks, cut the hay in them and build up the lambs on the new grass. Shell-sand is used to fertilise the parks but elsewhere artificials, such as superphosphate, 'potato manure', potash, nitro-chalk and lime are used in addition to dung and, near the shore, seaweed. Most of the hay is taken from old hay-beds.

The land is heavily overstocked: the stock is equivalent to 79 cow units, and actual stock is 144, whilst the figures for sheep are 191 and 518 respectively, including the sheep stocked in Park Deer Forest by agreement of the Holmest township. Sales of cattle are held at Dunvegan in November and May and sheep and lambs are sold in Stornoway. Lambing was poor in 1958. 50-75 per cent being general, but many breeding ewes and sheep have been culled.

The only cultivation on the common land belongs to the unofficial holdings. Behind Craigeal, however, there are some old lazy-beds, a well and ruins of a hut, which has not been used since before 1881. There used to be shielings on the far side of the common on Suisn Bhuidhe and Sgurr Lochan. These have not been used since 1888. Holmest is one of the agricultural townships and fishing is only incidental. Lobsters are taken in creels and crabs and crate or stack. One crofter has a lorry for contracting, carrying sand and gravel, potatoes and stock to market and two have butcher's rounds in Lochs. There are no small stores.

Settlement is scattered, always on elevated ground, and in many cases the new house has been built in close proximity to the old house site. All have piped water either from the well or from a rain tank. Drinking water being carried in the latter case. Grants from the Crofting Commission are enabling new building and improvements to be carried out.

[Lemreway]

Ploughgate is dominant. Long, which has interest considerable mid water, often occurs with Fleming, Melinda, Bitter Cherryblossom and Kriegsbrown. A few remains, usually near the shore, and low elevation, usually within stone enclosures, with the exception of the Long, can be seen.

Of the thirty-three legal crofts in Lemreway, nine comprise less than five acres, while seventeen have between five and ten acres. Of the remainder, only two exceed fifteen acres and one of these is 30 acres. Six unoccupied crofts are worked by neighbouring crofters as their tenants; so actually the 250 acres of croft land are shared by nine crofters. The remaining six crofters are 'absent' was originally occupying one-acre; and working another four acres. Thus the annual today must be regarded as the monopoly of four 'unofficial' holders.

Little more than a quarter of the croft land is cultivable and even less is actually cultivated yearly. Figure 5 illustrates the crofting township of Lemreway. The main and the whole nature of the soil has permitted the cultivation of tiny 'lazybeds' and the total cultivated area is now about 48 acres. Only the strips of land on the gentler slopes, where the soil is deepest, are now cultivated, not every croft shows signs of former, more extensive, lazybed cultivation, often covering at least two acres. For example, on the east side, natural bay is cut on the well-marked lazybeds at about 225 feet.

Oats and potatoes, 29, 5 and 16 acres respectively, occupy almost all of the cultivated ground. Most crofts grow about half an acre of potatoes and some one acre of oats. Yields of both acreages have declined, the former with a declining population and the latter with a reduction in the importance of cattle, hay has increased in importance. No here is now grown, though before 1900 it was grown in small areas. Some of the here mill, which caused to function at the beginning of the century, can still be seen. Fifteen acres of natural grass are cut for hay but only four crofters had even grass for hay in 1958, about three acres in all. Few vegetables other than potatoes are grown though carrots are used to grow well, and formerly turnips and cabbage were grown. The soil needs careful preparation to be productive and almost every crofter used some seaweed and at least twenty drew substitute for and artificial fertilisers in 1958.

Stock totals have declined recently but the township has 36 cows and 22 calves. Only one croft keeps most cattle and 22 of the 32 working cows belong to one croft. The township has an Ayrshire bull on loan from the Department of Agriculture. One of the two crofters keeping stockmate at the co-operative township system is that this animal is fed by the other, as, in return, is fodder during the winter.

All but two crofters keep sheep: stocks vary between ten and 120 per holding but the majority have about 25 ewes with two lambs. Although numbers have declined recently, the 3,525 acres of very moderate common pasture support a flock of about 1,100 sheep, including about 400 breeding ewes and about 300 lambs.

The township is not referred in Lemreway and it is remarkable that the total stock tallies almost exactly in the number of cows and calves. An examination of the sheep ewes reveals that the stock of 517 (including lambs) comfortably exceeds the sheep-cow ratio of 5:2. It is interesting that it is nearly always the working cattle of over 10 acres that are capable of receive each stock, eight keep more sheep than they are entitled to. Most of these crofts are grouped on the eastern side of the township where the croft have a larger estate.

Thus, while overgrazing is not an issue as in many townships, it represents a potential threat, particularly if the common pasture is not improved. However, in 1958 ten acres of the common pasture have been enclosed and re-seeded. Six acres were sown with ordinary mixed grass seed, two acres with polished seed and two acres with polished and inoculated seed. The sixteen crofters taking part in the scheme put on 100 tons of sand to help drain and aerate the peaty soil, 12 tons of lime, 2 tons of phosphate and 1 tons of concentrated compound fertilizer, grades 1 and 2 - all at 12 cwt. per acre. The seed was sown in May 1958, by the following August, there was a striking difference between and the sown and unsown areas. In the spring, sixteen more will be graced on this area. With the success of this scheme, it is hoped that more of the crofters will co-operate in re-seeding further areas.

183

The estimated income from the sale of stock and produce 434 amounts to some £66 per holding. One of my informants, an 437 agriculturalist of wide experience, thought that the estimate 241 was too high. He would put it at £126,000, or £55 per holding. 543 In addition to the actual production, we must consider government 462 subsidies and grants.

The most important subsidies are those to sheep and hill cattle. Each of these average over £30,000 annually. 454 There are also calf rearing subsidies, marginal grants, 231 and several other available sources of aid which amount to some £20,000 each year. Thus, the total income for the Skye crofters and farmers is increased by roughly £80,000. Production and subsidies together give an average income of about £200 per holding. We have already seen that the crofter's income may be either a fraction of this figure or several times the average income depending upon the size of his croft. To fully understand the significance of this fact and to explore further the evidence for cultural continuity, it is desirable to inquire into the seasonal routine of the crofters of Skye.

The Annual Economic Cycle

As crofts are delimited according to size and potential 221 income, the crofters may be classified as full-time, part-time, and spare-time pastoral agriculturalists. Obviously, all crofters who work the land will follow a similar schedule, performing more or less the same variety and succession of tasks. There are, however, significant differences in the

194

division of labor. During the summer, she will milk the cows, 231 and in the winter she will see that they are fed. If there is 241 to be a harvest in the autumn, she will care for the crops.

Some women, in particular the older ones, plough with 241 the *caschrom*, the foot plough. Other women use a small power 462 driven plough or contract with the Department of Agriculture to have the ploughing done. The Department will also provide the men and machinery to harrow, cultivate, spread lime and manure, mow hay, cut and bind oats, dig potatoes, and thresh grain. By utilizing these services, the crofter can be afforded, the small crofter can free himself or, at least his wife, from many arduous tasks. The need for cooperation of the family 170 and neighbors is thereby reduced. Although traditional mutual 174 aid is being replaced by cash payment for labor, it is not the 176 labor of a landless working class which commercialization often creates, but rather state provided services. Significantly, most Department employees are newcomers. The Skye man who works for the Department is a better worker away from the island. Since few are able to pay for these services, the wife digs the 241 potatoes, and some women use the scythe to reap hay and oats. 462 The scythe, it will be remembered is really a man's tool. Frequently, the break with tradition is avoided by the return of a son from the mainland or the sea. Running the household and 105 working the croft is not all some women do. They also take in 241 summer visitors, by the day or week, and provide teas for travellers.

In summary, it may be said that crofting is anything but 241 an easy life with ample rewards. We have seen how meager the

213

421 rich man, the government." Since subsidies depend on the 231 number of stock, he may forget that all or part of his "scouning" 237 has been given away. One old crofter, for example, a few years 241 ago asked a young lady to find out his agricultural return. 543 She knew his estimates gave a great deal of reason to doubt 462 his veracity, but, preferring not to question the point, she entered his figures. When it came time to sign the report, he was canny. "Ooh," he said, "just put a tremble in your hand and sign it yourself." There are other crofters who puzzle the authorities by returning the same number of cattle and sheep year after year. Although even the best crofters and farmers lose a few sheep and an occasional cow, they insist 454 that their stock has produced as many as have been sold. As 231 a means of protecting the government from paying for non-existent stock, the police have to be notified when the annual stock counts are to be made. Even when they do supervise the counting, allowances for stragglers have to be made.

So pernicious is the effect of non-residence and decrepit 454 crofts, that a recent government commission has recommended the 231 severance of the house from the land in the case of the aged and the eviction of the absentee, as a means of bolstering the economy and alleviating the widespread condition of bad husbandry.[17] This could be the final blow for the culture. Not uncommonly, the croft is subjected to both absenteism and the infirmity of old age. The heir does not return until he has passed the age of retirement and begins to think, "It would be

[17] Report of the Commission of Inquiry into Crofting Conditions, pp. 42-43, 46-47, etc.

222

the suggestion detrimental to the best interests of the national 228 economy. There is no doubt that the Skye crofters would benefit. Their peak year, culminating in 1947, coincided with a time when the area was restricted for reasons of security during the Second World War. Additional problems include the loss of creels during gales and transportation difficulties. It takes a day and half for a lobster to reach the London market when all connections are made. The high cost of shipment and the high mortality rate reduce the crofters' profits.

The attitude of the government concerning the domestic 454 feasibility of encouraging the local fisheries may be summed 231 up by the following question by a fishery expert: "Can we afford to jeopardize the livelihoods of men who devote their lives to the sea in favor of an industry which may never develop? There's no official policy yet, but I don't think the Board will ever try to revive the industry on Skye." Although they slightly exaggerate the situation, a few state- 228 ments by Skye men sum up the present condition of this activity 229 pretty well. On one estate the landlord who has seen fishing die altogether in the last few years, said: "There are no boats at all, not even for lobsters. Even young men gave it up. All of a sudden it just died, stopped." A man from Stein, an abortive fishing village established by the British Fishery Society in 1790, has also seen fishing cease, "The few boats are beached, look at them rotting on the beach." He believes the decline in fishing is one reason for the continued depopulation. Others share his belief. A school teacher said, "Few realize how recent the decline in fishing really is.

231

mainland for the summer. For many of these people, unemploy- 464 ment is a misnomer. It means they are receiving a weekly 715 allowance from the government while they wait for the next seasonal opportunity to turn from crofting to wage labor. More- 464 over, providing work and paying unemployment compensation is 657 by no means all the government does for the Island's economy. Through the National Assistance Program many more are aided financially. In 1956 for example, there were no fewer than 726 individuals receiving some form of national assistance.[33] Most of this number were recipients of a non-contributory old age pension. The next largest category were young women required at home to care for aged and infirm parents. Of the total number, only thirty were Portree residents. Then, too, 657 there are the previously mentioned subsidies and grants for agricultural improvement and fuller exploitation of the land.

We may conclude, then, that cultural continuity is an 182 expensive proposition with a double-edged penalty. On the 687 one hand, there is the sentimental distress which depopulation 657 involves. Both the man who leaves Skye and those he leaves behind feel the loss of their loved ones. On the other hand, there is the expense to the government, which must be staggering and out of all proportion to the amount contributed by the people in taxes. It is not that the Islands receive any special grants, but, as one newcomer said, "They just happen to qualify for all the grants, dodges, and subsidies there are." He, of course, was exaggerating. As we shall see in the next chapter,

[33] Information extracted from the files of the National Assistance Board in Scotland, Edinburgh.

669 for crofts in Tongue, a township north of Stornoway, took
423 the law into their own hands, seized one of the fields of the adjacent farms, and threatened to take the remainder. It is easy to understand that when a man has come home from the war to his sweetheart, and after being promised a site on which to build a home (even a black house for a start), with a plot for potatoes, and 'a cow's grass', a year's vain delay may breed impatience! Leverhulme motored to the township, and with his customary vigour and persuasiveness spoke of his plans for 'work and wages' to be concentrated at Stornoway. He again declared that if the farms were divided this would cripple his schemes, and work would stop at once. The majority there agreed to fall in with his plans; in any case, only a
159 minority could find crofts on the farms. Leverhulme felt
433 that he had carried his point. He forgot not only that his oratory deserved applause and had won it for its own
669 sake, but that the people could not lightly afford to say 'no', if this meant immediate stoppage of wages. It was the after-thoughts on the morrow and in the following months, rather than agreement at the moment, that signi-
[228] fied. In 1920 herring fetched a fair price, the herring fishery prospects were encouraging, and work was resumed for a time. Yet one raid having begun and "the die having been cast, lawlessness spread rapidly". Leverhulme stopped expenditure, and obtained an interdict against the
[423] 'raiders', though he did not prosecute. After further
[654] parley, the Secretary for Scotland agreed to suspend division for ten years, and in 1921 Leverhulme resumed
159 operations. "Unfortunately very soon afterwards", wrote
433 his biographer, owing to "the general industrial depression which followed the boom in trade after the war", Lever-
458 hulme felt impelled to close down work for the time being,

159 and he was unable to make plans or promises for the future.
433 Meantime, it should be said, the Island herring catch and
458 prices fell rapidly (the catch by 50 per cent and prices by
[228] 60 per cent from 1920 to 1921). As a result, crofts now seemed more precious than ever to the applicants.

159 With what Leverhulme regarded as 'almost indecent
423 haste', the Secretary for Scotland proceeded to fulfil the promise to divide the farms. Most of the farms remaining
654 were divided into some fifty crofts, of ten acres or so with outrun, supplying little more than 10 per cent of the landless men. The Manor dairy farm, near Stornoway Castle and town, though raided by a few men, was retained to contribute to the town's supply of milk, along with two or three smaller farms close to Stornoway (Melbost, and Stoneyfield with Holm). Leverhulme felt that his offer to Lewis had been turned down, and he then concentrated his efforts upon Harris.

159 At the extreme south of Harris (midway along the
433 south-west coast), in the 'Hope' or natural harbour of
228 Obbe, Leverhulme built new piers. He transferred the machinery of the canning factory and the kippering sheds he had commenced to build at Stornoway. He started to build houses, a number being provided on generous terms; and "at the people's wish", the settlement was renamed Leverburgh. With the transference of his energy from Lewis to Harris, Leverhulme's "optimism and determination were intensified", wrote his son. They were not to last long. After a visit to the Congo in 1925, Leverhulme died suddenly in Brussels. How far the new plans might have succeeded had Leverhulme lived, his son has commented, "remains uncertain". What is certain is that the second Lord Leverhulme toured Harris, visiting the works on hand and examining the accounts. No doubt he also

185 In 1919, when the men came home to Lewis they could
727 still see reasons for hope. They found a strange proprietor, known first for his outstanding—some said ruthless—
[159] business ability, and only secondly for his philanthropy. They heard his plans and were inclined to listen.

185 Yet, remembering their pre-war losses and the notorious fluctuations of prices and employment in the fisheries, they wished for a policy of insurance, as it were; so, if their home lay near a promised farm, of which they had long
159 meant to claim a share, they claimed this forthwith. Only too soon after, in the early years of Leverhulme's adventure,
458 the fall in total sales and prices of fish brought immediate
433 loss to the keenest and hardest working of the fishermen,
228 and to their financial backers in Stornoway. These losses warned others of the uncertainties of fishing. Now the fall in the fishing industry is not so much as mentioned in the biography of Leverhulme; nor do we remember a
[654] word of it in Leverhulme's speeches. One finds no data to show a substantial endeavour by the Scottish Office to co-operate with Leverhulme in framing policies either to change the trend of European markets or to make local adaptations to combat downward trends. The Fishery Reports certainly record the losses, year by year. As for the Island fishermen, they shared the feeling expressed by other Scots fishermen, that the old markets across the North Sea, eastward to what had been St. Petersburg, could and should be reopened, not closed 'for party reasons' by 'English politicians'. Although ostensibly Leverhulme ignored it, he cannot really have been unaware of the effect of the downward trend of the fisheries upon his own prospects of success, and upon the hopes and confidence of the fishermen. Having been so outspoken upon the shortcomings of Government with regard to local

362 of new steadings. The average amount of loans (totalling
652 £166,000) was under £150; repayment has been satisfactory, and the arrangements made by the Department of Agriculture won general praise among the people. Yet 1200 houses were very far from replacing all the 'black houses', and many more are needed.

433 In terms of cash profit, ten crofters today run their
427 crofts less remuneratively than the farmer they dispos-
241 sessed; even together they may show little more total production than the farmer. Nevertheless, these ten crofts each allow a part, at least, of the basis for a country home.
[423] Hence the weight of public opinion supported, nay, insisted on 'giving back' the land to the descendants of those who
• 654 had worked it sixty or a hundred years before. The State
423 bought the farm stock at a high valuation, and till lately without adequate reform of crofting use and wont. The farms having now been divided, a great emotional issue, which had smouldered for half a century, has been brought to an end. Although the practical results are small, the crofters feel that justice has been done, and that fact may
311 be a great gain. Now that there is no more green reclaimed land to be had, the reclamation of the peat moor, or the grey 'skinned' boulder clay has to be faced.

By financing the renewal of Leverhulme's brief attempt to reclaim deep peat on Arnish Moor, south of Stornoway, the Canadian, T. B. Macaulay, made a resolute attempt to
[241] solve the island's main agricultural problem. Good crops were grown, potatoes and silage produced, and a dairy farm established. But the difficulties called for continuity of effort and research. From the practical point of view of 'demonstration' it had been a mistake to tackle deep and almost level peat, black in colour and viscous in consistency.
[402] There was not the light machinery required for cultivation.

178 developed through the township Grazing Committees by
476 the Scottish Agricultural Organisation Society and its
44 associated Crofters' Agency. Lime and fertilisers were
• [654] purchased, and wool and other products sold, co-operatively. The co-operative marketing of lobsters, taking
[228] advantage of fluctuating London prices, has led to the reconstruction of ponds for storage. By these and other
[654] means, government assistance is utilised but not squandered; earlier initiative in agricultural organisation is reinforced; and communal tradition is revived, linked to personal responsibility through the crofters' lifelong knowledge of one another.

178 As to the future, all agreed that unless the Harris Tweed
288 industry flourished, with work at reasonable wages, the villages would be abandoned by the young, perhaps with
[829] no return such as hitherto on 'retirement'. Many young people are content with life in the townships, provided they can get a living there, though not all, for they are somewhat divided; and work elsewhere, even in the mills of Stornoway, is a counter-attraction.

178 Social life is undergoing changes which operate both
592 for and against the retention of the young. On one hand,
538 household interchange of conversation, song and story, the *ceilidh*, has declined. On the other hand, one found
178 that, as regards religious prohibitions, and in spite of the
771 nervous tension expressed in 'Revivals', the young have
577 won greater freedom. Near one village a Nissen hut, handed over to the Home Guard, was also used by young
[535] people for monthly dances. When I asked a young crofter invalided from the Navy whether the Elders of the Kirk made no protest, he replied that they had, but had to give it up: "They see that we won't stand for it"! This would have been unthinkable during the First World War,

464 For a year or two after the war many men and women
[288] returning from the Services, the sea or the factories found employment in the flourishing Harris Tweed industry.
[729] This included work in the spinning mills and hand-weaving at home—work in which the male weaver was helped by
[226] his family in jobs such as bobbin winding. Few fishermen dared to sink capital in new boats and gear, and risk losses
[178] such as those sustained after 1920. Few women wished to return to the hard, uncertain work of gutting. The whaling
[462] station, built on West Loch Tarbert before 1914 and open for a short time between the wars, was reopened in 1950, and employed some 30 men for 18 months before it closed
[241] in 1952. Crofting was lightened by some mechanised
[722] cultivation. The war-time construction of air-fields had ceased, though some harbour-work and road-making was
• [654] assisted by government grants.

In 1949 the Harris Tweed industry, now the Islanders'
288 main source for earning, was crippled by the imposition of
651 a 66⅔ per cent purchase tax on hand-woven Harris Tweeds.
648 Parliament decided that as a non-utility product, its export sales alone could be exempt from tax. Viewing the
[433] position of the tweed industry in Britain as a whole, there were strong arguments for the extension of the tax to
[171] Harris Tweeds: the high-grade industry of the Scottish Border or the manufactures of the West Riding should not be subjected to unfair handicap. At the same time the crippling of a handicraft practised by peasant or artist favours mass-production to the loss or ruin of traditional and experimental workmanship or design to which, in the end, the mass-production is an unacknowledging debtor. The obvious economic handicaps of Island hand-weaving
[439] may surely permit some latitude. The export trade in
[458] Harris Tweed, in which the imponderable 'sentimental

656

175 423 427 [161] Factors which led to further crowding were the development of industry and an increased demand for wool in the south, which occurred when traditional ties between laird and tenant had been loosened. The clans had been disbanded after the Jacobite rebellions of 1715 and 1745; those landlords who had not forfeited their estates received huge sums of money as compensation for the abolition of hereditary jurisdiction. They had experienced travel and the luxuries of other countries, and were not eager to remain on their estates. They accepted the huge rents offered to them by sheep farmers to the south, and turned vast amounts of land into sheep tracts. Tenants [361] were crowded together along the seashore, or lived on tiny holdings dispersed among the larger farms or on moorland, earning their living by doing wage labor.

175 423 241 178 [656] Despite the factors which encouraged a high level of population to remain on the land, proprietors attempted to destroy the joint farm with its small, dispersed holdings and collective rights. Run-rig agriculture was abolished in Argyll in 1776 (Day 1918: 180; Gray 1957: 49), and over the next 80 years it disappeared from the Highlands (cf. Gray 1952: 49-50), to be replaced by townships of compact holdings surrounded by undivided hill grazing lands.

was made in the Crofters (Scotland) Bill of 1961; this had a mixed reception. In general, today, small crofts predominate in most areas. Out of some 18,000 (the number is decreasing annually) about 15 per cent exceed 20 acres (see Chapter 5). But size has little to do with the type of land; whether arable or rough grazing. In fact, the proportion indicates that some 85 per cent of all crofts in Scotland, and this applies to Harris and Lewis, cannot be considered as full-time now or as potentially full-time.

EDUCATION

In general, the Highlands and Islands of Scotland owe their introduction to letters to the early Christian missionaries. One of the main provisions in the early monastic Church in Ireland and Scotland was for the cultivation of learning and the training of its members in sacred and profane literature. Associated as they were so closely with the common folk on the one hand and the aristocracy on the other, something of this learning and desire for learning rubbed off to advantage on to willing recipients. Literacy however, has had many ups and downs since the dawning of the Christian era in the Hebrides. Though it is impossible to ascertain to what extent the common folk participated in the knowledge imparted by the early Celtic monasteries, there are many references to a class of cleric called 'scolocs', whose learning was accessible to the poorer classes of the emergent Highland society. The 'scoloc' is still retained in Gaelic as 'sgalag', a farm servant, the poor searcher after knowledge who received education in the monasteries in return for services as labourer on the church lands, and who appears in monastic records as late as the fourteenth century.

As late as the sixteenth century, however, after the influence of the Church had diminished, the inhabitants were almost wholly illiterate. When the Fife Adventurers came to Lewis in 1598, they brought a schoolmaster with them; though it can be taken that his services were intended for the improvement of the incomers rather than the islesfolk. Old Roderic MacLeod, doughty chief of the MacLeods of Lewis at the time of the Fifers' arrival, was unable to sign his name. Two of his sons, on the other hand, were

houses prior to 1854. Monthly returns of attendance were sent to my office, and parents who did not keep their children at school were dealt with, but in many cases to no avail, as they often told me they did not want to give their children wings to leave them.'

In 1833 there were thirteen schools in the parish of Stornoway, according to the *New Statistical Account*, 1840-46, which records that there were 586 children between the ages of six and fifteen years, and 1,265 persons above the age of fifteen in the parish who could not read. Barvas had three schools in 1836; Uig had five in 1833. In Lochs, in 1833 a parish school had just been erected, and four schools were maintained by the Gaelic School Society; yet out of a parish population of 3,067, only 12 could write. After the Disruption of 1843, the Free Church established a large number of schools throughout the island. And soon after Sir James Matheson took over the island he built schools in those districts not catered for by other agencies.

In 1865, the Government began to prepare for the Education Act of 1872, and sent Sheriff-Substitute Nicolson to the island to investigate the state of education there. At the time of his visit there were forty-seven schools, supported by as many as nine different agencies, persons, or institutions. The number of pupils on the rolls was 3,332, with 2,647 in actual attendance. Nicolson computed that there were some 2,500 children on the island who did not normally attend school, and who should have done. A large number of schools were little more than thatched houses. Fifteen were good; fourteen tolerable; and eighteen bad or inadequate. In the third group he classes 'those that cannot by any standard of comfort or fitness above that of troglodyte, be considered suitable for having the work of education carried on in them, or any work indeed, to which the prevalence of smoke and moisture are infavourable.' Of the children who attended these schools, 79 per cent received tuition in the Scriptures; 85 per cent were taught to read; 39 per cent were taught writing; 32 per cent were taught arithmetic; and 16 per cent taught needlework.

The Education Act of 1872 put an end to the old parochial system, and virtually to other agencies which it found at work. The schools on the island were brought into line with the re-

mainder of Scotland where, under the school boards, education became both free and compulsory.

In Lewis the school of real significance to the island was, and still it, the Nicolson Institute, founded by Alexander Morison Nicolson and opened in February 1873, supported by bequests from him and his brothers. Nicolson's grandfather was the founder of the Lewis fish-curing trade, and was also shipowner and farmer. Alexander was the fifth of six sons and was educated in Stornoway parish school and in Glasgow High School. He served an apprenticeship as an engineer with Thomson of Clydebank. Later he entered the service of the Chinese Government and established himself with a partner of a shipbuilding and foundry business in Shanghai. In 1865, in his thirty-third year, he was killed in a boiler explosion in one of his new ships going a trial run. His ideal of establishing a school in Stornoway was subscribed to by his brothers who were a widespread family: Yorkshire, Mississippi, Western Australia, Tighnabruaich (Scotland) and South Africa.

The first headmaster of the school received £82 per annum, plus the school fees, which ranged from 2s 6d per quarter in the lowest classes to 5s in the highest. The fees covered reading, writing, arithmetic, geography, English, history and English grammar and composition; when Latin, Greek, French and mathematics were taught, an additional shilling was charged for each subject. But the teacher was always bound to teach gratuitiously twenty pupils selected by the Nicolson Trustees. In 1888, the school was handed over to the school board. In 1901, by a Decree of the Court of Session, its name, previously the Nicolson Public School, was changed to the Nicolson Institute. In 1898, the first boys went straight from the Institute to university, a trend that has not ceased since (see Chapter 8).

As far back as the turn of this century a recommendation was made for the provision of technical education on the island. A report on the subject of Higher Education in Lewis (1900) stated: 'Regarding the practical or scientific aspect of education . . . there is a clamant need of a central Technical School in Lewis . . . the local resources are quite inadequate for the establishment of such a school, or its maintenance, on an effective basis. Such popular technical instruction as Household Economy, Wood and Iron

2. *From Black House to White House*

Discontent with the old black house grew with the knowledge and experience of better housing in Stornoway and on the mainland. The congestion which developed during the nineteenth century meant that often one house was fouled by another above it, leading to typhoid epidemics. While the smoky atmosphere of the 'black houses' inflamed the eyes and irritated the respiratory system, the roof was high and the fire kept the air in motion by day, ventilating it to the chimney hole, while the lack of glass often made it necessary to work with the door open. The ravages of tuberculosis came towards the end of the nineteenth century, when Islanders went to our crowded towns and, not being immunised, were dangerously infected. Returning home, too often to linger and die in a house now provided with tiny, fixed panes which permitted a closed door and made it stuffier than before, patients spread infection. Flight to a tiny, air-tight wooden cabin or to a small white house of stone and lime often followed. The availability for the first time of planks and timber, a certain practice in boat-repairing, and possibly acquaintance at first- or second-hand with Canadian wooden houses, may have influenced the choice of wood. The early 'white' houses, with an attic lit by skylight, were airtight, for the windows were too often fixed or only opened at the bottom. The door was left open in warm weather, but it was not high enough to allow the escape of the stale, upper layer of air which the women breathed as they did their cooking and baking.

In the inter-war period, particularly in its last decade, the 'black house' was being abandoned, not for something worse, but far better. The Government-aided houses have

342 adequate air-space, and windows opening at the top and
746 usually kept open by day, in which a woman can work at
178 ease. The Department of Agriculture aided the building
656 of a good standard type. The quality of joinery and
[335] masonry or concrete work improved, one fairly skilled
[333] workman usually directing the householder and friends as amateur builders. The cost of materials was met by a grant, generally of £250, half being repayable by an annual rent of £6: 10s. for twenty years. Repayments proceeded satisfactorily. No scheme organised by the Department of Agriculture for Scotland won so general a commendation as this of house improvement. It made good use of family initiative and responsibility, with neighbourly co-operation not called for upon a large scale, a township at a time, but in quite a small, personal way. Nevertheless, had more guidance been provided to the builders, the
[464] houses could have been really well built. For lack of this, perhaps, crofters increasingly prefer to pay for skilled work, though helping actively. Appendices I (ii) and II (ii) gives pre-War and post-War statistics.

3. *The Township and its Changing Plan*

361 Where absence of rock and boulder permits ploughing,
[182] the village land is laid out in a series of parallel strips,
[491] aligned with the slope. The road runs either parallel with shore or river, or at right angles to it. The intermixed possession of strips by 'run-rig' characterised the Lowlands before the Enclosures, and is frequent in
[423] the Highlands and Isles. The apparent regularisation of field lines may conceal the fact that an individual holder's plots may be scattered amongst those of others in fixed
[182] run-rig. This is an advantage where quality of land is so patchy, and each man thus gets his share of good and bad

361 it command and make it the leading settlement of the
366 Hebrides, with a population fluctuating around 5000.[1]
162

2. *Aspects and Problems of the Burgh*

361 The little town pleases by its views over the harbours,
632 outer or inner—sheltering perhaps a steamer or two and the clustered fishing vessels—across to the wooded skyline and the beautiful grounds of the Castle, a-flower in spring with rhododendrons. Or framed in trees from the Castle policies, the harbour and even the roofs and
[342] smoke of the houses are not unpleasing (Plate II). But the town's chief charm is its setting, not itself, though its plain dwellings with 'harled' or rough-cast walls and slate
[746] roofs are simple and inoffensive. In rehousing, the Local
656 Authority had respected Scottish domestic features. But the greater use of local materials, labour and skill is surely desirable in the Island with its many half-employed men, who need such work to maintain income, health and morale.
[362] As is to be expected in view of low incomes, and the extremely primitive housing in the country, urban housing
[162] is inadequate. In Stornoway burgh in 1931, 44 per cent, or nearly half the population, still dwelt in houses of one to three rooms, 17 per cent in four (including attics often with no dormer windows), 20 per cent in five or six, and 18 per cent in seven rooms and over. There has been improvement up to 1939, and after 1945, but much remains to be done.

369 Turning to cultural life, profound differences divide
632 the town from the country about it. Whereas in the townships of rural Lewis the people are almost purely natives

[1] The burghal area was extended in 1935. At the census of 1951 its population stood at 4950. This showed an increase of 15·9 per cent above the population enumerated in the same area in 1931.

369 of the place, even the schoolmaster and ministers being
632 mostly Islanders, in Stornoway an important minority of the officials and business men hail from the mainland, and some of them from the Lowlands. New blood has undoubtedly been needed to promote enterprise, to foresee new possibilities, and even, at times, to make the best of the past. At the same time, the cleavage between town and country is marked in ways of thought and feeling as in
369 livelihood. To take a single criterion, that of speech, most
632 of the children of the town speak no Gaelic and many hardly understand it. While the percentage of Gaelic
197 speakers was 95 in the three outlying parishes in 1931, in the burgh only 70 per cent could still speak the old tongue. By 1951 the ratio, still almost unchanged in the outlying parishes and townships, had considerably lowered in the burgh.

369 The attempt to harmonise the interests of country and
632 town forms a hopeful aspect of the activities both of the Stornoway Trust, which holds the rural and urban property
656 presented to the people of Stornoway parish by the first Lord Leverhulme, and of the Lewis Association, formed
[427] in 1943 to undertake studies of the Island to guide action
[654] for the future. The maintenance of the town's prosperity will depend greatly upon its industries of fishing and of
228 spinning; and these are almost inseparable from the
[288] maintenance of the rural population for whom Stornoway acts as regional centre, and who weave with the yarn spun in the mills. Unity in constructive purpose could go far to build up the prosperity of the community.

361 With the recognition of the need for planning aroused
369 by the problems which faced the country with the return
632 of peace, it is proposed, at the centre of the Burgh, to rebuild the whole of the peninsular area of Point Street,

361 by co-operation of three authorities: the Town Council,
369 the Piers and Harbour Commission, and the Stornoway
632 Trust as owner of property, including Lews Castle with its grounds. The social situation is of quite exceptional
656 interest, and an attempt to describe some of its features is
[654] made in Appendix II, on the Stornoway Trust and the Lewis Association.

(c) CHANGES IN ISLAND POPULATION, AND THE FUTURE

1. *From 1801 to 1939*

175 Until the middle of the eighteenth century, the growth
162 of population was periodically checked or even set back by famines and epidemics, such as smallpox, or by warfare.
[731] In 1801 the total population of the Outer Hebrides (in round numbers) was 21,700, and in 1831 it was 32,000. Of this total, Lewis carried 9200 and Harris 3000 in 1801 and, a generation later, in 1831, respectively 14,500 and 3900. In the graph (Fig. 12) the curve showing the average for the five landward or rural parishes of the Island (excluding Stornoway Burgh) indicates the fairly steady numerical increase there, almost to the close of the
[731] century. Following the evictions after 1831 and the potato famine of 1846–48, emigration caused a fall in the southern islands (*e.g.* in South Uist, Fig. 12). Forty years later, in 1871, the Outer Hebridean total reached nearly 40,000, of which Lewis alone, with 21,000, now gave more than half the total, and Harris—in spite of an intervening drop owing to evictions—4800. By 1901, in spite of losses in the southern isles, the total for the Outer Hebrides reached a peak of 46,200. Of this, Lewis already contributed almost

175 rent-rolls record something of more vital and enduring
241 concern, the unit of community life in the Lews. This was
427 the 'conjoint' or 'group' farm of the labouring peasantry
[496] —though it was overlaid in parts of the Island by the formation of tacks held by gentleman rent-farmers.

Both rolls are Judicial Rentals, that is to say, the
175 tenants, great and small, were convened by the Govern-
241 ment Commissioners and examined on oath as to the rents
427 they formerly paid; the accounts were then entered and totalled. Because of the Jacobite resistance, the small
656 amounts of rent and the maladministration of the Forfeited Estates, doubt was cast upon the first rental, of 1718. A second rental was therefore compiled in 1726, upon a different system, which confirms the correctness of the first.[1] All were named, including those absent or 'valetudinary'.

175 Owing to the Island's comparatively smooth land sur-
361 face and access to the sea, the people could group themselves as they chose. Whereas in the Highland mainland many
[182] a pocket of land is too small to keep more than two or three
[184] families alive and no fishing grounds are available, in Lewis the people could join together in teams of four, five or six,
[433] to work a hamlet-farm or penny-land, definable as a
[496] joint-farm of unit size, and to man a boat with "four to row and one to steer".

175 The first point of interest is the equality of the shares,
241 each man paying exactly the same as his fellow-tenants for
427 his 'farthing',—a fourth, or other equal share of the farm. An average share of rent was a little over 10 shillings sterling
[436] with additional payments in farm produce, though not (as
[113]

1794, for instance, their crews not only fishing but also buying from local fishers. Islanders occasionally earned a pittance as pilots, for until the charting of these rocky coasts navigation was most dangerous.

The herring industry was in the hands of 'adventurers' (who 'ventured' their capital), and the Islanders benefited little. The British export was aided by a bounty which helped to capture the Continental market; but, as Adam Smith pointed out, no bounty was given to the small, open boats suitable for the north-west lochs. Thus the operation of the Salt Duty after 1707 and of the bounty system from before 1745 until 1786, illustrates two of the recurrent blights upon "Public Administration" in the Isles. As Day wrote, their interests have had to suffer "either deliberately, for the benefit of other parts, or other classes in the kingdom, or inadvertently from ignorance".[1] Although the bounty system was widened to include small boats after 1786, the Salt Tax remained until 1817.

To overcome difficulties, the British Fisheries Society was founded with Government support in 1786. Although Stornoway then seemed too far afield, the Society's concentration upon larger settlements foreshadowed Lord Leverhulme's principles after 1918. At Ullapool, Tobermory and Lochbay (Skye), and at Wick, quays and stores were constructed and dwelling-houses built, with croft land and grass for a cow, to be reclaimed. Although concentration at Wick led to the sale of the three western properties about 1842, the Society had done some good work in the West. The chief difficulty of the West Coast north of the Clyde area and south of Stornoway District remained: the lack of a well-marked seasonal migration of herring.

[1] J. P. Day, *Public Administration in the Highlands and Islands of Scotland*, 1918.

to one another, to the landlord and to the State would have been profoundly different.

(8) STATE AID, THE LAND, AND THE CROFTERS' RESPONSE

Until 1914 the congestion in each Island township dotted between the wide, lonely moors, had increased, and it was still increasing. To every two legal crofters, either a cottar or a landless squatter was to be found, on the 'skinned land' outside the crofts. Parliament, in 1886, had discarded the Napier Commission's recommendations to give powers to extend the crofts from portions of the common, or to supply a house site and garden space for men of independent occupations such as fishermen. This congestion embarrassed Government and local services.

The associated rating system was also at fault; indeed it has still to be put right. For instance, a crofter's son—able to make a living, say, as a fisherman, and about to marry but having no croft—was penalised by high rates, should he take up his proper status of a legal cottar at a small rent. Throughout the crofting counties, the legal crofter, as an agricultural landholder, was (and is) de-rated, and had only to pay one-eighth the rates for a non-agricultural holding of the same rental. Only since 1938 has the value of the house been assessed. A recognised cottar paying rent to an estate was rated as owner and occupier, being treated in fact as a feuar;[1] and as such he had to bear a heavy burden of rates, possibly of over 30s. in the £. Whereas if he 'lay low' and shared his father's or brother's

[1] *Feuar*, in Scotland one who holds real estate in consideration of a stipulated annual payment; lit. on *feudal* tenure. Cf. J. P. Day (1918), pp. 383–384.

croft by subdivision, he would pay little, indirectly and by arrangement; while if he simply built a hut or house on a vacant spot he paid neither rates nor rent. Either course was illegal; yet it was too expensive for the landlord, however 'hard-hearted', to take legal proceedings to turn off a squatter. As for wholesale expropriation the suffering caused and the odium incurred would have involved—and would still involve—both landlord and State in insurmountable difficulties by starting fresh agitation, perhaps with outbreaks of law-breaking, repression and bad blood. Yet these anomalies still discourage, and the normal illegalities demoralise, all concerned.

Because of the provision by State and local authorities of a growing range of services in other regions, and also because of the special reasons of Insular poverty, State action was increasingly taken in the Isles. To what extent have the Islanders responded, it may be asked; or how far may they have failed, in return for aid offered and benefits received? Let us begin with mutual aid practised among the people up to 1900, and then consider the repayment of loans and grants under different conditions. Observations by those in touch with the Island for many years, officially or privately, allow one to read between the lines and attempt an impartial judgment.

As to the strength of independent mutual aid there could be no doubt. Up to the beginning of this century, the amounts expended on parish relief were 'almost nothing', and had shown no increase in preceding years. General poverty, anomalies in the rating system, and the mistakes such as the erection of poorhouses by the central administration, diminished resources; but the people generously gave help to their poorer neighbours in work and gifts. Except for a year of overwhelming crisis,

schemes, and knowing how much local fishing depended upon international policy, particularly the resumption of trade relations with the chief customers of the past, Leverhulme, one feels, should have dealt no less outspokenly with these. The removal of trade barriers lay not in the hands of the Scottish Office or of Scots officials (however internationally minded these might be as private citizens), but in the hands of Ministers of Cabinet rank and leading financiers, of whom Leverhulme himself was one.

In brief, the Scots fisheries suffered after the war as neither Leverhulme nor others had foreseen when first he laid his plans for the Island's prosperity. It seems clear that had this major change been squarely faced by Leverhulme and Government alike, in 1920, 1921 or even later, they could never have fallen apart about a relatively minor issue, that of the farms. Both sides turned their faces away from this disquieting factor of the Baltic markets, though both knew it to be fundamental to the success of Scots fisheries and the Island's future. Had they faced it together frankly, then, even if powerless to effect a remedy, their sincerity might have prevented a deadlock upon a secondary matter.

To Leverhulme, given his large scale of expenditure and return, the division of a few farms formed a minor issue. But to a number of ex-Servicemen, 'crofters' without a croft, the division meant a home and relative stability. Moreover, what was merely a matter for personal decision to Leverhulme, was a lifelong issue to many people brought up in congestion on the wrong side of the boundary fence. Meantime, milk from Easter Ross was available in Stornoway, at town if not at country prices. Lastly, further possibilities of land-development lay open to Leverhulme, though not so readily to the unaided people. In reading

The Trustees of the Stornoway Trust have not found it easy to meet the cost of keeping up the valuable property of the Castle and Park, nor to carry the burden of its rates, no adequate income being available for the purpose. Today, however, Leverhulme's gift is being put to good use as a Technical College, opened in September 1952.

Division of the available farms, after providing about 200 small crofts (of ten acres or so), still left the problem of finding legal homes on legal tenure for the remaining cottars and squatters.[1] The Department of Agriculture arranged to feu plots of 'skinned land' on the outrun of certain townships, including one in the extreme north and others in Lochs. About 200 of these little holdings with potato ground were provided. On the holders' behalf the Department feued land from the owner, after obtaining the consent of the Common Grazings Committee of the township and permission from the Land Court for 'resumption', *i.e.* for enclosure of a portion of the common. The legal and administrative procedure involved may seem disproportionate to the economic value of the holdings. Yet difficulties of law and custom had been allowed to go from bad to worse during the past eighty years; and these difficulties were overcome.

To encourage better housing in the crofting counties, loans are made to 'crofters and fishermen feuars' personally. Local stone, or latterly concrete, is used, and much of the building is done by the 'man of the house' himself, and his friends. From 1920 to 1940, nearly 1200 loans were made in Lewis and Harris for the erection (or improvement) of houses, and in a few cases for the erection

[1] Estimated at 1200 to 1500 shortly before, the open question was whether subdivision during the previous eighty years was to be recognised and accepted.

In 19th-century Scotland, the cause of the Highland tenants and subtenants was taken up, as part of the trend of the times and because a series of famines occurring in the Highlands caught the attention of Britain. After the kelp industry was destroyed at the beginning of the 19th century, landlords maintained high rents on the assumption that the depression was only temporary, which caused tenants to deplete their capital by selling their cattle (Gray 1957: 38). A number of reports were published on the plight of Highland smallholders: Fullarton and Baird (1838), MacNeil (1851), Mackinlay (1878), and finally the Napier Commission's report of 1884 which was followed by the Crofters Holdings (Scotland) Act of 1886.

The 1884 Napier Commission Report tried to resolve the conflict between the rights of the individual smallholder and the maintenance of agricultural efficiency in a situation which still had communal elements of social organization, by recommending an organization much along the lines of the old joint farm. The township was defined as a farm, or part of a farm, which was occupied in common or in division by several tenants. The township, seen as an agricultural unit, was to be given various immunities and powers by which to achieve

273 175 65 [656] Excise taxes were first levied on whiskey in 1814, and stills of less than 500-gallon capacity were prohibited. Local, illegal distillation continued for a long time after 1814, and throughout the Highlands and Islands tales are told of "the excise man" and how he was outwitted.

273 175 [66] The Island of Pabbay in the Sound of Harris was evacuated in 1843, supposedly because of illegal distillation that was being carried on there. The ruins of old distilling houses are found throughout Shawbost. Villagers say that these were used in the time of their grandfather or great-grandfather to distill whiskey for occasions such as weddings.

[527] In Shawbost, until recent times whiskey was associated mainly with special ceremonial occasions: the birth of [846] a child, weddings, and wakes. When a baby was born, the father went into town for whiskey to be given to visitors 764 coming to see the baby. Having whiskey at a funeral was 273 so important that many a widow sold her cow to provide it, so that people would not say it was a bad funeral. A custom of sitting up all night in the house of the deceased has stopped, probably in part because a prayer meeting lasting from midnight until 2 a.m. was introduced with the intention, according to one minister, of preventing 273 the wake from becoming too joyful an occasion. Whiskey 175 was abundant at New Year's, and at weddings. "The dance [527] [585]

For a number of years it had been the practice for a considerable proportion of the older schoolboys during their attendance at the Secondary School to put in their training with the local body of Territorials—the Ross Mountain Battery. At the School Prize-giving of 1914, these boys attended in their uniform to be ready to go off the same evening by steamer en route for the annual training camp. Before the School re-opened, the Territorial Force was mobilised, and for some of these lads there intervened four long years of toil, of fighting, and of sickness overseas, before they ever saw their homes again.

Later (1938), the unit became the 203rd (Ross) Battery of the 51st (West Highland) Anti-tank Regiment. It was whilst fighting as an anti-tank battery that, with other units of the 51st Division, the men were taken prisoner at St Valery in 1940. Today, after more changes, the battery is the oldest in 540 LAA Regt RA, TA (the Lovat Scouts). In 1960 the Ross Battery received the Freedom of the Burgh of Stornoway in recognition of a century of voluntary service to the community and the nation.

LAND USE AND CROFTING

The history of land use and the crofting system in the Highlands and Islands (see Chapter 5) is full of difficulties. In the older days of the clan system, before the rot set in, though the clan members belonged to the chief, they also belonged to the land and the land to them. In such a climate, the agricultural system, for it was such then, was in a reasonably healthy state; the land was worked to the full. Good land was available for the support of the clan, and as often as not in good years there was ample produce, crops, and livestock, to send south to well-paying markets. That fertile lands abounded is indicated by the reports of visitors in various centuries. But times changed. The increase in population after the breakdown of the clan system by statutory legislation, and the policy of population placement carried out with a rigorous enthusiasm, planted seeds of discontent—in particular a hunger for land. The land was in any case becoming ever more inadequate to support those already on it.

The story of the agrarian troubles in the Highlands area is well

1901, the average was only 5·086, the county average being 3·983. The population was still to reach its peak in Lewis, some 30,000 in 1911. Emigration was at a fairly high rate, some 2,000 every decade, but this was no relief with births between 8,000 and 9,000 during the same period. In 1894 it was estimated that the number of cottars (or squatters) as distinct from crofters was in the region of 1,000. These people, mostly relatives of crofters, constituted a serious incubus on every crofting township.

Elsewhere in the Highlands, the enlargement of crofting holdings relieved the land-hunger situation. It was not possible for the same to be done in Lewis, and Harris possessed even less useful land to share out. Many applications were made by crofters either for an increase in their own holdings or an increase in the acreage of common grazings held by each township. Though some 500 acres were in fact handed over by the estate management for crofting purposes, there was a steady refusal to diminish the acreage of farms.

The Congested Districts Board was appointed in 1897, supervising public works to relieve the people of a certain amount of their ills. It carried on until 1912, when it passed into the newly-formed Board of Agriculture. The Congested Districts Board could have achieved much more than it did. It scraped away only a little of the vast problem. The next major landmark in the history of crofting legislation was the Small Landholders (Scotland) Act of 1911. It extended certain provisions introduced for the crofter in 1886, and further increased the class of tenants who benefited by bringing in the tenants of holdings rented at not more than £50 (£30 in Lewis) or not exceeding 50 acres (30 acres in Lewis). The 1911 Act also brought into existence the Scottish Land Court in place of the Crofters Commission. In Lewis, however, the hunger for more land went on unabated and reached a not insignificant peak during the later years of Lord Leverhulme's regime.

A new Crofters Commission was set up in 1955, following on the report of a Commission of Enquiry under the chairmanship of the then Principal T. M. Taylor of Aberdeen University. Fresh provision for the reorganisation, development and regulation of the crofting system in the seven crofting counties of Scotland

HISTORY

*175 [614] in the following two centuries as clan rivalry, with its claims and counter-claims for territorial and other rights, was predominant. Generally, what could not be taken by intermarriage was snatched by fiercer means.

Though these times generated a tradition of extraordinary richness, one must wonder what would have been the result had more attention been spared for the development of the island. Progress was retarded. The lawlessness was not worse than that endemic on much of the Scottish and English mainland or in Europe, but the island was of course more cut off from the gradual infiltration of civilising agencies and influences; at some times in its history it was found to be more than a century behind even the rest of Scotland.

MOVEMENTS TOWARD CIVILISATION

*175 • 657 614 And what was the Scots Government in Edinburgh doing about the Western Isles? In the Middle Ages, the answer is very little. It had enough troubles of its own without endeavouring to police the clan warfare in that remote part of the kingdom; in any case the islands of the west were difficult to get to and probably best left alone. This attitude did not hold indefinitely. Once the semblance of peaceful conditions was established throughout the Scottish mainland, attention was duly focused further afield. In 1506 Stornoway Castle was beseiged and captured by the Earl of Huntly—the first time cannon and gunpowder were used in the Western Isles, and the first of a number of punitive expeditions arranged to bring the unruly clans to heel.

*175 657 614 643 One of the leaders of disorder at this time was Roderic MacLeod of Lewis, and it was to parley with him that no less a person than James V decided to visit the island. In 1540 James, with devastating swiftness, determined to quell these fighting chiefs once and for all, arrived to examine conditions on the spot. Titles to land were closely looked at and the equivalent of our 'small print' read carefully. All the chiefs who owned anything in the islands were forced to accompany the King on his tour of inspection. No doubt this close contact resulted in James becoming as fluent in the Gaelic language as his father had been in his time.

MOVEMENTS TOWARDS

HISTORY

*175 423 668 427 The crofters were in a state of revolt against the accumulation of trends and events which now stood like a high dam against their progress to a higher level of acceptance in the social scene. They stood in open conflict with local and national authority. Unhappy scenes were enacted, many being in complete variance with the natural temperament of the Highlander. Lewis crofters were not far behind with their contribution to the agitation for land reform, though they had perhaps suffered less direct action from landowners than had crofters in the Highlands and southern Islands. But their living conditions had deteriorated. And an inhumanly-efficient factor made for deep unrest.

*175 • 657 423 427 [668] Land agitation began in Lewis in 1881, and large numbers of Lewis crofters gave evidence before the Napier Commission. This Commission was the result of agitation for an enquiry into crofting conditions in the Highlands. Its setting up relieved a situation of acute tension, though it neither extinguished political agitation nor mitigated the disaffection felt in the more disturbed districts. Under Lord Napier's direction a mass of information was collected. The official findings of the Commission were almost identical with political declarations in the country, but did not altogether coincide with the requirements of the crofters and their spokesmen. The resultant Crofters' Act of 1886 fixed the crofting system into that rigid trance in which agricultural innovation, opportunity for improvement, the social progress of crofting communities are largely lacking. It did give all crofters permanency of tenure, where they had none before, fair rents for the land they had and compensation for improvements. But the old demand for new smallholdings and settlements persisted with greater insistence and further pressure on high political circles.

[735] [746] In 1888, members of the new Crofters Commission visited Lewis and found that poverty was so general in the island that among 607 crofters for whom fair rents were fixed, there were scarcely a dozen who had not been recipients of 'destitution' meal or some other form of relief. The population was too much for the land to support it under the distribution system prevailing. The number of persons per family in 1871 was on average 5·358, as compared with 4·232 on the mainland of Ross and Cromarty, the county of which Lewis formed a part. Thirty years later, in

161 162 *175

If May is considered a busy month, June duties are even more pressing. Although the winter gales are over, the rainfall has begun to increase. A succession and variety of demands are made on the crofter's time. Once again the sheep must be brought down to the "fank." This time the purpose is to mark the lambs. The males, unless one or two healthy specimens are selected for future use as rams, are castrated and smeared with a dye to indicate their ownership. The females are smeared and have their ears cut to signify both ownership and age. Like the dipping, this operation requires the cooperation of the crofter and his family, the neighbors, and hired hands. Next the sheep without lambs are dipped once again and given a dose of medicine for liver fluke and a variety of diseases. At the same time, the early hay and, perhaps, the early potatoes are ready for harvesting. The end of June brings the Highland Wool Fair in Inverness. If he has Cheviot sheep, as most crofters do, the man must go to arrange for their wintering on the milder and drier east coast. Although Cheviots produce a finer wool than the more common Blackface sheep, they do not stand up to the incessant wind and rain of a Skye winter. If his wife can leave the children behind, she will accompany her husband. The old function of the Fair, the sale of wool, has disappeared under government price control legislation.

It is not unusual to have the early harvest delayed until July, but even then the mowing may have to wait because sheep must come first. On one of the dry days during the first

had to be accepted. Not a word was heard. At length one crofter simply said, "No one has anything to say, so I guess we all are agreed." One of the former members of the committee could not be re-elected; he had passed away. This was a thorny matter. A series of men were proposed, and each in turn declined. Finally, a man was nominated and seconded before he had a chance to deny himself the honor. Election, of course, was automatic.

The committee administers the farm, handles stocking, employs the necessary shepherds, sells the stock, and rents the hunting lodge. They do so, however, within the now traditional framework. They have neither been granted nor assumed a role of independent action. They do not reach independent decisions. They rather weigh and put into operation decisions made by the Department of Agriculture. As we shall see, even the elder, despite his high prestige status, has power to enforce social conformity rather than the authority to direct or lead men.

It is significant that while the share-holding crofters own the farm and their crofts, they have not achieved independence from outside control. Many of the Glendale crofters frankly admit they are afraid of independence. As in any township or neighborhood there are two opposing groups. "There always is someone who tries to sabotage the whole thing," said one man. One group has favored the guidance of the officers of the Department. The other group resents the interference of the government in their affairs. At the same time, however, they do not want to be cast off on their own. They want some form

of farm management under a resident manager, preferably not a Skyeman. The attitude of the former faction was aptly expressed by one person who was about to leave Skye: "We need the Department. If they withdrew, we wouldn't have anybody to go to for anything." This is in strixing contrast to the Irish small farmer for whom land ownership is an all important factor in regulating social interaction and status.[24] On Skye land ownership has not led to any change in the traditional status values. A Glendale crofter is not a better man because he owns land.

Prestige Ranking within the Neighborhood. In so far as prestige ranking is concerned, status is more developed within the neighborhood than within the township. In addition to the crofters and their families, there are always several individuals who are given status because of their performance of the necessary functions of ministering to the peoples' spiritual and physical needs and educating the children. These are the only achieved statuses which are valued by the crofters. Noteworthy enough, only the minister of Glendale serves his own "people and friends."

The minister's status depends to some degree on his denomination and the religious sympathies of the people. In Glendale the minister enjoys the highest possible status. In Kilmuir, with two ministers, each is valued by his own congregation with whom he interacts. Nevertheless, all ministers are treated with respect. They are always addressed as the Reverend Mister MacDonald or Mister MacDonald. It is interesting to note that

[24] Arensberg, op. cit., pp. 72-100; Arensberg and Kimball, op. cit., pp. 98-144.

of tenure function to protect the individual from potential abuses by a landlord where customary usages once fulfilled the need. Moreover, even though the tenure of the cultivated soil grants all the rights of a landholder, including the rights to bequeath the house and land to a member of one's family, for more than half the year it is used communally.

The Sgiathanach has never adjusted sufficiently to become a specialist, not even a specialized grazier. For him the land has always had a more fundamental value than merely being a means of livelihood. It is the ancestral home. There is a sentimental attachment to the land which is an expression of the affectionate bonds of kinship. The people have never lost the tribal tie of the land and the group. Although the former patriarchs disclaimed any sympathy with this point of view, the landlords on Skye today have kept what little land they have only because of its sentimental value. Indeed the attitude of the largest landholder, the government of Scotland, is that the crofting tradition is worth while preserving, if for no other reason, because in the predominantly urban and industrial civilization it has a romantic value. There are other reasons. The Islands have long been looked upon as a human reservoir for the armed forces, and, more recently, for Lowland industry.

As a result of their partial adjustment to the higher socio-cultural level, there have been changes in crops and stock. The British market has influenced the crofters' output, within ecological limitations. The old subsistence crops of oats and

Administration of dependent territories	636		

121 individuals; rather, causal primacy in human action is given to the sociocultural environment, which determines what choices are available to be made and what behavior is valued. Because the exercise of choice is a human universal, i.e., a constant, it cannot be used to explain variation (cf. Barth 1966).

Actors within a community which is marginal to a larger industrial society make choices within an environment characterized by constraints and incentives which derive from both the local sociocultural system and the larger system. The state of boundedness of the local system is maintained or modified as a result of the strategies adopted by its members. I have suggested that the Scottish crofting township persists as a relatively strongly bounded system not because it is inherently static, isolated, or resistive of change, but because of the constraints and incentives stemming from the larger society. For example, the British government has provided various incentives to encourage the persistence of crofting and township communalism; and to a certain extent, Gaelic speech or English spoken with a "Hielan'" (Highland) accent constitute social stigma (Goffman 1963) by which a person from the Highlands and Islands is assigned a somewhat lower social status in British social structure.

657 192 554

465 335 288 804 yards (a weaver's yard is equal to 8 feet, a measure which derives from the size of the frame once used to wind hanks of yarn). Payment varies according to the number of colors used in the pattern. A weaver may average 2½ tweeds per week when the work is available, thus earning more than mill workers. A female mill worker earns about L11 or L12, and her male counterpart about L3 more.

288 465 562

Because weavers are classed as self-employed, they do not qualify for unemployment benefit. They may apply for social security, but must submit to a "means" test, and the possession of bank savings or other assets disqualifies them from receiving such aid. All British workers must pay a weekly sum for "insurance stamps," a certain number of which makes the workers eligible for small payments from the government during periods of illness. Self-employed persons must pay for their own insurance stamps, whereas employers pay for the stamps of their workers. A weaver who does not keep up with his payments of over one pound a week for insurance stamps must pay the accumulated debt at a later time.

288 745 657

Weavers face other costs. They buy looms and bobbin-winding machines, and pay for lighting, heating, and the maintenance of all equipment. The preservation of this anomalous status of "self-employed" is related to the

401 288 288 463 438

592 unmarried sibling. Eleven households consist only of siblings who have never married, men and women who in 1971 were 45 years old or older. Two widows live with their unmarried siblings. Sixteen widows or widowers live alone, and sixteen unmarried persons live alone.

589

The large number of households occupied by single, elderly people reflects the use of the croft as a place of residence rather than as an agricultural unit, a view of the croft that was given legal expression in 1968 by the Miscellaneous Provisions Act. Before 1968, the croft went automatically to the eldest son if a crofter died intestate. Since 1968, the rights of different claimants must be considered and tenancy by a new person must be confirmed. District and county councillors argued for this change, saying that a widow was often left on the croft and her security endangered because the eldest son was usually far away from the island, in Canada or some other country. In other words, rather than an agricultural unit which should naturally be taken over and worked by the male head of the household, the croft is seen as a place of residence for the infirm and for the aged, and especially for the aged female.

241 592 423 671 888 428

The Crofters Commission has suggested that elderly people be allowed to rent small plots of land on which

657 185 423 888 311

657 their houses are located, and that most of the land b
185 freed for use by more active crofters, but the ideolo
423 associated with possession of the croft makes such a
888 plan extremely difficult to implement. "The croft is
311 your base, the only thing you have. You don't want i
taken away, even if someone else is using it already
anyway. Our county councillor suggested amalgamating
the unused crofts at a recent meeting. No one said
anything, but no one wants it."

Of the five households that have the use of thre
592 crofts each, one consists of a bachelor who uses the
241 crofts for grazing a large number of sheep. A second
311 household is composed of two brothers who had stayed
at home to take care of their aged parents. One of
these brothers recently married, after the last parent
died. These men keep cattle and sheep, and both weav

A third household is headed by a married man who
592 has recently sold most of his livestock in order to
241 "concentrate on the weaving." His father, who used t
311 haul peat with a horse and cart in exchange for the
288 use of grazing land so that his family never had to
go to the sheilings, died a few years ago. "My fathe
was a crofter only. The weaving didn't start until
the 30's. He was wounded in the war. He got a pensi
and sold a cow or a few sheep each year. But I didn't

APPENDIX I

228 average wage for the summer season dropped to about £25.

434 The number of women engaged in gutting and packing (and kippering) herrings varies from year to year. In 1938 1000

228 were engaged locally in summer, most of whom also went to

434 East Anglia. As always, the greater part of the wages was earned in the summer and the remainder in the East Anglia

462 (autumn) fishing season. The net average earnings per worker of the Scottish gutters and packers were estimated at £16 at the Scottish summer fishings and £17 at the East Anglian fishing (*Annual Report*, p. 12). This figure included 'arles' (*i.e.* earnest money), but excluded travelling expenses. The Stornoway District earnings averaged £16 at the local summer fishing but only £15 at the East Anglia fishing. The latter is a small return to place against the skill of the worker and the discomfort she endures. The women work in small teams together, and their efficiency is partly due to their comradeship.

228 Figures for catches have already been given as approaching

434 £20,000 for herring and £10,000 for white fish and shell-fish. While the net earnings derived, after subtracting the working expenses of boats and outlays for gear, were very much less than this gross sum, a substantial part should be counted as equivalent to earnings (Statistical Table 21).

Summing up the total net earnings, we arrive at the follow-

[462] ing for Lewis proper. The women's total net earnings may be taken as £25,000. We add to the probable earnings of the men at the herring fishing an allowance for their profits from other catches, making a total of say £15,000.

198 The industry was still declining here as elsewhere in Scotland. About 1930 the earnings of hired hands alone

228 reached £30,000 and that of women twice as much, say £60,000.

434 Besides this was the important sum earned by men with share of boats. The local white fish and shell-fish catches were also

656 considerably higher at that period. As to the future, much will depend on what can be done to rehabilitate the local industry by compensation for losses incurred in war, and by assurance that government policy will encourage local fishermen to embark on their enterprise without the risk of the

Note: 'New' townships, for this purpose, are those settled since 1900.

361 632 In detail the arrangement of the townships varies. Certain features are common: all inbye land and, consequently, all settlements, are coastal (except Lochganvich). Each has common pasture adjacent to the inbye and many have further areas of common - former shieling grazings - some distance inland (figure 1). This division of the hill grazings is to some extent nominal because fences are often absent or ineffective. Uninhabited islands, on the other hand, require no fences, and are particularly valuable for winter grazing; the smaller of them provide convenient natural paddocks for bulls

[471] and tups when out of season. The management of all these common pastures is controlled by the township committees. Unfortunately the most important aspect of stock management - control of numbers and maintenance of a proper balance of sheep and cattle - is almost universally neglected.

233 427 656 The total stock which each croft may put on the common pastures - the 'soum' - is defined in the Regulations. In the case of townships re-settled in the present century a specific soum is placed on each croft but, in most other cases, the old practice persists of stating the soum in terms of rent. Thus the soum of each croft may be defined as 1 cow, 1 two-year-old and 8 sheep per pound sterling rent (this is a very common souming). Such soumings have been in existence since time immemorial; they are mentioned in 1836*. Many of the Uig townships had their soumings stated by the Land Court in 1912; in most cases the soum was given "per pound sterling of rent" (presumably 1912 rent), but in a few "per pound sterling of rent payable in 1886". The rents had been substantially reduced in 1891, thus 1912 and 1886 rents were very different. Any township has a certain limited, stock-carrying capacity; therefore, if the total rental is thus changed without

[113] * New Statistical Account, Vol. XIV, p.148.

[TEXT CONTINUED ON PAGE 29]

233 427 656 175 change in area, then the amount of stock allowed, per pound sterling of rent, ought to be changed, too.

This does not appear to have been done in Uig although in Stornoway parish the soum per pound was increased after rents were reduced in the late nineteenth century. More recently, the Crofters Commission, in re-stating soumings for some townships, has generally (but not invariably) applied the soum to the 1886 rent, regardless of the wording of the 1912 regulations. This may appear to have the merit of consistency and, insofar as crofters pay any attention to the Regulations, it satisfies them because the greater (1886) rent gives them a larger soum and less likelihood of being criticised or penalised for overstocking. However, it perpetuates inconsistencies which originated during the nineteenth century when the stock allowed per pound sterling rent was not reduced although total rentals were increasing as squatters' and cottars' holdings were added (see page above). Moreover, the old souming referred to the old type of highland cattle which were much smaller beasts than those kept today, and it assumed that the shieling pastures would be in full use. A further complication arises because about 1920 some townships acquired substantial enlargements but the soumings do not appear to have been adjusted. Altogether it is little wonder that the Grazing Regulations are seldom observed, for they seldom bear any close relationship to the grazing capacity of township lands. Proper observance of carefully revised Regulations, in which unlimited substitution of sheep in place of cattle was specifically forbidden, would be of considerable benefit to the crofters.

241 233 417 188 The inbye, or croft, land is invariably separated from the common pasture by a ring fence, the gates of which are generally closed for protection of crops from May to November. Progressive townships are installing grids to obviate the twin nuisances of traffic interference and straying stock. The fencing of individual crofts was rare until the 1930's and is still by no means general. The inbye land is, in many townships, the best winter grazing and its division into innumerable tiny fenced patches, whilst advantageous for cultivation, would restrict the movement of stock in search of water and shelter; in a predominantly pastoral economy complete enclosure of individual holdings is not

[189] necessarily an advantage. This problem will be discussed in Part III but, in the present context, it is relevant to point out that the small crofts of Lewis contrast strongly with the larger ones of, for example, the Uists and Tiree. Therefore, what may be advantageous in the latter may be retrograde in much of Lewis.

The lay-out of the crofts aggravates this problem. The long narrow strips of the 1850 lotting, well-suited to spade cultivation and common winter grazing, may require four or five times the length of fencing required by an equi-dimensional croft of similar area. If fenced the stock may be deprived of both water and shelter; since arable cultivation has become relatively unimportant a suitable solution to this problem might be to fence a small potato plot near the house and to put the rest of the inbye down to sown grass in three or four communal parks in which grazing could be properly controlled. A particular problem is posed by crofts which have been sub-divided. These may take the form of strips as much as half a mile long by 10 yards wide or, more commonly (and much worse), of piece-meal sharing of innumerable plots, a system known locally, but incorrectly, as 'run-rig'. This is seen at its height in Kneep (fig 22), where every croft in the township is affected. The problem does not arise in townships with large crofts, which are usually more nearly equi-dimensional. These are mostly the result of re-settlement schemes and have long been fenced, (see, for example, figure 15).

Crofter-tenants.

162 427 463 An analysis of crofter-tenants according to age, sex and occupation (table 12) provides several important clues as to the present unsatisfactory state of crofting. More than one-third of the tenants are over 65 years of age; a further 16% are absent, some of these may also be over 65, others are younger people working away from home, a few are tenants

231 Hacklete, Kirkibost and Tobson have by far the largest total holdings of stock but are
311 eclipsed in regard to percentage of soum actually held by Breaclete, Croir, and all the
632 Bernera Shore townships. In fact the average percentage soum held is 66% on the Island as against 114% on the Shore. If efficiency is interpreted in terms of stock rearing therefore, Tobson is less than 50% efficient, Hacklete and Kirkibost 50% to 75% Breaclete Linshader and Lundale 75 to 100%, and the rest 100% to 175% efficient, the average falling at 75%.

It is also interesting to remark the area of common grazing per cow-unit actually held. This shows that, in effect, the Bernera Island townships, as might be expected from their use of one main common grazing, have much the same amount of land per beast The Bernera Shore townships apparently need rather larger areas of land per cow-unit; the excessively large area shown for Linshader indicates understocking.

[427] Figure 29 summarises the incidence of soums and actual stock carried. It will be seen that, although there are some crofts with soums of under five and over fifteen cow-units, the majority lie between those limits with a marked peak in the 7.5 to 10 cow-unit class. The largest soums tend to be under-utilised. Figure 28 shows the percentage of the soum held. Almost a quarter of the working units have less than 50% of their soum and must therefore be considered as inefficient in their chief function of stock raising, about one third have 50 - 100% and rather less than 1/3 have over 100%

The incidence from township to township varies (table 25) but generally the Bernera Shore townships have more uniform individual soums than the older and larger Island townships, though the range of size of stock holdings and consequently of soums held is more comparable. Table 25 shows the average soum per croft or working unit: Breaclete and Croir are similar with only just over half the average for the rest of Bernera Island. None of the Bernera Shore townships have soums as large as the bigger Island ones, and one of them, Earshader has no more than Breaclete or Croir. Kirkibost and Tobson stand out as far the most generously treated townships, but is this justified in practice?

Expressed in terms of cow units, (table 25) the total soums reveal that, on Bernera Island, only Croir is really efficient with just over 100% of its soum: Breaclete, Hacklete and Kirkbost are satisfactory - and no more - with 60 - 80%; but Tobson has only 45% of its soum. This is a very much poorer showing than that for the Bernera Shore townships, only one of which drops much below 100%. Therefore on the Shore the soums, though smaller, are better taken up than on the Island. Further it is clear that, of the individual working units on Bernera Island, none of those of Croir are unsatisfactory, three out of sixteen at Breaclete are not satisfactory, five out of twenty at Hacklete, eight out of twenty-eight at Kirkibost and eleven out of nineteen at Tobson, whereas on Bernera Shore there are only two unsatisfactory units - at Linshader - one of which is presently vacant with a dispute over the tenancy.

231 But so far, only the total soum has been considered: in fact it is necessary to consider
233 the elements of that soum, for in order to maintain the pasture one must have a stock
311 suitably balanced as between cattle and sheep. When the soums were originally calculated this was borne in mind and were every soum fully occupied in the proportions originally planned, the balance of grazing would presumably be satisfactory. Table 26 shows the stock equivalents in sheep units. In Croir the soum would indicate a marked preponderance of cattle +, in Linshader (with its extensive hill lands) of sheep; otherwise there is a rough balance in the soumings between large and small hooved beasts.
[656] Occasionally there are special permissive or restrictive clauses in the regulations. For instance, on Breaclete township common grazing, "...a landholder...shall be entitled to graze thereon, free of charge, during summer and autumn, two hoggs for every pound sterling of rent, for replacing the cast ewes...". Similarly, in Linshader horses are not allowed on a fenced area of 800 acres, and on Little Bernera horses are specifically disallowed. But generally the various classes of stock have clear equivalents which are freely interchangeable. How does this work in practice?

[698] + Editorial Note: this was probably because, when the Land Court determined the soum, Croir had no share in Bernera Sheilings. This now calls for adjustment, which should be made when the Crofters Commission re-enact the local Grazing Regulations.

us journey over to the "Capital of Skye" which stands on 621
Portree Loch.

The village of Portree, as stated earlier, represents the only successful attempt to introduce a nucleated settlement to the island. It was created by a landlord in the [656] early nineteenth century and has been fostered by the national and county government, especially within the last twenty years. Nothing has disturbed the English and the Lowland Scots more 621 than the alien nature of town life in the cultural heritage 648 of the Sgiathanach. Ever since the sixteenth century the Hebrideans have been resisting the introduction of villages. The Scottish and, later, the British, government has been only slightly less adamant in its determination that the country people should have a town, if not a burgh, come what may.

Indicative of its calculated creation, Portree has been 621 built "on the square," like so many English villages. Around 348 the square are found the police station, courthouse, and jail; 177 two banks and one private home; two churches and the Masonic building; and a hotel and two boarding houses. Equally indicative of the alien nature of the village, the square is normally used only when the people are going to or coming from their place of worship or business, or when they are entering or leaving Portree by the road which cuts across the square. The exceptions are an occasional civil ceremony and performance put on for the benefit of the summer tourists.

In reality, the village might best be described as an 621 overgrown hamlet, even though it was planned. The main function 348 of the village as far as the whole island is concerned is that

some townships the large crofter is given an allocation in 427
proportion to his rent. The payment of his rent also entitles 241
the crofter to gather seaweed along the coast for fertilizer [233]
and to cut peat for fuel on the common grazing or in special 222
peat areas. In a number of townships he has a further right 314
to pasture his rams in a "tup park" and his horses in a "horse park." These are lowlying areas of improved pasture. There is the general picture. [233]

There are three important exceptions to the typical 427
means of land tenure. First, there are the Glendale crofters 423
who own their land. Each individual has purchased his croft, 421
and the members of each township own the common grazing collectively. Before the law they are no longer entitled to the [656]
benefits of crofting status because, by legal definition, the crofter is a small farmer who rents his land. Second, there [233]
are the crofters of six Kilmuir townships who have individual areas of "outrun," good lowlying cattle pastures, in addition to the normal crofter's holding. Even though the Glendale crofters are landowners and the Kilmuir crofters have their own cattle pasture, they are subject to "souming" regulations. Third, there are a few large, isolated crofts which are self-contained units. The individual has his own cultivated land, pasture, and rough grazing. In reality, many of these large holdings are farms, but as long as the annual rent does not exceed £50, the benefits of crofting status are not withdrawn. The crofter, of course, stocks his holding as he thinks best. While the Irish and Scottish Highland systems of land use

233 178 578 sheep were let out of the pens, and a fight broke out between the two groups of people.

241 657 578 175 [671] 3. Crofters vs. Non-crofters: Another division within the township has developed largely because of the attention paid by outside agencies to "crofting." The Crofters Act of 1886 defined crofters and gave them a protected, privileged status. In fact, very little distinction existed between non-crofters (sometimes called squatters and/or cottars) and crofters, and in some places, such as the Isle of Scalpay, non-crofters even out-numbered crofters. Both categories were linked to each other by bonds of kinship and mutual dependence. Non-crofters were in fact favored economically. They did not have to pay rent, but had the same opportunities to graze stock and plough land as did crofters. Many crofters themselves had buaile, units of land not recognized as part of the croft and not included in the land for which rent was paid but recognized as property by the villagers themselves to the extent that these bits of moorland passed down through families or could be given by one person to another. Even today, a young girl thinking of getting married says her future husband might build their house on her father's buaile, and a man may build a house on moorland "given" to him by his wife's aunt. Officially, a non-crofter had no "rights" to a house which he built on the common

Chapter 5

GEOGRAPHICAL AND SOCIAL MARGINALITY

182 Despite the growth of the Harris Tweed industry and the gradual disappearance of some of the techniques and expectations associated with heavy reliance on the land and the sea, an important factor which helps to sustain some of these patterns is the social and geographical marginality of the islanders.

175 When the young men who survived the second world [729] war returned to the island, most households still had [231] horses to cultivate the croft, but a few years later [407] the tractors replaced the horses. The Labor government, 175 which came into power after the war, passed legislation •657 which extended the processes of centralization that had proceeded since the breakdown of the clan system. The National Health Service was established. Free milk [871] became available in schools. More scholarships (called "bursaries") became available for further schooling. [207] Television came in the 1960's. In short, the islander was exposed to a number of new alternatives.

182 To the extent that persons became involved in these possibilities, the island became peripheral or marginal. The island has become more dependent upon central

AGRICULTURE AND FISHING

THE CROFTER

241 The pursuit of agricultural processes, their growth, development and improvement, to establish a foundation for a secure society has never been easy on the island. The unyielding nature of the [135] base rock, Archaean gneiss, its hardness, its non-porous property, have all contributed to the resultant pattern and character of society which emerged. Though one is tempted to define crofting as an agricultural activity, it is also something much more intan- [113] gible: a way of life. To quote the Napier Report on *The condition of the crofters and cottars in the Highlands and Islands of Scot-* [181] *land* (1884): 'Habit and local affection bear so great a sway in the actions of mankind, that Highlanders will be found who would rather be proprietors in the mountains of Skye, or the wastes of Lewis, than on the fertile plains of Manitoba.' 'There is the Island of Lewis, with poor, peaty soil covering the Archaean gneiss, but with a crowded, lively, vivid community,' said the Taylor commision in 1955 (Commission of Inquiry into Crofting Holdings).

The Highland crofter is the subject of an extensive literature. [657] A special authority, the Crofters Commission, exists solely for the purpose of caring for his needs. He has special rights and privileges which are safeguarded by the Land Court. Crofters' unions have formed themselves into a strong federated wall for the system's defence.

241 Socially, the term 'crofter' means, on the island at any rate, a 423 landholder who cultivates his own (arable) holding, his croft. He 233 shares the common pastures with his fellow-crofters, each of whom has a right to carry a sum of so much stock, the 'souming'. These [571] common pastures or grazings are a social link of some consider- [632] able significance, forming the basis for the crofting township, as [621] distinct from the communities set up under the influence of some agricultural land use such as hamlet or village, where there are both small-holders and true farms, and the only communal land is the village green or common. For instance, outside the crofting counties area the main unit of Scots life in the country is the farm, with its tied cottages. Then come the full-time small-holdings important in the north-east and the southern Highlands.

Lewis and Harris

LIFE TODAY

As in other Highland areas, some of the island's problems have become so deeply entrenched as to be intractable. They have been the *raison d'être* of so many commissions and committees of inquiry that their existence is now almost forgotten by the islander —if indeed he ever understood their nature. Some results have been seen, such as the Crofters Act of 1886 which gave Highland crofters security of tenure, perhaps the most valuable measure of the last century or two. But somehow all things have not progressed so well since that date; at any rate not so fast that crofting, for instance, is now seen to be an economic form of land use of benefit to both local community and nation at large. Many problems have been virtually ignored by successive central Governments; at least, remoteness seems to qualify a topic for the office 'pending' tray. It has yet to be fully realised that the island, with other Highland communities, is part and parcel of the area generally administered from London and Edinburgh, and merits as much attention to its welfare as other European governments, such as Norway, give to their remote mainland and island communities.

As usual, charity and self-help begin at home, and one of the most dramatic changes in island life has been the result of the agricultural revolution of recent years which is changing once-brown moors to lush green pastures: reclamation by re-seeding. This revolution is still going on. Lewis crofters in particular are showing the way, with other Highland crofting areas following suit. The change in the Lewis scene is being emphasised by the planting of shelter-belts of hardy trees and the first of the new plantations of timber-producing trees. These show the promise of the future: a lively future for a lively community. The fishing industry also has a future, brighter on the horizon than it has been for many a poor year. The Harris Tweed industry, the staple employment-source in Lewis, is maintaining its ability to retain the interest of the market. And tourism, once a perfunctory and casual affair, promises to emerge as a useful sector in the economy. There are, in addition, many small pockets of native initiative and enterprise which, given sufficient encouragement

1901, the average was only 5·086, the county average being 3·983. The population was still to reach its peak in Lewis, some 30,000 in 1911. Emigration was at a fairly high rate, some 2,000 every decade, but this was no relief with births between 8,000 and 9,000 during the same period. In 1894 it was estimated that the number of cottars (or squatters) as distinct from crofters was in the region of 1,000. These people, mostly relatives of crofters, constituted a serious incubus on every crofting township.

Elsewhere in the Highlands, the enlargement of crofting holdings relieved the land-hunger situation. It was not possible for the same to be done in Lewis, and Harris possessed even less useful land to share out. Many applications were made by crofters either for an increase in their own holdings or an increase in the acreage of common grazings held by each township. Though some 500 acres were in fact handed over by the estate management for crofting purposes, there was a steady refusal to diminish the acreage of farms.

The Congested Districts Board was appointed in 1897, supervising public works to relieve the people of a certain amount of their ills. It carried on until 1912, when it passed into the newly-formed Board of Agriculture. The Congested Districts Board could have achieved much more than it did. It scraped away only a little of the vast problem. The next major landmark in the history of crofting legislation was the Small Landholders (Scotland) Act of 1911. It extended certain provisions introduced for the crofter in 1886, and further increased the class of tenants who benefited by bringing in the tenants of holdings rented at not more than £50 (£30 in Lewis) or not exceeding 50 acres (30 acres in Lewis). The 1911 Act also brought into existence the Scottish Land Court in place of the Crofters Commission. In Lewis, however, the hunger for more land went on unabated and reached a not insignificant peak during the later years of Lord Leverhulme's regime.

A new Crofters Commission was set up in 1955, following on the report of a Commission of Enquiry under the chairmanship of the then Principal T. M. Taylor of Aberdeen University. Fresh provision for the reorganisation, development and regulation of the crofting system in the seven crofting counties of Scotland

HISTORY

was made in the Crofters (Scotland) Bill of 1961; this had a mixed reception. In general, today, small crofts predominate in most areas. Out of some 18,000 (the number is decreasing annually) about 15 per cent exceed 20 acres (see Chapter 5). But size has little to do with the type of land; whether arable or rough grazing. In fact, the proportion indicates that some 85 per cent of all crofts in Scotland, and this applies to Harris and Lewis, cannot be considered as full-time now or as potentially full-time.

EDUCATION

In general, the Highlands and Islands of Scotland owe their introduction to letters to the early Christian missionaries. One of the main provisions in the early monastic Church in Ireland and Scotland was for the cultivation of learning and the training of its members in sacred and profane literature. Associated as they were so closely with the common folk on the one hand and the aristocracy on the other, something of this learning and desire for learning rubbed off to advantage on to willing recipients. Literacy however, has had many ups and downs since the dawning of the Christian era in the Hebrides. Though it is impossible to ascertain to what extent the common folk participated in the knowledge imparted by the early Celtic monasteries, there are many references to a class of cleric called 'scolocs', whose learning was accessible to the poorer classes of the emergent Highland society. The 'scoloc' is still retained in Gaelic as 'sgalag', a farm servant, the poor searcher after knowledge who received education in the monasteries in return for services as labourer on the church lands, and who appears in monastic records as late as the fourteenth century.

As late as the sixteenth century, however, after the influence of the Church had diminished, the inhabitants were almost wholly illiterate. When the Fife Adventurers came to Lewis in 1598, they brought a schoolmaster with them; though it can be taken that his services were intended for the improvement of the incomers rather than the islesfolk. Old Roderic MacLeod, doughty chief of the MacLeods of Lewis at the time of the Fifers' arrival, was unable to sign his name. Two of his sons, on the other hand, were

175 perhaps once in a generation, the neighbours were still the
476 best administrators for poor relief. On the whole, this
• 657 remained true to 1914.

As to financial assistance from the Government, the
175 evidence seems at first bewildering in its contradictions,
657 suggesting utter inconsistency on the part of the people.
476 Thus, the record of the Lewis-and-Harris fishermen, in repaying loans for the purchase of boats, was the most honourable in the North-west. In 1900, of the total capital on barely 100 loans made to them, 83 per cent had been repaid, whereas on 150 loans elsewhere less than 60 per cent had been repaid.

175 Yet as to the record of Lewismen with regard to assist-
653 ance for road-making, the Brand Report was significantly reticent. In 1891 a road was planned direct to Stornoway from Loch Roag on the west coast at Carloway. This short-cut of sixteen miles was to shorten the distance by seven miles and so facilitate the transit of fish landed at Carloway. Crofter labour was employed as a means of 'self-help'. The road was, mistakenly, printed as complete on 'base maps' and other recent 'quarter-inch' maps. By 1901, £15,500 had been spent, a sum which exceeded the estimated cost, but only eight miles of road had been completed and five miles partially made, while three miles were quite incomplete. The estimate having been exceeded and "financial difficulties having arisen"—the contractor had gone bankrupt and the engineer was dismissed—the work came to a standstill, £10,000 more having been estimated as necessary to complete the road.
[181 Of that sum £8000 was granted.[1] But the road was left
461] unfinished. These figures alone might not condemn

[1] J. P. Day (1918), p. 328. Day added that "the work should now, more than twenty years after its start, be approaching completion"!

175 the work done—or rather not done—by the local labourers;
653 for deep peat has misled road engineers elsewhere. But impartial observers have left no doubt that the work
461 was shirked—partly from the labourers' lack of will,
181 in other words from laziness, and partly from the not unnatural desire that further grants might continue, offering easy money. Inspection revealed deliberate and combined concealment of bad work, road metal being thrown on to give a surface which had no foundation. The Carloway road, which was to help the Loch Roag fishermen by rapid transport of fresh catches, was never completed. The bad work of many contributed to the undoing of all.

175 . How are these two apparently contradictory responses
• 657 to help to be explained? The answer lies in the completely different methods of expending the grants. A loan to
653 fishermen for a boat was put into their own responsible
121 hands. The hope of profit in which each could share stimulated their enterprise; and where both the private honour of each member and the corporate honour of each crew was at stake, mutual obligation and team-spirit spurred them to work. But road-making—a work many had done for contractors elsewhere as navvies under de-
181 grading conditions—was different. A Gael responds when his imagination is fired, whether for selfish or unselfish ends; but he can also enjoy leisure as to the manner born! Not only was personal skill or effort in road-making of no advantage to an individual; there was little to call out either personal prowess or team-spirit in the work. Moreover, little effort appears to have been made by the administration to arouse ardour. The ultimate advantage of a good road to the people on the west of the Island, as a whole, was clear. Yet since bad work and delay led (at first) to further

181 grants, then, in the absence of an immediate goal, the combination of the corporate interest in bad work with natural inclination to an easy time proved overwhelming! The problem of assuring good work and prompt repayment is real: it calls for the right appeal to team-spirit coupled with personal responsibility. Many short roads to small new settlements have been economically built.

175 With regard to loans for settlement and housing, similar
• 657 contrasts are found. Near Stornoway the farm of Aignish
476 (Eye) was divided in 1905 into thirty-two fishermen's holdings (rented at £3). The Congested Districts Board lent £3600 for housing and spent £1600 on fencing and £450 on administrative expenses, a total of about £180 per holding; but in seven years the holders had paid only one-seventh of the annuities due, and were in arrears with the rent.[1] Yet on the housing loans made on a wide scale since 1919, there was mutual aid among neighbours and the repayment has been satisfactory.

SUMMARY: 1750—1914—1919

175 The transition from the old economy of mutual aid in
178 self-support, little changed down to the 'Forty-five, to the development of production for sale had proceeded far
433 by 1914. Yet change had not continued steadily. There had been fluctuations, from the land and back again, or towards individualism with returns to common action. Kelp-making, migration, and commercial fishing alternated in importance as means to earn a living without losing the
[731] anchorage of home. After the potato famine, a century
[166] ago, the people tended to move away from the outlying
[167] townships and emigrate; but the next generation agitated

[1] J. P. Day (1918), pp. 312-314.

APPENDIX I

178 crippling losses suffered after 1914–18. A beginning has
228 certainly been made. The Herring Industry Board's scheme for 'Queen of Scots' kippers will help the Minch fishing. It will
434 not necessarily help the ports of Stornoway or Tarbert, because herring can be landed at mainland ports and treated there or else taken by road to the Moray Firth, kippered there, and still qualify under the scheme. The Scottish Agricultural Organisation Society has aided the marketing of lobsters to good purpose.

(iv) *Other Sources of Income earned in the Island*

114 It is to be hoped that members of the Lewis Association
814 may ascertain these, perhaps in collaboration with University research workers. This, in turn, might instructively be collated with the imports and exports of the Island, which are recorded and ascertainable with a precision impossible for a similar area on the mainland. Thus the facts would throw light on the economy of other crofting districts.

(v) *Allowances, Pensions, Unemployment Assistance and Remittances*

• 657 With regard to money received by the crofting communities
434 of Lewis from other than 'productive' sources, figures have kindly been made available regarding three sources, namely, (*a*)
436 Allowances made to members of the Forces and their depend-
729 ents, and Pensions, (*b*) Unemployment payments, and (*c*)
434 Money Orders and Postal Orders. The yearly periods for which figures are available are close enough to permit of reasonable comparisons. Among other sources, Bank Drafts form an insignificant fraction of monies received by crofters from outside
[505] the Island. It is impossible to say how much cash is brought
[464] home by men paid off from the Merchant Service and other employment, or how much may be sent through the post in the form of notes, whether registered or unregistered. The amount is known to be large, however, and an estimate based on the number of insured employed, and other figures, would be of value. A token figure is suggested in a note to the concluding Table.

APPENDIX I

729 For the year 1937–38, Allowances paid to members of the
434 Forces and their dependants in Lewis (proper) came to £40,000. Of this sum a greater part was paid through Stornoway Post Office than might have been expected from the town's population. But able-bodied recipients of Allowances are attracted to the town by the likelihood of finding work there, while men of higher rank and pay are apt to be townsfolk, and their
• 657 dependants also. Old Age, Orphans' and Widows' Pensions
434 exceeded £80,000. Of this sum a relatively large amount was also paid through Stornoway Post Office, partly for administrative reasons, rendering other causes harder to disentangle.

We turn now to the next source named, Unemployment Assistance. The Bureau made payments of £120,000 in 1936—the last year for which relevant statistics were made available. Of this sum, about one-third was Insurance Benefit, derivable in principle from the joint earnings of workers, and two-thirds were Public Assistance, contributions to which were made from local rates. The fraction paid to Stornoway workers was relatively small, and may be estimated at barely £10,000, that of rural payees accounting for the remaining £110,000. As the Means Test took account of the croft (or smaller holding with house), the average payment to individuals was small.

434 Turning to Money Orders, and taking the balance of pay-
436 ment and issue at face value, there was actually an outflow from the Island instead of an influx, for the issues exceeded the payments. In Lewis in 1937–38, whereas nearly £60,000 was issued in Money Orders, only a little over £30,000 was paid. Even allowing for the fact that part of the payments is cashed through banks or cleared at a central Post Office on the mainland, there would appear to be an outflow, as centralised clearances probably amount to no more than 35 to 40 per cent. The amounts in Postal Orders paid were smaller, totalling £23,000, and the difference between payments and issues less.

434 Comparisons between town and country are instructive.
436 Stornoway's position as a shopping centre is reflected in the heavier average of Money Order payments per head per annum
369 as compared with rural areas (£8·4 as against £1·1); and the

APPENDIX I

434 difference between the issues and the payments in rural areas
436 (£28,000 as against £13,000) is no doubt due to orders drawn to pay accounts. In this connection, a comparison of con-
369 ditions at an interval of nine years is suggestive for any attempt to distinguish the difference between rural incomes before and after the economic depression. In rural Lewis the total Order payments fell from over £33,000 in 1928–29 to barely £22,000 in 1937–38, a fall of more than a third. Although a decline in the payment of Money Orders in Stornoway was partly offset by an increase in that of Postal Orders there, it is thought that even this reflects a fall in the cash available in the townships, by indicating a fall in the average amount of accounts paid by country customers to Stornoway tradesmen. Even here, it is true, some allowances must be made, as latterly more shopping was done by customers coming into Stornoway by car and probably paying to a greater extent in cash.

• [657] Comparisons may now be made, for all the data quoted, between Stornoway and the rural or 'landward' areas of Lewis, and also between landward parishes for all except the
[161] Unemployment payments. Population having changed but little from 1931 to 1938, and economic conditions not being very different in the Island in the financial years 1936 and 1937–38, an approximation can be made of payments averaged per head of population. In the following table these are shown in £ sterling to one decimal place.

(B) REMITTANCES (BY POST), ALLOWANCES, PENSIONS AND UNEMPLOYMENT PAYMENTS

With Averages per Rural Household

(i) Urban and Rural		(ii) Rural (a) Official Rural	(b) Estimated Rural	(c) Average per Household
Money and Postal Orders	£53,700	£31,700	£34,900	£7·4
Allowances (Forces)	41,000	30,400	33,000	7·0
Pensions (State)	82,700	54,100	60,000	12·7
Unemployment payments	120,000	110,000	110,000	23·4
Total (B, i)	£297,400	Total (B, ii) £226,200	£237,500	£50·5
Total (i, A and B)	£1,026,500	Total (ii, A and B) £650,550	(Approx.) £661,850	£51 £141

NOTE.—To complete the estimate of rural income, partly indicated by (A) and (B) we should require to group with (A) certain sources of income of productive character such as road-making and the creation of other services, and to add to (B) other savings and pensions from outside the Island which may be received as Bank-notes by post, as Bank Drafts, and in cash brought home by earners. The figures of £110,000 for Unemployment Assistance, and of £35,000 for Money and Postal Orders, suggest that it would not be too much to add a figure equal to at least the two combined, or £145,000, towards making an income of another £30 or so per rural household. By bringing the sources of income to at least £170—still a very small amount—we should approach a true figure, which cannot, at best, be large.

Lewis and Harris

APPENDIX II

434 (iii) *Fishing Industry* (1953)

228 The renewed Russian contracts for herring have meant loading of Baltic shipping at Stornoway with barrels of herring [439] cured both in Stornoway and Ullapool. Catching power in Scotland generally is hardly enough to meet this contract. Thus, while the numbers of boats continued to decline after the war, leaving only one steam and 33 motor drifters (over 30 feet keel) registered by 1953, the fishermen employed rose to 610, of whom some 520 were crofter-fishermen. Many worked much of the year; on the other hand, most of the winter catch went for 'oil and meal' at about 50s. per cran instead of the top price of over 80s. For local boats a figure of £30,000 is suggested for the catch of herring, say £10,000 for white fish, [178] with £5560 for shellfish. For "curing and associated income" the pre-war figures may be doubled.

(iv) *Other Sources of Income earned in the Island* (1953)

434 In mid-1953, of just 5000 registered for the Island as 465 employed—and other than the self-employed, *i.e.* the farmers and crofters, the hand-weavers and the boat-sharing fishers—1130 earned by the three industries first named, the rest by other trades and professions, 3870 in all. The unemployed numbered 1180. Analysis of wage-rates would throw light on [657] total earnings. As to unemployment, the fact that, like crofters and many fishers, hand-weavers count as 'self-employed' means that when out of work they are not covered by unemployment insurance, and have to be helped, at low rates, by public assistance.

(v) *Allowances, etc.* (1953)

434 Turning now to Remittances, to the manifold categories of 657 Pensions, National Insurance and National Assistance, and to Unemployment Benefit (a small item), the Table B, 1953–54, 436 shows the totals kindly furnished for this study, with £1,017,110 729 for all Lewis and an estimated £977,010 for rural Lewis.

175 427 Thus, towards the end of the nineteenth century, the proprietors were obliged, by pressure of population within, and of public opinion without, to made some concessions to their small tenantry. It may be relevant to point out that this was a period of falling agricultural prices and declining farm rentals; indeed the time was not far off when some farms would not find tenants at any rental:

TABLE 7

Farm:	Rental at c.1875/80	Rental at c.1885/90
Mealasta	£130	£85
Mangersta	£132	£95
Ardroil & Carnish	£285	£245

Notes: (1) Small reduction for enlargement to Glebe.
(2) £22 reduction for Laimeshader and Grimersta Lodge.

525 526 [161] [162] The crofters of south Uig were in particular difficulty at this time for here fishing declined earlier than elsewhere but the townships remained greatly overcrowded. In 1910 Breanish and Islivig had 14 cottar families, (most of them sharing crofts with the official tenants), and three of squatters, i.e. on the common pasture. Here fishing had almost ceased and the people were almost entirely dependent on their crofts or on employment away [231] from home. In Valtos and Kneep there were 21 cottar families; they had 31 cattle and sheep flocks. Here, too, fishing was on the decline. It was perhaps because of this that 288 commercial weaving was developed in South Uig earlier than in most parts of Lewis. As 175 early as 1900 Uig was classed with Harris, by the local committee of the Congested Districts Board, as producing a superior quality of tweed. Two 30 gallon iron pots were sent out so that enough wool could be dyed at one boiling to obviate irregular colouring in any [653] one tweed. The C.D.B. also made grants for roads, footpaths and "marine works". Amongst the latter the pier at Valtos (1899) was an attempt to resuscitate local fishing, but it came too late.

175 603 The Congested Districts Board was the first government agency with funds at its disposal to aid the crofting townships. One of its largest grants went in aid of the Carloway Road (or Pentland Road as it is now known). This scheme arose out of an abortive proposal for a railway from Loch Carloway to Stornoway. It was thought that this could enable trawlers and other large fishing boats to land their catch for quick transport to Stornoway and so to the mainland whilst the fishing vessels returned to sea with minimum 175 delay. The road, an excellently engineered one, is still not properly surfaced. A more effective C.D.B. - aided scheme was the resettlement of crofters on Mangersta Farm, 657 the rent of which had fallen to £70 and which the proprietors were willing to break up. 427 Thirteen new buildings were formed here and the first harvest was taken by the new settlers in 1911. The crofters' rent was fixed at £73 and the C.D.B. paid £566 in grants [241] to purchase the sheep stock and improvements, and towards the cost of fencing. About the same time the Board paid a grant to the township of Garenin for fencing a substantial enlargement to their pasture, obtained off Dalbeg. Here, and at Reef farm, small-holding resettlement schemes were vetoed by the Crofters Commission whose experts regarded the areas as unsuitable. Both have since been re-settled by crofters.

175 311 427 657 [471] After the first World War re-settlement schemes went ahead with renewed vigour. Men serving in the Forces expected land to be available for them on their return and they were impatient to get it. By this time the Lewis estate belonged to the Lewis and Harris Development Co. - in other words to Lord Leverhulme. The farms of Mealasta, Reef, Carnish and Ardroil were all without tenants; Leverhulme agreed to break them into crofts, the Board of Agriculture surveyors were speedily put to work, and the new settlers were able to commence cultivation on March 1, 1921. Timsgarry farm, with which was the Uig shooting lodge, was in the hands of a tenant; but the Board obtained possission, reserving a small area around the lodge for amenity. Croir farm, Bernera, was also broken up. More than 50 new holdings received enlargements to their common pastures; details are given in Figure 10 and table 8, (pages 22 and 23). The schemes were done in haste, the Secretary for Scotland pushed them forward in the face of some opposition from Leverhulme. Here, as elsewhere, the ex-servicemen were restive; land raids and violence, with inevitable political repercussion, were feared.

In 1924, Linshader farm was threatened by land raiders. As a result this, too, was broken up and 10 new holdings were occupied as from Whitsuntide, 1925. This was part of the Grimersta sporting estate and the proprietors required that all the ghillies be given crofts. Linshader was not particularly suited to crofter-management: it consisted of 49 acres of old arable land and more than 8.000 acres of rough pasture, the furthest part of which was five miles distant and without road access. When the Land Court fixed the souming the following remark was recorded:

"Under a club stock" (i.e. a single flock) the moor "might have been exploited to a very different extent, but in view of the fact that individual stocks are to be kept" (i.e. each crofter his own shepherd) "which is not conducive to hefting, ... 30 sheep per share will be ample. If the whole outside ground were being fully made use of by the sheep stock the grazing of ten cows should do no harm .... but the wintering afforded on the holdings does not justify a larger souming" (than one cow). It had, in fact, been the practise at Linshader farm to buy in young cattle for summer grazing, and to send away the lambs to the Dingwall area for their first winter.

Finally, in the thirties, two long established cottar families at Aird Bheag an isolated spot on the Uig shootings, applied for and obtained recognition as crofters. Their holdings have since been abandoned and now form part of the sheep farm operated by a syndicate of four Breanish and Islivig crofters. Finally, in 1935 a further 12 new holdings were formed by a partial break-up of Garynahine farm. Thus in all, 140 new crofts and 45,000 acres [161] have been added to the crofter holdings of Uig since 1878. During that period the population of the parish has declined from 4,500 to 2,700. Neither the formation of new crofts, [162] nor the enlargement the old, has prevented depopulation. Little, if any, more land is available and depopulation continues. The only hope, now, is to make the existing land - individual holdings and commons alike - more productive.

Table 8 and the map, figure 10, illustrate the progress of resettlement.

Crofts and Crofters.

491 427 311 The parish of Uig is now mainly owned by five small limited companies: Uig Crofters, Bernera Crofters, Grimersta Estate, Carloway Estate, and Lewis Island Crofters. In addition, when Lord Leverhulme sold the Lewis estate a few crofters accepted their holdings as free gifts; consequently they lost legal crofter status (which is confined to tenants) although they continue to share in their respective townships. More recently four crofters in the south purchased some 2,000 acres of rough sheep grazings, including the now defunct settlement of Ard Bheag. There is no official record of the extent of crofters' land, but we accounted for some 95,000 acres (table 9). The remainder con-

Period IV (1886 - 1953)

*175 *178 648 The year 1886 is a chronological hinge in the culture history of the Sgiathanach. The British government began to play a positive, continuing role in local affairs for the first time in history. Hitherto, the interest of the government had been confined to proscriptions, recruiting, and taxation, occasionally interspersed with relief for the destitute. With the change in policy, we enter the realm of the contemporary culture; therefore, all I wish to do is indicate the direction the processes, which we have been following, took under the national attempt to rechannel them. The major trends to be noted are two. The proprietors' influence in determining how the land was to be used was curtailed, and, with a redirection of the commercialization of the estates, many of the traits and complexes characteristic of the traditional culture assumed renewed importance.

*175 *178 657 423 671 621 632 Since the Napier Commission had been mainly concerned with the disregard of the customary rights of the crofters and their inconsiderate treatment by proprietors, the recommendations which were presented to Parliament sought a land reformation within the framework of local custom.[79] Unlike the Continental Commune, a local, self-governing body, the Highland township had never legally existed. Elsewhere in Scotland this communal agricultural unit had been replaced by individual farm occupancy, just as had been happening on Skye. The major proposal was a retrogressive step; the township system should be given legal

[79] Napier Report, pp. 7-15.

*175 *178 657 423 671 621 632 sanction and endowed with privileges and immunities by which self-regulation, stability, expansion, and improvement might attained. Additional provisions called for the replacement the repudiated customary usages by national laws of land ten

*175 *178 671 241 427 565 The Crofters' Holdings (Scotland) Act of 1886 embodied many of the Commission's proposals.[80] The crofter became, perhaps, the only class, as a horizontal segment of the popu lation, with a minimal legal definition. He was a pastoral agriculturalist who resided on his holding, the annual rent of which was less than £30, (later raised to £50) in a crofti parish. Such an individual was entitled to a fixed, fair re just compensation for improvements made by himself or his predecessors in the same family should he leave his holding, security of tenure, and modified right to bequeath the holdi to a member of his family. Except for the statutory conditi that he must not alienate the holding from his family, sublet without consent, or violate the rights of his neighbors or his landlord, including withholding rent and contributing to the deterioration of the land and dwelling, the crofter was given all the privileges of a landowner with few of the responsibilities. A Crofters Commission, with executive functions, was established to carry out the provisions of the act and to assign "available" land to the townships as

[80] I owe a debt of gratitude to innumerable government officials in Portree, Edinburgh, Glasgow, and London for their patience and cooperation in providing me with the neces information to discuss this final period of the history of Sk The facts are theirs; the interpretation is my own responsibi

weaving and fishing, the fall in population would probably be small, if any, in 1941. This fall in the total figure was not so much a decrease in the number of families as in the number per family. The Island was only then following the restriction of population begun half a century before in the rest of Protestant Britain, though the causes, social and economic, are very dissimilar. Actually, little did occur to change either the rural situation or that of Stornoway, until the outbreak of war in 1939.

Since 1931 there had been no real decrease: Lewis is a land of house-building, not of ruin and abandonment; of increase of holdings, not diminution, and even of agricultural improvement. No doubt 'artificial' causes were at work: first, loans, grants and unemployment insurance and assistance—once known as 'the dole'—and, secondly, the money sent to elderly parents and dependants at home by young folk in Glasgow or abroad, or savings brought back by the young people themselves. Yet there is some fishing and agriculture still. Above all, 'hand-weaving' has grown, even if this be partly 'artificial'. Recently it was not only the elders who had returned to the Island, but men and women in the prime of life, so that the question of resources, livelihood and population in Lewis needs to be re-examined afresh.

The emigration which took place from 1949 to 1951 followed directly upon the losses and the unemployment in the Island's Harris tweed industry. This crisis resulted from the imposition in 1949 of a Purchase Tax on hand-woven Harris tweed of 666 per cent. If the tax had been maintained and no adequate adjustment made, the effects on population would have been far-reaching.

427 croft by subdivision, he would pay little, indirectly and by
656 arrangement; while if he simply built a hut or house on a vacant spot he paid neither rates nor rent. Either course was illegal; yet it was too expensive for the landlord, however 'hard-hearted', to take legal proceedings to turn off a squatter. As for wholesale expropriation the suffering caused and the odium incurred would have involved—and would still involve—both landlord and State in insurmountable difficulties by starting fresh agitation, perhaps with outbreaks of law-breaking, repression and bad blood. Yet these anomalies still discourage, and the normal illegalities demoralise, all concerned.

656 Because of the provision by State and local authorities
178 of a growing range of services in other regions, and also because of the special reasons of Insular poverty, State
511 action was increasingly taken in the Isles. To what extent have the Islanders responded, it may be asked; or how
12 far may they have failed, in return for aid offered and
[476] benefits received? Let us begin with mutual aid practised among the people up to 1900, and then consider the repayment of loans and grants under different conditions. Observations by those in touch with the Island for many years, officially or privately, allow one to read between the lines and attempt an impartial judgment.

175 As to the strength of independent mutual aid there
476 could be no doubt. Up to the beginning of this century, the amounts expended on parish relief were 'almost
[657] nothing', and had shown no increase in preceding years. General poverty, anomalies in the rating system, and the mistakes such as the erection of poorhouses by the central administration, diminished resources; but the people generously gave help to their poorer neighbours in work and gifts. Except for a year of overwhelming crisis,

enlargements when the proprietor would not lease it on reasonable terms. Thus, the government began to protect the crofter from potential abuses and to restore the land to the descendents of the clanna, who had, to say the least, manifested a persistent disinclination to accept any other system of land use. A complete reformation, however, was not yet possible.

The crux of the problem of maintaining the crofting population was succinctly stated in 1851 by the chairman of the Highland Destitution Board. The people could not support themselves, at a subsistence level, unless each crofting family were given ten acres of arable land plus pasture. Not only was there not enough land, but without credit facilities, a man could not find local employment until the land began to produce, and, if he sought employment at a distance, he could not work his land to free himself from the necessity of working for a wage. In 1883 it was estimated that a 50 percent reduction in population would not leave enough land to give each family an adequate holding, ten acres of arable and 277 acres of grazing land.[81] How right they were. Today the population is less than half that of 1883, and still very few have what was considered an adequate holding a hundred years ago. Let us see what measures the government took in the attempt to solve this problem.

At first the land reorganization program was thwarted by a lack of available land and by the continued tendency of

[81] Napier Report, pp. 100-101.

the people to overstock. No land could be assigned as an enlargement if it would impair the value of a sheep farm or deer forest. The remainder of the island was already possessed by crofters. Moreover, there was no one to regulate the use of the common grazings. As the Crofters Commission usurped the functions of the landlord, estate management became lax. The township constable had disappeared. The cotters, 36 percent of the population, had been omitted from the provisions of the Crofters Act. Later when the government provided for a grazing committee to draft voluntary regulations for sharing the common grazing and, finally, coerced the crofters to elect a grazing committee, the regulations could not be enforced, except by appealing to the sheriff.

At length another commission of inquiry visited the Highlands to decide how the resettlement program might be extended. Then, in 1897, the Congested Districts Board was created. The Board was given power to purchase land for enlargements and for creating new holdings, to resettle crofters and cotters from congested districts, to foster the development of stock breeding, agriculture, fishing, and home industries, and to improve communications. It was not intended that the government should become a landlord. The crofters, like the Irish small farmers, were supposed to have acquired a desire to own their own land. In 1904 the estates of Glendale, the present twelve townships, and Kilmuir, the whole parish and part of the parish of Snizort, were purchased. On the Kilmuir Estate there were 450 crofts in 35 townships and 10 large farms.

Heavy rackrenting in the past had led to dissatisfaction and arrears in rent, the crofters' weapon against the landlord. The rents were revised and most of the arrears were cancelled. All the farms but one were subdivided to form 79 new holdings in 7 reorganized townships and to make enlargements to the other townships. The Glendale estate received similar treatment, being made over into 147 crofts in 12 townships plus a jointly held club farm. Both estates were sold to the crofters on a fifty year annuity basis. Then came a rude awakening. Within ten years the crofters found ownership to be a dubious privilege, especially since it excluded them from the benefits of legislation favoring the small tenant. The Kilmuir crofters were released from the contract, but the government refused to accept the petition of the Glendale people, who still are not pleased with their rather unique position. Private ownership of the land might be said to be as alien to their heritage as village settlements.

Land settlement continued, with the introduction of certain refinements, the most important of which was the power to use compulsion to acquire land for crofting in the national interest. Today over half the Island is owned by the national government and administered by the Department of Agriculture. The tendency in recent years has been to create more adequate holdings. On the Kilmuir estate the number of crofts has been reduced from 530 to 442. The process of resettlement, or de-commercialization, has been carried further on Skye than in any other Highland area.[82] It has also included the only major

[82] Cf., e.g., Collier, op. cit., pp. 90-113; and Hance, op. cit., pp. 61-62, 64-68.

migration scheme to be attempted. In 1923 sixty-eight families from the Isle of Harris, in the Outer Hebrides, were brought over to Skye and settled in Bracadale. Probably, close to 300 new holdings and in the neighborhood of 200 enlargements have been made since 1897. This clearly reflects the limited space available for crofting at the end of the "Clearances."

In addition to land settlement, the government has continued to stimulate improvements in stock breeding techniques and to foster more efficient land utilization. Credit facilities, by grant and loan, were offered to enable the crofters to purchase stock, especially sheep, and to build new cottages. Grants and subsidies, in an ever increasing number, have been made available to promote a fuller use of the land. Initially, under the Congested Districts Board, these facilities were devised specifically for the Highlands. By the time the Congested Districts Board was abolished, the crofters had become officially integrated with the national agricultural scene so that specific subsidies, grants, and loans were replaced with an opportunity to apply for assistance within the national program of agricultural development. Instruction in scientific methods of agriculture has been another continuing function of the government through a series of advisory services and, more recently, by a program of demonstration crofts and farms. Access to markets has similarly been facilitated by improving communications by land and, to a lesser extent, by sea.

Security and protection for the crofters has been another unfailing interest of the government. Again, with official integration, the scope of legislation has been extended to

include all small tenants in Scotland. The landlords have lost their right to evict a crofter for breach of conditions. Since 1911 only the Land Court, which replaced the Crofters Commission, can remove a tenant who is guilty of bad husbandry. Moreover, such action can only be taken after the general circumstances of the crofter and his need of the croft for a home have been considered. To date, no Highland crofter has been removed. In fact, security of tenure has been carried to the extreme that the individual no longer has to reside in Scotland much less on his croft. Although this change is now regarded as inadvertent, the courts have ruled in favor of the small tenant. The only remaining functions of the landlord in estate management are to collect his rents and pay compensation should a tenant desire to leave. Both the rents and the compensation are determined by the Land Court.

Accompanying the integration of the Island with the national scene, politically and economically, were extensions of social services. Prior to 1872 education was the responsibility of the church, charitable agencies, and, especially in the Highlands, the local proprietors and their financially secure tenantry.[83] Although the parish school system was national, the administration of each parochial school was local. The ideal of a school in each parish was neither adequate nor easily obtainable. The result was a few regularly taught schools.[84]

[83] DSA, XVI, 156-157, 226, 539; XVIII, 188; XXI, 430.
[84] James MacDonald, op. cit., pp. 771-774.

The substantial tenants had their own private tutors, but the people, in general, received only informal schooling until well into the nineteenth century when several charitable societies entered the field.[85] All schools were essentially religious. The act of 1872, and subsequent legislation, changed the program and made education compulsory for all. It was not until the end of the century that adequate facilities were available and the system began to function, with the beginning of free education.[86]

Informal control within the community was augmented by the establishment of a rural police force, with headquarters in Portree and local stations at convenient points around the Island. Health and welfare became a responsibility of the state. A regional medical plan provided doctor's care and hospital facilities for all regardless of means. Old age [737] pensions were granted to the elderly. Later, the scope of assistance for the infirm, aged, and the poor, and the unemployed was increased. Thus, the government continually usurped many of the functions of the family and the local group, especially following the abolition of the parish council in 1929.[87] Although the parish councils, or the still older parochial boards, had no legislative powers, they did handle welfare and, until 1918, education. Now, in 1929, a Skye

[87] C. De B. Murray, How Scotland Is Governed (Glasgow: Art and Educational Publishers, 1947), pp. 118-136; 195-196.

#175 District Council was established, but the only functions left
#178 to the Islanders were such minor ones as providing recreation
657 grounds and maintaining footpaths. Today the members of the
621 Council can only make the local needs known to the county council and carry out the functions of the county council.

#175 In more recent years the functions of the county and
#178 national governments have increased still more. Government
657 employees have multiplied. After the Second World War, the
[34] county became a landlord, building subsidized housing. Since
[36] the county has built these houses at Portree and at a few centers, such as Broadford, Uig, and Dunvegan, where the police have their stations, they are still persisting in the attempt to
[48] bring villages to the island. Roads have become the concern of the county. Within this period, then, the crofter became dependent on the county and national government for the satis-
[18] faction of many of his needs. Although he resents authority, he has not shown any resentment at the continual encroachment of the government's services. To him the government is a "rich man" who has bestowed many favors and may be asked to bestow a few more, like electricity and plumbing.

#178 Like European peasants in general, the Skye crofters
181 have lost three important things: isolation, political independence, and self-sufficiency. At the same time, they have retained a good deal of their former identity, a continuity of culture, and an attachment to the land and to the traditional way of life. The culture has been modified by adaption to the higher socio-cultural organization, especially in material

#175 crofting districts. Shops, schools, inns, and churches in-
#178 creased in numbers, but they have not clustered to form a
361 village nucleus. In more recent years the county has tried to stimulate village growth by building houses at a few centers. Someday they may succeed in altering the settlement pattern.

#175 As a consequence of the increasing integration of the
#178 Sgiathanach within the national scene, government regulations
657 have expanded and have come to be enforceable by a local police. Government services too have increased in scope. Many of the traditional functions of the family and the local group are now functions of an ever increasing number of government employees. Nevertheless, the traditional statuses of the members of the group have persisted and social control has not been reduced in favor of action by the state.

#175 The class structure has changed several times. It has
#178 vacillated between a leveling of socio-economic differentiation
565 and a growing polarity of status. At present there is no local class structure beyond the old polarity of landed gentry and crofters. Those who fall between these groups are ranked
[59] on prestige values of long standing. Even though many of the intermediate group would be working or middle class if they lived elsewhere in Britain, on Skye personal factors play a more important role in determining prestige than socio-economic differences. Leadership and political power remain in the hands of the gentry.

#175 If the foregoing material suggests that there is
#178 evidence on Skye for Redfield's concepts of disorganization
182
771

427 than the bare essentials, these people just get along. Even
511 so, they would be unable to get by were it not for some form of
[44] supplementary income. This essential prerequisite for the
[65] individual or family who upholds the crofting tradition may take the form of seasonal employment on the island or away from home; contributions from a child or, less frequently, a brother or sister; or payments from the government in the form of unemployment compensation, relief, or a pension.

427 Many a Sgiathanach thinks of his croft as a home more
181 than anything else. There are men who have found full time employment. Some in this catagory work the croft in the evening. Others expect their wives to care for the crops
[88] and stock, or they leave the land untouched. Then, there are the old men and women who have returned to their an-
[147] cestral homes to spend the twilight of their lives. These exiles come back from cities as near as Inverness and from places as far away as the sheep ranches of Montana or the cities of Australia. Perhaps, the most significant point is that for all Skyemen the croft cannot be evaluated merely in terms of acreage and income. As we shall see, it is a way of life in which an attachment to the land, as an embodiment of kinship, plays a very important part.

427 The incomes of three representative crofts clearly
514 reveal the financial difficulties under which the crofting family labors. Although I have somewhat arbitrarily divided the holdings into small, medium and large on the basis of acres of arable land, it should be remembered that this

the cash income was £1044 3s 3d for 1952 and £1527 3s 9d for 1953. 427
I do not know the net profit. 241 231 434

Summary. The foregoing facts and figures should make it abundantly clear that a man with less than ten acres of arable land and with a "souming" of less than three or four cows and fifty sheep can expect only a meager and definitely inadequate return for his investment of time and money. Several crofters thought thirty or forty acres were required. This would mean a "souming" of 10 or 12 cows and 200 sheep, if the present proportion of grazing land to cultivated area were maintained. Some said 300 to 500 sheep would be closer to the mark in order to make a good living on the land. The budget for the large croft confirms this view, but even then we have seen crofting to contain a precarious element of risk. Most crofters felt that with twice their present acreage and "souming" they would be faced with a less hopeless proposition.[6] This, of course, would involve a further, coerced reduction in population. But this is all a matter for future planning. What we want to know is the contribution of crofting to the local and national economy.

The Contribution of Crofting to the Economy

If we are to determine the value of agricultural pro- 231
duction from crofting, we must consider not only the crops and 241 657

[6] It is not only the Skyemen who want more land; see The Report of the Commission of Enquiry into Crofting Conditions (Edinburgh: Her Majesty's Stationery Office, 1954), pp.18-19.

stock grown for local household consumption and export but 241
also the subsidies and grants provided by the national govern- 231 657
ment. I hasten to add that it is impossible to estimate 657
accurately the specific contribution of crofting to the economy of Skye. There is no available means of distinguishing the status of crofter from that of farmer in the annual returns of crops and stock or in the applications of farmers and crofters for subsidies and grants. Before getting down to pounds and shillings, we may find a brief digression to review the acreages of land devoted to crop and stock raising and the yields to be expected helpful in our attempt to understand the many problems under which the Skyeman labors.

The total area of Skye is approximately 447,000 acres. 311
Of this area, 422,415 acres were classified, in 1953, as rough 151 231
grazing.[7] The land under cultivation, excluding grasses, 241
was only 3,254 acres. There were 6,258 acres of grass intended for use as hay and 12,339 acres of permanent grass or improved pasture. The remainder, about 2,500 acres, was unclassified.

The stock, in 1953, was 1808 dairy cows and heifers, 231
8,108 cattle, 143,422 sheep, 41,888 fowls, 436 horses, and 319 pigs.[8] The dairy cows are mainly beef breeds which give a low yield of milk. The sheep are primarily the hardy blackface variety but some crofters have cheviots, which produce a finer wool. For each sheep there are about three acres of grazing

[7] Agricultural Returns, June 4, 1953, Department of Agriculture for Scotland, Edinburgh, Scotland (in the files of the Department). These figures include adjacent small isles.

[8] Ibid.

equal number, but mainly newcomers to Skye, are teachers 462 464
nurses. The remainder are employees of the national and
nty government, serving as postmistresses and clerks. In
ition, an indeterminate number of women, in Portree and in
rural hinterland, but none in Kilmuir or Glendale, add
heir income by taking in summer visitors. This practice is
strictly legal for the crofters, in as much as it casts
t on the agricultural valuation or devaluation, but the
ty government has not attempted to discourage the practice.

Turning to the men of Skye, we find that the largest
oyer is the county government, with well over 200 men on
payroll as road workers and general laborers. The national
rnment, directly and indirectly, in recent years has employed
her 200 or more men through the Department of Agriculture,
verseers, agricultural workers, and laborers; through the
n of Scotland Hydo-electric Board; and in the post offices.
add the number who work for the nationalized ferry service [657]
the subsidized steamer service, we find that over half of
vage earners on the island depend on the government for
wages. The only other fields open to men are in agriculture,
rm help or township shepherds; in transport, as bus and
drivers; and in hotels, as barmen, waiters, and porters.

These jobs are by no means permanent or regular. It is 464
t all unusual to have 300 or 400 unemployed during the
r when road work falls off and the tourist season is ended,
will then draw compensation from the Ministry of Labor, [745]
ll the younger men and women who have been working on the

mainland for the summer. For many of these people, unemploy- 464 745
ment is a misnomer. It means they are receiving a weekly
allowance from the government while they wait for the next
seasonal opportunity to turn from crofting to wage labor. More- 464 657 745
over, providing work and paying unemployment compensation is
by no means all the government does for the Island's economy.
Through the National Assistance Program many more are aided
financially. In 1954, for example, there were no fewer than
726 individuals receiving some form of national assistance.[33]
Most of this number were recipients of a non-contributory old
age pension. The next largest category were young women
required at home to care for aged and infirm parents. Of the
total number, only thirty were Portree residents. Then, too, [657]
there are the previously mentioned subsidies and grants for
agricultural improvement and fuller exploitation of the land.

We may conclude, then, that cultural continuity is an 182 167 657
expensive proposition with a double-edged penalty. On the
one hand, there is the sentimental distress which depopulation
involves. Both the man who leaves Skye and those he leaves
behind feel the loss of their loved ones. On the other hand,
there is the expense to the government, which must be staggering
and out of all proportion to the amount contributed by the
people in taxes. It is not that the islands receive any special
grants, but, as one newcomer said, "They just happen to qualify
for all the grants, doles, and subsidies there are." He, of
course, was exaggerating. As we shall see in the next chapter,

---

[33] Information extracted from the files of the National Assistance Board in Scotland, Edinburgh.

As we shall see in the next chapter, 232
178 there is hostility between the Portree dwellers and the crofters.
651 One reason for this is the fact that the village pays more in
657 property tax than the rest of the island put together while they receive relatively little in return. The feeling that the crofter is "aye wantin', but never pays a cooper" (a penny in taxes) is not at all unusual.

Summary

511 If the economic aspect of the culture is judged in terms
182 of the standard of living it affords, it cannot be considered
184 as satisfactory. There are persistent environmental obstacles,
178 among them geographical isolation and an unfavorable climate for pastoral-agriculture. We have seen that few can hope for anything which would approach a desirable income in the surrounding commercial society. The crofters have been caught between two cultural patterns. The old system of land use
[177] has persisted. A new system has been superimposed. From this new system, however, the Sgiathanach has accepted few innovations of more recent origin than the eighteenth century, except those of a material or technological nature. Still, he has ceased to be self-sufficient, and, in doing so, he has become dependent on the commercial world for the very essentials of physical existence. For many of the crofters this means seasonal migration in the quest of employment. For some it means part-time or full-time work locally. For a relatively large proportion of the population it means dependence on contributions of their children and government agencies. This dependence has not led to a full

427 his croft to his eldest son. Some reformers feel that the
428 youngest son or daughter who has stayed at home to care for his parents is cheated. When there is no will, the State steps in and assigns the croft to the widow, the eldest son, or the child who has remained behind.

657 The growth of the welfare state has had its influence
745 in determining this pattern. On the one hand, there are
593 payments to unmarried children who remain at home to look after their parents. On the other hand, there are the old age pensions. While the pension has made the transition of the old couple from active crofters and parents to grandparents easier for the Irish small farmer,[13] on Skye the coming of the pension saw the end of the old pattern of the oldest son returning, with his wife, to care for his parents and raise his own family. With a pension the old couple had little need to work the croft. The children were not needed, and not infrequently the old people enjoyed their independence and their freedom from turning the house over to a woman whose ideas and beliefs conflicted with their own. The common desire of parents today is that one of their children will stay on to take over or return after they are gone. Naturally, no one likes to see his children far from home, but what can they do?

582 Aside from the difficulties of inheriting a croft or finding a vacant holding, it has become increasingly difficult for a young man to find a wife. Most of the crofters' daughters

[13] Arensberg, op. cit., pp. 85-86; Arensberg and Kimball, op. cit., p. 125.

I were to adapt this argument, I might even be convincing, but my dissertation would have a fallacious conclusion. Emphatically, irreparable cultural disorganization is not a characteristic of the culture history of Skye. 178 182

Continuity has been maintained through a reintegration. In part, Skye has made an adjustment to the higher socio-cultural organization of Great Britain and Western Civilization. This phase of the culture's readaptation, however, is an incomplete adjustment. The Sgiathanach has remained enisled geographically and culturally. A readaptation has also been made in the older, traditional culture. 178 182 184

The national culture has played no insignificant role in the readaptation. Parliament turned back the process of commercialization in 1886 and undertook to rechannel the trends toward ever increasing commercialization of the land, ultimately leading to the socialization of the land. The essentials of the old system of land use and tenure were not only reaffirmed but also given legal sanction to insure their stability. The nation confirmed the customary usages. In many townships and in whole neighborhoods the crofting system was restored. As far as the Sgiathanach is concerned, he has never known any other economic structure than communal use and tenure of the land. There are only three significant differences between the runrig farm, whether the farm was a tacksman's or the common holding of several joint-tenants, and the crofting township. The arable acreage is held in compact, permanent blocks instead of dispersed and shifting strips; the crofter pays a money rent in place of goods in kind and services; and national laws 178 182 423 427 657

of tenure function to protect the individual from potential abuses by a landlord where customary usages once fulfilled the need. Moreover, even though the tenure of the cultivated soil grants all the rights of a landholder, including the rights to bequeath the house and land to a member of one's family, for more than half the year it is used communally. 178 182 423 427 657

The Sgiathanach has never adjusted sufficiently to become a specialist, not even a specialized grazier. For him the land has always had a more fundamental value than merely being a means of livelihood. It is the ancestral home. There is a sentimental attachment to the land which is an expression of the affectionate bonds of kinship. The people have never lost the tribal tie of the land and the group. Although the former patriarchs disclaimed any sympathy with this point of view, the landlords on Skye today have kept what little land they have only because of its sentimental value. Indeed the attitude of the largest landholder, the government of Scotland, is that the crofting tradition is worth while preserving, if for no other reason, because in the predominantly urban and industrial civilization it has a romantic value. There are other reasons. The Islands have long been looked upon as a human reservoir for the armed forces, and, more recently, for Lowland industry. 178 423 [656] [702] [464]

As a result of their partial adjustment to the higher socio-cultural level, there have been changes in crops and stock. The British market has influenced the crofters' output, within ecological limitations. The old subsistence crops of oats and 178 231 241 433

barley have been replaced by grass and hay. Conceivably, this is a more complete adjustment to the environment, which has been made possible by integration with a commercial economy, than an adjustment to the demands of the outside world. Whereas the objective of the local economy once was the export of cattle, today the purpose is the breeding of cattle and sheep for the national markets. We have seen that there are a host of limitations and difficulties in the economic aspect of the culture. Many of these are due to the persistence of conservative practices. Each crofter must keep pace with his tradition-practicing neighbors, with the old men of the township. Others are the result of an inhospitable environment. The economy does not run smoothly, but this is not conclusive evidence for disorganization. Integration does not mean smooth functioning. In the spring and autumn the crofter is confronted with a variety and succession of tasks which would fill a specialist with dismay. Very often, these pastoral and agricultural chores have to be carried on in conjunction with outside employment. In return for his labor, the crofter receives a meager income, frequently supplemented by contributions from his children or the government. As a further result of the partial adjustment to the wider society and culture, the people leave the island to seek employment and to achieve an upward mobility impossible on Skye. Economically, Skye, along with most of the Highlands, may be viewed as presenting a picture of the Lowlands of Scotland 200 years ago. That is the extent of the economic adaptation of the Sgiathanach to the national culture. 178 231 241 433 [629] [134] [657] [167] [175]

include all small tenants in Scotland. The landlords have lost their right to evict a crofter for breach of conditions. Since 1911 only the Land Court, which replaced the Crofters Commission, can remove a tenant who is guilty of bad husbandry. Moreover, such action can only be taken after the general circumstances of the crofter and his need of the croft for a home have been considered. To date, no Highland crofter has been removed. In fact, security of tenure has been carried to the extreme that the individual no longer has to reside in Scotland much less on his croft. Although this change is now regarded as inadvertent, the courts have ruled in favor of the small tenant. The only remaining functions of the landlord in estate management are to collect his rents and pay compensation should a tenant desire to leave. Both the rents and the compensation are determined by the Land Court.

Accompanying the integration of the Island with the national scene, politically and economically, were extensions of social services. Prior to 1872 education was the responsibility of the church, charitable agencies, and, especially in the Highlands, the local proprietors and their financially secure tenantry.[83] Although the parish school system was national, the administration of each parochial school was local. The ideal of a school in each parish was neither adequate nor easily obtainable. The result was a few regularly taught schools.[84]

[83] OSA, XVI, 156-157, 226, 539; XVIII, 188; XXI, 430.

[84] James MacDonald, op. cit., pp. 771-774.

The substantial tenants had their own private tutors, but the people, in general, received only informal schooling until well into the nineteenth century when several charitable societies entered the field.[85] All schools were essentially religious. The act of 1872, and subsequent legislation, changed the program and made education compulsory for all. It was not until the end of the century that adequate facilities were available and the system began to function, with the beginning of free education.[86]

Informal control within the community was augmented by the establishment of a rural police force, with headquarters in Portree and local stations at convenient points around the Island. Health and welfare became a responsibility of the state. A regional medical plan provided doctor's care and hospital facilities for all regardless of means. Old age pensions were granted to the elderly. Later, the scope of assistance for the infirm, aged, and the poor, and the unemployed was increased. Thus, the government continually usurped many of the functions of the family and the local group, especially following the abolition of the parish council in 1929.[87] Although the parish councils, or the still older parochial boards, had no legislative powers, they did handle welfare and, until 1918, education. Now, in 1929, a Skye

632 578 to neglect crofting and to concentrate on weaving. Those who still participate in crofting activities may neglect their communal obligations, such as going out on the moor after sheep, and may prefer to harvest crops, cut peat or perform other agricultural activities independent of other villagers.

632 182 462 Despite these tendencies, certain criteria of firm boundedness are still found in the township network. All the adult males of the township, including non-crofters, are responsible for serving as officers in the township grazing committee. The committee draws up rules for the [654] organization of communal crofting activities, and applies for grants from the Crofters Commission or Department of Agriculture, for example, to build a new township fence, plant trees as shelter belts for livestock, extend a peat road, or to fence and reseed areas of moorland in "township [464] reseeding schemes" (see Chapter 2). All adult males of the township are expected to provide labor to implement such plans.

632 571 666 Township meetings, chaired by the clerk of the grazing committee, are held twice a year. A vote is taken when any decision is to be made. The vote is usually unanimous, as all discussion, argument and persuasion have occurred before the meeting, and those who disagree

632 571 666 with the decision which they know is to be made usually do not attend the meeting. Thus, apparent consensus is always maintained.

632 178 Changes in the character of the township as social boundary system are apparent in ceremonial occasions such as weddings and funerals, which will be discussed in the following pages.

584 1. Courtship and Marriage: Courtship occurred during the dark hours when the older members of a household had gone to bed. A great deal of courting was done in [574] company. Because transportation was limited, groups of young people went together to dances; and on other nights, bands of young men would visit a house in which several girls were sleeping together, climb in through a window, and perhaps lie beside the girls, fully dressed, filling the dark with whispered jokes. Such a custom, a form of bundling, was called "night visiting" (ruith na h-oidhche); the male visitor was called caraid na h-oidhche, "companion of the night."

When couples began serious courting, they would meet outside at night, or the girl would let her bramar (sweetheart) into the house after the old people had gone to bed. A couple would never consider walking hand in [831] hand along the road during the day. Boys and girls were seated separately in school, went around in separate

273 216 175 the Lord that his prayers had been answered.") Another bothan was started in an old bus.

Today only one bothan exists in Shawbost. It is a [554] small concrete structure, lit by gas and heated with coal, which is burned in an expensive fireplace. Like most bothans, the one entrance faces away from the main road. Unlike most bothans, it has a small window which is curtained but nevertheless reveals whether or not the light is on inside. Most bothans present blank, windowless and doorless faces that give no indication whether or not the building is occupied.

[208] Every three years a poll may be taken within a parish to determine whether the parish should be wet or dry. [446] After the parish of Uig voted itself "wet," the Doune Braes Hotel was opened in Carloway, only five miles from Shawbost. [829] One of the arguments for making the parish "wet" was that drinking at the bothans would cease, and men would drink under more controlled circumstances. "The married men usually went home from the bothan at a reasonable hour, but the single men just stayed there talking all night. At the hotel, they have to go home at 10:00."

Despite the opening of the hotel so close to Shawbost, the bothan remained open. The drink was cheaper and the atmosphere less formal. Unlike the bothans in Ness, however, [901] the Shawbost bothan was usually open only on Saturday, the

631 632 626 634 693 631 public health and general administration, and has offices in Stornoway. Stornoway itself is largely looked after by a Town Council which deals with the property of the burgh, makes and administers byelaws and imposes burgh rates. The police are under County administration, each burgh paying an annual contribution for their services; the law is administered by a sheriff-principal and two sheriff-substitutes, one of whom holds court in Stornoway. Each parish has a local committee of management.

631 *172 665 The political history of the Western Isles, and no less Harris and Lewis, reflects the agrarian troubles. Before 1917, when Lewis was a Parliamentary part of Ross & Cromarty, and Harris part of Inverness, the electorate was both Liberal and Radical; traditionally there has been a significant anti-Tory vote. In 1917, the [234] Boundary Commission for Scotland set up the Parliamentary County of Inverness and Ross & Cromarty, with three divisions: Inverness, Ross & Cromarty and the Western Isles. In 1918 the Western Isles voted for the first time as a Parliamentary constituency of its own, and showed a predominant Liberal sympathy; the returned candidate was also standing for the reform of the Land Law.

644 665 *175 In the General Election of 1923 a Liberal candidate was again returned, with a repeat performance in 1929. In the latter election however, the Socialist came in second place. In the crisis or scare election of 1931, the Labour Party did not contest the seat, which was won by a Liberal-National candidate opposed by a full-blooded Conservative. In 1935 the Labour candidate, a native of Lewis, was returned with a 1,345 majority. This Member retained his seat through all subsequent elections losing it only in 1970 to a member of the Scottish National Party, who became a lone Home Ruler in the House. Labour, Conservative and Scottish National parties are represented in the constituency, with a small Liberal showing. The revision of local authorities has given virtual autonomy to the Western Isles.

PUBLIC SERVICES

36 The lack of adequate social and public services has been cited by some authorities as a factor encouraging people to leave the

175 654 the legal recognition, improvement and enlargement of the 'township', defined as a farm, or part of a farm, occupied in common or division by several tenants, three or more in [630] number. The executive officer of the township, the Con- [666] stable, was to be elected annually by the community.

The Crofters' Holdings (Scotland) Act of 1886 did 175 embody three of the chief recommendations made, but the first, the recognition of the township, was omitted. The 671 Crofters Act gave security of tenure, compensation for 427 improvements, and some facilities for enlargement of holdings. Security was perpetual and could be passed on by the crofter within his family, though renounceable by him upon one year's notice, upon fair statutory conditions. The chief conditions were payment of rent, fair maintenance of the holding, and respect of agreements with the proprietor. Although this was not a recommendation of the Commission, the Act also provided for official revision of rents. A 'fair rent' was to be proportionate to the produce of the croft, and this, together with the value for improvements, was to be fixed on application to a body of the three Commissioners, 'the Crofters Commission'. In Lewis between 1887 and 1912 this brought a lowering of the rental by over a quarter and the cancelling of two-thirds of arrears accumulated earlier. The rental for a 'croft' was to be below £30; this figure was raised to £50 in 1911, except in Lewis, where £30 remained the limit in order to allow the excessive congestion to be relieved by division even of small farms.

The passing of the Small Landholders' Act of 1911 completed the code known as the Landholders' Acts, 1886-1911. The Land Court replaced the Crofters' Com- [649] mission. The Department (then still the Board) of Agriculture took over the powers of the Congested Districts

565 559 666 the nine election districts where a member of the gentry is resident, he is the people's choice. Otherwise, the post passes to a newcomer, especially a minister, if he will accept, a non-crofter of relatively recent arrival, a returned exile, or an eccentric. The Skye delegates to the County Council are similarly elected. The village of Portree and the neighborhood of Glendale are represented by members of the county people; Kilmuir is represented by a minister of the Church of Scotland.

565 559 797 The function of the landed gentry emerges even more clearly when non-political leadership is considered. We may take the Skye Council of Social Service and the old People's Welfare Committee as examples. The Skye Council of Social Service is dedicated to the promotion of the "general good of the community," and the assistance of the work of statutory authorities and voluntary organizations engaged in improving education, health, and economic conditions. Although the Scottish Council of Social Service claims this is a product of the people of Skye, it was not a spontaneous development. A retired Registrar General for Scotland was responsible for the initial interest. The Scottish Council seems to have stimulated this interest by securing financial assistance in the initial stages and paying 75 percent of the annual expenses. The local organizers were county people, and their success was due in no small way to the efforts of an officer of the Department of Agriculture. Today the "civile leadership and local followership," of which the Scottish Council is wont to speak, is to be found in one clique of the

from the necessity of daily calls at the post office and shop, 182 but the drivers serve the function of passing on the news of the 571 day at each stop. 243

Standing in the place of many of the traditional social 182 outlets which have disappeared or been modified, there are the 794 religious occasions for joining together as a small group. We have found the Sgiathanach to be very religious. Everyone is [796] expected to go to church on the Sabbath, and everyone goes to church. Irregular attendance soon becomes noticed by one's neighbors, the kirk elders, and the minister. Concern over [626] what one's neighbors may think, in itself a strong motivating factor, is reinforced by a forbidding fear of what the venerable old men may do whenever an opportunity presents itself. There are Wednesday night prayer meetings for further social intercourse. Above all, there are the semi-annual Communions which, 182 except in Sleat and Strath and one Bracadale sect, bring to- 794 gether the people of the kirk, the members of the same sect from 796 other neighborhoods, and affiliates of the denomination from the mainland. Even the adherent, the individual who has not experienced a saving change because he is not old enough, normally takes his vacation, if he is employed, at the time of the Communions in order to attend.

The decline in interpersonal religious strife does not 182 mean that strong personal sentiments are not present. No one, 571 other than the eccentric, is indifferent to his neighbors or 243 others with whom he may have dealings. The crofter and his [646] village cousin may not bother to vote, but they closely watch 666 and freely discuss their representatives. Gossip has retained

LAND USE AND CROFTING

agrarian order. Crofting townships were created which contained 195* holdings of a uniform size, often fit to provide only a bare sub- 423 sistence living. This is still so today. There were and are no means 311 of achieving ambition through some kind of agricultural promotion, 241 no ladder to climb to prove one's ability to win the land over to [108] one's side to increase its yield. And as each family increased, the progeny demanded land. The family acres were divided, subdivided and fragmented to a vicious mathematical system: more people, less land.

In the nineteenth century, many estates were sold. The new- [427] comers, with no kinship ties with the small tenantry, saw that the only way to make their estates economic was to establish large farms, which meant the eviction, by force if necessary, of the small tenants. This is what happened. For those who did not 195* emigrate, it was a life of huddling around a weak fire, whose flame 423 itself could hardly stand, and thinking of the prospect of starva- 668 tion and the 'old days'. Thoughts nourished on these old days 427 became the root of action; and a fierce agitation for land reform [511] started. The Minutes of Evidence of the Napier Commission (1882-4), of the Deer Forest Commission (1894-6) and the several official reports on the conditions of the crofters and cottars, give ample evidence of bitterness and despair as the result of poverty and lack of opportunity. About 1870, unrest in the congested areas of crofting townships became a political issue. The flames of ideals were burning high and bright. Ideals were transformed into action: take the land!

By 1880, the ripples from the stone flung into the agrarian pond were reaching the general public. Sides were taken: one stood either on the economic touchline, or on that dangerous thin red line of sentiment based on high feelings and a deep sense of wrongs being perpetrated on fellow humans. The landowners naturally insisted on the right to move into an era of land use in which management was not hampered by affairs of sentiment or philanthropy. Governed by the cold principles of business, they hardened themselves in the face of their attackers. And though they pointed to arrears in rent, and their inability to improve their land agriculturally while they had tenants not of their own choosing, they faced mounting antagonism.

HISTORY

*195 423 668 427 The crofters were in a state of revolt against the accumulation of trends and events which now stood like a high dam against their progress to a higher level of acceptance in the social scene. They stood in open conflict with local and national authority. Unhappy scenes were enacted, many being in complete variance with the natural temperament of the Highlander. Lewis crofters were not far behind with their contribution to the agitation for land reform, though they had perhaps suffered less direct action from landowners than had crofters in the Highlands and southern Islands. But their living conditions had deteriorated. And an inhumanly-efficient factor made for deep unrest.

*195 657 423 427 [668] Land agitation began in Lewis in 1881, and large numbers of Lewis crofters gave evidence before the Napier Commission. This Commission was the result of agitation for an enquiry into crofting conditions in the Highlands. Its setting up relieved a situation of acute tension, though it neither extinguished political agitation nor mitigated the disaffection felt in the more disturbed districts. Under Lord Napier's direction a mass of information was collected. The official findings of the Commission were almost identical with political declarations in the country, but did not altogether coincide with the requirements of the crofters and their spokesmen. The resultant Crofters' Act of 1886 fixed the crofting system into that rigid trance in which agricultural innovation, opportunity for improvement, the social progress of crofting communities are largely lacking. It did give all crofters permanency of tenure, where they had none before, fair rents for the land they had and compensation for improvements. But the old demand for new smallholdings and settlements persisted with greater insistence and further pressure on high political circles.

[735] [746] In 1888, members of the new Crofters Commission visited Lewis and found that poverty was so general in the island that among 607 crofters for whom fair rents were fixed, there were scarcely a dozen who had not been recipients of 'destitution' meal or some other form of relief. The population was too much for the land to support it under the distribution system prevailing. The 161 162 *175 number of persons per family in 1871 was on average 5·358, as compared with 4·232 on the mainland of Ross and Cromarty, the county of which Lewis formed a part. Thirty years later, in

659

9 MISCELLANEOUS GOVERNMENT ACTIVITIES--governmental activities not classifiable elsewhere (e.g., census taking, government support of national and state forests; of established churches); expenditures on public safety (e.g., military establishment, police, fire protection, disaster relief); etc. See also:

575 The
197 organization receives a large proportion of its funds
186 from the Scottish Education Department, whose statutory
• 659 duty is to foster the speaking of Gaelic in Gaelic-
speaking areas. In 1970-71 a series of evening meetings
were sponsored by An Comunn in Stornoway; but the
serious meetings, such as readings of Gaelic poetry, were
attended largely by schoolmasters.

Associations which sponsor Highland dancing and the
opportunity to get together with other Gaelic speakers
thrive in Glasgow, London, Toronto and Detroit, everywhere
648 but in the Gaelic-speaking Highlands. Such associations
serve important functions in situations of interaction
between Gaelic speakers and members of the dominant
society; they provide identity and self-defense against
those who react to them as members of a lower-status
minority group.

535 A girl who teaches Gaelic in Glasgow and comes home
186 to the island only for holidays never goes to the island
648 dances, but loves going to the dances sponsored by the
Lewis and Harris Society in Glasgow. All the young
people from the islands come, and dance away accumulated
insults in a fiery sense of belonging.

464 A girl who worked in hotels on the mainland found
197 herself speaking Gaelic with her fellow workmates who
186 came from Lewis or other Gaelic-speaking areas, although
571

175 to join the Free Church (Donaldson 1960: 100). The Free
795 Presbyterians left the Free Church in 1893 because they
found it too "liberal." Several dissenting groups,
including most of the members of the Free Church, formed
• 659 a United Free Church at the turn of the century. After
a long court case, the church property was left with the
Free Church, which continues to support itself without aid
795 from the state. Collections and funds solicited by
791 villagers who visit the households periodically are sent
465 to a central office in Edinburgh, which pays all ministers
an equal salary, despite variations in the size of their
congregations. About one-fourth of the church's income
comes from Lewis. A minister's salary is between L950-
1,000, and the upkeep and fueling of his manse is included.
The present minister in Shawbost uses oil and coal, but at
an earlier time received loads of peat from the villagers.
The villagers bring extra food to the manse when Communions
are held, although the church donates about L20 to be used
to provide for visiting ministers.

795 The Free Church contains a number of presbyteries,
of which Lewis and Harris are one. An Assembly is held
each year which parallels the Assembly held by the Church
of Scotland. (According to one minister of the Free Church,
"A Berlin wall divides the two.") The Free Church publishes
a monthly report of church activities and amount of money

A HARRIS VIGNETTE

Other tombs inside the church include that of Mary MacLeod, 175 *
a bardess of the seventeenth century who was also governess to 346
the young MacLeods at Dunvegan. She was probably the first to 764
compose what may be called the 'court' song, in simple words (533)
and in the 'strophic' verse-form of rhythm and assonance enjoyed
by all Gaels since her time. Her last elegy was composed to Sir
Norman MacLeod of Berneray in 1705.

So far as personal characteristics are concerned, there is a 181
marked difference between the Herrach (Harrisman) and the 197
Leodhasach (Lewisman). Their Gaelic dialects are different, the
Harris pronunciation being much softer, with an attractive sing-
ing lilt. And Harris Gaelic has fewer words of Norse origin. The
main reason for this difference has been a topographical one: be-
fore a road was cut, the mountain barrier of north Harris divided
the inhabitants of the two parts of the same island, who developed
in their own distinctive ways.

The character of the land of Harris has also had much to do 181
with the difference. Harris for the most part is infertile, with great 133
expanses of rock outcrops. The east side of the island is torn in
shreds by fiord-like sea-mouths; the west coast is slow-moving,
with large expanses of sand and machar-land which look out over
the Atlantic breakers rolling in from a sea that is oceanic in
appearance and in fact. From early times the Harris folk have 175 *
had to work hard to scarify their snippets of land to make it fer- 181
tile. Regular increases in population forced them to cultivate land 133
extending up to 500 feet above sea level in some places, in the 241
form of hard-won lazy-beds. After the clearances early last cen- (236)
tury, when the more fertile lands on the west coast were taken
over for the formation of sheep farms, the people concentrated on
the eastern side of the island, and on some of the higher ground
in the west.

On Lord Leverhulme's death in 1925 the ownership of large 423
tracts of Harris passed to absentee landlords. After this, some of (659) •
the lands which had been cleared a century earlier were pur-
chased by the Government and broken up into crofts again, en-
abling some of the indigenous population to come back to make 423
use of the more fertile lands of the west. There are some 550 241
crofts in Harris, with 29 regulated common grazings; the total

THE OTHER ISLANDS

* 175 *Account*, there was one family there, that of the person employed
162 by the owner to look after the livestock. The owner was a Ness
(422) tacksman who paid £4 sterling rent per annum. The island pro-
duce was corn, butter, cheese, a few sheep and sometimes a cow,
and some wild fowl and feathers.

* 175 In 1844 Rona was evacuated, its last inhabitant being, in the
166 seventh year of Queen Victoria's reign, the 'King of Rona',
Donald MacLeod, who lived in almost prehistoric conditions.
Rona was without inhabitants until 1884, when a last attempt
(785) at resettlement was made by two men from Ness. This was a self-
imposed exile, after a difference of opinion with the minister of
their parish; in penance, they hied themselves off to Rona. In
1885 a relief boat called and found both men dead, one from
natural causes, the other from starvation and exhaustion after
nursing his friend. By the fireside of their hut was a pot ready
for the preparation of a meal they never ate.

236 Today, man's connection with the island is maintained by the
221 small party of Lewis shepherds who each year make the journey
to shear the sheep which still graze on the green slopes around the
now-ruined village. Otherwise, only the occasional traveller now
• 659 lands there. In June 1956, North Rona with its associated rock,
185 Sulasgeir, was declared a National Nature Reserve on account
of its importance as a breeding ground for colonies of oceanic
birds—guillemots, puffins, kittiwakes, and fulmars—and for its
seal colony.

133 *Sulasgeir*

(131) Sulasgeir is twelve miles west of North Rona, a lonely rock in
the Atlantic, bleak and grassless, and tunnelled by caves and
gullies. The only life it has ever supported is seabirds—officially.
(316) Yet one of the old buildings said to be a chapel and is called
173 'Tigh Beannaicht' (House of Blessing). According to Ness tradi-
tion, Sulasgeir was once used as a prison for sheep-stealers, and
it is also said that Brenhilda, sister to St Ronan, was left on the
island to perish. Yet another tradition claims that it was at this
rock that Prince Charles Edward made his first contact with his
Scots clansmen, when the ship that carried him to Scotland was
spoken to by a Ness boat making for North Rona.

661

661 EXPLOITATION--exercise of their power by holders of political office to further personal goals, whether materialistic, psychological, or ideological; perquisites of office (e.g., exceptional income and material comforts, special sexual or marital privileges, unusual honors or deference); use of office for self-aggrandisement (e.g., exhibitionism, extortion of bribes, protection of vice, acceptance of commissions for services rendered); employment of power to force others to conform to personal ethical or religious convictions; suppression of rivals (e.g., purges); oppression of opponents; nepotism; protection of vested interests; etc. See also:

Organized vice	848	Religious persecution	780
Political machines	667		

175 they were composed of at least one to four or five hamlet-
427 farms. The tacksmen also had cottars for service.
614 Thus in Lewis a special reason, the accession of Sea-
621 forth, had led to the granting of many tacks to his own
clansmen and to natives. Elsewhere in the Highlands the
175 procedure is noteworthy during the sixteenth, seventeenth
427 and eighteenth centuries, for the collection of rents from
614 the peasantry by means of large tenants had financial
184 advantages for the greater landlords (I. F. Grant, 1930).
The tacksman's continuation as tenant depended on his
• [661] paying regularly, for the lease was not a hereditary grant.
[565] A tack could also provide for a lord's younger sons or
immediate relations, such as formed the gentry of the clan.
Along with smaller lairds, these furnished the cadres of
officers who led the clan regiments down to the 'Forty-
five, and later the Highland Regiments of the line and
the Fencibles down to Waterloo. Like MacKenzie, other
great chiefs such as Argyle or Breadalbane leased tacks
when they acquired the status of peers and took possession of
fresh lands with Royal support, after vain resistance from
native chiefs and their followers. In Lewis, the fiscal
status of tacksmen was applied both to MacKenzie's sup-
porters from the mainland and to those with ancient roots
in the west of the Island. The latter may have thought a
mere lease a poor substitute for hereditary tenure, though
a legal compromise necessary if their possession was to be
[660] continued. The lack of permanent tenure ultimately led
to the departure of their descendants.
175 From the families of these tacksmen have sprung most
621 of those of Lewis birth or descent who achieved fame
614 before the twentieth century. Of the MacAulays, we saw

[668]

175 the mansion, lodges, and grounds or 'policies', much was
747 built and laid out for himself at the time, though part was
423 for reclamation. This contrasts with his provision for
those whose homeland he had bought—the sum spent
upon his own mansions and grounds being nearly half that
spent directly for the good of some 20,000 fellow-Gaels.
175 Matheson was not technically equipped for his chosen
157 task of 'reconstruction'. Nor was he fitted by trade in
the East for the leadership of a people accustomed, in
[623] spite of dire poverty, to considerable freedom. Ignorant,
one gathers, of the language of the people, his choice of a
175 later Factor was hardly a happy one. Tradition in Lewis
623 speaks of this Donald Munro as an 'autocrat', and evidence
423 in 1874 confirms it. In addition to being the Factor for
an ageing man and so holding economic sway over the
• 661 people, he held seventeen public and semi-public offices
in the Island, from Justice of the Peace to Captain of the
Volunteers, still other offices being held by his clerk! The
extent of his sway is also shown by his having served
summonses of removal upon fifty-six families on his own
authority. As a result of the treatment of the officer sent
to serve the summonses, three crofters were tried on a
charge of "assault committed on an officer of the law in
revenge for having executed his duty". When asked in
court if Sir James would not have disapproved of this step
and the manner of its execution, Munro replied that it was
his practice "never to trouble Sir James with small
matters". "Then you consider the eviction of fifty-six
families a small matter?" was the retort. These 'Bernera
rioters' were found not guilty, they and their neighbours
were left in possession, and soon after the Factor demitted
175 office.[1] Lewismen felt the result to be a moral victory,

665 POLITICAL PARTIES--organization for the purpose of acquiring and retaining political power; political factions; organized political parties (e.g., number, composition, leadership, objectives); party organization (e.g., national, regional, and local committees); methods of recruiting and rewarding members (e.g., spoils system); nomination procedure (e.g., caucuses, primaries, conventions, slates); special organization during electoral campaigns; integration of political parties with the structure of the state and its subdivisions; etc.

631 public health and general administration, and has offices in
632 Stornoway. Stornoway itself is largely looked after by a Town
626 Council which deals with the property of the burgh, makes and
634 administers byelaws and imposes burgh rates. The police are
643 under County administration, each burgh paying an annual con-
tribution for their services; the law is administered by a sheriff-
principal and two sheriff-substitutes, one of whom holds court
631 in Stornoway. Each parish has a local committee of management.
631 The political history of the Western Isles, and no less Harris
*175 and Lewis, reflects the agrarian troubles. Before 1917, when Lewis
was a Parliamentary part of Ross & Cromarty, and Harris part
• 665 of Inverness, the electorate was both Liberal and Radical; tradi-
tionally there has been a significant anti-Tory vote. In 1917, the
[634] Boundary Commission for Scotland set up the Parliamentary
County of Inverness and Ross & Cromarty, with three divisions:
Inverness, Ross & Cromarty and the Western Isles. In 1918 the
Western Isles voted for the first time as a Parliamentary constitu-
ency of its own, and showed a predominant Liberal sympathy;
the returned candidate was also standing for the reform of the
Land Law.
666 In the General Election of 1923 a Liberal candidate was
665 again returned, with a repeat performance in 1929. In the
latter election however, the Socialist came in second place. In
*175 the crisis or scare election of 1931, the Labour Party did not
contest the seat, which was won by a Liberal-National candidate
opposed by a full-blooded Conservative. In 1935 the Labour
candidate, a native of Lewis, was returned with a 1,345 majority.
This Member retained his seat through all subsequent elections
losing it only in 1970 to a member of the Scottish National
Party, who became a lone Home Ruler in the House. Labour,
Conservative and Scottish National parties are represented in
the constituency, with a small Liberal showing. The revision of
local authorities has given virtual autonomy to the Western Isles.

36 PUBLIC SERVICES

The lack of adequate social and public services has been cited by
some authorities as a factor encouraging people to leave the

they were composed of at least one to four or five hamlet-farms. The tacksmen also had cottars for service.

Thus in Lewis a special reason, the accession of Seaforth, had led to the granting of many tacks to his own clansmen and to natives. Elsewhere in the Highlands the procedure is noteworthy during the sixteenth, seventeenth and eighteenth centuries, for the collection of rents from the peasantry by means of large tenants had financial advantages for the greater landlords (I. F. Grant, 1930). The tacksman's continuation as tenant depended on his paying regularly, for the lease was not a hereditary grant. A tack could also provide for a lord's younger sons or immediate relations, such as formed the gentry of the clan. Along with smaller lairds, these furnished the cadres of officers who led the clan regiments down to the 'Forty-five, and later the Highland Regiments of the line and the Fencibles down to Waterloo. Like MacKenzie, other great chiefs such as Argyle or Breadalbane leased tacks when they acquired the status of peers and took possession of fresh lands with Royal support, after vain resistance from native chiefs and their followers. In Lewis, the fiscal status of tacksmen was applied both to MacKenzie's supporters from the mainland and to those with ancient roots in the west of the Island. The latter may have thought a mere lease a poor substitute for hereditary tenure, though a legal compromise necessary if their possession was to be continued. The lack of permanent tenure ultimately led to the departure of their descendants.

From the families of these tacksmen have sprung most of those of Lewis birth or descent who achieved fame before the twentieth century. Of the MacAulays, we saw Zacharias was Chamberlain during and after the 'Fifteen. Thomas Babington Macaulay came of the same line, as

175 554 614 621 [668] [178] [871] 175 554 565 427 [113]

did another Zacharias, closer than Thomas to the Lewis tree, who worked nobly with Wilberforce for the emancipation of the slaves.[1] Still another connection was a Canadian emigrant, grandfather of the late T. B. Macaulay, LL.D. Alexander Mackenzie, the explorer of the Mackenzie River, was a descendant of Lewis tacksmen. MacIvers and Morisons also distinguished themselves. But the sons and daughters of crofters had to await the provision of education in English before they could rise in trade, learning or war; hence few Lewismen of the greatest Lewis name, MacLeod, achieved eminence until the twentieth century.

As for the peasantry, the interposition of a new or enlarged class of tenantry between themselves and the superior must have meant that they had to labour on the tacksman's home farm, and no doubt pay more in produce or cash. Hence the Gaelic saying that if the position of the small (joint) tenants was bad, that of the subtenants was worse, "the Evil One itself". Following the long fight with the Fife Adventurers, hardship may have been greatest where mainland tacksmen were placed above the joint tenants; but even under MacAulays and MacIvers rents may have been raised and some of the joint freedom lost which was still enjoyed in Ness. Whatever adjustments had been made in an earlier period had to be re-made with the beginning of Seaforth's new order.

In the following generations, contradictory accounts of lairds, factors and tacksmen are given by contemporary observers. Certain of these insisted that, given the poverty of the lands as a whole, the chiefs and landlords, factors and tacksmen, were the saviours of their people. Yet even among those who supported authority in general, there was

[1] Charles Booth, *Zachary Macaulay*, 1934.

175 The families of the young men might be willing to
702 encourage enlistment. But they pled or bargained for an assurance that after service was over their sons should be returned to their homes and have land on which to settle down. The receipt of the bounty and their savings would help the men to pay rent later.

175 Passive resistance was offered at times, however, as

178 " banished him to the dungeons of the Bass Rock for
794 twenty-eight years, and it was during his imprisonment that the meetings of communicants were kept going by a parishioner,—a reformed tinker and a gifted and consecrated lieutenant ". This tradition of the ' Men ' renewed itself and spread with each wave of ' Revival '. It sprang up in the Islands more than a century ago, as it had on the north-western mainland during the later eighteenth century, and in ' Easter ' Ross two hundred years before.

[798] The spiritual crises of the Reformation and of the Cromwellian and Covenanting age are still profoundly influential; yet they seem hard for those from the Lowlands and England to understand because they occurred so long ago. But in Lewis, Macfarlane writes of the ' Men ' whom he knew and admired, in order to keep their memory green. Once more, life in the Isles throws fresh light on the past, revealing its significance.

(D) EVANGELISM AND ERASTIANISM, WRATH AND WOE

175 The Disruption [1] gave a powerful urge to the move-
• 668 ment for freedom, in many ways. Throughout Scotland the people were made to feel that both landlordism and the
[795]

[1] The issues of Disruption, for the sake of freedom from the choice of a minister by the landlord's patronage and from State control, were reviewed by the Rev. Prof. G. D. Henderson, in *Heritage of the Disruption*, 1943 (published at the centenary, and nearly half a generation after the Union of 1929). While the Free Church still maintains a strong hold in the Island—and among a small minority elsewhere who feel that even the terms of the Union could not secure full moral freedom—it is claimed by the Church of Scotland that its constitution now goes far to solve " the age-long antinomy of establishment and freedom ", a view widely held abroad, both in Germany and in the smaller lands of North-west Europe occupied by the invader, at the time of the centenary.

employment as hands on fishing vessels. The young women followed these fleets seeking work as gutters and curers in the ports. Some may have made their way to Portree, where a woolen mill had been erected by the Highland Destitution Committee. The population of Portree increased during these years from 510, in 1841, to 893, in 1881, but this can hardly be regarded as a significant trend.

The really striking aspect of this period is the almost complete lack of protest by the Sgiathanach against the violation of his presumptive right to the land. The disappearance of the tacksmen, of course, had left the people without their counselors and leaders in secular affairs, and many of the ministers, especially those who were themselves sheep farmers, counseled submission to the will of God. Then, too, the ethos of the Skyemen would not allow them to ventilate their grievances. They despised the Sassanach and felt that "the landlord was bad enough, but the factor was the Devil himself." Still those who knew them well and those who rambled by their cottages wrote unanimously of a people who endured overwhelming sufferings in patience and reticence.[69] The betrayal of any weakness, especially before the cursed Sassanach, was a breach of propriety.[70]

The Skyeman had not lost his capacity to respond to leadership. Throughout the nineteenth century there had been widespread and growing discontent all over Europe with the

175 State were in the wrong: the people were with God and,
668 most of all when they suffered, God was with them! The sense of liberation brought to the Highlanders and Islesmen encouraged them to press their claim to the land they worked, strengthening the agrarian movement of 1880–86. The moral victory of 1843 contributed to legal victory in 1886.

175 The influence of Evangelism continued for some time
178 at fever heat. "Even down to the present time (1877)
771 there are tokens of the gracious working of the Spirit on
795 men's minds, although it is a day of small things compared with the past and, in the case of some, a day of stumbling and instability. How humbling to behold the first reaction in favour of worldly and Erastian [1] principles, manifesting itself on the spot where the gospel banner was first unfurled in Lewis! But there is a God that judgeth in the earth, and his time to vindicate his cause shall come. 'Offences must come, but woe unto that man by whom they shall come!'" [2]

181 What comment can be made on this? One shudders at first, to hear of 'gross vices' among the people, only to find that by these 'vices' was meant fidelity to the religious past. It may seem strange that Highlanders such as these writers on the 'Disruption Worthies', who were almost as proud of Columba as of the Covenanters, were blinded to the enduring values in Columban tradition. They were certainly unable to foresee the effects of their preaching.

[1] 'Erastianism' is the doctrine of the supremacy of the State in ecclesiastical causes, a term which came into use in Britain in the seventeenth century. Actually the problem is one which Erastus, 1524–83, nowhere entered upon; none the less, the name is established, and it denotes a major issue of principles.

[2] J. Greig (ed.), *Disruption Worthies of the Highlands* (1877).

175 Board, created in 1897 to develop agriculture, fishing and
671 home industries, to form new holdings, to assist migration,
427 and to provide public works such as roads, bridges and
[647] piers. These powers were further extended by the Land Settlement (Scotland) Act of 1919, passed to provide land for ex-Servicemen.[1]

The Crofters' Act granted to the individual crofter most of the rights advocated by the Napier Commission, and other advantages besides, but it did not impose upon him the corresponding duties. As Day wrote, "The landlord was compelled to act in the interests of the crofter; the crofter was not compelled to act in his own interest".
[632] The Act discarded the core of the Napier Commission's scheme, that of "a recognised local community, the township, with an executive officer, the Constable, working for the improvement of the township, by fencing, draining and other works, with the assistance of the proprietor", the whole scheme enforceable by "legal compulsion on either
[829] side". As a Gael might say, the Act discarded *duty-right* of members of the community to one another.

175 As a result, peace did not descend upon the Island at
423 once. The demand for land continued, followed up by attempts to settle upon it, in spite of police and armed force.
[668] A legal victory was to be pressed home. In Lewis the

[113] [1] A useful summary of the legislation is given by the Scot. Econ. Committee's Report, 1938, pp. 17-21, and a searching review in J. P. Day's *Public Administration in the Highlands and Islands of Scotland*, 1918, a work of real social insight.

The Act of 1919 is still the main enactment under which land settlement schemes may be undertaken in Scotland; but the Agriculture (Scotland) Act 1948 included new provision to allow the creation of holdings up to 75 acres in extent and £150 in rental. After the Second World War a more cautious policy was adopted in regard to settlement of ex-Servicemen and little progress has been made in carrying out schemes, despite many unfulfilled applications in the Hebrides and elsewhere where the demand for crofts exceeds the supply.

159 of the owners—but farmers knew it was futile to protest,
473 and they suffered with a wry smile and a shrug of the
433 shoulders. After all, most of the farmers had stayed at
home and their affairs had prospered, in war-time; whereas
427 all but the older crofters had had years of seafaring or
fighting, and the nation's debt to them had not yet been
forgotten. The farmers kept quiet and waited.

159 Meantime, Leverhulme made public war upon the
Government. Speaking in Edinburgh in November 1919,
668 he declared that " Reports, thick as leaves in Vallombrosa,
433 have been the dominating feature of Government policy
in the Highlands and Isles . . . but the invariable rule
seems to have been, whenever expenditure of public money
was recommended, for the Government either to ignore
such reports or to cut down expenditure so penuriously
as only to result in waste . . . by not spending to the
full amount . . . Lewis and Harris have too long been
[213] the Cinderella in the Government pantomime." [1] The
crofters, reading this in the daily papers, and again in the
weekly *Stornoway Gazette* a day or two later, chuckled
with glee, rolling the phrases on their tongues. They
might not all have been able to explain the strange words,
like Vallombrosa or Cinderella, though they sounded fine;
but all had heard of pantomimes, and some might even
have seen one, without saying too much about it to the
minister. About ' penurious expenditure ' they could
have no doubt. Yes, a fine speech, they felt! Yet in
spite of the sting of truth contained in such orations, these
did not make it easier for Government to co-operate with
the orator, to prevent raiding or to deal with it should it
begin.

000 Raiding did begin in the spring of 1920. Applicants

175 It is worth noting that the rental charged for the newly cleared farm of Carnish was
427 £55 - being £20 less than had been paid by the crofters. Thus it cannot be said that the latter were evicted purely in order to obtain more rent. The proprietor must have been taking a long term view, looking for land improvement rather than immediate gain. By the 1870's the farm rentals had increased by 55%, those of the crofting townships by only 15%. And the latter often remained unpaid.

175 Thus, whilst the farmers prospered, the tenants became crowded in their townships
427 which were correspondingly less and less able to support their increasing numbers.
511 The crofts became so reduced that in an average year the produce of the land might keep a crofter and his family for only six months; for the rest he had to find other means of
175 support. Fortunately, after the hungry years of the 'forties', fishing provided just this.
226 Starting in 1851, an annual migration began, first to Caithness and later to the whole east
464 coast of Scotland and England. By the 1880's not only were most of the able-bodied young
166 men following the herring as hired men on east coast boats, but many of the women-folk,
who had learned gutting, packing and kippering from English girls brought to Stornoway
[223] for the purposes, were also earning. This was summer work, and fitted well between seed-time and harvest. In the winter, small local open boats worked long lines for white fish which were dried and salted for local curers as they still are today on the
[511] Norwegian coast. Between the 1850's and 1880's there was a "condition of plenty" in Lewis "which would not have been credited by those who judged of the condition of the people by the external aspect or sanitary arrangement of their dwellings".* It was this "condition of plenty" which encouraged the people to stay at home, to sub-divide their crofts, and to live on the proceeds of paid labour rather than on the produce of the croft.

Re-settlement, 1878-1935.

175 The process of sub-division ceased only when economic conditions became less
427 favourable and emigration began to exceed natural increase. In the 1880's fishing and
166 farming suddenly became less profitable. Simultaneously, and given extra point by the
226 particular distress of the time, agitation for land reform, and in particular for the
511 relief of the most congested districts, became a political issue. This began in Uig in
175 1874 when an attempt was made to evict 56 crofters from Bernera; hundreds of crofters
668 resisted by force and subsequently marched on Stornoway. They were well received by the proprietors - who appear to have been unaware of the summary and inhumane behaviour of their chamberlain - and to the credit of all concerned the matter ended peacefully. But land agitation continued.

175 The position in Bernera was eased in 1878 when Linshader farm was deprived of the
427 old township of Kirkibost which was resettled by crofters from Bosta, the latter being let to the Tobson crofters as an enlargement to their pasture. In 1880 new holdings were formed in Hacklete, which had been the grounds-officer's farm (but which, judging from its population, had always contained a number of cottars or sub-tenants). The grazing of Laimshader was probably returned to the Borroston crofters about 1886, having been part of Linshader farm and, in 1891, six new holdings were formed at Lundale, also part of the same farm. At the same period, under the new Act, the crofters of Crowlista, Valtos, and Kneep applied unsuccessfully for enlargements from the farms, but during the nineties the islands of Little Bernera and Eilean Kearstay were taken off Linshader farm and added to the townships of Bernera, and Valtos obtained Pabay Mor.

241 century as an attempt to reform the previous system
427 of run-rig; but it is usually identified with the
175 definition given it by the Crofters Holdings (Scotland)
671 Act of 1886, as a form of land tenure to which many protections accrue. The Act defined crofts and crofting areas in Scotland, and assured the crofter of security of tenure, hereditary succession and fair rent. The legislature which followed on the heels of this act, which is sometimes referred to as the Magna Carta of the Highlands (Day 1918: 190), is mountainous. The flow stems from two perhaps incompatible aims: the desire to provide security for the landholder, and to enhance agricultural productivity. The difficulty of developing the land as an efficient agricultural unit has always existed in an area characterized by a wet climate, unproductive soil, and smallness of holdings in heavily populated areas, and was one of the factors that prompted agricultural reform in the 18th century.

175 B. Stratified Tenantry vs. Egalitarian Society
423
427 At the time of the break-up of the clan system in
[614] the first half of the 18th century, three categories of persons held land under the Highland proprietor or "laird": tacksmen (gentlemen farmers, often relatives

175 stability and improvement; e.g., an executive offic
423 the Constable, was to be elected annually by the
656 community, and he would oversee various improvements
the township (Napier 1884; Day 1918: 187-9).

175 However, the Crofters Act of 1886 did not make t
423 township a unit of local government. It was more
67 concerned with protecting the individual crofter's
rights than with the creation of a self-sustaining,
[656] self-correcting economic unit. The Napier Commission
[168] had recommended the consolidation of crofts which wer
rented at less than £6 a year, and a policy of persua
by which the excess population would be encouraged to
emigrate or specialize as laborers, fishermen, and so

175 Instead, the 1886 Act provided security of tenur
423 for a large number of crofters, as well as a fixed fa
67 rent and compensation for improvements if the crofter
178 [656] chose to leave the croft. These assurances, and the
creation of a variety of agencies (such as the Conges
Districts Board, the Crofters Commission, and the Boa
of Agriculture) whose purpose was to encourage agricu
improvement by providing funds, equipment, breeding a
seeds, advice and so on, constituted a set of incenti
These incentives combined with a number of other fact
including improved transportation and the spread of

[Marivig]

231 There are only fifteen cows, two yearlings and four calves in the township, and the crofters w
no cow rely on neighbours, or on tins, for their milk supply. All but two of the crofters keep
sheep, there being four hundred and eleven ewes, one hundred and eighty-five sheep and two hund
and thirty-four lambs belonging to the township. The common grazing (including the off-shore
islands which are grazed by five different crofters each year) is used for the sheep in summer, w
[235] all but one of the crofters winter their sheep within the township dyke on the crofts. Most crofter
keep hens, and surplus eggs are sold to the Stornoway vans.

314 Peats cut on the common are transported to lorry to the crofts, while peats from the north en
482 the peninsula separating Loch Marivig from the sea must be carried in creels.

Nearly every crofter owns a rowing dinghy which is moored in the loch off the end of his croft,
228 and with this supplements the family food supply. One herring boat, operating nightly from Storn
501 and returning to Marivig at weekends, is all that is left of a fairly large fleet which operated
before the war. A second boat, unused for two years, lies shored up on the beach, and two other
are wrecks. Over fifty years ago there was a curing station at Marivig. One crofter fishes lobst
during the winter and markets them in London.

463 Of the other crofters, only two supplement their incomes by weaving, one by working on the
464 roads while several men work partly on the crofts but are periodically away whaling in South Geor
fishing, or on hydro-electric schemes. Several others are in the Merchant Navy. The gradual
166 migration from Marivig, especially of the young people, is reflected in the high average age of the
167 permanent residents, and in the numbers in the school -over one hundred pupils in 1900, thirty-ni
162 (including sixteen from Calbost) in 1946; but only nine (none from Calbost) in 1958. The young
271 people leave the township to train or work on the mainland (generally in Glasgow) or in Stornoway,
while their elders accept the view that "there is nothing for the young people here".

205 The township has a Post Office and telephone kiosk which also serve Calbost, while lack of a
206 shop is partially compensated by a choice of four vans from Stornoway and one from Gravir. Ther
366 is a daily bus from Gravir via Marivig to Stornoway and back: the return is over 10/-. The road
490 which reached the township from the west in the late 1920's has a tarred surface and is much
495 better than the later road southwards to Gravir which is untarred. There is no church in Marivig
491 and most of the population attend the Free Church in Gravir.
446

Within the township the two arms of the township road serve all but two of the crofts and the
363 sites of the newer houses, few of them more than thirty years old, tend to be near the road, while
361 the ruined houses found on most crofts are often nearer the sea. Only two thatched houses remain
342 and the other inhabited houses are built of stone roofed with asbestos slate, or of corrugated iron.
377 All the crofts are supplied with electricity from the grid, but very few have a piped water supply;
312 rainwater is collected from the roofs and piped for washing, with a separate piped supply from a
well for drinking. All other houses draw water from wells.

829 The stormy winter weather, rocky terrain and poor soil are all blamed by the residents for the
drift of population away from the crofts, but those who remain have little incentive to work the
900 crofts more efficiently owing to the very hard labour involved. It is suggested that with more
intensive cropping and more cattle, each croft could make a comfortable profit and surplus milk,
potatoes and eggs could be marketed in Stornoway - the milk replacing that at present brought
from the mainland. Such development, perhaps on a co-operative basis, together with a revival
of the fishing industry and introduction of a tourist industry, by building a small hotel or guest
house and attracting anglers as well as those who simply wanted scenic beauty, might bring pros-
perity back to a township which otherwise may well be derelict in the next twenty years. But the
capital required for the two latter enterprises is not available within the township.

671

671 LEGAL NORMS--extent of differentiation of social norms enforceable by a
organ of politically constituted society from those enforced only by informa
social control; conception of law (e.g., as precedent, as a body of absolut
relative principles); comparative prevalence of customary or common law
of "made" laws (e.g., edicts, decrees, ordinances, statutes, constitution
binding judicial or administrative decisions, imposed taboos, divine revel
lawgivers; law codes; legal categories (e.g., civil and criminal law); leg
rules and administrative law; jurisprudence; uniform and multiple system
law; etc. See also:

Chapter 2

HISTORY OF THE CROFTING TOWNSHIP

A. "Crofting"

241 427 175 192 The word "croft," meaning an enclosed field, come from Old English. In 1563, a rental of the bishopric of Moray mentions the lease of two crofts (Grant 1930: 272). Walker (1812: 51) refers to "cottars or crofters as subtenants of Highland farms. The word croft appear in Gibbon's historical novel, A Scots Quair, and is sti in common use around Aberdeenshire. In the Hebrides, a number of Gaelic words are used to refer to units of land (e.g., faich, fearann, fiadhaire, and fiannag), but the word for "croft" remains in Gaelic vocabulary as a foreign word, slightly Gaelicized as croit or lot (from "allotment").

[522] A cynical definition of a croft, given by some academicians and administrators concerned with crofting, and supposedly first proposed by the son of a crofter, is "a piece of land entirely surrounded by legislation." 241 427 175 171 Crofting, as a particular method of land use, was introduced by "progressive" landlords in the mid-18th

669 for crofts in Tongue, a township north of Stornoway, took
423 the law into their own hands, seized one of the fields of the adjacent farms, and threatened to take the remainder. It is easy to understand that when a man has come home from the war to his sweetheart, and after being promised a site on which to build a home (even a black house for a start), with a plot for potatoes, and 'a cow's grass', a year's vain delay may breed impatience! Leverhulme motored to the township, and with his customary vigour and persuasiveness spoke of his plans for 'work and wages' to be concentrated at Stornoway. He again declared that if the farms were divided this would cripple his schemes, and work would stop at once. The majority there agreed to fall in with his plans; in any case, only a
159 minority could find crofts on the farms. Leverhulme felt
433 that he had carried his point. He forgot not only that his oratory deserved applause and had won it for its own
669 sake, but that the people could not lightly afford to say 'no', if this meant immediate stoppage of wages. It was the after-thoughts on the morrow and in the following months, rather than agreement at the moment, that signi-
[228] fied. In 1920 herring fetched a fair price, the herring fishery prospects were encouraging, and work was resumed for a time. Yet one raid having begun and "the die having been cast, lawlessness spread rapidly". Leverhulme stopped expenditure, and obtained an interdict against the
[423] 'raiders', though he did not prosecute. After further parley, the Secretary for Scotland agreed to suspend
[654] division for ten years, and in 1921 Leverhulme resumed
159 operations. "Unfortunately very soon afterwards", wrote
433 his biographer, owing to "the general industrial depression which followed the boom in trade after the war", Lever-
458 hulme felt impelled to close down work for the time being,

RELIGION AND SOCIAL CUSTOMS

121 to the world within. Above all, harmony of relations, at
791 every stage of life, in man and woman, was felt to pre-
181 figure relations with the Divine. The religious poetry of which the Gael were the creators and heirs, promoted courage and calm. True, its very power could lead to superstitious respect for mere forms of words, debased as 'magical' charms. Such misuse was 'superstitious', being false in itself and falling short of the clearest thought, the highest aspiration, of the time and the community. Worse still, use with evil intent could concentrate ill-will and evoke mutual fears. Yet at its best, thought was clearer, less confused, than is commonly imagined. To the aspiration and attainment of the Gael—in congregation or solitude, in meditation or labour, in love and faith or in works—the fragments of their oral heritage bear witness.

(c) LITERACY AND EVANGELISM: 'THE MEN' AND THE DISRUPTION

175 From before 1680 "a school for the gentlemen's sons
178 and daughters" was open in Stornoway. Latin and
871 English were taught, and a century later even Greek had been added, as recorded by W. J. Gibson, for many years Rector of Stornoway's high school, the Nicolson Institute, in his *Education in Scotland*, 1912 (chap. v). Particularly towards the end of the eighteenth century, the Gaelic School Society and other bodies, like the Society for the Propagation of Christian Knowledge, sent out schoolmasters to teach the reading of the Scriptures. Industrial schools were set up at the same time by Lady Seaforth, to teach spinning
• (671) by the wheel, replacing the slow distaff. It was not till nearly a century later that teaching of English was widely taken advantage of—partly by the compulsion of the

175 Education Act of 1872, for the people "did not want to
198 give their children wings to leave them".[1]
871 The reading of Gaelic progressed fairly rapidly after
• (671) 1800, in order that the Bible might be read. By 1833 something like one in three or four of the population, or more than half of the younger people, could read Gaelic. The Hon. Mrs. Stewart-Mackenzie of Seaforth, it seems, had a 'warm sympathy' both with teaching to read the Scriptures and with evangelical preaching. The coming
175 to Lewis in 1824 of the first evangelical minister, the Rev.
114 Alexander MacLeod, an Assynt man, is described in his
793 memoir in a striking volume, *Disruption Worthies of the Highlands*, edited by J. Greig (1877).

"At the distance of more than half a century it is not
175 easy to form a conception of the religious and moral
791 condition of Lewis previous to the year 1824. The present
793 writer has heard a still living minister of the Free Church, who is a native of Uig, declare publicly that only two or three copies of the Bible could be found within the wide extent of the parish, and that he himself travelled a journey in search of a copy of the blessed book, and all in vain. . . . The denesest intellectual and spiritual darkness held universal sway. Notwithstanding the pleasing features that characterise Highlanders, even in their most primitive condition, this state of things could not fail to be attended with baleful influence. Despite their constitutional warmth of heart and loyalty of nature, unbending fidelity to what they esteemed to be honour, and their unbounded kindness and hospitality, many gross vices were found commingling in the characters and lives of the Lewis people. For, however strange it may appear, at the first prayer-meeting

[1] Quotations to this effect, dating from the *Old Statistical Account* until 1883, are given in the Brand Report of 1902.

ECONOMIC CHANGES: 1750–1919

175 About the seventeenth century there was introduced
198 the making of *aqua vitae*, *uisge-beatha* or 'whisky', an
433 addition to the ancient drink of home-brewed beer or ale
273 (*lionn*), a pleasant brew still tolerated by the Excise. In
(430) order to pay the rent, the making of whisky from home-
(427) grown barley must have consumed a precious foodstuff.
(651) The small bulk of whisky facilitated export by tacksman or Factor, and it also served to tickle the palate, cure the
175 ills and cheer the spirits of the crofters themselves. But
(651) before 1800 'the Gauger' was in the land, though there were undoubtedly whisky stills that escaped his eye. In some of the old houses a hollow space was left at a selected spot between the inner and the outer walls, to conceal what was not meant to be seen. A pleasant picture survives of
(511) the eighteenth century. It is told of a man of exceptional prosperity, that when he laid his head on a pillow "he could hear on the one side the clacking of his corn mill and on the other the babble of his still". What more could
(427) the good man want? Nevertheless, the increase of distilla-
• (671) tion as a legitimate home industry by which to pay the rent (in kind or by sale), followed by legislation prohibiting all but large stills, first encouraged the landowners in a more strong drink, then tempted them to smuggling and breaking the law.[1] Seaforth started two distilleries at Stornoway, importing barley for the purpose. By 1825 these had ousted the illicit stills, but they were closed about 1870.[2]
175 From a perilously narrow margin of subsistence, periodi-
178 cally overstepped in famines, the Islanders passed to a
431 larger measure of production for sale, and in the second
498 half of the eighteenth century population increased. Its
(113)

[2] Brand Report, 1902.

175 the legal recognition, improvement and enlargement of the
651 'township', defined as a farm, or part of a farm, occupied in common or division by several tenants, three or more in
(430) number. The executive officer of the township, the Con-
273 stable, was to be elected annually by the community.
(666) The Crofters' Holdings (Scotland) Act of 1886 did embody three of the chief recommendations made, but the
175 first, the recognition of the township, was omitted. The
• 671 Crofters Act gave security of tenure, compensation for
427 improvements, and some facilities for enlargement of holdings. Security was perpetual and could be passed on by the crofter within his family, though renounceable by him upon one year's notice, upon fair statutory conditions. The chief conditions were payment of rent, fair maintenance of the holding, and respect of agreements with the proprietor. Although this was not a recommendation of the Commission, the Act also provided for official revision of rents. A 'fair rent' was to be proportionate to the produce of the croft, and this, together with the value for improvements, was to be fixed on application to a body of the three Commissioners, 'the Crofters Commission'. In Lewis between 1887 and 1912 this brought a lowering of the rental by over a quarter and the cancelling of two-thirds of arrears accumulated earlier. The rental for a 'croft' was to be below £30; this figure was raised to £50 in 1911, except in Lewis, where £30 remained the limit in order to allow the excessive congestion to be relieved by division even of small farms.

The passing of the Small Landholders' Act of 1911 completed the code known as the Landholders' Acts, 1886–1911. The Land Court replaced the Crofters' Com-
(647) mission. The Department (then still the Board) of Agriculture took over the powers of the Congested Districts

ECONOMIC CHANGES: 1750–1919

175 Board, created in 1897 to develop agriculture, fishing and
• 671 home industries, to form new holdings, to assist migration,
427 and to provide public works such as roads, bridges and piers. These powers were further extended by the Land
(647) Settlement (Scotland) Act of 1919, passed to provide land for ex-Servicemen.[1]

The Crofters' Act granted to the individual crofter most of the rights advocated by the Napier Commission, and other advantages besides, but it did not impose upon him the corresponding duties. As Day wrote, "The landlord was compelled to act in the interests of the crofter; the crofter was not compelled to act in his own interest". The Act discarded the core of the Napier Commission's
(632) scheme, that of "a recognised local community, the township, with an executive officer, the Constable, working for the improvement of the township, by fencing, draining and other works, with the assistance of the proprietor", the whole scheme enforceable by "legal compulsion on either
(829) side". As a Gael might say, the Act discarded *duty-right* of members of the community to one another.

175 As a result, peace did not descend upon the Island at
423 once. The demand for land continued, followed up by
(668) attempts to settle upon it, in spite of police and armed force. A legal victory was to be pressed home. In Lewis the

(113)

[1] A useful summary of the legislation is given by the Scot. Econ. Committee's Report, 1938, pp. 17-21, and a searching review in J. P. Day's *Public Administration in the Highlands and Islands of Scotland*, 1918, a work of real social insight.

The Act of 1919 is still the main enactment under which land settlement schemes may be undertaken in Scotland; but the Agriculture (Scotland) Act 1948 included new provision to allow the creation of holdings up to 75 acres in extent and £150 in rental. After the Second World War a more cautious policy was adopted in regard to settlement of ex-Servicemen and little progress has been made in carrying out schemes, despite many unfulfilled applications in the Hebrides and elsewhere where the demand for crofts exceeds the supply.

ECONOMIC CHANGES: 1750–1919

175 co-operate in active endeavour. It was all the more
632 important to have an elected 'official', the Constable,
427 one of themselves but placed in authority. There could be no restitution of the old joint farms where they had
(241) been broken down by enagration. Yet it should have been
(674) still possible to extend the old spirit to the larger townships, as the Commissioners held.

175 Again, the constitution of the township is bound up
632 with the rights of common pasture upon the moor all the
427 year, and in winter even on unfenced arable; but the
423 Crofters' Act failed to regulate the rights and obligations
• 671 of Common Grazings. It slackened the authority of the estate without restoring the hold of the tenant community upon its members. After five years the Government began to recognise the mistake, and passed the first Crofters' Common Grazings Regulation Act, permitting the crofters to elect a Common Grazings Committee. But it was ill-considered; most of all because non-crofters, that is, cottars and squatters without legal tenure, were not bound by the Regulations. On one hand they could not get permission to 'resume' (or enclose) a portion of the outrun, in order to reclaim it as a croft, without first obtaining the unanimous consent of the township's crofters; and in large
(233) townships there might always be an objector. Yet each cottar could, and did, put on stock, a cow or two and a few sheep, so nullifying the possibility of discipline.

In 1908 a second Act was passed; but twenty years had allowed tradition to lapse and difficulties to accumulate. In Isle Scalpay (Tarbert) for instance, by 1909 there were only forty legitimate crofters, but eighty cottars; and the legal crofters would not take part in depriving any
(476) cottar of such grazing liberties as he exercised. All were
(362) neighbours and most were relations, and their principle

175 was to share; the children needed milk and the women
632 wool to work, while the men fished. As the Crofters'
423 Commission put it at the time, "Necessity has no law and
• 671 . . . it is scarcely possible to carry out . . . the Grazings Acts in this island". The position remains little changed.
(476) Still, in spite of sixty years' delay, and the law's failure to
(462) restore an executive, the Constable, to perform specified duties as a member of the community, the Grazings Committees do perform useful functions with credit. They form nuclei with which proprietor, Government or co-operative agency actually deal, and the voluntary Clerk may shoulder considerable responsibility.

175 With regard to small occupiers paying less than £6
423 rent per annum and holding less than 10 acres and 250
671 acres of scaming (or share of pasture), the Napier Commission declined to recommend the bestowal of rights or immunities tending "to fix them in a condition from which they ought to be resolutely though gently withdrawn". The Act, however, did grant small occupiers immunity from eviction, and made it hard for either landlord, State or fellow-crofters even to refuse house sites or fresh holdings, particularly in the crowded Lewis. The squatter continues; indeed he is favoured, by escaping the payment of rent and rates though he shares in benefits. The rate-payers are proportionately, and unjustly, handicapped. But as isolation has diminished, landless squatters have been allowed to "resume" portions of the common grazing for new holdings, as by common consent at Ness and in Lochs, after Lord Leverhulme's death.

175 A further recommendation of the Napier Commission
168 was to aid emigration. Now Sir James Matheson's aid in
163 1863 proved successful, but his later efforts met with no
161 response. There were then, and still may be, in the Island

The year 1886 is a chronological hinge in the culture history of the Gaidhealtachd. The British government began to play a positive, continuing role in local affairs for the first time in history. Hitherto, the interest of the government had been confined to proscriptions, recruiting, and taxation, occasionally interspersed with relief for the destitute. With the change in policy, we enter the realm of the contemporary culture; therefore, all I wish to do is indicate the direction the processes, which we have been following, took under the national attempt to rechannel them. The major trends to be noted are two. The proprietors' influence in determining how the land was to be used was curtailed, and, with a redirection of the commercialization of the estates, many of the traits and complexes characteristic of the traditional culture assumed renewed importance.

Since the Napier Commission had been mainly concerned with the disregard of the customary rights of the crofters and their inconsiderate treatment by proprietors, the recommendations which were pres nted to Parliament sought a land reformation within the framework of local custom.[79] Unlike the Continental Commune, a local, self-governing body, the Highland township had never legally existed. Elsewhere in Scotland this communal agricultural unit had been replaced by individual farm occupancy, just as had been happening on Skye. The major proposal was a retrogressive step; the township system should be given legal

[79] Napier Report, pp. 7-15.

sanction and endowed with privileges and immunities by which self-regulation, stability, expansion, and improvement might be attained. Additional provisions called for the replacement of the repudiated customary usages by national laws of land tenure.

The Crofters' Holdings (Scotland) Act of 1886 embodied many of the Commission's proposals.[80] The crofter became, perhaps, the only class, as a horizontal segment of the population, with a minimal legal definition. He was a pastoral agriculturalist who resided on his holding, the annual rent of which was less than £30, (later raised to £50) in a crofting parish. Such an individual was entitled to a fixed, fair rent, compensation for improvements made by himself or his predecessors in the same family should he leave his holding, security of tenure, and modified right to bequeath the holding to a member of his family. Except for the statutory conditions that he must not alienate the holding from his family, sublet without consent, or violate the rights of his neighbors or his landlord, including withholding rent and contributing to the deterioration of the land and dwelling, the crofter was given all the privileges of a landowner with few of the responsibilities. A Crofters Commission, with executive functions, was established to carry out the provisions of the act and to assign "available" land to the townships as

[80] I owe a debt of gratitude to innumerable government officials in Portree, Edinburgh, Glasgow, and London for their patience and cooperation in providing me with the necessary information to discuss this final period of the history of Skye. The facts are theirs; the interpretation is my own responsibility.

enlargements when the proprietor would not lease it on reasonable terms. Thus, the government began to protect the crofter from potential abuses and to restore the land to the descendants of the clansmen, who had, to say the least, manifested a persistent disinclination to accept any other system of land use. A complete refrication, however, was not yet possible.

The crux of the problem of maintaining the crofting population was succinctly stated in 1851 by the chairman of the Highland Destitution Board. The people could not support themselves, at a subsistence level, unless each crofting family were given ten acres of arable land plus pasture. Not only was there not enough land, but without credit facilities, a man could not find local employment until the land began to produce, and, if he sought employment at a distance, he could not work his land to free himself from the necessity of working for a wage. In 1883 it was estimated that a 50 percent reduction in population would not leave enough land to give each family an adequate holding, ten acres of arable and 277 acres of grazing land.[81] How right they were. Today the population is less than half that of 1883, and still very few have what was considered an adequate holding a hundred years ago. Let us see what measures the government took in the attempt to solve this problem.

At first the land reorganization program was thwarted by a lack of available land and by the continued tendency of

[81] Napier Report, pp. 100-101.

the people to overstock. No land could be assigned as an enlargement if it would impair the value of a sheep farm or deer forest. The remainder of the island was already possessed by crofters. Moreover, there was no one to regulate the use of the common grazings. As the Crofters Commission usurped the functions of the landlord, estate management became lax. The township constable had disappeared. The cottars, 36 percent of the population, had been omitted from the provisions of the Crofters Act. Later when the government provided for a grazing committee to draft voluntary regulations for sharing the common grazing and, finally, coerced the crofters to elect a grazing committee, the regulations could not be enforced, except by appealing to the sheriff.

At length another commission of inquiry visited the Highlands to decide how the resettlement program might be extended. Then, in 1897, the Congested Districts Board was created. The Board was given power to purchase land for enlargements and for creating new holdings, to resettle crofters and cottars from congested districts, to foster the development of stock breeding, agriculture, fishing, and home industries, and to improve communications. It was not intended that the government should become a landlord. The crofters, like the Irish small farmers, were supposed to have acquired a desire to own their own land. In 1904 the estates of Glendale, the present twelve townships, and Kilmuir, the whole parish and part of the parish of Snizort, were purchased. On the Kilmuir Estate there were 450 crofts in 35 townships and 10 large farms.

Heavy rackrenting in the past had led to dissatisfaction and arrears in rent, the crofters' weapon against the landlord. The rents were revised and most of the arrears were cancelled. All of the farms but one were subdivided to form 79 new holdings in 7 reorganized townships and to make enlargements to the other townships. The Glendale estate received similar treatment, being made over into 12 townships and 12 townships plus a jointly held club farm. Both estates were sold to the crofters on a fifty year annuity basis. Then came a rude awakening. Within ten years the crofters found ownership to be a dubious privilege, especially since it excluded them from the benefits of legislation favoring the small tenant. The Kilmuir crofters were released from the contract, but the government refused to accept the petition of the Glendale people, who still are not pleased with their rather unique position. Private ownership of the land might be said to be as alien to their heritage as village settlements.

Land settlement continued, with the introduction of certain refinements, the most important of which was the power to use compulsion to acquire land for crofting in the national interest. Today over half the Island is owned by the national government and administered by the Department of Agriculture. The tendency in recent years has been to create more adequate holdings. On the Kilmuir estate the number of crofts has been reduced from 530 to 442. The process of resettlement, or de-commercialization, has been carried further on Skye than in any other Highland area.[82] It has also included the only major

[82] Cf., e.g., Collier,

migration scheme to be attempted. In 1923 sixty-eight fa from the Isle of Harris, in the Outer Hebrides, were brougt to Skye and settled in Bracadale. Probably, close to 300 holdings and in the neighborhood of 200 enlargements have b made since 1897. This clearly reflects the limited space a ble for crofting at the end of the "clearances."

In addition to land settlement, the government has co to stimulate improvements in stock breeding techniques and t foster more efficient land utilization. Credit facilities, grant and loan, were offered to enable the crofters to purchase stock, especially sheep, and to build new cottages. Grants and subsidies, in an ever increasing number, have been made available to promote a fuller use of the land. Initiall under the Congested Districts Board, these facilities were devised specifically for the Highlands. By the time the Conge Districts Board was abolished, the crofters had become offici integrated with the national agricultural scene so that specif subsidies, grants, and loans were replaced with an opportunity to apply for assistance within the national program of agricultural development. Instruction in scientific methods of agriculture has been another continuing function of the govern- ment through a series of advisory services and, more recently, by a program of demonstration crofts and farms. Access to markets has similarly been facilitated by improving communication by land and, to a lesser extent, by sea.

Security and protection for the crofters has been anothe

information via the technology of mass society to affect the choices made by succeeding generations. For example, young people are able to leave the island and work in British cities or abroad, sending money home to sustain their aged parents who by law cannot be removed from the croft.

E. Changing Land Use

Darling (1955) described the previous Highland way of life as a well-adapted, ecologically balanced system, in which proper use of land was attempted by limiting the number of livestock, preserving a proper ratio between cattle and sheep, and regulating the flow of stock on the land throughout the year. Dikes (fences of turf or stone) and drains were communally repaired and cleaned. Although continuity with the previous way of life is evident today, the overall picture is one of partial use, and misuse, of natural resources. Various advisors from government organizations and colleges have been brought in to encourage effective husbandry and land use.

1. Specialization and Individuation: The change from an ecologically adapted, internally regulated community in which land was used intensively for subsistence

592 unmarried sibling. Eleven households consist only of siblings who have never married, men and women who in 1971 were 45 years old or older. Two widows live with [589] their unmarried siblings. Sixteen widows or widowers live alone, and sixteen unmarried persons live alone.

241 The large number of households occupied by single, 592 elderly people reflects the use of the croft as a place 423 of residence rather than as an agricultural unit, a 671 888 view of the croft that was given legal expression in 1968 by the Miscellaneous Provisions Act. Before 1968, [428] the croft went automatically to the eldest son if a crofter died intestate. Since 1968, the rights of different claimants must be considered and tenancy by a new person must be confirmed. District and county councillors argued for this change, saying that a widow was often left on the croft and her security endangered because the eldest son was usually far away from the island, in Canada or some other country. In other words, rather than an agricultural unit which should naturally be taken over and worked by the male head of the household, the croft is seen as a place of residence for the infirm and for the aged, and especially for the aged female.

57 The Crofters Commission has suggested that elderly 35 people be allowed to rent small plots of land on which 33 38 11

233 178 578 sheep were let out of the pens, and a fight broke out between the two groups of people.

241 657 578 175 [671] 3. Crofters vs. Non-crofters: Another division within the township has developed largely because of the attention paid by outside agencies to "crofting." The Crofters Act of 1886 defined crofters and gave them a protected, privileged status. In fact, very little distinction existed between non-crofters (sometimes called squatters and/or cottars) and crofters, and in some places, such as the Isle of Scalpay, non-crofters even out-numbered crofters. Both categories were linked to each other by bonds of kinship and mutual dependence. Non-crofters were in fact favored economically. They did not have to pay rent, but had the same opportunities to graze stock and plough land as did crofters. Many crofters themselves had buaile, units of land not recognized as part of the croft and not included in the land for which rent was paid but recognized as property by the villagers themselves to the extent that these bits of moorland passed down through families or could be given by one person to another. Even today, a young girl thinking of getting married says her future husband might build their house on her father's buaile, and a man may build a house on moorland "given" to him by his wife's aunt. Officially, a non-crofter had no "rights" to a house which he built on the common

241 175 423

273 175 585 [at a wedding] would be held in the barn, with sheets lining the walls so that if a man staggered against the wall he wouldn't dirty himself. There were four and one-half gallons jugs of beer and a few bottles of whiskey. Sometimes someone would spew on the floor. People got drunk on very little, because they didn't have it so often."

273 175 Occasionally the word went out that someone had brought a jug of beer from town, and the men gathered in someone's barn or weaving shed, usually on a Saturday night.

273 175 829 "The war changed that. When you were at sea, you lived from day to day. There was no tomorrow." "When my brother was away at sea, most of the money he earned was saved for him, and when he got back we gave it to him to do whatever he liked with it. The men would go off to town drinking. They had money, and they had nothing else to do; and they had learned to drink during the war. Maybe if the TV had been around then they wouldn't have started that kind of drinking."

175 275 273 [671] 1. Bothans: Because most parishes in Lewis were "dry," that is, no licensed purveyors were allowed, a journey of many miles had to be made to purchase beer and whiskey in Stornoway. Around 1930, Nessmen (many of whom were sailors) began to bring back from town several kegs

105 24 654 [311] [671] The fact that crofting townships are located on marg land is one reason that the larger society is no to exploit the land. The Crofters Holding Act o and subsequent legislation ensured protection of incentives for continued maintenance of crofting the crofting township.

Protective government legislation, grants a for housing, subsidies for rearing livestock, re low taxes, and the economic protection provided socialistic government in times of crisis have h maintain a core of crofting families for many ge

105 162 632 166 434 584 [621] The predominance of older persons in the townshi striking, but many of the younger people who have the island to work on the mainland return frequen contribute part of their salary to the remaining members, and plan eventually to marry and settle the village or to retire there. Long-term reside kin-linked families in a small area has in itself to the boundedness of the township network.

105 24 654 632 000 The policy of the government, through develo agencies such as the Highlands and Islands Develo Board, has been to support economic strategies th complement rather than interfere with the functio the crofting township with its small holdings and practices. Dean Monro, in his 1549 account, refers to the vast numbers of wild fowl and mentions that the men of Ness sail there and stay for seven or eight days and bring back a boat full of dried wild fowl and feathers. The *Old Statistical Account* (1796) says: 'There is in Ness a most adventurous set of people who, for a few years back, at the hazard of their lives, went there in an open six-oared boat without even the aid of a compass.' The boat, says the *Account*, could not be pulled up out of the sea, and therefore, while some of the men worked on the birds, the others had to stay in the boat on the most sheltered side of the sheer-cliffed island. This custom of hunting young gannets (or 'guga') on Sulasgeir still continues. Under the Protection of Wild Birds Act, 1954, the gannet is protected by law, but so that the Ness men could continue their old custom, a Statutory Order was passed making a special exemption (from 31 August each year at the end of the close season) of the gannets on Sulasgeir. With North Rona, Sulasgeir is one of the great breeding grounds for British oceanic seabirds.

The Loch Roag islands

The one large inhabited island off the Lewis coast is Great Bernera, though technically it is not now an island, having been connected to the mainland of Lewis in 1953 by a bridge. It is part of the parish of Uig, as are the other islands in Loch Roag. Its population reached a peak of 730 in 1911, but has now fallen to about half that figure. Off the west of Great Bernera is Little Bernera, which in Dean Monro's time was 'inhabit and manurit', but which has had no population recorded since the 1861 Census. Monro describes it as full of rough little craigs, but with fertile earth between.

Also in Loch Roag are three islands which, now deserted, once supported families: Pabbay had 17 people in 1861, 9 in 1881, and none since; Vacsay had nine men in 1861, and none since; Orasay in 1891 had one man and one woman, but none since.

The Flannans

Belonging again to the parish of Uig is the group of islands known as the Flannans, or Seven Hunters, some twenty miles

LIFE TODAY

As in other Highland areas, some of the island's problems have become so deeply entrenched as to be intractable. They have been the *raison d'être* of so many commissions and committees of inquiry that their existence is now almost forgotten by the islander —if indeed he ever understood their nature. Some results have been seen, such as the Crofters Act of 1886 which gave Highland crofters security of tenure, perhaps the most valuable measure of the last century or two. But somehow all things have not progressed so well since that date; at any rate not so fast that crofting, for instance, is now seen to be an economic form of land use of benefit to both local community and nation at large. Many problems have been virtually ignored by successive central Governments; at least, remoteness seems to qualify a topic for the office 'pending' tray. It has yet to be fully realised that the island, with other Highland communities, is part and parcel of the area generally administered from London and Edinburgh, and merits as much attention to its welfare as other European governments, such as Norway, give to their remote mainland and island communities.

As usual, charity and self-help begin at home, and one of the most dramatic changes in island life has been the result of the agricultural revolution of recent years which is changing once-brown moors to lush green pastures: reclamation by re-seeding. This revolution is still going on. Lewis crofters in particular are showing the way, with other Highland crofting areas following suit. The change in the Lewis scene is being emphasised by the planting of shelter-belts of hardy trees and the first of the new plantations of timber-producing trees. These show the promise of the future: a lively future for a lively community. The fishing industry also has a future, brighter on the horizon than it has been for many a poor year. The Harris Tweed industry, the staple employment-source in Lewis, is maintaining its ability to retain the interest of the market. And tourism, once a perfunctory and casual affair, promises to emerge as a useful sector in the economy. There are, in addition, many small pockets of native initiative and enterprise which, given sufficient encouragement

he growth of the population ended with a prolonged famine. 161
he proprietors, finding that the people's only justification 731
or crowding the estates and leaving to their landlords for 425
elp were some nebulous customary usages, facilitated the
decline by disregarding custom and throwing as much land into
heep farming as was possible. While evictions were not new, 427
nly after the famine did they result in an absolute reduction
n numbers. The Gaidhealtachd, fettered by a lack of capital 182
nd an inability to break with the past, could not make the
inal adjustment required by the process of commercialization,
pecialization. In addition to emigration, the Clearances 167
nd general economic hardship forced a postponement of 582
marriage. There was neither land nor regular employment to 469
provide a livelihood.

Later in the nineteenth century new influences began 161
to play a role in the continuing decline of the population. 167
Following the passage of the Crofters' Act, the nature of 178
emigration changed. Seasonal migration became negligible. 427
The provisions of the Act, and ensuing legislation, made it 671
possible for a man to remain away during his active years and
return to the parental croft to spend his old age. The ex- 871
tention of education not only equipped the youth for life in
the larger society but also created demands for objectives
which could not be attained at home under the existing order.
Thus, as in the period of population growth, the persistence of 161
many features of the old traditional culture, and the renewed 167
importance of others, were factors of no little consequence. 182

CRIME

CRIME

Serious crime is rare in the island, though it was not always so. 175*
Some light on the life lived in Lewis nearly two centuries ago is 674
found in the old records of the Sheriff Court of Ross County. The 673
first minute in the records concerns the appointment of George 217
Munro, Writer in Dingwall, as the first Sheriff Substitute 'within the Island of Lewis'. The date is 1788. Munro's commission empowered him to sit 'in the town of Stornoway or anywhere else he may find most eligible at the time within the said Island of Lewis and hold Sheriff courts there, judge, decide and determine in all causes civil and criminal coming before him.' In those days a case might be raised in any of the county courts. In 1788, a 175*
regulation was made to save defenders from unnecessary trouble, 691
hardship and expense in travelling to relatively distant courts where actions were raised against them; litigants had, before Munro's appointment, been faced with a long and hazardous journey to either Dingwall or Tain on the Scottish mainland.

The old Court Records date from 1788 and 1826 and record 175*
a number of interesting cases. Sheep-stealing was common, but 674
other forms of theft less so; this is indicated by the fact that much 217
of the Court Records are taken up with the minutiae of court 685
appointments. In a case concerning wrecking, Lloyd's of London are mentioned as being represented in Stornoway as early as 1824 if not earlier. The defendants were fined £4 for destroying the mast of a ship found by them in Lemreway, in Lochs.

In a report dated 1902, a survey of crimes (offences against 175*
the person and offences against property) revealed that Lewis and 674
Stornoway had good characters; considering the population num-
ber compared with the large influx of strangers to Stornoway
during the fishing season, local people emerge as more law-abiding than the national average. Miscellaneous petty crimes were
numerous enough, however: minor assaults, breaches of the
peace and disorderly conduct, occurring mainly in Stornoway. 673
Much of this 'crime' was traceable to drink. The island's first 682
and only murder occurred a year or two ago.

COMMUNICATIONS

secondary school, the 'Nicolson', has had since its inception a 632
formidable academic record. Back in 1907 work from the school 871
was included in the educational section of an International Ex- 648
hibition held in Christchurch, New Zealand: this was appropriate 167
because emigrants from the west Highlands, notably from Harris and Lewis, were among the pioneers of New Zealand education a century ago. In 1957 new extensions were opened, costing about £300,000 and making the school the largest of its kind in the Highlands area. It is co-educational, its primary and junior secondary departments taking only Stornoway children and its senior secondary department catering for those from both Stornoway and rural Lewis. Many board out in the town during the week, returning home at weekends.

In providing social facilities, the town has placed itself in the 632
position of an agent for those things deemed necessary for life, 369
and is a middle-ground between the rural repression of the Free 671
Church and the city abandon of the mainland, with resulting 183
dilemma. The public houses, the cinema, youth clubs, dances and 369
juke boxes are all in direct opposition to the preaching of the Free 184
Church. The result is tension between the town's desire to act as a host for tourists and its wish to fulfil its duty on a religious plane; to instance this, the Stornoway Sabbath is less strict than the Lewis Sabbath. In keeping with the rest of Lewis, social
standards are extremely high. Home is the centre of life, as it 592
always was; the sense of community and communal responsibility 595
is there. Divorce is practically unheard of, and the incidence of 674*
crime, as such, is extremely low.

675

675 CONTRACTS--conception of contractual relations; agreements, bargains, promises, and their enforceability; consideration; rights, privileges, and powers of contracting parties; procedure in the conclusion of contracts (e.g., presence of witnesses); terms and stipulations; types of contracts (e.g., legal forms, oral agreements, covenants); etc. See also:

144 the men of Ness.
112
174 Third, it is still commonly stated not only that the
"great majority" under the clan system were "without
174 any legal status", but that their tenure "depended on the
[613] good will of the chief or tacksman".*

As the last lawbooks of the Gael were taken from Lewis
174 by its first mainland lord in 1611—never to be heard of
675 again—it may well be that, as recognised in the Northern
Tales, so in the Western Isles, peasant tenure was perma-
[175] nent according to regional law. In practice, mere 'good-
will' is so uncertain a quantity that if this statement had been true, it is hardly credible that communities could have remained so stably rooted as their race-types show them to be. Evictions of groups or individuals at the whim of chief or tacksman would have broken down their
178 homogeneity of race. In the Lowlands, where eviction
had become so frequent by 1500 and insecurity for the
184 mass of the country people has prevailed ever since, such localisations of race would be unthinkable and do not exist except in certain fishing communities who possess a pride, almost a caste-code, of their own: the Newhaven fishers within Edinburgh remain apart, with a dialect and a dress of their own. Great stability of tenure—in fact as in customary claim—is shown by the racial homogeneity of Gaelic communities.

174 Lastly, it is common to state that the nobility and gentry of a countryside constitute its 'old' or 'original' families. It is true that some land-owning families seem 'old' compared to recent purchasers—successively the merchants and lawyers, venturers and planters of the

175 of beer at one time to avoid having to make the 30-mile
275 round trip very often. Men met to drink in barns or in
213 high ceilidh, the houses in which people gathered for evening visiting, but for this purpose eventually built huts of stone or concrete, or used shelters already available such as the shells of old buses or Nissen huts built by the armed forces but no longer used by them.
[361] These shelters, separate from the rest of the village, were called bothans. One or a few men brought the drink
275 from town, and the drinks were sold at cost. In 1963
213 a bothan was raided by the police and the men fined.
225 But in 1967, a court case found six men not guilty of
681 trafficking in exciseable liquor because there was no evidence that money had changed hands. The lawyer for the accused men argued that the drink was not "for sale." It was simply available, and drinkers made "voluntary" contributions to a common kitty.

175 The first bothan in Shawbost was started after the
213 second world war, by a sailor home on leave. Liquor was
275 brought to an old Nissen hut, which eventually was replaced by a small concrete hut with gas lighting. ("It was built overnight, because if anyone knew it was being built, they would protest." "It was built inside the Nissen hut so no one would know. On the day they were tearing down the Nissen hut, a minister was passing by and he praised

CRIME

CRIME

Serious crime is rare in the island, though it was not always so. 175*
Some light on the life lived in Lewis nearly two centuries ago 694
found in the old records of the Sheriff Court of Ross County. The 693
first minute in the records concerns the appointment of George 217
Munro, Writer in Dingwall, as the first Sheriff Substitute 'within the Island of Lewis'. The date is 1788. Munro's commission empowered him to sit 'in the town of Stornoway or anywhere else he may find most eligible at the time within the said Island of Lewis and hold Sheriff courts there, judge, decide and determine in all causes civil and criminal coming before him.' In those days a case might be raised in any of the county courts. In 1788, a 175*
regulation was made to save defenders from unnecessary trouble, 691
hardship and expense in travelling to relatively distant courts where actions were raised against them; litigants had, before Munro's appointment, been faced with a long and hazardous journey to either Dingwall or Tain on the Scottish mainland.

The old Court Records date from 1788 and 1826 and record 175*
a number of interesting cases. Sheep-stealing was common, but 694
other forms of theft less so; this is indicated by the fact that much 217
of the Court Records are taken up with the minutiae of court 685
appointments. In a case concerning wrecking, Lloyd's of London are mentioned as being represented in Stornoway as early as 1824 if not earlier. The defendants were fined £4 for destroying the mast of a ship found by them in Lemreway, in Lochs.

In a report dated 1902, a survey of crimes (offences against 175*
the person and offences against property) revealed that Lewis and 694
Stornoway had good characters; considering the population number compared with the large influx of strangers to Stornoway during the fishing season, local people emerge as more law-abiding than the national average. Miscellaneous petty crimes were numerous enough, however: minor assaults, breaches of the peace and disorderly conduct, occurring mainly in Stornoway. Much of this 'crime' was traceable to drink. The island's first [203]
and only murder occurred a year or two ago. [682]

683

685 deviants without recourse to the court. Indeed in Kilmuir
617 they do so well that I never heard of any theft. Still, there has been some theft in Glendale. Shortly before each cattle sale the shepherds on the club farm found one or two cattle had disappeared. At first they thought the cattle might have gone over the cliff, but coincidence soon indicated they had a thief in their midst. One of the crofters, a retired Glasgow policeman, took a hand in discovering the guilty party. At length he found out who it was. At the annual meeting several weeks later, he stood up and told the shareholders exactly what he had seen. Here were the facts, in detail. He did not, however, name the guilty person. After he had finished, the crofters calmly asked him to retell several parts of his story, and then there was a period of silence. Finally, the man publicly confessed and expressed repentance. He was not cast out or handed over to the police -- I doubt if the police know of this even now. His humiliation was sufficient punishment.

* 682 Among such crimes and the forms of social control which
[743] they prompt, however, murder is almost unknown, deterred by the tales which tell of being plagued by the man's ghost to the grave, and suicide is extremely rare, with only three cases in many, many years. Much more important, however, is the influence of social control over public behavior.

* 683 During my stay on Skye, I was struck by the lack of overt
182 aggression. Aggression was an outstanding characteristic of the
157 culture during the days of the clan, as the Crown ruefully

295

* 683 discovered on many occasions. I once entertained the thought
183 that its absence was indicative of a decadent culture. Then
157 I discovered that it was a traditional norm of behavior. Only once during the modern period has there been any aggressive behavior, during the closing years of the "Clearances." Some who remember these "old warriors" who were not afraid to stand up for their rights wonder why their descendants have changed.
[713] Today only the ministers are aggressive in their dealing with their congregations, and they reserve their aggressive pose for their Sunday sermons. Naturally, the people quarrel among themselves and a couple of drunken men may come to blows with each other or the policeman who interferes. In any group situation or in any dealings with outsiders, however, dislike or resentment takes the form of placid resistance. The Islander
683 remains courteous and suffers in silence. This is "affect
183 suppression," resultant from Protestantizing the crofters.[39]
157 Even the talkative individual, unless he stands among the gentry
626 or has achieved prestige status through his profession, is considered an eccentric. He must stand the snickers of the group and bear the title of a "worthy," a man who does not act his age.

152 Real anger, manifested by a loud or quavering voice, or
626 table pounding, clenching one's fist or other recognizable signs,
156 is not characteristic of the Gaithaigach in public. The man who forgets himself is always taken in hand by the minister, an old man, or a teacher. He may feel righteous indignation, but if he

[39] I am indebted to Conrad Arensberg for calling my attention to this fact.

nclude all small tenants in Scotland. The landlords have ost their right to evict a crofter for breach of conditions. ince 1911 only the Land Court, which replaced the Crofters ommission, can remove a tenant who is guilty of bad husbandry. oreover, such action can only be taken after the general ircumstances of the crofter and his need of the croft for a ome have been considered. To date, no Highland crofter has een removed. In fact, security of tenure has been carried o the extreme that the individual no longer has to reside n Scotland much less on his croft. Although this change is ow regarded as inadvertent, the courts have ruled in favor f the small tenant. The only remaining functions of the andlord in estate management are to collect his rents and pay ompensation should a tenant desire to leave. Both the rents nd the compensation are determined by the Land Court.

Accompanying the integration of the Island with the ational scene, politically and economically, were extensions f social services. Prior to 1872 education was the responsibility f the church, charitable agencies, and, especially in the ighlands, the local proprietors and their financially secure enantry.[83] Although the parish school system was national, the dministration of each parochial school was local. The ideal f a school in each parish was neither adequate nor easily btainable. The result was a few regularly taught schools.[84]

[83] OSA, XVI, 156-157, 226, 539; XVIII, 188; XXI, 430.

[84] James MacDonald, op. cit., pp. 771-774.

427 241 162 of the holders reside on their land for more than half the year. The lowest rate of absenteeism is found among the tenants of the Department of Agriculture. There are 76 absentees out of a total of 667 tenants. Most of the non-resident crofters are permanently absent. On the small estate mentioned above thirty-seven of the forty-two absentees have not been seen in years. Five of them usually return to Skye to spend their summer vacation.

427 241 311 887 Thus, we have a situation in which, perhaps, a third of the crofts are held by people who either cannot work them because of old age or infirmity, or do not choose to work them because of greater opportunities elsewhere. What, then, happens to this land? Some of the old people allow a neighbor to use the land. Almost invariably this means the few fertile acres will be used for grass and hay. Absentees "entrust" the [671] croft, house and land, to a landless family. While Parliament inadvertently gave the crofter a right to keep his holding whether he resided on it or not, it is illegal to sublet. So far, this has not concerned the crofters. Other absentees "entrust" the land to someone in the township who uses it for grass.

427 887 231 Turning to the influence of old age and absenteeism on stocking, we find a series of entanglements. If the township is inhabited solely by old people, like Aird in Sleat, the township becomes derelict. More commonly, the absentee and the old person allows someone else to take over his "souming" so [829] that some crofters have far more than their share. Not infrequently, this gives the crofter a chance to outwit that

565 554 747 and no one thought himself capable of running a future At last reports, the wife of another proprietor was ha her impression that "It's not as easy as it sounds jus call a public meeting in Glendale," confirmed. While majority of the crofters thought an Old People's Welfa mittee was a good idea, they had no intention of being instrumental in its organization or in assuming any po which might elevate them above their neighbors. Throu this chapter, the stress on conformity has been appare let us now turn to the problem of social control for a picture of how conformity is enforced and to see how t Sgiathanach handles the deviant.

Social Control

626 Since social control is an important topic, I wa go into a further analysis of the manner in which the influences the behavior of its members. For the sake clarity, we must distinguish between social and politi 121 control. By social control I mean the informal pressu spontaneous action which any organized group can muste exert an influence on its members sufficient to encour conformity to tradition patterns of behavior. Politic control, to me, involves the independent or requested ference of the state, as represented by the police, in case which involves the enforcement and maintenance of 671 and order as prescribed by legal enactments. On Skye 829 laws of the land do not always have the same meaning t

671 829 people as they have for the larger society. This is true in spite of several hundred years of continuous and increasing contact.

Poaching provides an excellent contrast between the two forms of control and the differing attitudes of the state and the Sgiathanach. In Great Britain the tenant of the land does not automatically have hunting and fishing rights. The landlords, including the Department of Agriculture, lease them separately and the county taxes them separately. The crofters, and many of the villagers, have never fully accepted the legality of their being barred from the rivers for fish, the moors for grouse, and the hills for deer. The police enforce the law to the best of their ability, but they cannot always count on the support of the local justices of the peace, much less the cooperation of the people. Several of the local justices of the peace, those who are not landlords, feel that a man catching a few fish for his own use is not poaching.

626 671 829 If social control were to assume importance with respect to poaching, it should appear in Glendale. When the crofter owner-occupiers are able to rent the hunting lodge and gaming rights which they received as part of the purchase, they all share in the rent and benefit by not having to pay both owners' and occupiers' rates on the property and the gaming rights. Unfortunately, they have had a great deal of trouble in finding tenants and even more difficulty in keeping them. The river and land is all poached. When asked by whom, one man replied, "Och, who but ourselves would be doing it?" The

626 671 829 last tenant apparently decided the whole island was working against him. Unable to catch a single salmon in the Hamara River, an excellent fishing stream, he drove into Portree to buy one from the local fish shop. After he had purchased a fine salmon, he asked the shopkeeper where it was from. Not knowing the gentleman, the fishmonger told him it was fresh in from the Hamara. Buying his own fish, so to speak, was too much for him to take.

626 834 Favorite subjects in discussions of social control, or the lack of it, are pre-marital and extra-marital sexual relations. One reason for this is, no doubt, the fact that 836 the social control of sex is a universal.[36] In an area such as Skye where the most powerful institution to which the Sgiathanach looks for guidance, the church, forbids or condemns open courting, young people must court in secret. Moreover, for a people who find marriage all but impossible in their younger years, secretive courting not infrequently is accompanied by illegitimacy. A pattern has evolved on Skye to handle such mishaps.[37]

848 The child of an unwed mother is "adopted" by the girl's parents, or, less often, the girl's brother or sister. The foster parents raise the child as their own. People exercise great caution in asking about the parentage of a child who does not seem to be compatible with the age of his mother and

Illegitimacy 848

lef in a God who punishes iniquity "unto the third and 586
rth generation." 771 626

In one family the wife transgressed by committing 684
ltery, albeit a rare sin. Her husband was one of the 794
ect" and a deacon in the Free Church. Fully aware of 626
fact that his wife had remained away from Skye until
r her child was born, he took her back. He was older
she and devoted to her. The story could not be covered
n Skye, where the elders have their thumbs on the pulse
he congregation. The elders summoned him before the
session. After he admitted he knew all the details and
fact that his sister-in-law had taken the child, they
ared him to be excommunicate. The control of the elders
till characterized by austerity and severity toward the
y and ungodly alike. What hope has a Sgiathanach once 771
as been eternally denied salvation? Perhaps, someday 794
ill again receive a visitation from the Holy Spirit
experience a saving change. Although no longer entitled
he benefits of the church, he continues to attend, as an
rent. One may ask, what was the reaction of the people
his punishment? A few Church of Scotland people, feel
the elders might have tempered their decision. As one
, "They thought only of Moses on Mount Sinai and forgot
s on Calvary." Most of the people, however, including
in the Free Church and Free Presbyterian Church, either
oved the action taken or, at least, would not question
judgment of the elders.

e the spouse is likely to lose status. 626 684

The most powerful of all agents for social control are 626
old men of the neighborhood. Through their position in 888
church, a religious sanction for their prestige status, [794]
enforce conformity to the norms of behavior which religion
sanctioned either positively or negatively. No one, nor
group, has been successful in questioning the right of
e venerable men to maintain their habits and statuses
h have been preserved over the generations. The baptism
man's children and his own salvation depends on acceptance
he authority of the elders, for they will be his judges.

As far as the contemporary scene is concerned, there 182
o anomie. The content of the culture has been greatly 178
fied, but the form, the underlying distinctive pattern,
teen preserved. We are dealing with a single tradition
hich the norms of behavior and the sanctions for them
remained common and clear. This is all the more striking
use there have been periods in which cultural and social
ntegration threatened to overwhelm the Sgiathanach. This
gs us back to the role of religion in preserving cultural
tinuity.

Loomis and Beegle have employed Durkheim's theory to 171
yze the growth and spread of fundamentalist religious 182
s in contemporary United States.[16] They conclude: "It 771
o mere coincidence that various types of emotional 786
rious sects are now among the most rapidly expanding 781

685

685 PROPERTY OFFENSES--definitions of and penalties for stealing (e.g., theft, poaching, robbery, burglary, fraud, embezzlement); definitions of and punishment for property damage (e.g., trespass, arson, malicious mischief); etc.
See also:
Property . . . . . 42 Banditry 579

24,863 acres. The value of this boggy property, as far as the landlords are concerned, is determined by its fishing potential. The landlords generally reside away from their property, and brave the buffeting gales several times a year to return to fish for trout and salmon. For the rest of the year they hire river-watchers to prevent their tenants from poaching. As in Wales (Emmett 1964), the islanders continue to poach, in part as an expression of their identity as independent countrymen, a minority group in a nation-state.

Lewis is the most populated area in the Outer Hebrides, containing 21,934 of the 32,607 Outer Hebrideans numbered in the 1961 census. It is part of the County of Ross and Cromarty, whose headquarters are on the mainland near Inverness. Lewis has four administrative areas called civil parishes in which births, deaths and other vital statistics are recorded. Stornoway parish is the largest, containing the town of Stornoway on the east side of the island in which many non-Gaelic speakers live. Of the other three parishes, the largest is Barvas which stretches along the west side of the island and contains 4,331 persons, of whom 94.6% are Gaelic speakers. The people of Stornoway refer to someone from the west side as a <u>siarach</u> (west-sider), a term which connotes rusticity.

behind the tweed's popularity. The tweed was more than a cloth; it was peat smoke and windswept moorland, the image of the free man who had escaped city life and machines and was the master of his own destiny. Steps had been taken all along the way to preserve the image of home-crafted goods, as when, in an effort to prevent machine-spinning, carding mills were built in Lewis and Harris at the turn of the century to prevent wool from being sent to mills on the mainland, where it was both carded and spun. As early as 1906, a man was convicted in London of selling power-loomed tweed under the name "Harris Tweed." Today power-driven looms can produce double-width cloth 54 inches wide, a width much preferred to the 28-inch cloth produced on the Hattersley loom because there is less waste when the cloth is cut. But because "Harris Tweed" must be hand-woven, new looms of light-weight metal are being designed on which double-width cloth can be hand-woven. The new looms will cost so much that many weavers say they would be unlikely to invest in them, especially given the uncertain future of the industry.

The Harris Tweed Association, formed in 1909, was granted a certification mark by the Board of Trade which was stamped on tweeds that were hand-spun and hand-woven in the islands. During World War I, hand-spinning died

illibrium. I find it difficult to understand how any 626
could have a low rate of interaction without a loss of 182
control. Conversely, I feel that it is all but incon-
le that a group could continue to exercise social control
t a high frequency of face to face contact. On Skye
control is a very potent factor. Gossip is a double
weapon. It not only continues to enforce acceptance
traditional norms by the Sgiathanach and, to a lesser
, the newcomer but also can be used to punish the
t. People have been known to leave the island after [167]
ation which rendered them inacceptable. Gossip became
ce of misery from which there was no escape other than
. Exactly how powerful the dread of gossip is in Portree
judged from the experience of my wife and myself. We
layed chaperons to people much our superiors in age.
n one escape gossip by secrecy. The person who remains
ery is rejected as a deviant.

The amount and influence of social control, of course, 626
s on the values of the Sgiathanach. Poaching is rather 685
port, but the theft of stock is a serious offense. The
the concern of the police and the justices of the peace;
ner is a matter which the people prefer to handle them-
. It is quite wrong to burgle a home, but theft from
is a different matter, especially when the store is
by a Lowland corporation. A similar dichotomy applies 684
case of illicit sexual activities. A pattern has 626
d to protect the unwed mother, but the married man or
who violates the taboo is severely censured. Ideally,
fender is cast out by the community and his spouse, or

pared to make fishing their career, together with financial assist- 228
ance to those who satisfactorily completed their training and 452
who wished to acquire boats of their own. This Scheme is now 654
run by the Highlands & Islands Development Board. The
Board's participation in the expansion of the fishing potential
around the island has been first-class, with commensurate results
from an investment of some £500,000.

Illegal fishing

Like goldfields, the seas around the island have always attracted 685 •
the unscrupulous, those for whom the word 'conservation' has no 226
meaning, and who are careless of the dangers of over-fishing. 175* [185]
Illegal trawling began around the year 1894 and by now has
drastically impoverished the inshore fishings to which the Harris
and Lewis crofters once looked for a supplement to diet and in-
come. The rapid adoption of efficient trawlers was attended by an
increasing number of reports of their poaching within the three-
mile territorial limit. Though the islanders tried many times to
involve the Government's cruisers for the protection of their
shores, the poaching went on, and still continues today. Even
some of the violence which attended the early attempts to clear
the scum from the sea, as it were, continues, part and parcel of
the island's sea-life.

Fish processing

A former freezing plant in Stornoway, run by the Herring 228
Industry Board has been converted into a fish-processing factory.
This facility, of great value to the port, is run by Rolf Olsen A/S, [648]
a long-established Norwegian company with a successful back-
ground in fish processing. The company has received investment
aid from the Highlands & Islands Development Board, the
Highland Fund and the Stornoway Trust; the latter's interest
is significant in that it is the first time in which the funds of the
Trust have been invested in a private concern, to help retain
Stornoway as a successful fishing port.

The most regular shore-side as distinct from maritime industry
is the processing of prawns (scampi, or *nephrops norvegicus*). Two
firms buy the prawns at the pierhead, shell, cook and freeze them,

CRIME

Serious crime is rare in the island, though it was not always so. 175*
Some light on the life lived in Lewis nearly two centuries ago is 674
found in the old records of the Sheriff Court of Ross County. The 693
first minute in the records concerns the appointment of George [217]
Munro, Writer in Dingwall, as the first Sheriff Substitute 'within
the Island of Lewis'. The date is 1788. Munro's commission em-
powered him to sit 'in the town of Stornoway or anywhere else
he may find most eligible at the time within the said Island of
Lewis and hold Sheriff courts there, judge, decide and determine
in all causes civil and criminal coming before him.' In those days
a case might be raised in any of the county courts. In 1788, a 175*
regulation was made to save defenders from unnecessary trouble, 691
hardship and expense in travelling to relatively distant courts
where actions were raised against them; litigants had, before
Munro's appointment, been faced with a long and hazardous
journey to either Dingwall or Tain on the Scottish mainland.

The old Court Records date from 1788 and 1826 and record 175*
a number of interesting cases. Sheep-stealing was common, but 674
other forms of theft less so; this is indicated by the fact that much 217
of the Court Records are taken up with the minutiae of court 685 •
appointments. In a case concerning wrecking, Lloyd's of London
are mentioned as being represented in Stornoway as early as 1824
if not earlier. The defendants were fined £4 for destroying the
mast of a ship found by them in Lemreway, in Lochs.

In a report dated 1902, a survey of crimes (offences against 175*
the person and offences against property) revealed that Lewis and 674
Stornoway had good characters; considering the population num-
ber compared with the large influx of strangers to Stornoway
during the fishing season, local people emerge as more law-abiding
than the national average. Miscellaneous petty crimes were
numerous enough, however: minor assaults, breaches of the
peace and disorderly conduct, occurring mainly in Stornoway. [203]
Much of this 'crime' was traceable to drink. The island's first [682]
and only murder occurred a year or two ago.

17 or summer pastures for the tenants of Laxay and Harnish respectively, townships on the north
17 shores of the loch. In 1775, there were four tenants in Kershader, but their place of origin
162 is unknown. In 1805, five tenants are recorded, two of them from Uig; by 1826 there were 10
30 tenants. Thus the growth of population in Lewis during the second half of the eighteenth century
31 may well have been the major reason for the colonisation of one of the least agriculturally
161 attractive districts of the island.

From Figure 1, which shows most of the thirty-four occupied places south of Loch Shell about 1828, it is evident that colonisation had extended south into the mountainous area. The evictions, which commenced in Harris in 1816, may have increased the population already there as early as 1660, for many of these families came from Harris. The numerous shielings in South Park speak of a vigorous community. It is possible that South Park was more densely populated than the northern area up till 1800.

162 During the period 1818 to 1842, when the grazier, Donald Stewart, and his brothers had a lease
175 of South Park, most of these settlements were cleared (Fig 2): in addition, between 1838 and
34 1843, 68 tenants and sub-tenants in Shieldernish, Cleiter, Seafordthead, Lemreway, Oronsay,
311 Stornrabagh and Ingion were removed, in all about 436 people.[1] Some 27 families were sent to
161 Crossboat in North Lochs; others went to Tolsta and Tong in Stornoway parish, and some emigrated. The main body of those evicted settled in the township in North Park: Marivig in 1838 had 6 tenants; by 1850, 22 are recorded. Thus the present distribution of population crystallised about 1840 and by then the townships along the shore of Loch Erisort from Habost to Garyvard were well established. The Minch coast townships from Cromore to Gravir, first settled about 1800, were greatly expanded, and Park south of Gravir became a sheep grazing devoid of small tenantry.

175 In 1844, the Seaforth family, which had held Lewis for over two centuries, sold the island to
425 Sir James Matheson. The estate management soon wrought great changes in the landscape. Until
311 1850-52, the run-rig system prevailed, a system whereby a group of joint tenants, or a tacksman
341 and subtenants, cultivated in small patches what arable land had been reclaimed, each share
291 being periodically re-allocated. The crofts, or individually held land, date from 1850-52, when the land was lotted and most of the present crofts were formed at this period. The settlement pattern associated with run-rig was one of closely nucleated groups of houses but when run-rig was abolished, houses were built on the individual crofts.

175 In 1858, Lemreway was once again made available to crofters, most of whom came from the
162 fishing townships where population pressure was building up. After the disastrous potato famine
433 of 1846-7, and the final failure of the kelp industry from 1840 to 1844, the population of the Outer
731 Isles experienced great hardship. By the early 1850's, the lotting of the crofts and the rapid
229 development of the fishing industry brought a period of prosperity and the population grew rapidly
161 especially in the fishing townships of the Minch coast. The prosperity was such that numerous cottars built houses on the lotted crofts, and their stock-keeping on the common was tolerated because of the demand for fishing crews. About 1884, the system whereby each boat was tied to individual fish merchants, who advanced meal and provisions against the catch, was discontinued. When this system was replaced by the auctioning of catches, such was the privation in Lewis that the Royal Commission investigating the poverty of the population in 1888 found conditions almost as severe as those prevailing during the potato famine forty years earlier. It was during this period
• 685 that the Park Deer Raid occurred. Park became a Deer Forest in 1883 at the end of the grazier's lease. In 1886, as a demonstration of their grievances, a large number of crofters from the Park townships went into the Deer Forest and killed about 200 deer, cooking the meat in the open for all to see. Some were arrested but after trial acquitted.[2] A few good fishing seasons remedied this unhappy situation and the population of the fishing townships rose to a peak in 1911.

[115] 1 Evidence given to Royal Commission of Inquiry into Crofters and Cottars 1883. (Also known as the Napier Commission).

[113] 2 Report on the Conditions of the Cottar Population in the Lews, 1888.

[113] 3 Stornoway Gazette, 27.1.59.

857 was the first place he had ever worked where his men did not
have to lock up their tools at lunch time, and the windows
• 685 were not broken as fast as they went into the frames. Still
there is some theft.

As might be expected in any area of low per capita
income and seasonal employment, some people succumb to temp-
685 tation. Children, now and then, find the temptation of a
857 candy bar, a shiny pocket knife and other such items which
[131] shopkeepers may have on the counter too strong to resist. The
striking thing is that they always share their loot with
685 their schoolmates. Around New Years, when unemployment is
[273] at its height and a man needs his bottle to see in the New
Year in the traditional way, some men turn to theft. It
never takes the form of house burglarly or armed robbery. As
far as I know, the only case of armed robbery in which a
man from Skye was involved happened on a train in England.
His weapon was a rolling pin. The people at home were very
amused when he said he was taking the rolling pin to his
mother. The usual forms are to take a cow or sheep or to
685 loot a shop. No answer can be given to the question, how
824 much theft is there? The responses vary. "If you stood on
the corner and forgot who you were, they'd have you off in
five minutes, so they would," was one man's opinion. The
police say, "There's quite a bit of it." An old whiskey
smuggler told me, "There's no theft around Portree, but you're
not safe with five pence in your pocket in Skeabost." This
685 obviously is an expression of neighborhood loyalty. How,

• 685 then, is theft handled?

685 The police who are charged with the responsibility of
625 protecting and restoring the property of the local citizens are
faced with many difficulties. To begin with, the local people
will not always complain to them. Even if the help of the
police is sought, the person seeking it will not tell who
might have committed the crime. Even if he knows who is
guilty, he will not tell. The police must build their case
with care. If the facts are clear and straightforward, the
685 defender invariably confesses. One reason for this is the
692 fact that a confession means a local trial by a justice of
the peace rather than one before a sheriff. The defendant
can hope for sympathy, and he rests secure in his knowledge
that his sentence will be lighter because of statutory
685 limitations. If witnesses are required, the police must almost
625 put words in their mouths, and they are never free from the
possibility that a witness may change his story when he is
put on oath. One policeman said, "They hold their church
services up there," pointing to the court room, which was
being used by one sect while their church was being repaired,
"on the Sabbath from 10:30 until 2:00 and they're back again
at 6:30, but they tell the damnedest lies in the same room."

685 We are dealing with a dichotomy like that we noted in
183 the case of poaching. As far as I was able to determine,
those cases which come to court involve activities which do
not affect the norms of the group. There was for example, a
girl in Portree who stole the equivalent of some five or six
thousand dollars in cash and material over a period of two

685 183 years from her employer, an outside concern. She spent the money on clothes and holidays in London, and gave the material to her friends. She was brought to trial and given a sentence of six months. Upon her return, she was welcomed with open arms. The sympathy of the people was with her rather than with the organization with its main office in far off Edinburgh. As they said, "Poor Jane, she was a good girl." "Poor Jane" died not long after being released.

When traditional norms are involved the situation is handled quite differently. There was another young girl in the village who was guilty of a similar petty crime, on a smaller scale. During the last war, one of the local ministers organized a group of girls from the school hostel to make a door to door collection for a charity. One of the girls, a "foster child," had never been given any spending money. The temptation was too great. She spent her collection. To replace the money, she stole from a fellow hosteler. When she was found out, she was expelled from the hostel. The school year had two remaining weeks, at the end of which she was to graduate. Not one Sgiathanach, including her "people" and "friends" of her relatives, would have anything to do with her. As far as they were concerned she had exiled herself. She was an outcast.

685 627 Now let us turn to the crofting neighborhood to see how a crime is handled there. In most cases the neighborhood, as the fundamental locus of social control,[38] is able to deal with

[38] Cf. Murdock, op. cit., p. 84.

685 627 deviants without reccurse to the court. Indeed in Kilmuir they do so well that I never heard of any theft. Still, there has been some theft in Glendale. Shortly before each cattle sale the shepherds on the club farm found one or two cattle had disappeared. At first they thought the cattle might have gone over the cliff, but coincidence soon indicated they had a thief in their midst. One of the crofters, a retired Glasgow policeman, took a hand in discovering the guilty party. At length he found out who it was. At the annual meeting several weeks later, he stood up and told the shareholders exactly what he had seen. Here were the facts, in detail. He did not, however, name the guilty person. After he had finished, the crofters calmly asked him to retell several parts of his story, and then there was a period of silence. Finally, the man publicly confessed and expressed repentance. He was not cast out or handed over to the police -- I doubt if the police know of this even now. His humiliation was sufficient punishment.

682 [763] Among such crimes and the forms of social control which they prompt, however, murder is almost unknown, deterred by the tales which tell of being plagued by the man's ghost to the grave, and suicide is extremely rare, with only three cases in many, many years. Much more important, however, is the influence of social control over public behavior.

683 183 157 During my stay on Skye, I was struck by the lack of overt aggression. Aggression was an outstanding characteristic of the culture during the days of the clan, as the Crown ruefully

disequilibrium. I find it difficult to understand how any group could have a low rate of interaction without a loss of social control. Conversely, I feel that it is all but inconceivable that a group could continue to exercise social control without a high frequency of face to face contact. On Skye social control is a very potent factor. Gossip is a double edged weapon. It not only continues to enforce acceptance of the traditional norms by the Sgiathanach and, to a lesser extent, the newcomer but also can be used to punish the deviant. People have been known to leave the island after [167] a deviation which rendered them inacceptable. Gossip became a source of misery from which there was no escape other than flight. Exactly how powerful the dread of gossip is in Portree can be judged from the experience of my wife and myself. We have played chaperons to people much our superiors in age. Nor can one escape gossip by secrecy. The person who remains a mystery is rejected as a deviant. 626 182

The amount and influence of social control, of course, depends on the values of the Sgiathanach. Poaching is rather good sport, but the theft of stock is a serious offense. The one is the concern of the police and the justices of the peace; the other is a matter which the people prefer to handle themselves. It is quite wrong to burgle a home, but theft from a shop is a different matter, especially when the store is owned by a Lowland corporation. A similar dichotomy applies in the case of illicit sexual activities. A pattern has evolved to protect the unwed mother, but the married man or woman who violates the taboo is severely censured. Ideally, the offender is cast out by the community and his spouse, or 624 685 684 626

623 good. In response to this realisation, and encouraged too by
433 the growth and prosperity of the tweed industry, the Lewis Association sprang into being in 1942–43. The Association's aims are survey, planning and the initiation of action for the public welfare, economic, social and spiritual. Something should be said of each of these bodies in turn.

623 The membership of the Town Council, Harbour Trust and Stornoway Trust overlap, the Town being represented on both
633 Trusts. Indeed by the conditions of the Deed of Trust drawn
433 up by Leverhulme (in 1923–24), the Stornoway Trust must
361 include the Provost of the Burgh as its Chairman, together with Magistrates and Councillors. For some time past the Provosts and Councillors have been chosen from the more important
[369] business men of the town. Indeed as a result of the constitution of the Stornoway Trust, urban interests and outlooks might easily gain undue preponderance at the expense of rural needs. Nevertheless two members with strong rural ties were elected to the Trust in recent years.

In view of the growing burden of deficit, the Trust felt unable to frame a general policy, still less to carry it into action. To meet the deficit, the Trust sold portions of properties without reference to any general plan of town or country. Even after the Trust began to accumulate a favourable balance, hand-to-mouth decisions continued to be made, undirected by any clear policy. The most lamentable case occurred when a garage site was given to the chief Stornoway bus proprietor at a road junction near the western entrance to the town, close to the principal new housing schemes and opposite the main gate of Lews Castle and the Lady Lever Park. The palpable mistake in siting soon caused strong public criticism. The Trust repented, and sought to distrain the garage proprietor
[686] from extended use of the area. The parties went to law and the case was fought through the courts until, in a final decision reached in the House of Lords, the Trust lost and had to pay a bill of some £4000. The lesson of defeat in the court was severe, capped as it was by the equivalent of a fine of £4 or £5 from every family in the burgh. Coming at a time when the need

175 death of Sir James had left his widow in possession of the
423 estate, a lady with little training for its responsibilities.
668 In south-east Lewis, in November 1887, a body of landless men attempted to settle on the peninsula of Park, Loch Seaforth, after which some of the illegal settlers or raiders were tried and acquitted, and fourteen small crofts with outrun were provided. In January 1888, 300 men marched from Barvas to petition Lady Matheson that the sheep farm of Galson should be allotted to some of them at a fair valuation, as they could not live on their tiny plots. Lady Matheson refused to consider the petition until the arrears of rent due by Barvas tenants were paid. Less than a week after, sheep were driven off Aignish (Eye) and police, reinforced by marines and soldiers, arrested eleven men. Two days later, more sheep runs were invaded, fences de-
[701] molished, and sheep driven off. On January 20, 500 marines were ordered to Lewis (of whom 200 actually
[687] sailed). On February 2, the Aignish raiders were found guilty and sentenced to terms of from nine to fifteen months' imprisonment. After this the disturbances gradually passed away. Yet the seeds of trouble only lay dormant; they were to spring up a generation later, and again after the war of 1914–18.

175 In defending the Napier Commission's plan to recog-
632 nise the township, one may accept their definition of it as
427 a farm held by tenants, singly or in common. Yet it must be remembered that the word 'farm' had come to have a very elastic meaning. The joint farm-group was once the
[241] active group for labour in common; but if the 'township' included several joint-farms, as it generally had in the Island, its people formed a relatively 'passive' community. Members of the township enjoyed rights in common, and shared in duties of observance; but they had seldom to

n, is theft handled?

The police who are charged with the responsibility of tecting and restoring the property of the local citizens are ed with many difficulties. To begin with, the local people l not always complain to them. Even if the help of the ice is sought, the person seeking it will not tell who ht have committeed the crime. Even if he knows who is lty, he will not tell. The police must build their case h care. If the facts are clear and straightforward, the ender invariably confesses. One reason for this is the t that a confession means a local trial by a justice of peace rather than one before a sheriff. The defendant hope for sympathy, and he rests secure in his knowledge t his sentence will be lighter because of statutory itations. If witnesses are required, the police must almost words in their mouths, and they are never free from the sibility that a witness may change his story when he is on oath. One policeman said, "They hold their church vices up there," pointing to the court room, which was ng used by one sect while their church was being repaired, the Sabbath from 10:30 until 2:00 and they're back again 6:30, but they tell the damnedest lies in the same room."

We are dealing with a dichotomy like that we noted in case of poaching. As far as I was able to determine, se cases which come to court involve activities which do affect the norms of the group. There was for example, a l in Portree who stole the equivalent of some five or six usand dollars in cash and material over a period of two

CRIME

Serious crime is rare in the island, though it was not always so. 175* Some light on the life lived in Lewis nearly two centuries ago is 674 found in the old records of the Sheriff Court of Ross County. The 693 • first minute in the records concerns the appointment of George [217] Munro, Writer in Dingwall, as the first Sheriff Substitute 'within the Island of Lewis'. The date is 1788. Munro's commission empowered him to sit 'in the town of Stornoway or anywhere else he may find most eligible at the time within the said Island of Lewis and hold Sheriff courts there, judge, decide and determine in all causes civil and criminal coming before him.' In those days a case might be raised in any of the county courts. In 1788, a 175* regulation was made to save defenders from unnecessary trouble, 691 hardship and expense in travelling to relatively distant courts where actions were raised against them; litigants had, before Munro's appointment, been faced with a long and hazardous journey to either Dingwall or Tain on the Scottish mainland.

The old Court Records date from 1788 and 1826 and record 175* a number of interesting cases. Sheep-stealing was common, but 674 other forms of theft less so; this is indicated by the fact that much 217 of the Court Records are taken up with the minutiae of court 685 appointments. In a case concerning wrecking, Lloyd's of London are mentioned as being represented in Stornoway as early as 1824 if not earlier. The defendants were fined £4 for destroying the mast of a ship found by them in Lemreway, in Lochs.

In a report dated 1902, a survey of crimes (offences against 175* the person and offences against property) revealed that Lewis and 674 Stornoway had good characters; considering the population number compared with the large influx of strangers to Stornoway during the fishing season, local people emerge as more law-abiding than the national average. Miscellaneous petty crimes were numerous enough, however: minor assaults, breaches of the peace and disorderly conduct, occurring mainly in Stornoway. [273] Much of this 'crime' was traceable to drink. The island's first [682] and only murder occurred a year or two ago.

*175 which firmly held the folk. The Reformed Church of Scotland
799 did little in the later centuries in Lewis. The Fife Adventurers brought a clergyman with them, a Robert Durie, minister of Anstruther, but it can be taken that his ministrations were for the benefit of the Fifers. The aborigines were left to their own brand of faith, to find grace as and where they could.

The interregnum between the abolition of Romanism and the effective establishment of the Reformed Church in the islands was marked by a decline in the 'Christian-ness' of the people. Former teachings were forgotten, and it is no coincidence that in this interim period social anarchy was rife. The credit for restoring Christian principles to Lewis rests with a Farquhar MacRae, vicar of Gairloch, a young man of about thirty years of age whom Lord Kintail brought to Lewis in 1610. On his arrival he found it necessary to baptise all under forty years of age, and practically to reintroduce the institution of marriage. The first Earl of Seaforth was a religious man; he built St Lennan's church in Stornoway, now non-existent, on North Beach. In 1626 there were two ministers in Lewis (Barvas and Eye), and gradually the influence of religion was restored.

ISLAND REGIMENTS

*175 It is a natural enough step from wielding a sword in the protec-
701 tion of one's home island to bearing arms for King and Country. After the 'natives had been pacified' over a period of a century or so, the national call to arms came north across the Hebrid seas. The warlike character of the clans in the north of Scotland had not escaped the notice of those charged with keeping England and the later Britain busy with overseas interests which required some military backing to maintain and improve. Lewis, in particular, despite its small size, has over the past couple of centuries contributed much of great importance both in regiments and fighting men; its military history is a subject that has escaped many past writers on the island.

*175 There is possibly no British regiment more closely associated
704 with historic deeds of heroism than the Seaforths, the Seaforth
000 Highlanders. At the turn of the eighteenth and nineteenth

CROFTER INDUSTRIES

according to the amount of barilla (its great competitor, a carbon- 175*
ate of soda made from plant ashes) which found its way into the 824
British market. When the American war interfered with the im- 323
ports the kelp price was as high as £22 per ton. Prices began to 388
decline about 1810, and from 1822 successive reductions in duties 433
on salt and barilla resulted in the decline and demise of the kelp industry. As a consequence great distress appeared in those districts which had founded their whole economy on seaweed.

The weeds of most value to the industry, because they yielded
most salts, included *laminaria digitata*, *laminaria bulbosa*, *asco-* (37)
phyllum nodosum and *fucus serratus*. One ton of kelp yielded an average of 8 lb of iodine, with certain quantities of chloride of sodium, chloride of potassium, and carbonate of soda. When subjected to special treatment and distillation, 2-3 cwts of sulphate of ammonia, and several gallons of naphtha, paraffin oil, and volatile oil were also derived.

The fishing industry, discussed in the previous chapter, took 175*
over where the kelp-making industry left off and became another 228
king-pin in the island economy. By the end of the last century it seemed set fair for continuing prosperity. In 1900, harbours were (503)
being planned and built with State aid in Uig, at Carloway, Ness (653)
and Tarbert. Then 1914 came, and with it sweeping changes in
international trade. Island fishermen were left workless with (511)
wrecked and rotting fishing boats. In twenty years the number of Scotland's fishermen was halved; the remainder were all but ruined. The islanders' fate mirrored this pattern.

Yet another significant source of income for island families for 175*
almost 200 years came from the men in military service, who 701 •
either sent money home or returned home with their gratuities 434
and pay. In the wars of the last century many enlisted in the Highland regiments, the Navy and the Merchant Marine. Even today, the income from this external activity is not insignificant.

EIGHTEENTH-CENTURY ECONOMY

175*
Information and statistics about the economy of the island in the 113
middle of the eighteenth century are to be found in Walker's *Economical History of the Hebrides or Western Islands of Scotland* ; his MS is in the British Museum.

STORNOWAY

rocks about intrusions or dykes of more resistant crinanite. Second, 632
the better nature of the soil derived from the weatherings of the 133
sandstones and conglomerates has aided reclamation and cultivation.

In the long years of its existence the town has been a focal point 175*
of island history, fanning out to many corners of the world, where 632
it has been merged with the wider history of Britain, the Commonwealth and elsewhere. Detached as it was from the rest of (181)
Scotland by the Minch, Lewis often went its own way. In the 175*
reign of Queen Elizabeth, when England and Sweden plotted 32
against the Scottish crown, the emissaries of these countries met 648
in Stornoway. Later, in April 1719, a council of war was held in a room in Stornoway to plan the overthrow of the Hanoverian dynasty of Britain; included in the assembly were the Earl of Seaforth, the Marquis of Tulibardine, George Keith, the hereditary Earl Marshal of Scotland, and his younger brother James, who was to become the famous Marshal Keith. Prince Charles Edward, though not setting foot in the town, looked at its twinkling lights from across the Bay, at Arnish, while his pilot tried to obtain a boat to take the royal fugitive to France.

The harbour has seen many kinds of ships on its waters. In 504
the twenties, the *Metagama*, the *Marloch*, and the *Canada* came 501
to take away almost a generation of young Lewis folk to the new 632
lands across the seas, because their own island could not support (167)
them. The *Iolaire* sank within sight and sound of the harbour mouth and dragged about 200 Lewismen with her into an island memory. The *Cervona*, of Dundee, dropped her anchor just by Arnish lighthouse in July 1904, carrying survivors from the emigrant ship *Norge*, sunk at Rockall with appalling loss of life. The *Victoria and Albert* visited Stornoway in September 1902, (643)
the first visit to the town by a reigning monarch. That was a great 701 •
day, the result of a letter from Provost Anderson of Stornoway in which he pointed out to His Majesty, King Edward, that with less than 30,000 inhabitants Lewis had 2,300 men in the Royal Naval Reserve, trained at the local Battery, the largest in Britain. There were also 1,100 men in the Seaforth & Cameron Militia, all of whom volunteered for foreign service in 1899, and 900 of whom did garrison duty in Egypt. Between 300 and 400 Lewis-

STORNOWAY

• 701 men served in the various regiments at the front in South Africa, and over 300 in the Royal Navy.

*175 In 1796 there were sixty-seven slated inhabited houses in the
632 burgh, twenty-six of which had been built since 1784. Before this
(362) date most of the houses followed the constructional pattern of those found in rural Lewis. In 1838,

> Stornoway was, within the last twenty years, only a small fishing village, but from the spirited and patriotic exertions of Lord Seaforth, the proprietor, and the grant of irredeemable feus for building, it has become a place of considerable importance as a fishing station. It has a post office; and a packet sails regularly once a week with mail and passengers. No place in the North of Scotland, and in an insulated situation also, has made more rapid strides at improvement, both in a domestic and commercial point of view, than Stornoway.

(205)
(505)

COMMUNICATIONS

*175 Mention of the sailing packet indicates the tedious manner in
205 which mails came to the town for subsequent distribution in the
132 island. Letters went by mailcoach north to Dingwall, thence by
505 mail-gig west to Achnasheen. Because there was no road from
(489) Achnasheen to Poolewe, about thirty miles away, they had to be carried on horseback. The weekly sailing packet then picked up the bags, for which cargo the owners were paid £150 per annum. A letter from London to Stornoway cost 1s 5½d; the smallest enclosure made it double that amount. The mail-packet was often held up by bad weather. It was a wind-blown sailing ship that brought Stornoway the result of the Battle of Trafalgar and the death of Nelson, an event in which a number of Lewismen also took part and died; in St Columba's churchyard at Eye there can still be seen a Trafalgar officer's gravestone. A fortnight after this news arrived, the packet from Poolewe brought its stale message.

*175 In 1844 seventy boats, ranging from 15 to 150 tons, were work-
439 ing out from Stornoway. The *Gazetteer* for Scotland for that year
632 says, 'The grand trade of the place consists in the exchange of
(501) the produce of the fisheries and the kelp shores, for British manufactured goods and foreign produce.'

COMMUNITY FROM PAST TO PRESENT PT. II

175 Such are the mingled traditions of the Highland
• 701 regiments which served in so many wars, for right or for
(614) wrong. Of all the desperate alternatives before the Gael —famine at home, semi-slavery in the factory towns, death-stricken sea voyages, pioneering in the forested hills of Eastern North America, or war, it was this last which offered the men not only the trappings and glamour of clanship but continuing fellowship. In the regiment a Gael was among friends. Modern civilisation offered him no other life promising social continuity and the hope of a return to croft and township, " if death should spare him ".

175 It would be wrong to suggest that only the gentry could
701 rise to command, for as English and literacy were acquired,
565 the sons of small tenants received commissions. British
554 military discipline has too often driven a breach between
(703) the men and the non-commissioned officers, spoiling the latter's fitness for higher leadership. But among Highlanders " the bond of faith and affection " led naturally to commissioned rank. For generations, historic precedent
(198) was carried on in living tradition.[1] Given education, the
(871) sons of Island crofters have risen to command on land and sea ; but education came late.

CONCLUSION

175 Thus in the ' little commonwealths ' of the farm-hamlets
621 grouped within the township, personal right and equal
631 shares were balanced by common duty, summed up in the
577 principle of duty-right or croft-
614

[1] The tradition of leadership calls for review but here one can only cite examples. For instance, descendants of his neighbours in Strath Spey told me that my paternal grandfather, as a penniless lad speaking Gaelic and English (in which he was literate), enlisted in the Black Watch about 1820. He was known as a N.C.O. for his power of quiet, reasoning discipline. He thrice refused the offer of a commission, which was then given to others, of whom more than one rose to high command in the battalion.

175 death of Sir James had left his widow in possession of the
423 estate, a lady with little training for its responsibilities.
668 In south-east Lewis, in November 1887, a body of landless men attempted to settle on the peninsula of Park, Loch Seaforth, after which some of the illegal settlers or raiders were tried and acquitted, and fourteen small crofts with outrun were provided. In January 1888, 300 men marched from Barvas to petition Lady Matheson that the sheep farm of Galson should be allotted to some of them at a fair valuation, as they could not live on their tiny plots. Lady Matheson refused to consider the petition until the arrears of rent due by Barvas tenants were paid. Less than a week after, sheep were driven off Aignish (Eye) and police, reinforced by marines and soldiers, arrested eleven men. Two days later, more sheep runs were invaded, fences demolished, and sheep driven off. On January 20, 500
• [701] marines were ordered to Lewis (of whom 200 actually
[687] sailed). On February 2, the Aignish raiders were found guilty and sentenced to terms of from nine to fifteen months' imprisonment. After this the disturbances gradually passed away. Yet the seeds of trouble only lay dormant; they were to spring up a generation later, and again after the war of 1914–18.

175 In defending the Napier Commission's plan to recog-
632 nise the township, one may accept their definition of it as
427 a farm held by tenants, singly or in common. Yet it must be remembered that the word 'farm' had come to have a
[241] very elastic meaning. The joint farm-group was once the active group for labour in common; but if the 'township' included several joint-farms, as it generally had in the Island, its people formed a relatively 'passive' community. Members of the township enjoyed rights in common, and shared in duties of observance; but they had seldom to

175 rural Islanders throughout the nineteenth century and even
182 today.
197

From 1887 the State made efforts to improve the
175 crofters' lot. Crofters' claims to stake shares upon the only
654 available reclaimed land in the Island, that of a few farms,
241 had been refused in the 'eighties, but came to be granted,
427 in principle and in fact, after 1900. During the war of 1914–18 the Government reaffirmed its promise to divide sheep farms into crofts for men returning from the Services, and the Land Settlement Act became law in 1919. Yet in spite of tentative experiments and schemes, a determined effort to see the Island possibilities and face its problems, as a whole, still remained to be made in the twentieth century.

175 When war broke out in 1914 over 5000 men left Lewis
161 to join the Services, and corresponding numbers left from
72 Harris. Others, too, served in the Merchant Marine, ex-
• 701 posed to U-boat warfare. From the first months of the war, Lewismen in the Seaforth Highlanders, and men from Harris in the Camerons, fought in the Highland Division as shock troops in the attacks which cost the Division the highest casualties of any in the British Army. The Lovat Scouts, the Mountain Battery, the Garrison Artillery and other units, also enrolled their men, and suffered loss.
175 The last blow to the Island came after anxiety had ceased.
161 Early in 1919 the transport *Iolaire* struck a rock and sank
731 at the entrance to Stornoway harbour; and 200 men who had withstood dangers and hardships during four years of war went down in the dark of a winter's night, almost within call of their waiting relatives massed on the pier to welcome them.

178 so creating a small leak in the purse and in the mind,
209 leaving both a little emptier, week by week. Surveys made
[525] by teacher-members of the Educational Institute of Scot-
[829] land describe the effects on listeners in Highland parishes as pernicious, in the main. The reports of the B.B.C., on the other hand, emphasise their cultural endeavours, and the lightening of house-work and of rural monotony or solitude. Every effort is needed to aid a happy selection in home and neighbourhood.

72 Experiences undergone in war were of very differing
• 701 types. Many men spent the war years in the Navy, without contact with decent town life, or others in the Merchant Marine. Of combatants in the land forces, the Territorials of the original 51st Highland Division experienced a few months of relative inactivity in France, then of a brief but bitter campaign, followed by long years in prison camps, while other soldiers underwent prolonged training in Britain, followed by severe fighting for long periods, far afield. Lastly, a limited number of men served in engineering or other works of war-time industry, though labouring work, at high wages, kept many of the older men employed at
[462] home. Of the women called up for service, some were posted to the Forces, some to the Land Army, and some were
[162] sent to factories. The greater opportunities for women to earn a living wage away from the Island tend to equalise the ratio of the sexes.

177 An experience new to the Western Isles came with the
[464] establishment of Air Bases. Not only did their construction provide high wages for labouring for the older resident crofters, brought daily to the Bases by bus from their townships, but for the first time a heterogeneous mass of men from every part of urban Britain was put down at the doors of these quiet communities—at a time when

one such causing legal history. The chief garage proprietor 175*
e town applied to use for his business a site he had purchased 632
road junction near the western end of the town, close to the 429
cipal new housing schemes and opposite the main gate lead- 175*
into the Castle grounds. It was a mistake in planning, and 632
ic disapproval began to make itself felt. The Trust, in an 429
t to redress the situation, sought to distrain the garage pro- 691
tor from extended use of the area. The parties went to law,
the case was fought through the courts until, in the House
ords, the Trust finally lost and had to pay a bill of some
000, equivalent to a fine of £4 to £5 from every family in
burgh. The Trust drew its lesson, and since has formulated a
e alert and constructive policy.

he town is well served by its shopping centre, with multiple 632
es jostling for custom with smaller private business concerns. 366
sperity for all, however, depends on the well-being of the Harris
eed industry. If there are recessions, as there have been in the
, the tills rattle spasmodically. Also standing to suffer are others [365]
as the bus companies (who provide the efficient town ser-
s and link up Stornoway with the rural areas), the builders
the haulage contractors. In the ever-present climate of un- [464]
oloyment it is the policy of the mills to employ male labour, [462]
oite the fact that women would be cheaper. The mills, run
natives or by Lewis-born incomers of the second and third
eration, realise a social obligation in recognising that in Lewis
strong tradition is that the man should be the head of the
ily in every sense. The mills also carry a proportion of surplus [466]
our to offset the unpredictability of those workers who, with
fts to look after, occasionally have to take a day off 'at the
ts' or some such activity. This is another of the island's dis-
tive traditions.

On Cromwell Street is the shop of James MacKenzie & Sons 366
nited, dealing in hardware, furniture and china. Nothing un- 632
al in that, at first sight: yet it is another unique aspect of life 747
Lewis, being conducted as a charity for the benefit of, among
ers, the aged and infirm persons of Stornoway. The business
s established in 1830, on its present site. In 1964, the then [429]
ncipal shareholder presented the building and the business as a

public health and general administration, and has offices in Stornoway. Stornoway itself is largely looked after by a Town Council which deals with the property of the burgh, makes and administers byelaws and imposes burgh rates. The police are under County administration, each burgh paying an annual contribution for their services; the law is administered by a sheriff-principal and two sheriff-substitutes, one of whom holds court in Stornoway. Each parish has a local committee of management.

The political history of the Western Isles, and no less Harris and Lewis, reflects the agrarian troubles. Before 1917, when Lewis was a Parliamentary part of Ross & Cromarty, and Harris part of Inverness, the electorate was both Liberal and Radical; traditionally there has been a significant anti-Tory vote. In 1917, the Boundary Commission for Scotland set up the Parliamentary County of Inverness and Ross & Cromarty, with three divisions: Inverness, Ross & Cromarty and the Western Isles. In 1918 the Western Isles voted for the first time as a Parliamentary constituency of its own, and showed a predominant Liberal sympathy; the returned candidate was also standing for the reform of the Land Law.

In the General Election of 1923 a Liberal candidate was again returned, with a repeat performance in 1929. In the latter election however, the Socialist came in second place. In the crisis or scare election of 1931, the Labour Party did not contest the seat, which was won by a Liberal-National candidate opposed by a full-blooded Conservative. In 1935 the Labour candidate, a native of Lewis, was returned with a 1,345 majority. This Member retained his seat through all subsequent elections losing it only in 1970 to a member of the Scottish National Party, who became a lone Home Ruler in the House. Labour, Conservative and Scottish National parties are represented in the constituency, with a small Liberal showing. The revision of local authorities has given virtual autonomy to the Western Isles.

PUBLIC SERVICES

The lack of adequate social and public services has been cited by some authorities as a factor encouraging people to leave the

231 Hacklete, Kirkibost and Tobson have by far the largest total holdings of stock but are
311 eclipsed in regard to percentage of soum actually held by Breaclete, Croir, and all the
632 Bernera Shore townships. In fact the average percentage soum held is 66% on the Island as against 114% on the Shore. If efficiency is interpreted in terms of stock rearing therefore, Tobson is less than 50% efficient, Hacklete and Kirkibost 50% to 75% Breaclete Linshader and Lundale 75 to 100%, and the rest 100% to 175% efficient, the average falling at 75%.

It is also interesting to remark the area of common grazing per cow-unit actually held. This shows that, in effect, the Bernera Island townships, as might be expected from their use of one main common grazing, have much the same amount of land per beast The Bernera Shore townships apparently need rather larger areas of land per cow-unit; the excessively large area shown for Linshader indicates understocking.

[427] Figure 29 summarises the incidence of soums and actual stock carried. It will be seen that, although there are some crofts with soums of under five and over fifteen cow-units, the majority lie between those limits with a marked peak in the 7.5 to 10 cow-unit class. The largest soums tend to be under-utilised. Figure 28 shows the percentage of the soum held. Almost a quarter of the working units have less than 50% of their soum and must therefore be considered as inefficient in their chief function of stock raising, about one third have 50 - 100% and rather less than 1/3 have over 100%

The incidence from township to township varies (table 25) but generally the Bernera Shore townships have more uniform individual soums than the older and larger Island townships, though the range of size of stock holdings and consequently of soums held is more comparable. Table 25 shows the average soum per croft or working unit: Breaclete and Croir are similar with only just over half the average for the rest of Bernera Island. None of the Bernera Shore townships have soums as large as the bigger Island ones, and one of them, Earshader has no more than Breaclete or Croir. Kirkibost and Tobson stand out as far the most generously treated townships, but is this justified in practice?

Expressed in terms of cow units, (table 25) the total soums reveal that, on Bernera Island, only Croir is really efficient with just over 100% of its soum: Breaclete, Hacklete and Kirkbost are satisfactory - and no more - with 60 - 80%; but Tobson has only 45% of its soum. This is a very much poorer showing than that for the Bernera Shore townships, only one of which drops much below 100%. Therefore on the Shore the soums, though smaller, are better taken up than on the Island. Further it is clear that, of the individual working units on Bernera Island, none of those of Croir are unsatisfactory, three out of sixteen at Breaclete are not satisfactory, five out of twenty at Hacklete, eight out of twenty-eight at Kirkibost and eleven out of nineteen at Tobson, whereas on Bernera Shore there are only two unsatisfactory units - at Linshader - one of which is presently vacant with a dispute over the tenancy.

But so far, only the total soum has been considered: in fact it is necessary to consider
231 the elements of that soum, for in order to maintain the pasture one must have a stock
233 suitably balanced as between cattle and sheep. When the soums were originally calcu-
311 lated this was borne in mind and were every soum fully occupied in the proportions originally planned, the balance of grazing would presumably be satisfactory. Table 26 shows the stock equivalents in sheep units. In Croir the soum would indicate a marked preponderance of cattle +, in Linshader (with its extensive hill lands) of sheep; otherwise there is a rough balance in the soumings between large and small hooved beasts.
[656] Occasionally there are special permissive or restrictive clauses in the regulations. For instance, on Breaclete township common grazing, "...a landholder...shall be entitled to graze thereon, free of charge, during summer and autumn, two hoggs for every pound sterling of rent, for replacing the cast ewes...". Similarly, in Linshader horses are not allowed on a fenced area of 800 acres, and on Little Bernera horses are specifically disallowed. But generally the various classes of stock have clear equivalents which are freely interchangeable. How does this work in practice?

[698] + Editorial Note: this was probably because, when the Land Court determined the soum, Croir had no share in Bernera Sheilings. This now calls for adjustment, which should be made when the Crofters Commission re-enact the local Grazing Regulations.

include all small tenants in Scotland. The landlords have lost their right to evict a crofter for breach of conditions. Since 1911 only the Land Court, which replaced the Crofters Commission, can remove a tenant who is guilty of bad husbandry. Moreover, such action can only be taken after the general circumstances of the crofter and his need of the croft for a home have been considered. To date, no Highland crofter has been removed. In fact, security of tenure has been carried to the extreme that the individual no longer has to reside in Scotland much less on his croft. Although this change is now regarded as inadvertent, the courts have ruled in favor of the small tenant. The only remaining functions of the landlord in estate management are to collect his rents and pay compensation should a tenant desire to leave. Both the rents and the compensation are determined by the Land Court.

Accompanying the integration of the Island with the national scene, politically and economically, were extensions of social services. Prior to 1872 education was the responsibility of the church, charitable agencies, and, especially in the Highlands, the local proprietors and their financially secure tenantry.[83] Although the parish school system was national, the administration of each parochial school was local. The ideal of a school in each parish was neither adequate nor easily obtainable. The result was a few regularly taught schools.[84]

Leadership traits 157

175 228 464 [551] a crew member. Another family is called "cook," the first job which a novice had to assume when he joined the crew of a fishing boat. One of the last men to go to the east-coast fishing is about 60 now. The men [221] [241] [434] came back from the fishing in time to bring in the oats, barley and potatoes, and the money was used for rent and the purchase of various foodstuffs and other goods. [353] They usually brought enough rolls of wallpaper to cover the stone-walled or wood-lined tigh dubh (black house) [434] for another year. Twenty pounds were good wages for a season. While the men were away at the fishing, the [452] [571] remaining members of the family lived on credit from the local shops, and depended on the good will of their neighbors.

175 701 706 505 Many men joined the armed services, and were especially sought after by the Navy and the Merchant Service. In 1900, there were 2,500 Lewismen in the Naval Reserve.

175 228 484 [571] [435] Around the turn of the century, until the first world war and the growth of the weaving industry, the girls used to "follow the fishing." "Everyone came to the boat to see you off. You could go all the way to Aberdeen for 12/6 on a special fish-worker ticket." The girls went from the south of England to Shetland in the far north.

175 464 166 [357] domestic servants among the well-to-do families in Glasgow and other cities on the mainland (see Appendix A).

175 464 166 462 [288] When the weaving started, some men settled at home permanently, but many continued to come and go between the sea and the loom. In 1931, the ratio of men to women in Lewis and Harris was 100:114. The men came home for temporary jobs, such as the construction of road [522] or houses. Jokes are told of the common practice of [706] sending for an extension of leave. The men found it easy to join the Naval Reserve because of their fishing experience; and it brought them a retainer's fee and expense-paid trips to places off the island for several weeks of training during the year. But when the wars cam [701] the loss of men to the Navy and to the Merchant Service was heavy.

B. The Land

175 427 The number of arrears in rent in the Barvas rent ledger at the turn of the century indicates the small amount of money in circulation at the time. Between 1899 and 1914, several crofters paid part of their rent "by work," and six had some of their stock "uplifted by decree." For example, a Widow Catherine lost "one red

59 "I couldn't get back my health, but I
62 didn't want to go home, because the houses weren't so good there as on the mainland. I went to work on a farm. It was for the cream I was going. I was so weak I couldn't lift the milk pails for a week, but I got on so well with the old lady that the farmer let me stay in and keep her company. The other girls were always running off to dances and out late at night, but I didn't care about that. I stayed in with her, and got so pally with her that the others were jealous."

66 She had been coming back every winter to be with her mother, and during the war returned to nurse her until she died. Anna then returned to Glasgow, where she married a widower from the mainland. When he died a few years later, she returned permanently to the island. Although
94 she had not belonged to the Free Church while living in Glasgow, she became a member when she settled permanently in Shawbost.

The Baker

"The Baker" was 22 when the first world war broke
702 out. Many Shawbost villagers joined branches of the armed services at that time. The Baker joined the army, and two months later was wounded in one lung. Tough as salted dogfish and solid as Lewisian gneiss at the age of 78, he pounds his chest and shows visitors his scar. After

ISLAND REGIMENTS

At the turn of the eighteenth and nineteenth centuries, many villages in the north of Scotland suffered from the attentions of ship-borne press-gangs, who swooped down on unsuspecting communities and whisked away the best of the males they could find. Lewis did not escape this enforced service. Local traditions have much to say about compulsion, though not by press-gang. Young men were pressed into service through personal influence, by bribe or by blackmail. However, in the case of the Seaforth Highlanders, the raising of recruits was by appeal to the men of the clan and the clan adherents. 175* 702

The first battalion of Seaforths was raised in December 1777 by Kenneth, the sixth Earl of Seaforth. By far the greater number of soldiers were from the MacKenzie estates on the mainland: from Applecross, Kintail, and Lochalsh. Few Lewismen served among the soldiers of Coinneach Og, as the Earl was called. The real beginning of the Seaforth Regiment was in March 1793, when a Letter of Service was granted to Lord Seaforth. The chief himself personally toured his estates for recruits, to offer the King's Shilling. His visit to Lewis was at first regarded with some suspicion; he even met some active opposition in Uig, which was overcome by his explanation of the country's need to counteract the widespread effects of the high tide of the social revolution begun in France. In 1804, another battalion was raised; some 200 Lewismen volunteered, a fact recounted in tradition with great pride. The history of the regiment in those early formative years is detailed with battles in many parts of the world: Nimogen in Holland, Quiberon Bay in Brittany, Cape Town, India (Assaye is remembered in a Stornoway street name), Java, Messina, and so on. 175* 702 704 [726] [648]

In Egypt, many a Lewis lad found himself face to face with the Turks, and subsequently in a slave market in Cairo. One of the old soldiers of Uig has left traditions of his seven years' experience as a prisoner of the Turks. Some youths who had volunteered for service early in life were so ignorant of their island's geography that they found themselves in Stornoway on their return looking around for a guide to show them the way across the moors to their long-left homes. The hot, white sun of Egypt brought loss of sight to many soldiers, who returned to a Lewis which they could never see again. Some who were blinded at 175* 704 648 [727]

HISTORY

Some who were blinded at Rosetta were granted a pension of about £30 per annum, with an allowance of £12 per annum for a guide to lead them about.

On 21 December 1859, 'a public meeting of the Inhabitants of Stornoway was held in the Mason Hall to consider the propriety of organising an Artillery Volunteer Corps for the defence of this Island'. About a month later, Sir James Matheson, Baronet of Achany, and Member of Parliament for the Lews, was asked to tender to Her Majesty the services of eighty-one gentlemen who wished to form the corps. The unit eventually formed was the 1st Company in the County of Ross and held the 44th place in the Artillery Volunteer Force of Great Britain. After many ups and downs in its history, this corps exists today as the Ross Battery.

For more than half a century the activities of the corps were peaceful. The only highlight was its participation in the famous Wet Review at Edinburgh, on the occasion of Queen Victoria's Jubilee. Matching the rain which lashed down in sheets from the sky, a sewer burst open in the centre of the parade ground. Company after company divided ranks as they approached the disagreeable fountain in their path. But Lt John N. Anderson, later Provost of Stornoway, gave the order 'Right into it!' Amid a great roaring of cheers from the watching crowds, the Stornoway Volunteers marched straight on in perfect order. It was perhaps prophetic of the harder tests to come.

The unit was one of the Royal Garrison Artillery in 1908 when it was reformed as the Ross Mountain Battery of the 4th Highland (Mountain) Brigade. Later, as a regular division, the battery was the first field artillery to be landed at Cape Helles, in the Gallipoli campaign. At Suvla Bay, it lost 50 per cent of its strength in two days. At Ismailia it mustered again to fight against the Turks in the Canal area, but it was not allowed to remain to assist in driving back the enemy. Instead, it was moved to Salonika to help the mountain batteries, now much depleted by malaria. The final move was to Bulgaria, where the Lewismen were the first gunners, if not the first British troops, to enter that country.

Before, during, and for a time after, the first world war, the Ross Battery had close ties with the Nicolson Institute. To quote from a past Rector of the school:

ISLAND REGIMENTS

For a number of years it had been the practice for a considerable proportion of the older schoolboys during their attendance at the Secondary School to put in their training with the local body of Territorials—the Ross Mountain Battery. At the School Prize-giving of 1914, these boys attended in their uniform to be ready to go off the same evening by steamer en route for the annual training camp. Before the School re-opened, the Territorial Force was mobilised, and for some of these lads there intervened four long years of toil, of fighting, and of sickness overseas, before they ever saw their homes again.

Later (1938), the unit became the 203rd (Ross) Battery of the 51st (West Highland) Anti-tank Regiment. It was whilst fighting as an anti-tank battery that, with other units of the 51st Division, the men were taken prisoner at St Valery in 1940. Today, after more changes, the battery is the oldest in 540 LAA Regt RA, TA (the Lovat Scouts). In 1960 the Ross Battery received the Freedom of the Burgh of Stornoway in recognition of a century of voluntary service to the community and the nation.

LAND USE AND CROFTING

The history of land use and the crofting system in the Highlands and Islands (see Chapter 5) is full of difficulties. In the older days of the clan system, before the rot set in, though the clan members belonged to the chief, they also belonged to the land and the land to them. In such a climate, the agricultural system, for it was such then, was in a reasonably healthy state; the land was worked to the full. Good land was available for the support of the clan, and as often as not in good years there was ample produce, crops, and livestock, to send south to well-paying markets. That fertile lands abounded is indicated by the reports of visitors in various centuries. But times changed. The increase in population after the breakdown of the clan system by statutory legislation, and the policy of population placement carried out with a rigorous enthusiasm, planted seeds of discontent—in particular a hunger for land. The land was in any case becoming ever more inadequate to support those already on it.

The story of the agrarian troubles in the Highlands area is well

some 200 men enlisted at Perth. When, shortly after they had been embodied, the men were quartered in Leith prior to embarkation, complaints arose about infringement of engagements. "The regiment refused to embark, and marching out of Leith, with pipes playing and two plaids fixed on poles instead of colours, took a position on Arthur's Seat at Dunsappie, of which they kept possession for several days." The inhabitants of Edinburgh, who had encouraged them, supplied them with provisions and ammunition. "After much negotiation, a proper understanding was brought about . . . and they marched down the hill . . . with pipes playing and with the Earls of Seaforth and Dunmore, and General Skene, at their head. They entered Leith, and went on board the transports with the greatest readiness. . . ." None of the men were tried or confined. Seaforth, as their colonel, set out with them to India—although his fortune and title would have allowed him ease at home, or the purchase of higher military rank. His death on the long voyage contributed to the men's "prostration of mind which made them succumb more easily to the effects of disease", scurvy, of which 230 out of 1100 fit men died before reaching Madras, and others soon after. As we have told, the survivors fought with disciplined courage.

To a chief, recruitment was financially important, for he, and not only the recruits, received a handsome bounty. Simultaneously it provided him with a commission without the cost of purchase—previous training and promotion being considered unnecessary. The clansmen knew these facts of bounty and command, and generally responded to an appeal. When Stewart of Garth was recruiting for the Ross-shire Regiment, a band of young Lewismen joined it for half the bounty offered by a Lowland regiment!

The families of the young men might be willing to encourage enlistment. But they pled or bargained for an assurance that after service was over their sons should be returned to their homes and have land on which to settle down. The receipt of the bounty and their savings would help the men to pay rent later.

Passive resistance was offered at times, however, as when the Macleod Highlanders were raised in 1757, only a decade after the 'Forty-five. An Island friend has told me of a family tradition, that, as a young man at that time, his own great-grandfather was concealed to escape conscription. And the press gang was busy in Stornoway when the *Old Statistical Account* was written. Protest had usually to be made in secrecy or silence; but a revolt was organised by Stornoway men in 1793.[1] And the voice of one unwilling conscript has come down to us in a song, well known in the Isles (though little known in English), with the refrain—*Och ho ro*, brown lad, so bonnie ('*ille dhuinn*). Although it bears no sign of Jacobitism, it begins, "My grief to be wearing King George's red clothing!" It continues, "The short-coated sailors bore us to Holland. It was a Saturday evening when we fought; and many a wife was widowed ere dawn broke on the Lord's Day, their husbands ta'en, whom gold can never restore, stretched out among the rushes, blood pouring over their shoulders. . . .

'O'er the hills bear my greeting to Mull of the mountains;
Where cuckoos are cooing, on the braes before Beltane.'

'Bear my greeting to my mother, who nurtured me, to my sister who weeps for me, and to my sweetheart; I'll be home if death spares me."[2]

Lewis and Harris

landlords to improve passenger regulations at that time.

Wars brought enlistment in the Highland regiments, the Navy and Merchant Marine. Owing to migrations of all kinds, males came to be outnumbered by females, then as later (100 males to 114 females, 1931).[1] In Lewis in 1795 the proportion was 100 to 111, and in Harris 100 to 124. From this period onwards the 'export of men' continued, modified by the reserve for war. Men were trained for the Naval Reserve and Militia; and in 1900 for instance 800 men were training at Fort George and 2500 sailors were in the Reserve. The maintenance of a reserve for the Navy was one of the strongest pleas for the framing of the Crofters Act.

A new resource, important to the Islanders after 1750, was kelp-making, the cutting and burning of seaweed upon the shore, for use in the manufacture of alkali in the glass and soap industries. From 1770 onwards the price rose, heightened first by an import duty, then by the Napoleonic Wars. Estimating from the high prices, averaging over £10 per ton from 1800 to 1823, Sir John Sinclair put the value of the annual produce (20,000 tons) at £200,000. "It may appear surprising", he remarks, "how that sum could be of such importance to 80,000 people"; but he goes on to point out that this gave the additional cash needed to supplement their subsistence. But even when Sinclair wrote in 1825, the industry was in peril. Failure and loss occurred almost immediately after, with disastrous effect.

It is complained in the *New Statistical Account* that owing to the summer-time work of kelp-making up to 1830, the people could give little attention to the crofts, so that their extension must almost have ceased. Nor could

[1] In 1951 the ratio in Lewis was 100 males to 112 females, and in Harris, 100 to 110.

6: Ducey E-4,5 (1953-1954) 1956 ES10 Highland Scots ES10
Skye

We have already seen where some of the crofters sons and daughters have gone - all over the world. It may be of interest to indicate the fields which are attracting the present generation. In Scotland children graduate from school at fifteen or, if they have qualified for the university training course, at eighteen. Let us see what happens to those who leave school at fifteen. A reasonable number of the boys go back to the croft, but the school teachers usually try to guide the best students into other fields. Since there is a very limited choice of skilled or semi-skilled jobs on the island, this means they will go to a city in southern Scotland and find an apprenticeship, either on their own initiative or under the Ministry of Labor training program. The favorite trades are mechanics, electricians, and carpenters. A few go to sea, especially as stewards and wireless operators. Every now and then a boy will become a male nurse, a police cadet, or an office worker. Hotel service, laboring, and especially, truck driving, at home or away, attracts many. Girls leaving school at fifteen often go back to the croft for a year or two and then move away. The best girl students either go into office work or take advantage of the Ministry of Labor apprenticeship program, especially in dressmaking, hairdressing, and domestic science. Some go to pre-nursing schools. Others find employment in stores or hotels on Skye or in Lowland Scotland.

At eighteen it is very difficult to keep a boy at home. Those who have remained and have not taken a university course

6: Ducey E-4,5 (1953-1954) 1956 ES10 Highland Scots ES10
Skye

will be called into National Service. It has become very hard to obtain a deferment. One reason is that the government believes too many have been dodging their obligation. There was a man, for example, who applied for a deferment for his son on the ground that he was needed on the croft. Ordinarily the boy might have been deferred, but not when the officer found his father was collecting unemployment compensation. The most popular field for girls at eighteen is nursing. One family has sent three girls through nursing school. Another popular profession, for both boys and girls, is teaching. The boys who go to university take their degrees in pure science, medicine, and agriculture.

There is an interesting contrast here between the Highlands and the rest of Great Britain, especially England. In England few working men consider sending their children on to college. On Skye, the majority of those who go to the university from the local schools are from poor homes. The landed gentry send their children to preparatory schools in England, and most of the doctors send their sons to private schools. Somehow the boys and girls from the crofts scrape through. An additional fact I might mention is that despite the government's interest in maintaining the Highland population because, among other reasons, it is a reservoir for the armed forces, very few boys and even fewer girls voluntarily select a military career. Indeed, few men have seen service with the Army or Navy. The previously mentioned sample of the marital status of males also revealed that only 57 of the 270 men have seen active service in units other than the Territorial Army or Home Guard. This

6: Ducey E-4,5 (1953-1954) 1956 ES10 Highland Scots ES10
Skye

is, perhaps, one reason for the government's attitude regarding deferments.

Since the majority of the people converse among themselves in the Gaelic, I should like to conclude this study of the crofting family with a brief discussion of status in Gaelic terminology. The Gaelic language reveals the significance of several aspects of the relationship of family members and clearly marks the changing status of the individual. At birth both boys and girls are leanabh. If the parents are feeling protective towards the child, at time of illness or some mishap, they use this term until the age of three or four, but, normally, at two the children are called clann. Specifically, a small boy is balach, and a small girl is caileag. At puberty, when the clann and their associates become conscious of the physical changes accompanying adolescence, a boy becomes gille, and a girl, nighean. With this change, the boy puts on his first pair of long trousers, and the girl receives her first long skirt. Gille and nighean apply until marriage. A brother and sister, however, often use them throughout life, as synonyms for bràthair (brother) and piuthar (sister). There is one additional fact which we should note at this time. Nighean means both girl and daughter. Boys, on the other hand, are distinguished. Any boy is gille, but a son is mac. Only at marriage does the gille become a duine, a man, and the nighean, a bean, a woman. Just as the girl and daughter are not distinguished, neither are woman and wife. Bean means both. A man is not only a duine; he is also a fear, a husband. In the Gaelic, many people who have all the physiological

tenure function to protect the individual from potential 178
uses by a landlord where customary usages once fulfilled the 182
ed. Moreover, even though the tenure of the cultivated soil 423
ants all the rights of a landholder, including the rights 427
bequeath the house and land to a member of one's family, 657
r more than half the year it is used communally.

The Sgiathanach has never adjusted sufficiently to become 178
specialist, not even a specialized grazier. For him the 423
nd has always had a more fundamental value than merely being
means of livelihood. It is the ancestral home. There is a
ntimental attachment to the land which is an expression of
e affectionate bonds of kinship. The people have never lost
e tribal tie of the land and the group. Although the former
triarchs disclaimed any sympathy with this point of view,
e landlords on Skye today have kept what little land they
ve only because of its sentimental value. Indeed the atti- [654]
de of the largest landholder, the government of Scotland,
that the crofting tradition is worth while preserving, if
r no other reason, because in the predominantly urban and
dustrial civilization it has a romantic value. There are
her reasons. The Islands have long been looked upon as a [702] •
man reservoir for the armed forces, and, more recently, for [969]
wland industry.

As a result of their partial adjustment to the higher 178
cio-cultural level, there have been changes in crops and stock 231
e British market has influenced the crofters' output, within 241
ological limitations. The old subsistence crops of oats and 433

174 ready to leap fore or aft: "Quick to move as the mountain
614 hare . . . or the hounds after him; quick to climb as a
501 squirrel in the spring-time". Then comes the stirring
539 evocation of the storm, testing each man's mettle and the
577 discipline of all, until at last, their ship battered and themselves bruised and weary but undaunted, the crew reach Islay and round the sheltering point of Carrickfergus. There, with thanks to the High King, they drop anchor, the *birlinn* rides in peace, and all find meat and drink and rest.

175 As at sea, so in war, loyalty could rise to heroism in
644 individuals and corps. Young men were attached to their
721 chiefs by chivalrous leadership in warfare, both before
• 703 1745 and later. The Highlanders' high character contrasted with that of most Regiments of the Line, too often disciplined with the lash while demoralised by debauchery. From Lewis the Islesmen went out to the Seaforth or the Ross-shire Highlanders. General David Stewart of Garth, historian of the Highland regiments and people, wrote of these two regiments that again and again their courage and coolness in battle were proved.[1]

175 Not less striking was the record of Gaels among civil
618 populations, whether in Britain, as in the 'Forty-five, or abroad. In Germany in 1761 and 1762 much was said of the Highlanders' kindness, "for the boors were much better treated by those savages than by the polished English and French". Similarly in the Low Countries in 1814 and 1815, they were *enfants de la famille* and "kind as well as brave". The mayor of Brussels declared that they "called forth the attachment and esteem of all", and the inhabitants requested him "to endeavour to detain the 78th (2nd battalion Ross-shire) regiment of Scotchmen in the town, and to prevent their being replaced by
[113] other troops".

[1] *Sketches of the Highlanders*, 2 vols., 1822.

000 and to prevent their being replaced by other troops".

175 Such discipline was only possible when their officers
• 703 trusted to feelings and character. The officers were usually Highlanders, though some notable Lowlanders led Highland corps, and a Welshman commanded the Ross-shire Highlanders with success. Stewart, who had served with the regiment, after recounting their disciplined courage in battle in India, wrote: "The notice of all India was attracted by the temperate habits of the soldiers and Colonel Mackenzie's mode of punishment, by a threat to inform his parents of the misconduct of a delinquent, or to send a bad character of him to his native country". In the twenty-five years of peace and war during which the first battalion had been established, there had not been desertion among the men enlisted in the Highlands. "There were in this battalion nearly 300 men from Lord Seaforth's estate in the Lewis. Several years elapsed before any of these men were charged with a crime deserving severe punishment. In 1799 a man was tried and punished. This so shocked his comrades that he was put out of their society as a degraded man who brought shame to his kindred. The unfortunate outcast became unhappy and desperate, and Colonel Mackenzie, to save him from destruction, applied and got him sent to England, where his disgrace would be unknown and unnoticed . . . [and] he quite recovered his character."

If the officers' regard for their men led to true discipline, the men's expectations of high conduct from their officers brought forth leadership in the field. Mutual regard began in peace. When Stewart of Garth first joined his regiment as a young ensign, his colonel assigned to him an elderly private to act not only as servant, according to regulations,
[551] but also as intimate counsellor. Stewart tells how this

175 private naturally addressed him in Gaelic by his Christian
• 703 name, and writes of him with the warmth and respect due
[551] to an elderly relation. Something of this mutual regard remains; and young Englishmen of education have told me of their surprised admiration for the character of the best traditional type of 'Regular' Scottish, and particularly Highland, non-commissioned officer, before and during the two world wars.

175 Such bravery and character abroad led Stewart to the
824 conviction that their foundation must be the character of the peasantry at home. He held that the Highlanders' home life demanded support, and having served with the Sutherland Highlanders, he felt the deepest grief and anger at the clearances of the Sutherland estates by an English
[727] proprietor. When Stewart remarked that a few deaths mattered little when compared to the nation's renown, for this 'endures for ever', he referred to deaths in battle, which he analysed as typically of 1 to 2 per cent of the men. Whereas upon long voyages or in unhealthy stations, 25 per cent of soldiers or civilians might die of disease.

175 Yet, to the Gael, discipline did not mean blind sub-
703 mission to injustice. "Accustomed to obey their im-
614 mediate chiefs, who durst not break a compact with them, and to have promises punctually fulfilled, implicit submission was not yielded when they had rights to preserve." For the bond by which, of old, the Highlanders "were held to their superiors and one another" was "the bond
[648] of fidelity and affection. . . . In later times, when they entered the King's service, they considered themselves as contracting parties", and resented breaches of faith. Of eight mutinies in as many regiments, that of the Seaforth in 1778 should be instanced here. The regiment included many Lewismen, with Mackenzies and Macraes, and also

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

175 some 200 men enlisted at Perth. When, shortly after they
•703 had been embodied, the men were quartered in Leith prior
614 to embarkation, complaints arose about infringement of
648 engagements. "The regiment refused to embark, and marching out of Leith, with pipes playing and two plaids fixed on poles instead of colours, took a position on Arthur's Seat at Dunsappie, of which they kept possession for several days." The inhabitants of Edinburgh, who had encouraged them, supplied them with provisions and ammunition. "After much negotiation, a proper understanding was brought about . . . and they marched down the hill . . . with pipes playing and with the Earls of Seaforth and Dunmore, and General Skene, at their head. They entered Leith, and went on board the transports
[721] with the greatest readiness. . . ." None of the men were tried or confined. Seaforth, as their colonel, set out with them to India—although his fortune and title would have allowed him ease at home, or the purchase of higher military rank. His death on the long voyage contributed to the men's "prostration of mind which made them succumb more easily to the effects of disease", scurvy, of which 230 out of 1100 fit men died before reaching Madras, and others soon after. As we have told, the survivors fought with disciplined courage.

175 To a chief, recruitment was financially important, for
702 he, and not only the recruits, received a handsome bounty.
614 Simultaneously it provided him with a commission without the cost of purchase—previous training and promotion being considered unnecessary. The clansmen knew these facts of bounty and command, and generally responded to an appeal. When Stewart of Garth was recruiting for the Ross-shire Regiment, a band of young Lewismen joined it for half the bounty offered by a Lowland regiment!

COMMUNITY FROM PAST TO PRESENT PT. II

175 Such are the mingled traditions of the Highland
701 regiments which served in so many wars, for right or for
wrong. Of all the desperate alternatives before the Gael
[614] —famine at home, semi-slavery in the factory towns, death-stricken sea voyages, pioneering in the forested hills of Eastern North America, or war, it was this last which offered the men not only the trappings and glamour of clanship but continuing fellowship. In the regiment a Gael was among friends. Modern civilisation offered him no other life promising social continuity and the hope of a return to croft and township, "if death should spare him".

175 It would be wrong to suggest that only the gentry could
701 rise to command, for as English and literacy were acquired,
565 the sons of small tenants received commissions. British
554 military discipline has too often driven a breach between the men and the non-commissioned officers, spoiling the latter's fitness for higher leadership. But among High-
•[703] landers "the bond of faith and affection" led naturally to commissioned rank. For generations, historic precedent
[198] was carried on in living tradition.[1] Given education, the
[871] sons of Island crofters have risen to command on land and sea; but education came late.

CONCLUSION

175 Thus in the 'little commonwealths' of the farm-hamlets
621 grouped within the township, personal right and equal
631 shares were balanced by common duty, summed up in the
577 principle of duty, right or gain.
614

[1] The tradition of bloodshed and war for revenge, but here one can only cite examples. For instance, descendants of his neighbours in Strath Spey told me that my paternal grandfather, as a penniless lad speaking Gaelic and English (in which he was literate), enlisted in the Black Watch about 1829. He was known as a N.C.O. for his power of quiet, reasoning discipline. He thrice refused the offer of a commission, which was then given to others, of whom more than one rose to high command in the battalion.

Skye

a tremendous strength. There are villagers who dislike the 182
crofters, but few would intentionally slight an old crofter's 571
wife because it might give her something to talk about. I 703 •
shall elaborate this point shortly when I come to social control.

If there had been a decrease in the frequency of inter- 182
action, the traditional norms and sanctions should have become 554
less common and clear. In particular, social ranking based 565
on leadership in communal activities should have become less [571]
definite. Although anomie, as used by Homans, is an internal condition, I shall introduce a consideration of cross-group norms in order to present a clearer picture of the status system. Despite the extreme fluidity between the county people and the members of the intermediate social heirarchy in informal clique groups, such as the bridge club, there has been no tendency to obscure the lines of cleavage. The class structure, in terms of the whole community, has remained rigid. The county people are at the apex of the prestige status and class hierarchy. They are, of course, members of a group which extends across the length and breadth of Great Britain. In any neighborhood where there is a member of the landed gentry resident, he is always looked to for leadership. In Glendale, a privately owned neighborhood, a nearby landlord is their political spokesman. In Portree the gentry have done more than uphold social ranking based on leadership; they have created and introduced new activities in which they express their role. These are the Skye Council of Social Service, the village council, and the Old People's Welfare Committee. They may be aided by others, but their decisions are the orders to be followed. The gentry

HISTORY

*175 which firmly held the folk. The Reformed Church of Scotland
797 did little in the later centuries in Lewis. The Fife Adventurers brought a clergyman with them, a Robert Durie, minister of Anstruther, but it can be taken that his ministrations were for the benefit of the Fifers. The aborigines were left to their own brand of faith, to find grace as and where they could.

The interregnum between the abolition of Romanism and the effective establishment of the Reformed Church in the islands was marked by a decline in the 'Christian-ness' of the people. Former teachings were forgotten, and it is no coincidence that in this interim period social anarchy was rife. The credit for restoring Christian principles to Lewis rests with a Farquhar MacRae, vicar of Gairloch, a young man of about thirty years of age whom Lord Kintail brought to Lewis in 1610. On his arrival he found it necessary to baptise all under forty years of age, and practically to reintroduce the institution of marriage. The first Earl of Seaforth was a religious man; he built St Lennan's church in Stornoway, now non-existent, on North Beach. In 1626 there were two ministers in Lewis (Barvas and Eye), and gradually the influence of religion was restored.

ISLAND REGIMENTS

*175 It is a natural enough step from wielding a sword in the protec-
701 tion of one's home island to bearing arms for King and Country. After the 'natives had been pacified' over a period of a century or so, the national call to arms came north across the Hebrid seas. The warlike character of the clans in the north of Scotland had not escaped the notice of those charged with keeping England and the later Britain busy with overseas interests which required some military backing to maintain and improve. Lewis, in particular, despite its small size, has over the past couple of centuries contributed much of great importance both in regiments and fighting men; its military history is a subject that has escaped many past writers on the island.

*175 There is possibly no British regiment more closely associated
•704 with historic deeds of heroism than the Seaforths, the Seaforth
000 Highlanders. At the turn of the eighteenth and nineteenth

HARRIS'S OFFSHORE ISLANDS

The small shop stocks essential household items, and extensive use is made of mail-order. A few years ago a telephone to the mainland was supplied, much valued in emergencies.

Scarp in fact has a small place of its own in the history of communications: on 28 July 1934 one of three British rocket-mail experiments (for which special stamps were printed) was held there. The inventor of the rocket, Herr Zucker, was later to become prominent in V-rocket work during the second German war. Herr Zucker personally conducted the firings. His rocket, a large cylinder with pointed nose, something like a heavy shell, was 3 ft long and weighed 30 lb, with capacity for several thousand letters. The motive force was ordinary high explosive contained in a large cartridge about 18 in long; the device was designed to burn with a series of rapid explosions and produce a flight speed of 1,000 mph. The firing apparatus was a flimsy wooden structure providing a runway rising at an angle from the ground, an elastic sling giving the rocket an initial impulse. The first rocket was fired on Scarp, to the mainland: it exploded prematurely and most of the mail was damaged. The postmaster applied to the backs of the damaged covers a three-line cachet in violet: 'Damaged by first explosion at Scarp—Harris.' In order that this mail should be actually flown, it was re-transmitted by the second firing made in the opposite direction, Harris—Scarp. The whole experiment was deemed a failure, however. The route taken by the mail addressed to Kirkwall was unique; rocket, ferryboat, motorcar, mail steamer, railway train, and finally by Highland Airways to Kirkwall.

Depopulation in Scarp was encouraged by the lack of employment prospects, and centralised education, of the type which has already played havoc with remote rural communities elsewhere, is felt to be a black cloud darkening the future. Much the same problem faces Scalpay Island, mentioned later. Children are removed from their home environments for higher secondary education at a central school: for Harris children this is at Portree, Skye. Many islanders argue that the scheme tends to destroy the family unit, urbanising the children so that they become unsuited to, and with no inclination for, rural life. Some sympathy must be felt for the education authorities, of course, as the pro-

286 788 539

Make smooth and even the warp of my loom
And grant thy blessing, God, on me,
On all who here find shelter and room
And dwelling . . .

Thine arm be round each woman here
Who waulks this web of mine,
O aid her in her hour of need . . .

Keep the flock that we may win
Sweet and nourishing milk to drink
And wool to give, to weans and kin,
For wear!

Even now in Harris or the Lews, a brief good wish may be uttered—a "Health and strength to the wearers!" as the perspiring women end the waulking; but in the past the web was finally consecrated. Each of the family who was to wear a portion of it was named by the weaver herself, who led the consecration (*Carmina*, No. 113).

May the well-loved wearer of my web
Never be wounded . . .
May the sanctuary shield of the Lord be his. . . .

286 532 614 [593] [621] [291] [714] [175]

The significance of this gift of hard-won cloth can now be seen, first for the family but next for the neighbourly team. We can understand how each 'set' or pattern of tartan stood for the spirit of the family and the group of kin and homeland, the clan. We conceive what it meant to the Gael when the tartan, with "the Highland dress . . . or any part of it whatsoever", was forbidden "to any man or boy" in the Highlands. Women were still allowed to wear it, it was true, but the dress ceased to be a symbol of community when its wear was confined to one sex. As a single exception, the Highland dress was retained for soldiers, but the militarisation of the tartan—though it seized upon one strand of clanship, that of

CH. VII SPIRITUAL LIFE OF COMMUNITY

warfare—destroyed its intimate tie with the home, with peace. The web the women had dyed, spun, woven and waulked together ceased to be a sacrament when the tartan was proscribed to men except when worn as a uniform with "England's cruel red".

The framers of this law, which stood on the statute book for over forty years, took full cognisance of what they did. Appended to the Act of 1747 was an oath which reversed every benediction said by the women at their work: "I . . . do swear, as I shall answer to God at the great day of judgment, I have not, nor shall have, any gun, sword, pistol or arm whatever, and never use tartan, plaid or any part of the Highland garb; and if I do, may I be cursed in my undertaking, family and property—may I never see my wife and children, father, mother, relations—may I be killed in battle as a coward and be without Christian burial in a strange land, far from the graves of my forebears and kindred; may this come across me if I break my oath". This Act, as law and symbol, struck full at the sacramental life of family, neighbour-team and clan community, in which labour and prayer had been indissolubly bound.[1]

(c) WORSHIP, CONGREGATIONAL AND PERSONAL: THE BOOK AND THE WORD

178 771 346 172 [113]

Little remains of the tradition of worship in the tiny oratories, chapels or 'temples' whose ruins stud the shores

[1] The collaboration of friends in Lewis may allow mention of the Gaelic version of A. Geddes, *The Spirit of the Tartan, a Song Drama* (English Version); *Souvenir Programme and Book of Songs* (Outlook Tower, Edinburgh, 1932). In this the spirit of this labour sequence embodied in its songs and runes is dramatised in its setting of custom and history. The Gaelic version was prepared by the generous labours of James Thomson, M.A., Bayble, and the late Duncan Macdonald, M.A., Sandwick, Lewis.

ISLAND REGIMENTS

: the turn of the eighteenth and nineteenth 175*
turies, many villages in the north of Scotland suffered from 702
attentions of ship-borne press-gangs, who swooped down on
uspecting communities and whisked away the best of the
les they could find. Lewis did not escape this enforced service.
cal traditions have much to say about compulsion, though not
press-gang. Young men were pressed into service through per-
al influence, by bribe or by blackmail. However, in the case
the Seaforth Highlanders, the raising of recruits was by appeal
he men of the clan and the clan adherents.

The first battalion of Seaforths was raised in December 1777 175*
Kenneth, the sixth Earl of Seaforth. By far the greater num- 702
of soldiers were from the MacKenzie estates on the mainland: 704 •
m Applecross, Kintail, and Lochalsh. Few Lewismen served
ong the soldiers of Coinneach Og, as the Earl was called. The
l beginning of the Seaforth Regiment was in March 1793,
en a Letter of Service was granted to Lord Seaforth. The chief
nself personally toured his estates for recruits, to offer the King's
lling. His visit to Lewis was at first regarded with some suspicion;
even met some active opposition in Uig, which was overcome
his explanation of the country's need to counteract the wide-
ead effects of the high tide of the social revolution begun in
ance. In 1804, another battalion was raised; some 200 Lewis-
n volunteered, a fact recounted in tradition with great pride.
e history of the regiment in those early formative years is [726]
tailed with battles in many parts of the world: Nimogen in [648]
olland, Quiberon Bay in Brittany, Cape Town, India (Assaye is
nembered in a Stornoway street name), Java, Messina, and so

In Egypt, many a Lewis lad found himself face to face with 175*
Turks, and subsequently in a slave market in Cairo. One of 704
old soldiers of Uig has left traditions of his seven years' ex- 648
rience as a prisoner of the Turks. Some youths who had volun-
ered for service early in life were so ignorant of their island's
ography that they found themselves in Stornoway on their
urn looking around for a guide to show them the way across
moors to their long-left homes. The hot, white sun of Egypt [727]
ought loss of sight to many soldiers, who returned to a Lewis
hich they could never see again. Some who were blinded at

HISTORY

*175 704 648 727 729 *175 702 704 *175 704 726 648 *175 702 704

Some who were blinded at Rosetta were granted a pension of about £30 per annum, with an allowance of £12 per annum for a guide to lead them about.

On 21 December 1859, 'a public meeting of the Inhabitants of Stornoway was held in the Mason Hall to consider the propriety of organising an Artillery Volunteer Corps for the defence of this Island'. About a month later, Sir James Matheson, Baronet of Achany, and Member of Parliament for the Lews, was asked to tender to Her Majesty the services of eighty-one gentlemen who wished to form the corps. The unit eventually formed was the 1st Company in the County of Ross and held the 44th place in the Artillery Volunteer Force of Great Britain. After many ups and downs in its history, this corps exists today as the Ross Battery.

For more than half a century the activities of the corps were peaceful. The only highlight was its participation in the famous Wet Review at Edinburgh, on the occasion of Queen Victoria's Jubilee. Matching the rain which lashed down in sheets from the sky, a sewer burst open in the centre of the parade ground. Company after company divided ranks as they approached the disagreeable fountain in their path. But Lt John N. Anderson, later Provost of Stornoway, gave the order 'Right into it!' Amid a great roaring of cheers from the watching crowds, the Stornoway Volunteers marched straight on in perfect order. It was perhaps prophetic of the sterner tests to come.

The unit was one of the Royal Garrison Artillery in 1908 when it was reformed as the Ross Mountain Battery of the 4th Highland (Mountain) Brigade. Later, as a regular division, the battery was the first field artillery to be landed at Cape Helles, in the Gallipoli campaign. At Suvla Bay, it lost 50 per cent of its strength in two days. At Ismailia it mustered again to fight against the Turks in the Canal area, but it was not allowed to remain to assist in driving back the enemy. Instead, it was moved to Salonika to help the mountain batteries, now much depleted by malaria. The final move was to Bulgaria, where the Lewismen were the first gunners, if not the first British troops, to enter that country.

Before, during, and for a time after, the first world war, the Ross Battery had close ties with the Nicolson Institute. To quote from a past Rector of the school:

SEA-RESCUE WORK

But neither is Harris behind in willing men. In December 1962 502
he trawler *Boston Heron* saw herself on off-lying rocks and broken 175*
urf water in a full south-westerly gale. The rock island of Stila-
nair, off Scalpay Island, gave the stranded crew little hope of
help. But six Scalpay men saw the plight of the ship and went
out in a small open boat. Three of the trawlermen were saved, one
of whom was found clinging exhausted to a rock. The other seven
perished before more adequate aid could be brought. For their
heroism, these Scalpay men were awarded Vellum Certificates by
the RNLI. The attitude of local men to the sea, and the sea's
treatment of men, was once summed up by an old Harrisman:
'Our men were brought up in the school that taught them that
life was precious and that the soul was priceless.'

The formal organisation of sea rescue is found in the Coast- 502
guard Stornoway, the headquarters of the Stornoway District. 706 •
This covers the north-west coast of Scotland from Ardnamur-
chan, Argyll, to Cailleach Head, the Minches and the associated
sea areas, including the Small Isles, Skye and the Outer Hebrides
—in all some 800 miles of coastline. The Stornoway station is base
for a district officer, a station officer and four coastguardsmen,
supported by locally-enrolled residents who form the Auxiliary
Coastguard. Stornoway Coastguard is the launching station for
the Stornoway and Barra lifeboats, advising when a launch is
needed and calling out the boat crew by firing two green maroons.
It is also a coastguard liaison station for the GPO Coast Radio
Station (CRS) at Oban, and it co-operates with Oban and Wick
as a radio-telephone station when lifeboats are launched on ser-
vice. There is, in addition, liaison between Stornoway station [456]
and the RAF, the Royal Navy and Lloyd's: Lloyd's come into
the picture when tugs, salvage and shipping information are
required.

Though there have been many stranger ships and lives lost on 502
and around the island's shores, local tragedies are not lacking. In 731
December 1862 disaster overtook five boats from Port of Ness, 175*
but pursuing white fish. A fierce gale sprang up and the fishing-
fleet perished, with thirty-one lives. Twenty-four widows, seventy-
nine orphans and thirty-one other dependents were left destitute, [736]
though they obtained some subsequent relief from a fund to which

SOCIAL LIFE

an enterprising radio firm in Stornoway; its customers receive 207
both BBC and Grampian Television programmes.

Some youth organisations are represented on the island. The 883
first troop of Boy Scouts was connected with the Stornoway 575
YMCA and was founded by forty boys in 1921. Founded (in 883
1912) on the island's close association with the sea was the Boys' 708 •
Brigade (Naval), later to become the Stornoway Naval Corps and 575
the Stornoway Boys' Naval Brigade. Its objects were to provide instruction in drilling, signalling, seamanship and first aid; and to foster a spirit of manliness and comradeship among its members. The founder was Canon H. Anderson Meaden, of the Episcopal Church in Stornoway (St Peter's). During the first war the boys acted as signallers at the Stornoway Battery.

But the provision of some organised recreational facilities for 529
young people on the island has long been a thorny question. After the first world war, the Rector of the Nicolson Institute, Stornoway, proposed that village halls be built for village education and recreation. This scheme was never fully realised—except at Sandwick, just outside Stornoway—mainly because of the strength of
puritanical opposition. This attitude has been breaking down, [178]
however, and it is now generally realised that the wealth of any community is based on its youth. Most of the efforts to set afoot activities for young people began after the second war; the work was hard and challenging with not a few failures on the way; perseverance has won to the extent that there is now a full-time youth leader. Most of the cultural and recreational activities are to be found in Stornoway, with a full range of interests. Evening non-vocational classes during the winter are also widely attended for a variety of subjects.

In 1965, an excellent Youth Hostel was established at Stock- 485
inish, Harris, with the help of the Inverness-shire Education Department. In its first season it recorded between 600 and 700 visitors (1,070 bed-nights). Also involved in the establishment of
the hostel was the Harris Society of Social Service; practical help [575]
was given by the 2nd Stornoway Boy Scouts, who made a wall map, cleared up grounds and shifted furniture. A group of English enthusiasts have in previous years arranged a hotel at Rhenigidale, Harris (see Chapter 9), which provides for some fifty to

HISTORY

172 of these prehistoric remains indicates that before the Christian era began the island supported a considerable population. Generally speaking, the remains left by unrecorded history indicate three phases of cultural and economic development: the Stone Age, the Bronze Age, and the Iron Age. The dates usually associated with these 'ages' are approximate where the island is concerned. Because of their remoteness and isolation, the inhabitants may well have reached, say, the Bronze Age state of civilisation at a much later date than did people living in more direct contact with civilising influences. It has been conjectured that, where Lewis is con- [133] [134] cerned, peat several feet thick may have covered much of the ground which, in another time, was cultivated and lived on; and that the peat blanket hides the remains of very old constructions. Chambered cairns, duns or forts (round towers) built in lochs, by the seashore and on promontories, galleried duns, earth houses, standing stones, stone circles and ecclesiastical ruins are all to be found.

[112] The duns, or brochs, are believed to have had a defensive function, acting as lookout towers. Primitive dwellings would have been scattered nearby, with generally free-ranging livestock. If attack threatened, inhabitants and cattle together entered the tower, whose double walls held rough but welcome compartments for temporary living during the siege. Sometimes a dun was built on an islet in a freshwater loch, such as Dun Cromore in the Lochs district of Lewis; there is a similar example in Loch Bharabhat in Uig. A stone causeway connects each with the nearest point on the loch shore. Many of these causeways had a rocking-stone, a stepping stone so placed that the weight of a foot on it rocked it enough to warn the inmates of the dun that someone was approaching.

The most famous of the round towers is at Carloway, perched on the crest of a rocky slope on the west coast of Lewis near the crofting township of that name and overlooking much of Loch Roag. Its average external diameter is 47 ft, the walls varying in thickness from 10 to 12 ft. Though in a ruinous state, one side of its wall is still some 30 ft high. Dun Carloway is, after the broch on the Shetland isle of Mousa, the finest example of its kind in the country. About eight miles from Carloway, at Bragar, is Dun

ST KILDA

and to show their friends at home, that they had braved the 484
hazardous Atlantic seas to visit St Kilda on the very edge of the 361
world. The tourists were charitable, but this brought a psycho- 175*
logical evil in its wake. In 1886, Robert Connel wrote: 'One [155]
cannot be long on the island without discovering the great moral
injury that tourists and sentimentalists and yachtsmen, with
pocketsful of money, are working upon a kindly and simple
people.' It was estimated that the islanders collectively derived a [434]
profit of 5s from each of the 200 or more tourists who arrived
during the short summer.

The new influx of cash into a community which required 436
money as an exchange commodity because the original native 198
produce was becoming less saleable, hastened the decline of effort
to be self-supporting. The numbers of seabirds slaughtered [239]
steadily fell; paraffin oil replaced the traditional bird oil in St [364]
Kildan lamps. The need for daily work, to toil in fellowship with [461]
others, was dissipated; the islanders could purchase most of the
food they required, provided communications with the mainland
were maintained. The population was in any case dwindling, as [161]
St Kildans became more aware of 'the other life' available on the
mainland of Britain.

Finally, on a misty summer's day in August 1930, at a cost to 166
the nation of little under £1,000, St Kilda was left to the care
and keeping of the changeless Atlantic. It is now preserved by the
National Trust for Scotland as a crumbling monument to a small
human tragedy of a kind that has been repeated, and will be re-
peated, in other small communities who cannot argue out the
case for their survival in terms of economic viability. The island [112] •
is now occupied by military personnel in connection with the
Hebridean rocket range on South Uist.

St Kildans were described by Dean Monro, in 1549, as 'simple, 175*
poor folk, scarece learned in any religion'. In 1698, Martin Martin 181
published *A Late Voyage to St Kilda*. He went there in the com-
pany of a minister who had been summoned to the island to de-
nounce a certain false prophet who had risen among the 180
inhabitants (pretending he was an emissary of St John the Ba-
tist). Martin found, as did later visitors, that the island economy [825]
and the quality of its life were closely dependent upon its birds,

ISLAND, WORK AND PEOPLE PT. I

175 the eighteenth century these 'black houses' would be
342 replaced by houses of stone and lime, and a few of those
361 survive.

Of the fort built by Cromwell on the Point, no signs
172 remain. For tactical reasons, the best site would seem
174 to be the neck of the Point, from which the guns of the
• 712 fort could defend the houses, stores and quays. The
irregular building line near the point marked T, a
Town House at a later period, may correspond to the
175 northern angle of the fort. The fort appears to have been
712 standing when the original drawing was made for the
engraving in the Old (or First) Statistical Account of
Stornoway, *c.* 1793.

175 By the time Wood drew his plan in 1820, houses on
361 the Point no longer looked exclusively on to the axial
street. The main alinement of interest came to be the
shore, marked by a properly built quay. Today, the Point
Street houses have fallen into decay but many older houses
still stand in fair repair along the 'Beach' or Quay.

175 Thirdly, from the nineteenth century, until 1914, two-
361 storey, flatted tenements, hotels and houses of middle-class
34 people were built upon a grid that followed upon the old
field plans. In an alternative plan, proposed about 1820
but not adopted, a diagonal vista opened out to the Estab-
lished Church, built in 1794 on rising ground. The
modest Seaforth Lodge which had stood across the harbour
was replaced in 1850 by Stornoway (or Lews) Castle, its
pseudo-Tudor style designed to please the new improving
landlord, Sir James Matheson, who had purchased Lewis
in 1844. Presented to the people on the break-up of the
Leverhulme Estates in 1925, a new technical school has
175 taken it over. A few villas also grew up on outlying roads.
361 Thus, a mere village in 1801, and among the smaller burghs

233 hundred and thirteen - but most crofters had from forty-five to one hundred and twenty. Wedders are sold at two-three years old when the position is said to be at its best.

231 Parts of the common pasture - usually the machair, are set aside for wintering hogge but the usual practice is to keep as many as possible on the croft. The soum as a whole
[472] is not enforced but shares in the wintering parks are adhered to. For example:- Timsgarry Glebe is leased to Crowlista and one share entitles a crofter to winter twenty-five hogge on it. In Ardroil one share allows one cow or four yearlings or eight sheep or eight hogge
[232] on the machair - in practice it is the best hogge that are sent. The minister of Timsgarry who is much interested in sheep husbandry, has bred a heavier sheep with longer legs by crossing the Hebridean blackface with Swaledales and these seem to be doing very well; the minister is more attentive to his sheep than are many of the crofters, but some local crofters are showing interest in this crossbreed. The lambing percentage, so dependant upon the winter and spring weather, was about 80% in 1959 and this was regarded as good.*

Enquiries show that some crofts in each township far exceed their souming but because others carry no stock the four townships are understocked according to the total soum, here expressed in cow units. Sheep stocks in Timsgarry approximate to the sheep soum, Crowlista is overstocked by 130%, while the other townships are understocked.
[235] Some of the figures used for sheep stock were approximate or estimated. Nearly all crofts keep some poultry and surplus eggs may be sold to the grocery vans.

The rhythm of work on the croft during the year is shown on Figure 16, overleaf.[1]

241 Part of the hill common west of Crowlista was cultivated until the beginning of the
175 present century, at which time the township was overcrowded with two or three houses on
361 each croft. A similar area west of Carnish was cultivated and old lazy beds, now grassed, are to be seen on slopes south of the road in Ardroil, in the valleys of Ambuian Thoraghain and Aiilt a'Gharaidh and on the Borranish peninsula. The ruined shieling huts for this area, still to be seen around and beyond Loch Suainaval were in use until 1934 - '35. (Figure 5).

461 Ancillary employment is sought by all but nine of the thirty men under sixty-five in these townships and the wives of two of the 'full-time crofters' have regular employment.
228 There is no commerical fishing by local boats though the Bernera lobster boats are seen frequently off Uig Bay. The ruined curing house and piers at Crowlista, and the 'port' shown on the O.S. map near the site of the clachan in Carnish, point to the former importance of fishing.

288 At present the weaving of Harris tweed from yarn supplied by the Stornoway mills is more lucrative. There are two looms (plus one other weaver) in Carnish, two in Ardroil, three in Timsgarry and two (plus one other weaver) in Crowlista. All these looms were in use and two tweeds woven a week bring in a useful income but the supply of weaving is irregular. The future security of these weavers depends on the prosperity of the Harris tweed industry.

464 Mitchele's sand and gravel quarry at Carnish provides employment for from three to
[344] ten men. Five men from Ardroil and one from Carnish are employed there at present.
[712] The Aird R.A.F. station draws most of its civilian employees from Aird Uig but two
[371] Ardroil men work there. One Crowlista man is employed at the hydro-electric scheme
[462] site at Giala and this work will last for another year or two. Employers recognise the particular needs of their crofter employees and 'days off' are allowed for sheep fanks and other necessary work.

* The minister's ewes gave 103%.

For a number of years it had been the practice for a considerable proportion of the older schoolboys during their attendance at the Secondary School to put in their training with the local body of Territorials—the Ross Mountain Battery. At the School Prize-giving of 1914, these boys attended in their uniform to be ready to go off the same evening by steamer en route for the annual training camp. Before the School re-opened, the Territorial Force was mobilised, and for some of these lads there intervened four long years of toil, of fighting, and of sickness overseas, before they ever saw their homes again.

175* 702 704

ater (1938), the unit became the 203rd (Ross) Battery of the 51st West Highland) Anti-tank Regiment. It was whilst fighting as n anti-tank battery that, with other units of the 51st Division, e men were taken prisoner at St Valery in 1940. Today, after ore changes, the battery is the oldest in 540 LAA Regt RA, TA he Lovat Scouts). In 1960 the Ross Battery received the Free-om of the Burgh of Stornoway in recognition of a century of oluntary service to the community and the nation.

LAND USE AND CROFTING

241 614 182 311 175*

he history of land use and the crofting system in the Highlands nd Islands (see Chapter 5) is full of difficulties. In the older days f the clan system, before the rot set in, though the clan members elonged to the chief, they also belonged to the land and the land them. In such a climate, the agricultural system, for it was ch then, was in a reasonably healthy state; the land was worked the full. Good land was available for the support of the clan, nd as often as not in good years there was ample produce, crops, nd livestock, to send south to well-paying markets. That fertile nds abounded is indicated by the reports of visitors in various enturies. But times changed. The increase in population after e breakdown of the clan system by statutory legislation, and the olicy of population placement carried out with a rigorous thusiasm, planted seeds of discontent—in particular a hunger r land. The land was in any case becoming ever more in-dequate to support those already on it.

[443] [161] [56]

The story of the agrarian troubles in the Highlands area is well

a crew member. Another family is called "cook," t first job which a novice had to assume when he joi the crew of a fishing boat. One of the last men t to the east-coast fishing is about 60 now. The me came back from the fishing in time to bring in the barley and potatoes, and the money was used for re and the purchase of various foodstuffs and other g They usually brought enough rolls of wallpaper to the stone-walled or wood-lined tigh dubh (black hou for another year. Twenty pounds were good wages f season. While the men were away at the fishing, t remaining members of the family lived on credit fr the local shops, and depended on the good will of their neighbors.

175 701 706 505

Many men joined the armed services, and were especially sought after by the Navy and the Mercha Service. In 1900, there were 2,500 Lewismen in th Naval Reserve.

175 228 484 [571] [435]

Around the turn of the century, until the fir world war and the growth of the weaving industry, girls used to "follow the fishing." "Everyone cam the boat to see you off. You could go all the way Aberdeen for 12/6 on a special fish-worker ticket. The girls went from the south of England to Shetla in the far north.

175 464 166 [359] domestic servants among the well-to-do families in Glasgow and other cities on the mainland (see Appendix A).

175 464 166 462 [288] When the weaving started, some men settled at home permanently, but many continued to come and go between the sea and the loom. In 1931, the ratio of men to women in Lewis and Harris was 100:114. The men came home for temporary jobs, such as the construction of roads [522] or houses. Jokes are told of the common practice of ● [706] sending for an extension of leave. The men found it easy to join the Naval Reserve because of their fishing experience; and it brought them a retainer's fee and expense-paid trips to places off the island for several weeks of training during the year. But when the wars came, [701] the loss of men to the Navy and to the Merchant Service was heavy.

B. The Land

175 429 The number of arrears in rent in the Barvas rent ledger at the turn of the century indicates the small amount of money in circulation at the time. Between 1899 and 1914, several crofters paid part of their rent "by work," and six had some of their stock "uplifted by decree." For example, a Widow Catherine lost "one red

*159 288 stand beside him as he pedalled, and yell 'Stop!' when the bobbin was about to run out. By post-war, the single-shuttles were gone. Most men had the six-shuttle box.

*159 ● 706 "It was all the rage then to join the Naval Reserve. You got a free trip every now and again to the south of England, and thirty shillings a month retainer. I was sailing for about 18 months before I was called up to the war.

"I was in the war for a full six years. I liked to visit every place, but I preferred the white countries. I didn't like Africa or India. China wasn't so bad. Russia was awful. It was cold, and there was nothing you could buy.

"You made very good friends on board ship. You never forgot the face of a man you served with. Most of them were English. I felt very awkward at first with English. I was very slow translating Gaelic into English, not eloquent at all. The English had the gift of the gab. But I got used to this."

*159 Neilie became engaged to marry a Shawbost girl soon after his return to the village but the marriage did not take place for a number of years because his intended wife had to raise the children of her invalid sister. During the year of their marriage he built a new house. His

3: Geddes K-4,5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

174 ready to leap fore or aft: "Quick to move as the mountain
614 hare . . . or the hounds after him; quick to climb as a
501 squirrel in the spring-time". Then comes the stirring
539 evocation of the storm, testing each man's mettle and the
577 discipline of all, until at last, their ship battered and themselves bruised and weary but undaunted, the crew reach Islay and round the sheltering point of Carrickfergus. There, with thanks to the High King, they drop anchor, the *birlinn* rides in peace, and all find meat and drink and rest.

175 As at sea, so in war, loyalty could rise to heroism in
614 individuals and corps. Young men were attached to their
721 chiefs by chivalrous leadership in warfare, both before
703 1745 and later. The Highlanders' high character contrasted with that of most Regiments of the Line, too often disciplined with the lash while demoralised by debauchery. From Lewis the Islesmen went out to the Seaforth or the Ross-shire Highlanders. General David Stewart of Garth, historian of the Highland regiments and people, wrote of these two regiments that again and again their courage and coolness in battle were proved.[1]

175 Not less striking was the record of Gaels among civil
618 populations, whether in Britain, as in the 'Forty-five, or abroad. In Germany in 1761 and 1762 much was said of the Highlanders' kindness, "for the boors were much better treated by those savages than by the polished English and French". Similarly in the Low Countries in 1814 and 1815, they were *enfants de la famille* and "kind as well as brave". The mayor of Brussels declared that they "called forth the attachment and esteem of all", and the inhabitants requested him "to endeavour to detain the 78th (2nd battalion Ross-shire) regiment of Scotchmen in the town, and to prevent their being replaced by
[113] other troops".

some 200 men enlisted at Perth. When, shortly after they had been embodied, the men were quartered in Leith prior to embarkation, complaints arose about infringement of engagements. "The regiment refused to embark, and marching out of Leith, with pipes playing and two plaids fixed on poles instead of colours, took a position on Arthur's Seat at Dunsappie, of which they kept possession for several days." The inhabitants of Edinburgh, who had encouraged them, supplied them with provisions and ammunition. "After much negotiation, a proper understanding was brought about . . . and they marched down the hill . . . with pipes playing and with the Earls of Seaforth and Dunmore, and General Skene, at their head. They entered Leith, and went on board the transports with the greatest readiness. . . ." None of the men were tried or confined. Seaforth, as their colonel, set out with them to India—although his fortune and title would have allowed him ease at home, or the purchase of higher military rank. His death on the long voyage contributed to the men's "prostration of mind which made them succumb more easily to the effects of disease", scurvy, of which 230 out of 1100 fit men died before reaching Madras, and others soon after. As we have told, the survivors fought with disciplined courage.

14

To a chief, recruitment was financially important, for he, and not only the recruits, received a handsome bounty. Simultaneously it provided him with a commission without the cost of purchase—previous training and promotion being considered unnecessary. The clansmen knew these facts of bounty and command, and generally responded to an appeal. When Stewart of Garth was recruiting for the Ross-shire Regiment, a band of young Lewismen joined it for half the bounty offered by a Lowland regiment!

651 which official records are kept by the mills. If you
434 say jokingly to a fisherman who has brought in a large
catch that he should put some money aside for the
income tax man, he is likely to reply, "He'll have to
463 catch me first." A tradesman may be earning large sums
434 of money doing local work as a skilled specialist at
[745] the same time that he is collecting social security.
A man may move in and out of a number of different jobs,
[171] and never report his income. "Occupational pluralism"
(cf. Brox 1968) rather than economic specialization has
developed as a strategy in various countries along the
North Atlantic fringe, such as Iceland, the Faroes,
northern Norway and Newfoundland, as well as the west
coast and islands of Scotland. In these marginal areas,
income from specialized occupations is, in the long run,
unpredictable and inconsistent.

178 In times of national economic depression, strikes,
468 shifts between socialist and conservative governments,
241 and other crises, crofting provides an alternative
175 strategy. During the last war, many islanders who had
722 left the island (including some who had been quite
166 prosperous in the cities) returned to spend the duration
of the war in the village, glad of the relative security
provided by the relative abundance of food and less strict
000 rationing. During a huge snow-fall that occurred on

rural Islanders throughout the nineteenth century and even today.

From 1887 the State made efforts to improve the crofters' lot. Crofters' claims to stake shares upon the only available reclaimed land in the Island, that of a few farms, had been refused in the 'eighties, but came to be granted, in principle and in fact, after 1900. During the war of 1914–18 the Government reaffirmed its promise to divide sheep farms into crofts for men returning from the Services, and the Land Settlement Act became law in 1919. Yet in spite of tentative experiments and schemes, a determined effort to see the Island possibilities and face its problems, as a whole, still remained to be made in the twentieth century.

When war broke out in 1914 over 5000 men left Lewis to join the Services, and corresponding numbers left from Harris. Others, too, served in the Merchant Marine, exposed to U-boat warfare. From the first months of the war, Lewismen in the Seaforth Highlanders, and men from Harris in the Camerons, fought in the Highland Division as shock troops in the attacks which cost the Division the highest casualties of any in the British Army. The Lovat Scouts, the Mountain Battery, the Garrison Artillery and other units, also enrolled their men, and suffered loss. The last blow to the Island came after anxiety had ceased. Early in 1919 the transport *Iolaire* struck a rock and sank at the entrance to Stornoway harbour; and 200 men who had withstood dangers and hardships during four years of war went down in the dark of a winter's night, almost within call of their waiting relatives massed on the pier to welcome them.

174 The historical aspect of these regional facts is extremely
184 significant to the evolution of Scots social life, and to
279 developments of Presbyterian worship led by Elders in
55 ferm-toun and Kirk; although suggested by comparisons
128 throughout this book, they have still to be seriously followed
out. As to the future, regrouping of our somewhat
scattered agricultural population has been strongly urged
121 in planning for post-war housing and community life.
185 But sound planning must be based on survey, long over-
due; though elementary, this key map appears to be the
first of its kind for Scotland (Fig. 2). It is from these units
of farm-team and township that Scots rural society must
be rebuilt, region by region.

184 One further contrast between the farming and the
24 crofting communities demands attention: it lies in the
36 types of migration—one is tempted to say, of semi-
166 nomadism. Crofters, though they move to and from their
croft and township—to the city, the sea, or the New World
—return home to their native township when they can,
and to no other. Many farm servants, on the other hand,
though they usually spend their lives in the county or
region of their birth, have been on the move from farm
to farm, year after year. What is true of Lowland Scotland
seems rather true of North-east England, but not of 'the
[164] English Plain'. Unmarried Scots farm servants were hired
for the half-year, and frequently moved after each new
hiring, the married once a year. Families were annually
uprooted—if indeed they could be said to strike root at all!
[922] The war-time 'Standstill' Order for Scotland began to
[198] check this migratory life; but its effects remain. Hence
many men have few ties, their wives still fewer. The
children could not grow up with their schoolmates: they
could look back to no "Auld Lang Syne", of which the

COMMUNITY FROM PAST TO PRESENT PT. II

464 For a year or two after the war many men and women
[288] returning from the Services, the sea or the factories found
employment in the flourishing Harris Tweed industry.
[729] This included work in the spinning mills and hand-weaving
at home—work in which the male weaver was helped by
his family in jobs such as bobbin winding. Few fishermen
[216] dared to sink capital in new boats and gear, and risk losses
[178] such as those sustained after 1920. Few women wished to
[462] return to the hard, uncertain work of gutting. The whaling
station, built on West Loch Tarbert before 1914 and open
for a short time between the wars, was reopened in 1950,
and employed some 30 men for 18 months before it closed
[241] in 1952. Crofting was lightened by some mechanised
[922] cultivation. The war-time construction of air-fields had
ceased, though some harbour-work and road-making was
[654] assisted by government grants.

In 1949 the Harris Tweed industry, now the Islanders'
288 main source for earning, was crippled by the imposition of
651 a 66⅔ per cent purchase tax on hand-woven Harris Tweeds.
648 Parliament decided that as a non-utility product, its export
sales alone could be exempt from tax. Viewing the
[433] position of the tweed industry in Britain as a whole, there
were strong arguments for the extension of the tax to
[171] Harris Tweeds: the high-grade industry of the Scottish
Border or the manufactures of the West Riding should not
be subjected to unfair handicap. At the same time the
crippling of a handicraft practised by peasant or artist
favours mass-production to the loss or ruin of traditional
and experimental workmanship or design to which, in the
end, the mass-production is an unacknowledging debtor.
The obvious economic handicaps of Island hand-weaving
[439] may surely permit some latitude. The export trade in
[458] Harris Tweed, in which the imponderable 'sentimental

COMMUNICATIONS

779 This is only related if emergency sailings are necessary. During
486 the second world war attempts were made by Free Church min-
505 isters to stop the movement of ships in Stornoway harbour, but
*175 needless to say the war effort took precedence.
[724]

THE SHIPS

*175 When Sir James Matheson bought Lewis in 1844, sea com-
505 munications were still erratic: a mailboat or packet was running
[501] thrice weekly between Stornoway and Poolewe on Scotland's
west coast. Sir James decided that a craft based on Stornoway
would serve more efficiently both for general trade and for island-
to-mainland transport, and he provided a regular steamer service.
[205] As this craft, the *Mary Jane*, was to carry mails, Sir James thought
the Post Office should promote the service, and he struggled with
that department for some years, eventually being promised a sub-
sidy of £1,300. Though the scheme was to cost far more and had
won no other financial support, the service began in 1846, Sir
James being surety for the whole concern. He lost some £17,000.
Another of his ships was the PS *Ondine*, which carried mails be-
tween Ullapool and Stornoway during the 1870s and '80s.

Quite apart from the Matheson ventures, things had been stir-
ring in the south; the sea communications of the West Highlands
and Islands were about to be commercially developed. One of the
[501] first ships on a regular run between Stornoway and the south was
the *Ben Nevis*, a small wooden paddle vessel later to be wrecked
south of Campbeltown in 1831 while homeward bound from
Stornoway. G. & J. Burns was one of the main companies operat-
ing the early West Highland trade, managing to survive the
vagaries of fortune until 1851, when its interests were passed to
David Hutcheson, its chief clerk, on the condition that the Burns's
nephew, David MacBrayne, became one of the partners. This
was the beginning of the company so well known today, Messrs
David MacBrayne Ltd. The new company started off with a
building programme and gave birth to a long line of ships, many
of whose names were to become bywords in the Western Isles.

The PS *Clansman* was the first. Her route was the strenuous
501 one of Glasgow, Oban, Skye and Stornoway. Alexander Smith's

ISLAND REGIMENTS

175* At the turn of the eighteenth and nineteenth
702 centuries, many villages in the north of Scotland suffered from the attentions of ship-borne press-gangs, who swooped down on unsuspecting communities and whisked away the best of the males they could find. Lewis did not escape this enforced service. Local traditions have much to say about compulsion, though not by press-gang. Young men were pressed into service through personal influence, by bribe or by blackmail. However, in the case of the Seaforth Highlanders, the raising of recruits was by appeal to the men of the clan and the clan adherents.

175* The first battalion of Seaforths was raised in December 1777
702 by Kenneth, the sixth Earl of Seaforth. By far the greater number of soldiers were from the MacKenzie estates on the mainland;
704 from Applecross, Kintail, and Lochalsh. Few Lewismen served among the soldiers of Coinneach Og, as the Earl was called. The real beginning of the Seaforth Regiment was in March 1795, when a Letter of Service was granted to Lord Seaforth. The chief himself personally toured his estates for recruits, to offer the King's Shilling. His visit to Lewis was at first regarded with some suspicion; he even met some active opposition in Uig, which was overcome by his explanation of the country's need to counteract the widespread effects of the high tide of the social revolution begun in France. In 1804, another battalion was raised; some 200 Lewismen volunteered, a fact recounted in tradition with great pride.
726 • The history of the regiment in those early formative years is
548 detailed with battles in many parts of the world; Nimegen in Holland, Quiberon Bay in Brittany, Cape Town, India (Assaye is remembered in a Stornoway street name), Java, Messina, and so on.

175* In Egypt, many a Lewis lad found himself face to face with
704 the Turks, and subsequently in a slave market in Cairo. One of
648 the old soldiers of Uig has left traditions of his seven years' experience as a prisoner of the Turks. Some youths who had volunteered for service early in life were so ignorant of their island's geography that they found themselves in Stornoway on their return looking around for a guide to show them the way across the moors to their long-left homes. The hot, white sun of Egypt
[727] brought loss of sight to many soldiers, who returned to a Lewis which they could never see again. Some who were blinded at

727 about.
729 On 21 December 1859, 'a public meeting of the Inhabitants
*175 of Stornoway was held in the Mason Hall to consider the pro-
702 priety of organising an Artillery Volunteer Corps for the defence
704 of this Island'. About a month later, Sir James Matheson, Baronet of Achany, and Member of Parliament for the Lewis, was asked to tender to Her Majesty the service of eighty-one gentlemen who wished to form the corps. The unit eventually formed was the 1st Company in the County of Ross and held the 44th place in the Artillery Volunteer Force of Great Britain. After many ups and downs in its history, this corps exists today as the Ross Battery.

For more than half a century the activities of the corps were peaceful. The only highlight was its participation in the famous Wet Review at Edinburgh, on the occasion of Queen Victoria's Jubilee. Matching the rain which lashed down in sheets from the sky, a sewer burst open in the centre of the parade ground. Company after company divided ranks as they approached the disagreeable fountain in their path. But Lt John N. Anderson, later Provost of Stornoway, gave the order 'Right into it!' Amid a great roaring of cheers from the watching crowds, the Stornoway Volunteers marched straight on in perfect order. It was perhaps prophetic of the sterner tests to come.

The unit was one of the Royal Garrison Artillery in 1908 when
*175 it was reformed as the Ross Mountain Battery of the 4th High-
704 land (Mountain) Brigade. Later, as a regular division, the battery
• 726 was the first field artillery to be landed at Cape Helles, in the
648 Gallipoli campaign. At Suvla Bay, it lost 50 per cent of its strength in two days. At Ismailia it mustered again to fight against the Turks in the Canal area, but it was not allowed to remain to assist in driving back the enemy. Instead, it was moved to Salonika to help the mountain batteries, now much depleted by malaria. The final move was to Bulgaria, where the Lewismen were the first gunners, if not the first British troops, to enter that country.

*175 Before, during, and for a time after, the first world war, the
702 Ross Battery had close ties with the Nicolson Institute. To quote

(e) STORM AND GALLEY; BATTLEFIELD AND REGIMENT

194 The peaceful round of daily life formed the most
614 enduring test of the mutual loyalty uniting the commoners
577 of the clan, and linking chief to people. Yet the tensest
[601] ordeals came in hours of danger faced together, whether
• [726] at sea in a small fishing boat or a many-oared galley, or in war in a clan company. The Gaels' own records must speak for them. Many a song of the Isles conveys the team-spirit of the crew though without describing its men. And although Mary MacLeod's song of MacLeod's Galley
194 be irretrievably lost, there survives one epic poem portray-
614 ing the ship, the storm and, man by man, the crew who
501 warred against the waves and won. Alexander Mac-
538 donald's *Birlinn of Clanranald* is unmatched in Gaelic, and probably in English, verse for its portraits of the crew in action, from steersman to 'look-out'. The flowing metrical translation by Pattison with Hugh MacDiarmid's vivid prose helps to give the English reader some vision of a crew of Gaelic freemen at their best.[1]

194 The poem opens in slow traditional rhythm with "the
614 Blessing of the Ship", the arms and the crew. Then the
501 bard, speaking for the stately skipper, "incites the sixteen
539 oarsmen to row" out of the bay, and they row to a rousing
570 shanty, a *Iorram*. Next, in readiness for the voyage and
[113]

Macleod (Ed.), *Sar Orain: Three Gaelic Poems*, Glasgow, 1933. The different themes of its sections, such as its own metre, have been published separately, in *The Songs of the Hebrides*, and elsewhere.

177 most of the young men of the Islands were away. Hitherto,
[464] though people from the Isles had gone out into the world and rubbed shoulders with all sorts of men and women, from best to worst, their own homes and townships had remained inviolate. Now, however, there came men in numbers from distant homes, with little to do when off duty and with money to spend, either on tweeds, which were virtually free of controls, or on pleasures, if they could find them. The temptations offered to a community so unaccustomed to town ways were considerable.

729 Those who returned least changed in their outlook upon
178 rural life were ex-prisoners-of-war, from the 51st Highland
[423] Division. At their own wish, they had received instruction in modern small-holding; and the demand from prison camps for land when the Highlanders would come home was upheld. It is especially among these men that agencies such as *An Comunn Gaidhealach* kept Gaelic tradition alive, linking it to the Highlanders' long thoughts of home. Next to these come naval seamen, while those most subject to urban influences were those who worked in factories. But whatever their experiences, home exerted a strong attraction. If work and a fair wage can be found in the township and on the crofts, and if social life can be renewed, many who returned will stay.

• 726 As in the First World War, so in the Second: few communities in Britain have had so large a proportion of
[177] their men in the Forces, in the fighting line and at sea,
[167] from the outbreak of hostilities. The Island community
[727] is almost without the exemptions due to 'essential occupations' such as commercial agriculture in the country, or war industry and administration in the towns. The toll has been heavy, and the nation's debt to the Islanders should be remembered.

727 AFTERMATH OF COMBAT--number and nature of casualties; treatment of own casualties (e.g., retrieving and disposal of dead, care of wounded); treatment of enemy casualties (e.g., despoiling, mutilation, killing); taking of trophies; treatment of captives and prisoners (e.g., slaughter, torture, mutilation, release, exchange, holding for ransom, adoption, enslavement, sacrifice); punishment of enemy leaders; military occupation and military government; homecoming after war (e.g., return trip, reception of returning warriors); home reactions to victory and defeat; victory celebrations (e.g., dances, feasts, memorials); demobilisation; resumption of normal life; reconstruction of war damage; etc. See also:

Chapter 5

GEOGRAPHICAL AND SOCIAL MARGINALITY

182 Despite the growth of the Harris Tweed industry and the gradual disappearance of some of the techniques and expectations associated with heavy reliance on the land and the sea, an important factor which helps to sustain some of these patterns in the social and geographical marginality of the islanders.

175 When the young men who survived the second world
• [728] war returned to the island, most households still had
[230] horses to cultivate the croft, but a few years later
[407] the tractors replaced the horses. The Labor government,
175 which came into power after the war, passed legislation
657 which extended the processes of centralization that had proceeded since the breakdown of the clan system. The National Health Service was established. Free milk
[871] became available in schools. More scholarships (called "bursaries") became available for further schooling.
[207] Television came in the 1950's. In short, the islander was exposed to a number of new alternatives.

182 To the extent that persons became involved in these possibilities, the island became peripheral or marginal. The island has become more dependent upon central

e after, the first world war, the
the Nicolson Institute. To quote

In the pyramid for rural Lewis (b) the differences are striking, and are mainly due to two factors: the 'natural' ratio of births to deaths, and migration. Beginning from the bottom of the pyramid, it will be seen that in 1931 there were fewer infants (from 0–5 years) than children from 5–10 years, fewer in fact than in the three older age-groups. In 1951 (c), the birth rate having risen sharply after the war and preceding depression, infants formed a much larger ratio (over 5 per cent).

In rural Lewis, emigration asserted itself earliest with girls, as they left the Island chiefly for domestic service; but soon after the age of 20 as many young men left as young women. In 1931 the discrepancy was most marked from the age of 30 to 35. This was further accentuated by the heavy death-roll among the younger men during the 1914–18 war, deaths having totalled more than 1100, perhaps the heaviest proportionate loss in the Empire. Only when they marry and return, permanently or for a period, to the croft (vacated it may be by the death of a parent), do the numbers of men tend to balance those of women. Thereafter the falling away among men is due to their shorter life expectation.

In 1951 National Service had drawn away lads of 18 to 20, so that the difference between the sexes is much less marked in the 15–19 age-group than it was in 1931. Mortality in the 1914–18 war contributes to the shortage of men between 50 and 55 in 1951, and the mortality of the 1939–45 war has also left its trace—or the birth rate would have been still higher (always excluding the factor of migration). For the men, those jobs not requiring per-

has improved, but detailed analytical statistics for 1951 were not available by 1954. Allowances being made for the effects of the wars, for the high ratio of births immediately after, and for emigration from Lewis after 1949, the age-grouping in the island changed but little from 1931.

COMMUNITY FROM PAST TO PRESENT PT. II

185 In 1919, when the men came home to Lewis they could
• 727 still see reasons for hope. They found a strange proprietor,
known first for his outstanding—some said ruthless—
[159] business ability, and only secondly for his philanthropy.
They heard his plans and were inclined to listen.

185 Yet, remembering their pre-war losses and the notorious
fluctuations of prices and employment in the fisheries, they
wished for a policy of insurance, as it were; so, if their
home lay near a promised farm, of which they had long
159 meant to claim a share, they claimed this forthwith. Only
458 too soon after, in the early years of Leverhulme's adventure,
the fall in total sales and prices of fish brought immediate
433 loss to the keenest and hardest working of the fishermen,
228 and to their financial backers in Stornoway. These losses
warned others of the uncertainties of fishing. Now the
fall in the fishing industry is not so much as mentioned in
the biography of Leverhulme; nor do we remember a
[654] word of it in Leverhulme's speeches. One finds no data
to show a substantial endeavour by the Scottish Office to
co-operate with Leverhulme in framing policies either to
change the trend of European markets or to make local
adaptations to combat downward trends. The Fishery
Reports certainly record the losses, year by year. As for
the Island fishermen, they shared the feeling expressed
by other Scots fishermen, that the old markets across the
North Sea, eastward to what had been St. Petersburg,
could and should be reopened, not closed 'for party
reasons' by 'English politicians'. Although ostensibly
Leverhulme ignored it, he cannot really have been unaware
of the effect of the downward trend of the fisheries upon
his own prospects of success, and upon the hopes and
confidence of the fishermen. Having been so outspoken
upon the shortcomings of Government with regard to local

CH. X BETWEEN TWO WARS, AND AFTER

177 most of the young men of the Islands were away. Hitherto,
[464] though people from the Isles had gone out into the world
and rubbed shoulders with all sorts of men and women,
from best to worst, their own homes and townships had
remained inviolate. Now, however, there came men in
numbers from distant homes, with little to do when off
duty and with money to spend, either on tweeds, which
were virtually free of controls, or on pleasures, if they
could find them. The temptations offered to a community
so unaccustomed to town ways were considerable.

729 Those who returned least changed in their outlook upon
178 rural life were ex-prisoners-of-war, from the 51st Highland
Division. At their own wish, they had received instruction
[473] in modern small-holding; and the demand from prison
camps for land when the Highlanders would come home
was upheld. It is especially among these men that agencies
such as *An Comunn Gaidhealach* kept Gaelic tradition alive,
linking it to the Highlanders' long thoughts of home. Next
to these come naval seamen, while those most subject to
urban influences were those who worked in factories. But
whatever their experiences, home exerted a strong attrac-
tion. If work and a fair wage can be found in the township
and on the crofts, and if social life can be renewed, many
who returned will stay.

726 As in the First World War, so in the Second: few
communities in Britain have had so large a proportion of
their men in the Forces, in the fighting line and at sea,
[177] from the outbreak of hostilities. The Island community
[167] is almost without the exemptions due to 'essential occu-
pations' such as commercial agriculture in the country, or
• [729] war industry and administration in the towns. The toll
has been heavy, and the nation's debt to the Islanders
should be remembered.

HISTORY

*175 Some who were blinded at
704 Rosetta were granted a pension of about £30 per annum, with
648 an allowance of £12 per annum for a guide to lead them
727 about.

• 729 On 21 December 1859, 'a public meeting of the Inhabitants
*175 of Stornoway was held in the Mason Hall to consider the pro-
702 priety of organising an Artillery Volunteer Corps for the defence
704 of this Island'. About a month later, Sir James Matheson, Baronet
of Achany, and Member of Parliament for the Lews, was asked
to tender to Her Majesty the services of eighty-one gentlemen who
wished to form the corps. The unit eventually formed was the 1st
Company in the County of Ross and held the 44th place in the
Artillery Volunteer Force of Great Britain. After many ups and
downs in its history, this corps exists today as the Ross Battery.

For more than half a century the activities of the corps were
peaceful. The only highlight was its participation in the famous
Wet Review at Edinburgh, on the occasion of Queen Victoria's
Jubilee. Matching the rain which lashed down in sheets from the
sky, a sewer burst open in the centre of the parade ground. Com-
pany after company divided ranks as they approached the
disagreeable fountain in their path. But Lt John N. Anderson,
later Provost of Stornoway, gave the order 'Right into it!' Amid
a great roaring of cheers from the watching crowds, the Storno-
way Volunteers marched straight on in perfect order. It was per-
haps prophetic of the sterner tests to come.

*175 The unit was one of the Royal Garrison Artillery in 1908 when
704 it was reformed as the Ross Mountain Battery of the 4th High-
726 land (Mountain) Brigade. Later, as a regular division, the battery
648 was the first field artillery to be landed at Cape Helles, in the
Gallipoli campaign. At Suvla Bay, it lost 50 per cent of its strength
in two days. At Ismailia it mustered again to fight against the
Turks in the Canal area, but it was not allowed to remain to
assist in driving back the enemy. Instead, it was moved to Salonika
to help the mountain batteries, now much depleted by malaria.
The final move was to Bulgaria, where the Lewismen were the
first gunners, if not the first British troops, to enter that country.

*175 Before, during, and for a time after, the first world war, the
702 Ross Battery had close ties with the Nicolson Institute. To quote
704 from a past Rector of the school:

TRADE AND INDUSTRY

Lord Leverhulme's fisheries

159 The era of Lord Leverhulme, the soap magnate, is well docu-
*175 mented; a complicated story and not yet told in full. The con-
frontation of a dynamic industrialist from England with the
deep-thinking crofter of Lewis has formed the subject of much
speculation, particularly with regard to the non-success—rather
than failure—of Leverhulme's schemes for the island. Leverhulme
bought Lewis in 1918. He had visited the island about twenty
years before and had no doubt thought that with proper direction
and adequate capital much could be done to bring it out into a
fresh, lively economic air, profitable both to himself and the in-
habitants. He was a visionary; but he was also a practical man,
with great successes in the commercial world to prove it. In 1919,
159 contracts were placed with Sir Robert MacAlpine Limited to
*175 begin operations in Stornoway: excavating, levelling and build-
228 ing in preparation for the new town and its factories. The Lever-
hulme Syndicate bought deep-sea trawlers in Aberdeen, Hull,
Fleetwood and other ports, and also retail fish shops in many
towns on the mainland. This side of the enterprise was known as
The Mac Fisheries Limited, and the island developments were
under the direction of the 'Lewis & Harris Welfare & Develop-
ment Company Limited'.

Leverhulme's main idea was to establish Stornoway as the
centre of a great fishing and fish-processing industry. As he put it,
acre for acre the seas surrounding the Hebrides were infinitely
richer than the land. He maintained that in any programme for
the improvement of the islanders' economic position, fishing must
become their primary if not their only activity. Such, however,
159 was the land hunger of returning ex-servicemen that his attentions
*175 were almost wholly given over to trying to persuade those want-
423 ing crofts that they would be, materially at least, better off in his
• 729 canning factories. But farms were broken up to satisfy the demand
for land until the time came when Leverhulme felt he had to
abandon Lewis. The Board of Agriculture and the Scottish Office
were also principal actors in the play, mostly on the side of the
land raiders who squatted on farm land in the island so causing
the farms' eventual fragmentation into small units of economic
ooo insignificance. When he pulled out of Lewis to go south to Harris,

CH. X BETWEEN TWO WARS, AND AFTER

177 most of the young men of the Islands were away. Hitherto,
[464] though people from the Isles had gone out into the world and rubbed shoulders with all sorts of men and women, from best to worst, their own homes and townships had remained inviolate. Now, however, there came men in numbers from distant homes, with little to do when off duty and with money to spend, either on tweeds, which were virtually free of controls, or on pleasures, if they could find them. The temptations offered to a community so unaccustomed to town ways were considerable.

Those who returned least changed in their outlook upon
• 729 rural life were ex-prisoners-of-war, from the 51st Highland
178 Division. At their own wish, they had received instruction
[423] in modern small-holding; and the demand from prison camps for land when the Highlanders would come home was upheld. It is especially among these men that agencies such as *An Comunn Gaidhealach* kept Gaelic tradition alive, linking it to the Highlanders' long thoughts of home. Next to these come naval seamen, while those most subject to urban influences were those who worked in factories. But whatever their experiences, home exerted a strong attraction. If work and a fair wage can be found in the township and on the crofts, and if social life can be renewed, many who returned will stay.

726 As in the First World War, so in the Second: few communities in Britain have had so large a proportion of their men in the Forces, in the fighting line and at sea,
[177] from the outbrake of hostilities. The Island community
[167] is almost without the exemptions due to 'essential occupations' such as commercial agriculture in the country, or war industry and administration in the towns. The toll
[729] has been heavy, and the nation's debt to the Islanders

COMMUNITY FROM PAST TO PRESENT PT. II

464 For a year or two after the war many men and women
[288] returning from the Services, the sea or the factories found
• [729] employment in the flourishing Harris Tweed industry. This included work in the spinning mills and hand-weaving at home—work in which the male weaver was helped by his family in jobs such as bobbin winding. Few fishermen
[226] dared to sink capital in new boats and gear, and risk losses
[178] such as those sustained after 1920. Few women wished to return to the hard, uncertain work of gutting. The whaling
[462] station, built on West Loch Tarbert before 1914 and open for a short time between the wars, was reopened in 1950, and employed some 30 men for 18 months before it closed
[241] in 1952. Crofting was lightened by some mechanised
[722] cultivation. The war-time construction of air-fields had ceased, though some harbour-work and road-making was
[654] assisted by government grants.

In 1949 the Harris Tweed industry, now the Islanders'
288 main source for earning, was crippled by the imposition of
651 a 66⅔ per cent purchase tax on hand-woven Harris Tweeds.
648 Parliament decided that as a non-utility product, its export sales alone could be exempt from tax. Viewing the
[433] position of the tweed industry in Britain as a whole, there were strong arguments for the extension of the tax to
[171] Harris Tweeds: the high-grade industry of the Scottish Border or the manufactures of the West Riding should not be subjected to unfair handicap. At the same time the crippling of a handicraft practised by peasant or artist favours mass-production to the loss or ruin of traditional and experimental workmanship or design to which, in the end, the mass-production is an unacknowledging debtor. The obvious economic handicaps of Island hand-weaving
[439] may surely permit some latitude. The export trade in
[458] Harris Tweed, in which the imponderable 'sentimental

APPENDIX I

178 crippling losses suffered after 1914–18. A beginning has
228 certainly been made. The Herring Industry Board's scheme for
434 'Queen of Scots' kippers will help the Minch fishing. It will not necessarily help the ports of Stornoway or Tarbert, because herring can be landed at mainland ports and treated there or else taken by road to the Moray Firth, kippered there, and still qualify under the scheme. The Scottish Agricultural Organisation Society has aided the marketing of lobsters to good purpose.

(iv) *Other Sources of Income earned in the Island*

It is to be hoped that members of the Lewis Association
14 may ascertain these, perhaps in collaboration with University
814 research workers. This, in turn, might instructively be collated with the imports and exports of the Island, which are recorded and ascertainable with a precision impossible for a similar area on the mainland. Thus the facts would throw light on the economy of other crofting districts.

(v) *Allowances, Pensions, Unemployment Assistance and Remittances*

With regard to money received by the crofting communities
657 of Lewis from other than 'productive' sources, figures have
434 kindly been made available regarding three sources, namely, (*a*)
436 Allowances made to members of the Forces and their depend-
• 729 ents, and Pensions, (*b*) Unemployment payments, and (*c*)
434 Money Orders and Postal Orders. The yearly periods for which figures are available are close enough to permit of reasonable comparisons. Among other sources, Bank Drafts form an insignificant fraction of monies received by crofters from outside
[508] the Island. It is impossible to say how much cash is brought
[464] home by men paid off from the Merchant Service and other employment, or how much may be sent through the post in the form of notes, whether registered or unregistered. The amount is known to be large, however, and an estimate based on the number of insured employed, and other figures, would be of value. A token figure is suggested in a note to the concluding Table.

APPENDIX I

• 729 For the year 1937–38, Allowances paid to members of the
434 Forces and their dependants in Lewis (proper) came to £40,000. Of this sum a greater part was paid through Stornoway Post Office than might have been expected from the town's population. But able-bodied recipients of Allowances are attracted to the town by the likelihood of finding work there, while men of higher rank and pay are apt to be townsfolk, and their
657 dependants also. Old Age, Orphans' and Widows' Pensions
434 exceeded £80,000. Of this sum a relatively large amount was also paid through Stornoway Post Office, partly for administrative reasons, rendering other causes harder to disentangle.

We turn now to the next source named, Unemployment Assistance. The Bureau made payments of £120,000 in 1936—the last year for which relevant statistics were made available. Of this sum, about one-third was Insurance Benefit, derivable in principle from the joint earnings of workers, and two-thirds were Public Assistance, contributions to which were made from local rates. The fraction paid to Stornoway workers was relatively small, and may be estimated at barely £10,000, that of rural payees accounting for the remaining £110,000. As the Means Test took account of the croft (or smaller holding with house), the average payment to individuals was small.

434 Turning to Money Orders, and taking the balance of pay-
436 ment and issue at face value, there was actually an outflow from the Island instead of an influx, for the issues exceeded the payments. In Lewis in 1937–38, whereas nearly £60,000 was issued in Money Orders, only a little over £30,000 was paid. Even allowing for the fact that part of the payments is cashed through banks or cleared at a central Post Office on the mainland, there would appear to be an outflow, as centralised clearances probably amount to no more than 35 to 40 per cent. The amounts in Postal Orders paid were smaller, totalling £23,000, and the difference between payments and issues less.

434 Comparisons between town and country are instructive.
436 Stornoway's position as a shopping centre is reflected in the heavier average of Money Order payments per head per annum
369 as compared with rural areas (£8·4 as against £1·1); and the

APPENDIX I

434 difference between the issues and the payments in rural areas
436 (£28,000 as against £13,000) is no doubt due to orders drawn
369 to pay accounts. In this connection, a comparison of conditions at an interval of nine years is suggestive for any attempt to distinguish the difference between rural incomes before and after the economic depression. In rural Lewis the total Order payments fell from over £33,000 in 1928–29 to barely £22,000 in 1937–38, a fall of more than a third. Although a decline in the payment of Money Orders in Stornoway was partly offset by an increase in that of Postal Orders there, it is thought that even this reflects a fall in the cash available in the townships, by indicating a fall in the average amount of accounts paid by country customers to Stornoway tradesmen. Even here, it is true, some allowances must be made, as latterly more shopping was done by customers coming into Stornoway by car and probably paying to a greater extent in cash.

Comparisons may now be made, for all the data quoted,
[657] between Stornoway and the rural or 'landward' areas of Lewis, and also between landward parishes for all except the
[161] Unemployment payments. Population having changed but little from 1931 to 1938, and economic conditions not being very different in the Island in the financial years 1936 and 1937–38, an approximation can be made of payments averaged per head of population. In the following table these are shown in £ sterling to one decimal place.

Average Payments (per Head per Annum)

432 strips running across the slope, which are interchanged each year, whilst a large part of
427 the common grazing lands are divided into interchangeable sections ("quarters") to
311 accommodate each of the groups of crofts. See Figures 22 and 23.

[233]

[139] The cultivable croftland at Kneep is relatively flat and the natural drainage is poorly developed; the quality of this land, depends to a very great extent on the upkeep of a dyke
[312] running across the croftland from a small marshy loch to the sea. This dyke has not been cleaned for several years, and as a result a large area has been invaded by reeds. Other parts of the croftland have been similarly overrun by 'wild rhubarb'. Such deterioration is almost inevitable when land is so fragmented.

The crofts at Reef are grouped in three separate localities. Crofts 1, 2 and 3, on the edge of the machair have probably never been occupied since the crofts were allotted in 1921 and are now used only for grazing. The main body of the crofts (nos. 3 - 13) face south - they are more compact than those in Valtos and Reef, but they vary in size from 2.9 to 13.25 acres and their boundaries are irregular in shape. Two crofts (14 and 15) are separated from the main parts of Reef: they are both small (2.5 acres) but the size is compensated by their situation on the level terrain of the machair. The old farm house
[241] is used as the dwelling for both 14 and 15. Much of the cultivation at Reef, except on the machair crofts, is on lazy beds - but many of these have decayed with the advent of horse
[407] and tractor ploughing; 35% of the land is cultivated by spade, and the remainder by horse plough.

The crofting economy is probably at its lowest ebb in Reef. Only eight of the fifteen
433 crofts are occupied and of these five are worked by disabled crofters or crofters over
[729] sixty-five. The Reef crofts were settled in 1921 by returning ex-servicemen and today seven are being worked by the original settlers; there is little evidence of a desire among the younger generation to succeed to the crofts.

[233] Until 1956, crofters on Reef used to graze both sheep and young cattle on the Flannan Islands, fifteen miles west of Uig.

162 Fig: 24 shows the age/sex structure of the population in the three townships. It tells a story familiar to crofting townships: 55% of the resident population are over forty-five years of age; 9% of the total population are permanently away; and since 1939 the population has declined by at least 15% as the result of emigration alone. But perhaps the
163 most significant fact is the very small proportion of women of a child-bearing age and the consequence that only three children are being born each year to replace the older generations.

131 By their very position, the townships of the Valtos peninsula are isolated. Fifty years
20 ago communication with the rest of Lewis was by boat. The road to Valtos and Kneep was built originally to bring the mails from the pier at Meavaig; the motor road to Reef was completed in 1956. Shopping facilities are provided at Valtos, for the people at
[443] Valtos and Kneep, and at Meavaig which serves Reef, Uigean and Cliff. These are supplemented by travelling shops which call once per week, by Indian dealers and by the local 'bus-driver who makes purchases in Stornoway on behalf of customers on the
[346] peninsula. The school for the whole area is situated mid-way between Cliff and Valtos and two kirks and the doctor's house lie at the junction of the Valtos and Reef roads.

• 731

In 19th-century Scotland, the cause of the Highland tenants and subtenants was taken up, as part of the trend of the times and because a series of famines occurring in the Highlands caught the attention of Britain. After the kelp industry was destroyed at the beginning of the 19th century, landlords maintained high rents on the assumption that the depression was only temporary, which caused tenants to deplete their capital by selling their cattle (Gray 1957: 38). A number of reports were published on the plight of Highland smallholders: Fullarton and Baird (1838), MacNeil (1851), Mackinlay (1878), and finally the Napier Commission's report of 1884 which was followed by the Crofters Holdings (Scotland) Act of 1886.

175
423
656

The 1884 Napier Commission Report tried to resolve the conflict between the rights of the individual smallholder and the maintenance of agricultural efficiency in a situation which still had communal elements of social organization, by recommending an organization much along the lines of the old joint farm. The townsh was defined as a farm, or part of a farm, which was occupied in common or in division by several tenants. The township, seen as an agricultural unit, was to be given various immunities and powers by which to achieve

159 conclusion—undoubtedly a sound one—that the most
433 effective action for commercial fisheries (as then known)
228 must be taken at one Island centre, Stornoway. As a direct result he considered how to feed the growing town, in particular how to give its children fresh milk. He saw the farms round Broad Bay ready to be turned to high-class dairy farms, if capitalised, and for this purpose they were swiftly scheduled in his mind.

159 "His early days were happy ones"—wrote his son—
433 "but they were not to last for long. He encountered the first obstacle on his path in the late summer of 1918, when
423 the Scottish Board of Agriculture declared its intention to
[647] take over the few remaining farms in the Island for crofts." By this declaration the Board spoke for many Islesmen in the Forces. The voices of Servicemen, not those of either a Government or a philanthropic millionaire, counted over-
[727] whelmingly, on the Island and beyond. When the war was over and the men came home, many set about examining their boats and fitting them up with motors, and in a few months the evening's departure for the fishing from Stornoway had lost some of the picturesqueness of the old, stately procession of sail moving out to the Minch at sunset, but had gained in efficiency as the motorised boats went puffing out to find the shoals, sure of return without delay after the catch was hauled in. Yet fishing was still precarious: there might be no catch, and even if there were, prices were a gamble. Hence many a cottar-fisherman wished to ensure a home for himself and applied for a croft, with his eyes on the farms. Farms were few, and not enough to go round more than some 10 to 15 per cent of squatters and cottars. Still, a promise is a promise: the farms were there, why not have them and be done with it? Knowing this feeling in the Island, aware of its support

Lewis and Harris

APPENDIX II

(iii) *Fishing Industry* (1953)

434 228 [439] The renewed Russian contracts for herring have meant loading of Baltic shipping at Stornoway with barrels of herring cured both in Stornoway and Ullapool. Catching power in Scotland generally is hardly enough to meet this contract. Thus, while the numbers of boats continued to decline after the war, leaving only one steam and 33 motor drifters (over 30 feet keel) registered by 1953, the fishermen employed rose to 610, of whom some 520 were crofter-fishermen. Many worked much of the year; on the other hand, most of the winter catch went for 'oil and meal' at about 50s. per cran instead of the top price of over 80s. For local boats a figure of £30,000 is suggested for the catch of herring, say £10,000 for white fish, [178] with £5560 for shellfish. For "curing and associated income" the pre-war figures may be doubled.

(iv) *Other Sources of Income earned in the Island* (1953)

434 465 In mid-1953, of just 5000 registered for the Island as employed—and other than the self-employed, *i.e.* the farmers and crofters, the hand-weavers and the boat-sharing fishers—1130 earned by the three industries first named, the rest by other trades and professions, 3870 in all. The unemployed numbered 1180. Analysis of wage-rates would throw light on [657] total earnings. As to unemployment, the fact that, like crofters and many fishers, hand-weavers count as 'self-employed' means that when out of work they are not covered by unemployment insurance, and have to be helped, at low rates, by public assistance.

(v) *Allowances, etc.* (1953)

434 657 436 729 Turning now to Remittances, to the manifold categories of Pensions, National Insurance and National Assistance, and to Unemployment Benefit (a small item), the Table B, 1953–54, shows the totals kindly furnished for this study, with £1,017,110 for all Lewis and an estimated £977,010 for rural Lewis.

private naturally addressed him in Gaelic by his Christian name, and writes of him with the warmth and respect due to an elderly relation. Something of this mutual regard remains; and young Englishmen of education have told me of their surprised admiration for the character of the best traditional type of 'Regular' Scottish, and particularly Highland, non-commissioned officer, before and during the two world wars.

Such bravery and character abroad led Stewart to the conviction that their foundation must be the character of the peasantry at home. He held that the Highlanders' home life demanded support, and having served with the Sutherland Highlanders, he felt the deepest grief and anger at the clearances of the Sutherland estates by an English proprietor. When Stewart remarked that a few deaths mattered little when compared to the nation's renown, for this 'endures for ever', he referred to deaths in battle, which he analysed as typically of 1 to 2 per cent of the men. Whereas upon long voyages or in unhealthy stations, 25 per cent of soldiers or civilians might die of disease.

Yet, to the Gael, discipline did not mean blind submission to injustice. "Accustomed to obey their immediate chiefs, who durst not break a compact with them, and to have promises punctually fulfilled, implicit submission was not yielded when they had rights to preserve." For the bond by which, of old, the Highlanders "were held to their superiors and one another" was "the bond of fidelity and affection. . . . In later times, when they entered the King's service, they considered themselves as contracting parties", and resented breaches of faith. Of eight mutinies in as many regiments, that of the Seaforth in 1778 should be instanced here. The regiment included many Lewismen, with Mackenzies and Macraes, and also

CHAPTER X

BETWEEN TWO WARS, AND AFTER: 1918–1952

(A) SEVEN YEARS' ENDEAVOUR, 1918–1925

1. *A Planner: Lord Leverhulme of the Lews*

727
458

LOOKING back to the aftermath of unemployment following the First World War and forward to anxieties ahead, a soldier in 1944 protested that it would be exacting too great a sacrifice from the country's manhood to throw it unaided, upon "the hazards of peace", for the second time in a generation! If Island life is to be planned for in the ensuing peace, we must ask, "What of plans last time?" Depression in the Island was not primarily due to the failure of any one of the three parties immediately concerned—to the Islanders, the crofters, cottars or fishermen, to the Scottish Office or its Departments, or to a particular philanthropist—nor even to failures by all three to get together for the Island's good. All three may deserve their share of praise or blame; who might not, stranded without warning by such an ebbing tide? Behind the personal factors on which biographers and writers have insisted, in retelling Leverhulme's Island adventure, larger forces were at work, undoing the efforts of all. Further, by undermining confidence and preying upon anxiety, disaster upon an international scale brought the Island consultations from unity to feud and to frustration.

[114]

But neither is Harris behind in willing men. In December 1962 502
e trawler *Boston Heron* saw herself on off-lying rocks and broken 175*
rf water in a full south-westerly gale. The rock island of Stila-
air, off Scalpay Island, gave the stranded crew little hope of
elp. But six Scalpay men saw the plight of the ship and went
ut in a small open boat. Three of the trawlermen were saved, one
whom was found clinging exhausted to a rock. The other seven
erished before more adequate aid could be brought. For their
eroism, these Scalpay men were awarded Vellum Certificates by
e RNLI. The attitude of local men to the sea, and the sea's
eatment of men, was once summed up by an old Harrisman:
Our men were brought up in the school that taught them that
'e was precious and that the soul was priceless.'

The formal organisation of sea rescue is found in the Coast- 502
uard Stornoway, the headquarters of the Stornoway District. 706
his covers the north-west coast of Scotland from Ardnamur-
han, Argyll, to Cailleach Head, the Minches and the associated
a areas, including the Small Isles, Skye and the Outer Hebrides
-in all some 800 miles of coastline. The Stornoway station is base
r a district officer, a station officer and four coastguardsmen,
pported by locally-enrolled residents who form the Auxiliary
oastguard. Stornoway Coastguard is the launching station for
e Stornoway and Barra lifeboats, advising when a launch is
eeded and calling out the boat crew by firing two green maroons.
is also a coastguard liaison station for the GPO Coast Radio
ation (CRS) at Oban, and it co-operates with Oban and Wick
a radio-telephone station when lifeboats are launched on ser-
ce. There is, in addition, liaison between Stornoway station [456]
nd the RAF, the Royal Navy and Lloyd's: Lloyd's come into
e picture when tugs, salvage and shipping information are
quired.

Though there have been many stranger ships and lives lost on 502
nd around the island's shores, local tragedies are not lacking. In 731 •
ecember 1862 disaster overtook five boats from Port of Ness, 175*
ut pursuing white fish. A fierce gale sprang up and the fishing-
eet perished, with thirty-one lives. Twenty-four widows, seventy-
e orphans and thirty-one other dependents were left destitute, [736]
ough they obtained some subsequent relief from a fund to which

COMMUNICATIONS

Queen Victoria and the Prince of Wales, later King Edward VII, contributed handsomely. But that was only one item in a long chapter that will never close.

The most shattering disaster on Lewis shores was the loss of the *Iolaire* on the very last day of the year 1918. Before the New Year's Day of 1919 was a few hours old, over 200 sons and fathers were lying in the death-waters of their drowning, little more than a stone's-throw from their native island. Barely a village on the island was not affected by the sinking of the *Iolaire*, which was bringing soldiers and sailors back from the war to their homes. The subsequent findings of the Court of Inquiry are bald statements which convey nothing of the tragic loss of the cream of an island's male population in a matter of minutes. The jury found that the *Iolaire* went ashore and was wrecked on the rocks inside the 'Beasts of Holm' (outside Stornoway) about 1.55 on the morning of 1 January, resulting in the death of 205 men; that the officers in charge did not exercise sufficient prudence in approaching the harbour; that the boat did not slow down, and that the look-out was not on duty at the time of the accident; that the number of lifeboats, boats and rafts was insufficient for the number of people carried, and that no orders were given by the officers with a view to saving life; and, further, that there was a loss of valuable time between the signals of distress and the arrival of life-saving apparatus in the vicinity of the wreck. The sad affair is still remembered in the In Memoriam columns of the *Stornoway Gazette*.

AIR SERVICES

The people of the Outer Hebrides are among the most air-minded in the world. However, aeroplanes came late to the island. The first visit by an aircraft was in 1928, when Seaplane S1058 landed in Stornoway Harbour. The crew of five were treated to a luncheon by the town's civic heads. In 1932 the seaplane *Flying Cloud* arrived in the town, piloted by Lord Malcolm Douglas Hamilton. Owned by British Flying Boats Limited, it was the first commercial aircraft to land and caused some local talk about air services for the island. In June 1933 a large seven-seater air-

AGRICULTURE AND FISHING

427 With the disappearance of the middlemen, their sub-tenants be-
*175 came tenants of the proprietor; and the descendants of these are most of today's crofters. Mr Thomas Knox, who became Chamberlain of Lewis in 1833, was examined before a Select Committee of the Houses of Parliament on the question of emigration from the island in 1841. At that time there were 1,913 small tenants on the island who paid yearly rents varying from 63s 9d
[433] to 72s 3d. He stated that the country produced sufficient corn for
• [731] the use of the people in most seasons. The years 1836-7 were
167 exceptional and outside relief became necessary. But he did not
427 consider that any person in Lewis was poor who had a lot of land, however small, if it were sufficiently stocked. There were,
*175 however, in the island, small tenants occupying land unsuitable for raising grain; and in order to avoid such distress as had occurred in recent years he had advocated the emigration of about 6,000 people, the vacant ground to be put under sheep. This course had been followed in 1838, when five families numbering about seventy people were removed and the land they had occupied was converted into sheep farms.

In the end, however, only a small fraction of the proposed 6,000 persons ever left Lewis under Knox's scheme. Those who were left worked their land under a cloud of increasing distress, in a system which had them in an iron grip. Eventually the bubble burst, as indicated in Chapter 3. The pressure of social conditions, and the events of historical progress, were manifested first in the social action against the agricultural system and finally in the legislation which gave the crofter certain rights.

CROFTING CHANGES

*175 In general, the island during the last century was able to support
244 its population, failing to do so only when disease struck at the
731 staple potato. Each family unit in the crofting township was self-
433 sufficient in most grown produce and the milk products from the family cow. Very poor families grew potatoes only and depended on neighbours for milk. But when the potato crops failed, distress knocked at almost every door, the fishing communities on the
000 island tending to relieve hunger by looking to the sea. The removal

magic is always efficacious—however desperate the need, however pure the motives of those who ask. These men were said to be the most successful fishers in the place; they were also Elders of the Kirk, who saw no wrong in what they did. They did not inform the minister; but the good man was not a fisherman and did not understand either the mysterious ways of fish or the incitement of a crew!

While this *neid fire* was kindled in all earnestness, a miming song-dance I have seen in Eriskay is pure fun: 'the Carline or Witch-wife of the Mill-dust' (*Cailleach an Dudain*), who falls down dead and is brought to life again! Once, perhaps, a half-remembered symbolic 'play' of the seasonal fall and resurrection of seed, it is certainly in form and spirit a thing of happy laughter now! Tales were retold by Martin and a seventeenth-century English skipper, of offerings made to a sea-god, Shony, at Eoropie, Ness, for the sake of seaweed, followed by feasting and drinking in the chapel there.[1] The story may be garbled or, if true, may record a pre-Christian survival turned to merriment and of no more significance to the people of the time than 'the Carline of the Mill-dust'. The prayers for the seaweed necessary for agriculture and daily bread are Christian in spirit.

When the people were at the mercy of periodic famines, diseases and sudden death, there were ample grounds for fears. Hence a word must be said of a belief widespread and ancient in the Old World, 'the evil eye' (*droch shuil*). In the absence of clinical diagnosis, a malady, or a misfortune to oneself or a valued possession, might cast suspicion on someone present when it occurred; and

[1] W. C. Mackenzie, 1919, pp. 143-208. Contrast *Carmina*, vol. iv, pp. 33-35.

small savings, if any, have been put to the purchase of fishing gear and boats, for fishing, too, was summer work. By 1833 the poverty of the Outer Islesfolk and the bankruptcy of the landlords were such that Parliamentary attention was called to the state of the Hebrides. Poverty continued to be extreme, but need turned the people to fishing. The loss of revenue to the lairds led to their making sheep farms—somewhat unwillingly—with local evictions: in Lewis chiefly from Park and from north of Stornoway, and in Harris notably from the western Machars to the eastern Bays. In spite of this, it also brought about the sale of Harris by Macleod, and finally of Lewis by Seaforth in 1844.[1]

(8) NEW OWNERSHIP AND CAPITAL IN LEWIS: 1844–78

Lewis was bought by Mr. James Matheson, a gentleman of Highland family, whose fortune had been made in China. Sir James (as he became) put much capital, effort and goodwill into the management and improvement of the Island. Of the amounts expended we may distinguish, so far as possible, what he spent as a rich man for his private pleasure from what he spent for the people. No sooner had Matheson bought the Island than the 'potato famine' of 1845–46 broke out. The terrible loss of life in Ireland, and the depopulation of that country which followed, would have been equalled in the Isles but for the action of landowners like Matheson—who were the descendants of 'kinsmen', not of alien conquerors—and also of subscribers

[1] A sketch map of Harris showing the areas cleared (1816–54) and areas settled as a result, together with those re-settled by government help after 1900, is given by J. B. Caird, *Scot. Geog. Mag.*, vol. 67, 2, 1951, p. 94.

in Scottish cities, who came forward again in 1888 and in 1925. Of the £33,000 Matheson expended on meal and seed potatoes for relief, about half was repaid in labour by the recipients. Here are the outlays reclassified from the Brand Report (1902, p. xv):

Castle buildings and grounds and shooting lodges			£120,000
Buildings and Land reclamation		£100,000	
Industries and Communications:—			
Chemical Works, for manufacturing paraffin oil from peat	£33,000		
Roads and Bridges	25,000		
Brickworks (from local clay)	6,000		
Patent Slipway, Quays, etc., at Stornoway	10,000		
		74,000	
Other expenditure:—			
Net Losses on Steamers and Mails	£32,000		
Industrial and Other Schools	12,000		
Emigration (2200 persons)	12,000		
Miscellaneous	1,000		
Relief (Meal, etc.), gross outlay	33,000		
		90,000	
Total expenditure, other than on Castle, etc.			264,000
Original Cost of Island			190,000
GRAND TOTAL			£574,000

Thus, of a capital outlay of over half a million pounds, roughly a quarter of a million was spent directly on the development of the estate. The rental in 1844 (exclusive of feu-duties) was nearly £11,000, and this rose to £18,000 within a few years, though it had been reduced to £15,000 at the end of the century. It will be seen that the praise given to Sir James Matheson for his liberal expenditure was well won, if allowance is made for the standards of his class and generation. Yet of the £120,000 he spent upon

favour of sheep farmers, in Lewis there had been very few evictions. Early in the days of the sheep-farming boom, one of the Seaforths had been offered 'double rents', and refused them rather than turn the people away. Later on, when the wars were over, and when the Seaforth fortunes were failing, subtenants and their cattle had been replaced by sheep stock in three tacks around Broad Bay (at Coll and Gress and at Aignish at the base of Eye Peninsula). The failure of kelp-burning and the potato famine brought acute want in rocky parts of the Isle, and led to the desertion of their homes by certain communities. In 1863, out of a total of forty crofters in a township of Barvas parish, more than half emigrated by help of Sir James Matheson. Local resettlement was aided by Sir James, who provided horses and implements for Uig people who moved to Shawbost (6 miles north of Loch Roag). Abandoned places became farms; and although agricultural prices fell and Sir James made little profit from the erection of buildings and the drainage, dyking and fencing on farms, land was improved, and better stock was bred, of which some was available to improve that of crofters, too. Twenty years later, however, increasing numbers increased the demand for crofts, and the people sought to reoccupy their forebears' land. In this, the Lewismen shared in a widespread movement, extending from the Scottish Isles to Wales and Ireland.

As a result of the real sufferings of the people in the Highlands and Isles, and of the growing interest in the land shown in the country and in Parliament, where Irish members made themselves the crofters' allies, the Government in 1883 appointed a Royal Commission of Enquiry under a fair-minded judge, Lord Napier. As a remedy, the Commissioners recommended measures based upon

grants, then, in the absence of an immediate goal, the combination of the corporate interest in bad work with natural inclination to an easy time proved overwhelming! The problem of assuring good work and prompt repayment is real: it calls for the right appeal to team-spirit coupled with personal responsibility. Many short roads to small new settlements have been economically built.

With regard to loans for settlement and housing, similar contrasts are found. Near Stornoway the farm of Aignish (Eye) was divided in 1905 into thirty-two fishermen's holdings (rented at £3). The Congested Districts Board lent £3600 for housing and spent £1600 on fencing and £450 on administrative expenses, a total of about £180 per holding; but in seven years the holders had paid only one-seventh of the annuities due, and were in arrears with the rent.[1] Yet on the housing loans made on a wide scale since 1919, there was mutual aid among neighbours and the repayment has been satisfactory.

SUMMARY: 1750–1914–1919

The transition from the old economy of mutual aid in self-support, little changed down to the 'Forty-five, to the development of production for sale had proceeded far by 1914. Yet change had not continued steadily. There had been fluctuations, from the land and back again, or towards individualism with returns to common action. Kelp-making, migration, and commercial fishing alternated in importance as means to earn a living without losing the anchorage of home. After the potato famine, a century ago, the people tended to move away from the outlying townships and emigrate; but the next generation agitated

[1] J. P. Day (1918), pp. 312-314.

for a firmer hold upon the land and for a return to abandoned sites. The communal possession of joint farms, held directly or under tacksmen, gave place to individual possession of crofts. Yet the legal recognition of perpetual tenure in 1886 gave not only the crofter's home but the crofting neighbourhood a security unequalled in Britain. The use of moor and machar in common was retained; but its control for improvement or reclamation by the estate or the township was weakened, rather than strengthened, by the Crofters' Acts. Confusion grew—both upon the arable land, subdivided, unenlarged and unimproved, and also upon the common grazing, sorely overstocked in spite of ever diminishing 'soumings' (or family shares) of cattle. Rating difficulties and anomalies appeared. Communal discipline, maintained at sea by fishing, was weakened on land after the abolition of the joint farm-group, and almost nullified in the townships by subdivision and squatting.

A year before the potato famine of 1845, a new landlord had brought good-will, capital and pioneering effort to Lewis. These had been directed to experiments in the reclamation and the industrial utilisation of deep peat. Helped by employment on these and other works, the population of Lewis continued to increase, when increase in Harris was arrested for a generation. Yet while neither experiment with peat met with success, little aid had been given to develop fisheries. In both parts of the Island a growing population was supported from the 'seventies onwards by help of earnings derived from the seasonal herring fishing on the East Coast and from inshore line fishing at home. Women added to the Island income by seasonal 'gutting' and, in Harris, by their spinning and weaving. Money was earned by work on the mainland,

rural Islanders throughout the nineteenth century and even today.

From 1887 the State made efforts to improve the crofters' lot. Crofters' claims to stake shares upon the only available reclaimed land in the Island, that of a few farms, had been refused in the 'eighties, but came to be granted, in principle and in fact, after 1900. During the war of 1914–18 the Government reaffirmed its promise to divide sheep farms into crofts for men returning from the Services, and the Land Settlement Act became law in 1919. Yet in spite of tentative experiments and schemes, a determined effort to see the Island possibilities and face its problems, as a whole, still remained to be made in the twentieth century.

When war broke out in 1914 over 5000 men left Lewis to join the Services, and corresponding numbers left from Harris. Others, too, served in the Merchant Marine, exposed to U-boat warfare. From the first months of the war, Lewismen in the Seaforth Highlanders, and men from Harris in the Camerons, fought in the Highland Division as shock troops in the attacks which cost the Division the highest casualties of any in the British Army. The Lovat Scouts, the Mountain Battery, the Garrison Artillery and other units, also enrolled their men, and suffered loss. The last blow to the Island came after anxiety had ceased. Early in 1919 the transport *Iolaire* struck a rock and sank at the entrance to Stornoway harbour; and 200 men who had withstood dangers and hardships during four years of war went down in the dark of a winter's night, almost within call of their waiting relatives massed on the pier to welcome them.

exists at Tárbert and another was erected in 'the Bays' district by Leverhulme. Leverhulme also appears to have introduced 'Automatic' hand-looms into Lewis. Today as in the past, the weavers possess a little croft or a feu, a cow, and a few sheep on the outrun, and perhaps a small boat.

Commercial fishing and weaving cannot, however, be satisfactorily combined, for seasonal alternation of occupation entails waste of gear and plant, and interferes with efficiency. Thus in the North Lochs fishing 'creek' (Leurbost neighbourhood, immediately south of Stornoway), weaving became important, but none of the seven large herring fishing boats (still registered in 1930) had been fitted with motors after 1918; they were idle and rotting, and by 1938 only one was still registered. In South Lochs, however, motor-boats were purchased, but there is little weaving. An obvious reason for the difference is the accessibility of the North Lochs area by road to Stornoway. Light passenger cars bring yarn to the village, besides groceries, etc., and take away rolls of tweed. South Lochs, on the other hand, considerably further from Stornoway by road, is still within reach for marketing fish. In North Lochs, merchant seamen at home and young men on their return from three months' work on East Coast fishing boats, turned increasingly to the 'Automatic' looms, manipulation being easily learnt; but such intermittent work alone gives little hope of progress. There is no more fascinating problem than the future of improved weaving.

2. *Unemployment and the Island Budget*

In the past, the storms of the Atlantic washed up on the Island shores the wreckage of world commerce; and

fragments of spars and other needful things lacking on croft and moor were picked up and carefully allotted. So, after 1919, from the wreckage of modern industry borne on the ground-swell of 'Depressions', there came to the Islesfolk the frail raft of unemployment relief, doled out like driftwood long ago.

Some assessment is therefore required. The total amounts of relief disbursed before 1931 were comparatively bountiful; and they certainly exceeded the sum of the crofters' contributions to the Unemployment Insurance Fund. After a couple of months of wage labour at road-mending, harbour-repair, or the like, young men were qualified for 'the dole'. Furnished with this, they returned to the croft when paid employment gave out, to cart in their peat, collect stones for a new house or saunter out with a rod for a little fishing from the rocks. All this was done 'on the dole', with complete legality, so long as their names were duly inscribed at Stornoway Labour Exchange as seeking fresh employment. Not a few prayed that 'employment' would not come inconveniently soon, as they would then be legally bound to accept it and to leave the croft. No doubt, even if only a part of the money received was urgently needed, the surplus was not squandered, as it might have been in a town. Extra cash, if any, served to buy a loom here, fencing for the garden there, and other things of permanent use. Yet morally it constituted misappropriation of relief. As a result, through no real fault of their own, young men began to lose independence and self-respect. This general problem for youth was widespread in years of 'depression', and it was peculiarly severe both in industrial Clydeside and the fishing villages of Scotland, and also throughout the 'depressed areas' of northern and western Britain, of which the Isles form the outermost fringe.

THE PEOPLE

733 734 158 people; Lewis can be taken as representative of the Hebrides and the Highlands in general. The incidence of involutional melancholia, occurring mainly in middle life, is high and, to quote one expert, 'It would seem profitable to consider the states of fear and distress with which it has been associated.'

731 165 Those in Harris and Lewis aged fifty or over have their recollections charged with little else than disaster. Not only did the island lose an abnormally high percentage of its young men in

NORTH RONA

Though the island is but a great lump of rock, Dean Monro says that in his time an abundance of corn was grown, by delving only, and an abundance of clover-grass for sheep. The island also produced a fine bere-meal which the islanders stuffed into the skins of sheep and sent, as their rent or tribute, to MacLeod of Lewis, along with mutton and fowls.

Of St Ronan's Chapel, still to be seen and reckoned the oldest Christian building in Britain remaining in its original state, Monro says: 'As the ancients of the country allege, they leave a spade and a shuil [shovel] when any man dies, and upon the morrow find the place of the grave marked with a spade, as they allege.' In 1695 Martin wrote of Rona in 1680:

> The people repeat the Lord's Prayer, Creed, and the Ten Commandments in the Chapel every Sunday morning. They have cows, sheep, barley, oats, and live a harmless life, being perfectly ignorant of most of those vices that abound in the world. They know nothing of money or gold, having no occasion for either; they neither sell nor buy, but only barter for such little things as they want; they covet no wealth, being fully content and satisfied with food and raiment; though at the same time they are very precise in the matter of property among themselves; for none of them will by any means allow his neighbour to fish within his property . . . They concern not themselves about the rest of mankind except the inhabitants in the north part of Lewis. They take their surname from the colour of the sky, rainbow, and clouds. There are only five families in this small island, and every tenant has his dwelling-house, a barn, a house where their best effects are preserved, a house for their cattle, and a porch on each side to keep off the rain or snow. Their houses are built with stone and thatched with straw . . . When any one of them comes to Lewis, which is seldom, they are astonished to see so many people.

Then came tragedy. Somehow, probably off a wreck, a swarm of rats landed on the island and consumed virtually all the food. A few months later, some seamen landed and robbed the islanders of their only bull. 'These misfortunes and the want of supply from Lewis for the space of a year occasioned the death of all that ancient race of people.' Some years afterwards a new colony was sent to the island. In 1796, at the time of the *Old Statistical*

THE OTHER ISLANDS

even to the extent that the St Kildans used their observations of the flights of birds both as compass and as omen for good or evil. Martin speaks of the islands with amusement and admiration. He indicates that the community was backward in some ways: they were illiterate, and wondered naïvely at the newcomers and their manners. 'The inhabitants of St Kilda are much happier than the generality of mankind, as being the almost only people in the world who feel the sweetness of true liberty.'

In May 1877, when the local tourist trade had hardly started, HMS *Flirt* sailed from Greenock with food to relieve hardship among the St Kildans, and an officer of the Highland & Island Agricultural Society on board reported that 'Tobacco was what they invariably asked for'. The ordinary diet of the island consisted of, for breakfast, porridge and milk; for dinner, potatoes and the flesh of fulmar, or mutton and, occasionally, fish; for supper, porridge when meal was plentiful. Seabirds' eggs, from March onwards, also formed a staple food. Tea was taken once or twice a week and the islanders were reported to be 'rather fond of it'. There were eighteen inhabited houses, sixteen of which had zinc roofs, two being thatched huts. The sixteen new cottages had been erected about 1863, 'and are certainly much superior to the inhabitations of the same class of tenants anywhere in the Western Isles'. All were well furnished, peat was used for fuel and there were two watches and one clock on the island. There were some seventy-five islanders; most of the men were old, and only two of them were unmarried, with twelve spinsters still to choose from. All read the Gaelic Bible. The men were mostly tailors, shoemakers and weavers; every house had a loom. They made all their own clothing, the men also making the women's dresses, and a good deal of blanketing and tweed cloth was made and sold. Nearly every house had a spinning wheel and a large pot in which the yarn was dyed. The women were expert knitters. Each croft and house was rented at £2 annually, sheep being charged for at the rate of 9d per head; these charges were usually paid in kind.

Feathers of the sea fowl formed the principal export of the island. The factor paid 6s per stone of 24 lb for black feathers; and 5s per stone for grey. For these he received, in Edinburgh or

361 by co-operation of three authorities: the Town Council,
369 the Piers and Harbour Commission, and the Stornoway
632 Trust as owner of property, including Lews Castle with
[656] its grounds. The social situation is of quite exceptional
[654] interest, and an attempt to describe some of its features is made in Appendix II, on the Stornoway Trust and the Lewis Association.

(c) CHANGES IN ISLAND POPULATION, AND THE FUTURE

1. *From 1801 to 1939*

175 Until the middle of the eighteenth century, the growth
162 of population was periodically checked or even set back by famines and epidemics, such as smallpox, or by warfare.
• [731] In 1801 the total population of the Outer Hebrides (in round numbers) was 21,700, and in 1831 it was 32,000. Of this total, Lewis carried 9200 and Harris 3000 in 1801 and, a generation later, in 1831, respectively 14,500 and 3900. In the graph (Fig. 12) the curve showing the average for the five landward or rural parishes of the Island (excluding Stornoway Burgh) indicates the fairly steady numerical increase there, almost to the close of the
[731] century. Following the evictions after 1831 and the potato famine of 1846–48, emigration caused a fall in the southern islands (*e.g.* in South Uist, Fig. 12). Forty years later, in 1871, the Outer Hebridean total reached nearly 40,000, of which Lewis alone, with 21,000, now gave more than half the total, and Harris—in spite of an intervening drop owing to evictions—4800. By 1901, in spite of losses in the southern isles, the total for the Outer Hebrides reached a peak of 46,200. Of this, Lewis already contributed almost

175 much of Britain and Europe until about 1700. A modern
511 parallel may be found in Asiatic lands with the frequency
162 of famines alternating with periods of recovery or, in others, the long-drawn misery of chronic under-nutrition and
171 endemic disease. In modern Europe, only international or civil war can now bring such extreme widespread misery.
• [731] And as peace brings partial healing, so in the Island past, when good seasons returned after famines, the life of the family renewed itself.[1]

175 The narrow margin of survival even in good seasons,
593 the risks of the bread-winner's death and of his family's destitution, and the need of co-operation in so many tasks made the family too small, weak and precarious a unit to stand alone. Even with relatively little division (or specialisation) of labour, and in spite of its apparent self-sufficiency, the family had perforce to link itself with wider circles of community life.

(B) JOINT LABOUR BY SMALL TEAMS: THE EVIDENCE OF TENURE IN 1715–26

175 Romance is hidden among the rent-rolls of the Seaforth
241 estates, all of which were forfeited when the Earl rose for 'King James VIII' in 1715. For of the rents withheld
429 from the government until 1720, on the mainland at least
[642] the loyal clansmen paid a considerable portion to their
[613] exiled chief, styled 'Marquis' by 'King James'. But the

[1] The 'ups and downs' of a peasantry living on the margin of subsistence and subject to severe disease can be studied in India, 1871–1941, where the 'net' or mean change has to be correlated with the 'variability'. This wide problem was reviewed in a series of papers to 1948; "The Social
[113] and Psychological Significance of Variability in Regional Changes of Population", with examples taken from Indian villages. (A. Geddes, *Human Relations*, Vol. 1, 2, 1947–48; cf. *Geog. Rev.* 1942 and 1948; and *Geog. Journal*, 3, vol. 98, 1941).

The number of cattle diminished as milk became available by other means; and when the township reseeding schemes came into existence, the need to go to the sheilings for an "early bite" was removed. The sheilings that remain in use today are huts of tin, wood and concrete within easy walking distance from the highway, used on weekends and during summer holidays. Most of these modern sheilings are close to Stornoway, and serve as summer retreats for the relatively harried urban dwellers such as publicans. On the west side, the sheilings are no longer used, but remain as a theme of songs and in nostalgic memories.

C. The Loom

Clo Mor, the big cloth, was woven in the Highlands and Islands for hundreds of years. Martin Martin, who travelled through the Outer Hebrides in the late 17th century, describes the export of "plaiding," and the practice of waulking or shrinking the woven length of cloth (Martin 1716). Weaving was done on wooden looms, and produced only for local markets until the middle of the 19th century.

By the middle of the 19th century, the failure of the kelp industry, decline of fishing, and destruction

286 175 731 735 286 175 741 439 of potato crops by blight had contributed to widespread poverty. The production of cloth for non-local markets was promoted initially by philanthropic proprietors in an effort to ameliorate such conditions. Lady Dunmore, of the Dunmore family that owned Harris during most of the 19th century, was largely responsible for developing a market in London and elsewhere for cloth woven in Harris. [565] The cloth was popular first among the aristocracy, who [438] wore it for hunting and other sporting occasions. The [435] romantic image of a cottage industry promoted for charitable purposes contributed to the market value of the tweed.

The market expanded in the second half of the 19th century, aided by ladies of leisure who followed the example 286 set by Lady Dunmore (cf. Hunter 1964: 24-26). The 441 production of cloth for a commercial market spread from 175 Harris to the southern isles, but was slow in coming to [964] Lewis, where the proprietor, Sir James Matheson, provided the people with construction jobs. After Matheson died in 1878, weaving for outside markets began in Lewis in the parish bordering Harris, and the name "Harris Tweed" was used because a market for cloth of this name had already been established. By World War I, weaving for outside markets was being done in all four parishes in Lewis. In 1899 there were 55 looms in Lewis and over 200 in Harris.

5: Caird et al.	K-5	(1958)	1959	ES10 Highland Scots Park	ES10

summer pastures for the tenants of Laxay and Barnish respectively, townships on the north
ores of the loch. In 1775, there were four tenants in Kershader, but their place of origin
unknown. In 1805, five tenants are recorded, two of them from Uig; by 1824 there were 10
ants. Thus the growth of population in Lewis during the second half of the eighteenth century
y well have been the major reason for the colonisation of one of the least agriculturally
active districts of the island.

From Figure 1, which shows most of the thirty-four occupied places south of Loch Shell
ut 1828, it is evident that colonisation had extended south into the mountainous area. The
ctions, which commenced in Harris in 1816, may have increased the population already there
early as 1660, for many of these families came from Harris. The numerous shielings in
th Park speak of a vigorous community: it is possible that South Park was more densely
ulated than the northern area up till 1800.

During the period 1818 to 1842, when the grazier, Donald Stewart, and his brothers had a lease
outh Park, most of these settlements were cleared (Fig 2): in addition, between 1838 and
3, 68 tenants and sub-tenants in Shieldernish, Cleiter, Seaforthhead, Lemreway, Oronsay,
mrabagh and Isginn were removed, in all about 436 people.[1] Some 27 families were sent to
sabost in North Lochs; others went to Tolsta and Tong in Stornoway parish, and some
grated. The main body of those evicted settled in the townships in North Park: Marivig in
had 6 tenants; by 1850, 22 are recorded. Thus the present distribution of population
tablished about 1840 and by then the townships along the shore of Loch Erisort from Habost to
yvard were well established. The Minch coast townships from Cromore to Gravir, first settled
t 1800, were greatly expanded, and Park south of Gravir became a sheep grazing devoid of
ll tenantry.

In 1844, the Seaforth family, which had held Lewis for over two centuries, sold the island to
James Matheson. The estate management soon wrought great changes in the landscape. Until
-52, the run-rig system prevailed, a system whereby a group of joint tenants, or a tacksman
subtenants, cultivated in small patches what arable land had been reclaimed, each share
g periodically re-allocated. The crofts, or individually held land, date from 1850-52, when
and was lotted and most of the present crofts were formed at this period. The settlement
rn associated with run-rig was one of closely nucleated groups of houses but when run-rig was
ished, houses were built on the individual crofts.

n 1858, Lemreway was once again made available to crofters, most of whom came from the
ng townships where population pressure was building up. After the disastrous potato famine
46-7, and the final failure of the kelp industry from 1840 to 1844, the population of the Outer
experienced great hardship. By the early 1850's, the lotting of the crofts and the rapid
lopment of the fishing industry brought a period of prosperity and the population grew rapidly
cially in the fishing townships of the Minch coast. The prosperity was such that numerous
rs built houses on the lotted crofts, and their stock-keeping on the common was tolerated
use of the demand for fishing crews. About 1884, the system whereby each boat was tied to
vidual fish merchants, who advanced meal and provisions against the catch, was discontinued.
this system was replaced by the auctioning of catches, such was the privation in Lewis that
Royal Commission investigating the poverty of the population in 1888 found conditions almost as
re as those prevailing during the potato famine forty years earlier. It was during this period
the Park Deer Raid occurred: Park became a Deer Forest in 1883 at the end of the grazier's
. In 1888, as a demonstration of their grievances, a large number of crofters from the Park
ships went into the Deer Forest and killed about 200 deer, cooking the meat in the open for all
e. Some were arrested but after trial acquitted.[2] A few good fishing seasons remedied this
ppy situation and the population of the fishing townships rose to a peak in 1911.

Evidence given to Royal Commission of Inquiry into Crofters and Cottars 1883. (Also known as
he Napier Commission).

Report on the Conditions of the Cottar Population in the Lews, 1888.

Stornoway Gazette, 27.1.59.

6: Ducey	E-4,5	(1953-1954)	1956	ES10 Highland Scots Skye	ES10

to the health of the potato and their own fertility.[40] Many men turned to fishing, on a part-time basis, but once again the initial success was short-lived. Others supplemented their diminishing incomes from the croft by seasonal employment in the Lowlands. Crofting had ceased to be a subsistence economy; the people had lost their self-sufficiency. Nor were they ever again able to escape from a dependence on some form of supplementary income to provide the bare essentials of life. The difference between conditions then and now is that the pressure of the population on the means of subsistence increased until it approached a Malthusian ceiling.

In the thirties epidemic and famine began to take their toll. Destitution became widespread and there was no system of relief beyond the moral obligation of the proprietors to provide grain. The marriage rate fell. In Kilmuir the average annual number of marriages fell from twenty-one to six. Subdivision was forbidden, but it was too late. In two districts of Kilmuir there were 190 lots, crofts, and farms to support 421 families in 1840. In all of Skye, after the emigration of at least 1500 people, there were 1900 crofters and 1531 cottars. Despite the fact that oats had become as big a luxury as meat and the fact that many were living on potatoes and fish, the population continued to increase. By 1841 it reached 23,074. Finally, the economic structure collapsed.

In the autumn of 1846 there were no potatoes. A blight destroyed the entire crop. Although the famine was universal

[40]For details concerning the plight of the crofters at this time, see MSA, pp. 216-360.

6: Ducey	E-4,5	(1953-1954)	1956	ES10 Highland Scots Skye	ES10

in Scotland, it lacked the same effects elsewhere. There is a significant correlation in the Highlands and Islands, as in Ireland, of the disproportion of the population to the means of subsistence, due to a change from subsistence farming to a partially commercial system of land use, and the intensity of the crop failure. In both countries the persistence of innumerable traits from the traditional economy, including conservative techniques, attachment to the land, and a tendency to share the land among the kin, hampered commercialization or, at least, specialization and led to devestation.

Five years of famine ended the growth of population. The emigration of large numbers and the death of untold numbers must have seriously disturbed the patterns of interaction within the extended family and the township. Although the proprietors made a final effort to help their tenants, ruining themselves financially, they had foresaken their people. The ministers were no longer able to contribute to group solidarity,[41] because the symbols and values they upheld reflected the attitudes of the landlords and lacked significance for the people.

A religious revival reached effective proportions by 1812.[42] The appearance of the Revival suggests that the culture was far more disorganized than the scant social and economic record indicates. Normally, the attempt to seek supernatural assistance as a source of comfort and hope appears only after the culture has become thoroughly disorganized.[43]

[43]Kroeber, Anthropology, pp. 437-440.

Each man received a permanent, compact plot of arable in place of his former concurrent right to a whole farm. The change, on the surface, seems to have been superficial. The grazings remained common property and the arable land became common property after the harvest. The significant fact is that commercialization had not yet led to a disregard for the customary rights of the small tenant, except in a few isolated areas. 175* 178* 427

There were other effects of the change in tenure beyond a leveling of the social hierarchy. By giving more people a direct share in the land emigration was stopped. The practice of subdividing the crofts among the children, as they married, at once favored an increase in population and strengthened the family of orientation, if not the extended family. At the same time, it placed a greater dependence on the potato; the people became hostages to the health of the potato and their own fertility. In time progressive economic deterioration began. The old subsistence economy had been weakened by subdivision of the small plots, increasing dependence on external markets for profts from the sale of cattle, and wages from kelping or a little fishing. When the markets broke, destitution and emigration reappeared. Finally, with a failure of the potato, the economic structure collapsed. The population trends were reversed. The people had remained unspecialized in a nation of specialists. [167] [161] [593] 175* 178* 731

The next stage in the process of commercialization, the growth of a village and the extension of communications, had little perceptible effect on the Sgiathanach. Villages were 175* 178* 621

existing system of proprietorship. At length, land leagues were formed to give body to the peasants' protest. The movement finally reached Scotland in 1880. By 1883 it had become important on Skye. Significantly, the agents responsible for the Skyemen's agitation were Irishmen.[71] The stimulus for accepting the course of action advocated by these agents was provided by another famine which coincided with the loss of wages from employment on the east coast fishing vessels.[72] The crofters took the law into their own hands. The Kilmuir crofters refused to pay their rent. The Glendale crofters forcibly drove the sheep off their old cattle grazings. Glasgow police and the Royal Marines were dispatched to Skye.[73] Out of this unrest came the appointment of a royal commission of investigation, but their work is our subject for the fourth period. A more pressing problem is what effect did these events have on the religious outlook of the crofter and what influence did religion have on the configuration of the culture. *175 *178 668 [73] [12]

While the Revival was underway during the first half of the century, the General Assembly of the Church of Scotland was witnessing a renewed battle over the old question of patronage, the right of the proprietor to select the kirk's minister. Finally, in 1843, the Church was broken by schism *175 *178 745

[73] Detailed accounts of the land raids and resistance to the police can be found in Alexander MacKenzie, The Isle of Skye in 1882-1883 (Inverness: A. and W. MacKenzie, 1884, pp. 7-144. See also Cummings, op. cit., pp. 146-147 and William MacKenzie, op. cit., pp. 24-25.

The growth of the population ended with a prolonged famine. The proprietors, finding that the people's only justification for crowding the estates and looking to their landlords for help were some nebulous customary usages, facilitated the decline by disregarding custom and throwing as much land into sheep farming as was possible. While evictions were not new, only after the famine did they result in an absolute reduction in numbers. The Sgiathanach, fettered by a lack of capital and an inability to break with the past, could not make the final adjustment required by the process of commercialization, specialization. In addition to emigration, the Clearances and general economic hardship forced a postponement of marriage. There was neither land nor regular employment to provide a livelihood. 161 [731] [427] [182] [167] [582] [464]

Later in the nineteenth century new influences began to play a role in the continuing decline of the population. Following the passage of the Crofters' Act, the nature of emigration changed. Seasonal migration became negligible. The provisions of the Act, and ensuing legislation, made it possible for a man to remain away during his active years and return to the parental croft to spend his old age. The extention of education not only equipped the youth for life in the larger society but also created demands for objectives which could not be attained at home under the existing order. Thus, as in the period of population growth, the persistence of many features of the old traditional culture, and the renewed importance of others, were factors of no little consequence. 161 167 178 427 671 [871] 161 167 182

THE PEOPLE

733 people; Lewis can be taken as representative of the Hebrides and
734 the Highlands in general. The incidence of involutional melan-
158 cholia, occurring mainly in middle life, is high and, to quote one expert, 'It would seem profitable to consider the states of fear and distress with which it has been associated.'

731 Those in Harris and Lewis aged fifty or over have their recol-
165 lections charged with little else than disaster. Not only did the island lose an abnormally high percentage of its young men in

HISTORY

*175 423 668 429 The crofters were in a state of revolt against the accumulation of trends and events which now stood like a high dam against their progress to a higher level of acceptance in the social scene. They stood in open conflict with local and national authority. Unhappy scenes were enacted, many being in complete variance with the natural temperament of the Highlander. Lewis crofters were not far behind with their contribution to the agitation for land reform, though they had perhaps suffered less direct action from landowners than had crofters in the Highlands and southern Islands. But their living conditions had deteriorated. And an inhumanly-efficient factor made for deep unrest.

*175 657 423 429 [668] Land agitation began in Lewis in 1881, and large numbers of Lewis crofters gave evidence before the Napier Commission. This Commission was the result of agitation for an enquiry into crofting conditions in the Highlands. Its setting up relieved a situation of acute tension, though it neither extinguished political agitation nor mitigated the disaffection felt in the more disturbed districts. Under Lord Napier's direction a mass of information was collected. The official findings of the Commission were almost identical with political declarations in the country, but did not altogether coincide with the requirements of the crofters and their spokesmen. The resultant Crofters' Act of 1886 fixed the crofting system into that rigid trance in which agricultural innovation, opportunity for improvement, the social progress of crofting communities are largely lacking. It did give all crofters permanency of tenure, where they had none before, fair rents for the land they had and compensation for improvements. But the old demand for new smallholdings and settlements persisted with greater insistence and further pressure on high political circles.

[735] [746] In 1888, members of the new Crofters Commission visited Lewis and found that poverty was so general in the island that among 607 crofters for whom fair rents were fixed, there were scarcely a dozen who had not been recipients of 'destitution' meal or some other form of relief. The population was too much for the 161 162 land to support it under the distribution system prevailing. The *175 number of persons per family in 1871 was on average 5·358, as compared with 4·232 on the mainland of Ross and Cromarty, the county of which Lewis formed a part. Thirty years later, in

781 273 795 794 [161] 3. Bible vs. Bottle: An islander living on the mainland once observed that the Free Church plays cat and mouse with members of the community who drink heavily. Death is a common event in a community which has a large number of old people, and the theme of death appears repeatedly in sermons and in the conversations of those who have undergone religious conversion. The temporary pleasures of drink are contrasted with the eternal joys awaiting those who have been saved. The "false" friend-781 794 ships of the drinking situations are contrasted with the more lasting, consistent relations which characterize the clique of the converted. "You have lots of friends when you get converted, and they don't change overnight the way your drinking companions do."

273 [434] [781] "With the drink it's easy to get started and just not be able to stop drinking, especially with the money there is now. Everything's unsteady here except religion."

273 794 • 733 781 [743] Many of the most deeply religious male members of the church were once heavy drinkers. One villager observed, "If a man went to extremes as a sinner, he'll be just as fanatical when he becomes holy. Had it not been for religion, some of them would have landed in Craig Dunain [the mental hospital near Inverness]. The talk is forever on religion. That keeps their mind at rest."

an urgent necessity for the island of Lewis', and a committee was 175* appointed to collect funds, the subscription list being headed by 743 Lady Matheson; for a period of three years donations flowed in from all parts of the world. The Lewis cottage hospital was opened on 1 February 1896, starting with only fifteen beds; the number was increased to twenty in 1915. An extension was opened in 1925, and the hospital was provided with a surgeon and an ambulance. Another extension in 1929 was the result of a gift of £3,000 from Mr John Bain, of Chicago, a Lewis son who was President of no less than fourteen banks in the Mid-West. The Lewis Sanatorium was started in 1926.

Tuberculosis was at one time in the island's history a disease 175* that caused many deaths and much sorrow. About 1930 an Assist- 164 ant Medical Officer of Health was appointed, Dr R. Stevenson 744 Doig (who died in 1965), who spent his career-life in Lewis stamp- 759 ing out what was called in the island the 'white scourge'; he lived [165] long enough to see the introduction of preventive medicine and the decline of the killing and crippling diseases he found on his first years in Lewis.

In dental health, progress has, as in so many areas, been 164 reversed. At one time the island teeth were so well known for 178 their strength and beauty that a film was made by the Army for showing to audiences considered in need of dental-health education. In 1966 the picture had changed: a survey revealed that 95 per cent of Lewis children were in need of dental treatment. [262] The mainland addiction to sugary foods has spread.

As distinct from the island's general medical services, centred 734 on Stornoway, the psychiatric services are based at Inverness. What was formerly the Inverness District Asylum, now called Craig Dunain Hospital, is the only mental hospital in the Highlands area, with a few long-term beds in the Institution at Lochmaddy; the general hospital at Stornoway conducts monthly out-patient clinics. Over the area served, the rate of admission to Craig Dunain Hospital is around 3·3 persons per 1,000 of population, compared with a figure of 4·68 for Scotland as a whole, 5·5 for Lewis and 2 for Harris.

The drink problem and Lewis's relatively high rate of admis- 733 • sions to mental hospital both stem from the background of the 734 158

• 733 734 158 people; Lewis can be taken as representative of the Hebrides and the Highlands in general. The incidence of involutional melancholia, occurring mainly in middle life, is high and, to quote one expert, 'It would seem profitable to consider the states of fear and distress with which it has been associated.'

731 165 Those in Harris and Lewis aged fifty or over have their recollections charged with little else than disaster. Not only did the island lose an abnormally high percentage of its young men in

162 *175 1861 Ages, 5-year intervals

The age structure of the Lewis population in 1861 and 1901, showing trend toward ageing as the younger elements emigrate (age scale 5-90 ye reading from base)

771 783 158 [158] press themselves in terms of religious values and ideas, the fear of having committed unforgivable sin. The normal adjustments, reflections and mental stocktaking of middle life are possibly more readily precipitated towards depression in an emotional people • 733 prone to serious thought. This brings of course a concomitant 157 spectrum of problems in an area where in general a man is expected to take a dram and stand it; both nature and nurture are relevant factors. In the words of Cunningham Graham (1899), the medical adviser finds himself 'preaching teetotalism, that is for others, but himself taking his glass of whisky for the reasons which have been so cogently set forth by St Paul the Apostle to the Caledonians.' For those who comment in isolation on a com- [539] munity's indulgence in alcohol, one must quote a Gaelic proverb: *'Tha smuideag fhein an ceann gach foid'*—Every peat-end has its own smoke.

733 From the earliest times the Western Isles have indeed been regarded as supporting a population with an uncanny predilec- *175 tion for spiritous liquors. To a certain extent the spirits were [539] needed by ill-nourished crofters to keep out the damp and cold when on the moors or at sea; and people in a depressed economic or mental condition will anywhere seek refuge in alcohol or other available drugs—forgetting the old Gaelic proverb 'Better the little fire that will warm than the great fire that will burn.' The evil effects of drinking have certainly at times been serious: in 1869 Sir James Matheson addressed a circular letter of remonstrance to his tenants, indicating that those guilty of misconduct were liable to be deprived of their holdings. In 1920 a vote was taken in Stornoway under the Scottish Temperance Act, with the result that the town went 'dry'; three years later the poll was upheld. Then in 1926, with a majority of 84, Stornoway went 'wet' again.

275 But the 'drink question' has been given undue prominence and [733] dragged out of its island context. For instance, Stornoway contains all but three of the licensed premises on the island (at Tarbert, Rodel and Carloway) and, as the chief centre for business and pleasure, must naturally attract anyone seeking refreshment.

734

734 INVALIDISM--chronic illness and invalidism (e.g., mental illness, tuberculosis, multiple sclerosis); prolonged convalescence after illness; treatment and care (e.g., hospitalization, neglect, euthanasia, nursing, diet, rest); home care and institutionalization; sanatoriums, mental institutions, convalescent homes; economic problems arising from chronic illness; relief of the chronically ill and their families (e.g., charity, public relief), etc. See also:

an urgent necessity for the island of Lewis', and a committee was 175* appointed to collect funds, the subscription list being headed by 743 Lady Matheson; for a period of three years donations flowed in from all parts of the world. The Lewis cottage hospital was opened on 1 February 1896, starting with only fifteen beds; the number was increased to twenty in 1915. An extension was opened in 1925, and the hospital was provided with a surgeon and an ambulance. Another extension in 1929 was the result of a gift of £3,000 from Mr John Bain, of Chicago, a Lewis son who was President of no less than fourteen banks in the Mid-West. The Lewis Sanatorium was started in 1926.

Tuberculosis was at one time in the island's history a disease 175* that caused many deaths and much sorrow. About 1930 an Assist- 164 ant Medical Officer of Health was appointed, Dr R. Stevenson 744 Doig (who died in 1965), who spent his career-life in Lewis stamp- 759 ing out what was called in the island the 'white scourge'; he lived [165] long enough to see the introduction of preventive medicine and the decline of the killing and crippling diseases he found on his first years in Lewis.

In dental health, progress has, as in so many areas, been 164 reversed. At one time the island teeth were so well known for 178 their strength and beauty that a film was made by the Army for showing to audiences considered in need of dental-health education. In 1966 the picture had changed: a survey revealed that 95 per cent of Lewis children were in need of dental treatment. [262] The mainland addiction to sugary foods has spread.

As distinct from the island's general medical services, centred 734 • on Stornoway, the psychiatric services are based at Inverness. What was formerly the Inverness District Asylum, now called Craig Dunain Hospital, is the only mental hospital in the Highlands area, with a few long-term beds in the Institution at Lochmaddy; the general hospital at Stornoway conducts monthly out-patient clinics. Over the area served, the rate of admission to Craig Dunain Hospital is around 3·3 persons per 1,000 of population, compared with a figure of 4·68 for Scotland as a whole, 5·5 for Lewis and 2 for Harris.

The drink problem and Lewis's relatively high rate of admis- 733 sions to mental hospital both stem from the background of the 734 158

264 The only occasions on which it is customary to feed
574 someone an entire meal is at a work party, such as peat-
576 cutting. On such occasions the preparation of meals is
[461] done in an atmosphere of competition and mutual scrutiny,
[476] and the meals are often elaborate. At other times, the
requirements of etiquette can be minimally fulfilled by
giving foods which are still relatively abundant, but
which were much more abundant when the land was cultivated
[262] and cows kept. Such foods are barley bread, oatcakes,
264 clotted sour milk, cream and fresh butter. These foods
571 are usually offered to visitors along with tea, and in the
574 past this custom served to minimize the economic disparities
between villagers, to spread scarce resources. A similar
[737] function was served by the practice of giving part of
[431] each catch of fish to old widows and other villagers in
need of aid. Even though food is more abundant and diverse
today, the taking of tea, and especially food, during a
visit is still very important.

173 A 50-year-old man who "married into" a croft recalls,
[581] "I came from a family of ten children. Everyone had to
[428] leave, or marry a girl with a croft. Only the eldest son
could inherit the croft." There was little room for
423 romanticism in the fight for scarce land among the sons
581 of large crofter and non-crofter families. "The most

The substantial tenants had their own private tutors, but the 175* 178* 658
people, in general, received only informal schooling until 671
well into the nineteenth century when several charitable societies [741]
entered the field.[85] All schools were essentially religious.
The act of 1872, and subsequent legislation, changed the program
and made education compulsory for all. It was not until the
end of the century that adequate facilities were available and
the system began to function, with the beginning of free
education.[86]

Informal control within the community was augmented by 175* 178* 657
the establishment of a rural police force, with headquarters [625]
in Portree and local stations at convenient points around the
Island. Health and welfare became a responsibility of the
state. A regional medical plan provided doctor's care and
hospital facilities for all regardless of means. Old age [737]
pensions were granted to the elderly. Later, the scope of
assistance for the infirm, aged, and the poor, and the un-
employed was increased. Thus, the government continually 175* 178* 657
usurped many of the functions of the family and the local group, 621
especially following the abolition of the parish council in
1929.[87] Although the parish councils, or the still older
parochial boards, had no legislative powers, they did handle
welfare and, until 1918, education. Now, in 1929, a Skye

286 175 731 735 286 175 741 439 of potato crops by blight had contributed to widespread poverty. The production of cloth for non-local markets was promoted initially by philanthropic proprietors in an effort to ameliorate such conditions. Lady Dunmore, of the Dunmore family that owned Harris during most of the 19th century, was largely responsible for developing a market in London and elsewhere for cloth woven in Harris. [565] The cloth was popular first among the aristocracy, who [438] wore it for hunting and other sporting occasions. The [435] romantic image of a cottage industry promoted for charitable purposes contributed to the market value of the tweed.

The market expanded in the second half of the 19th century, aided by ladies of leisure who followed the example 286 set by Lady Dunmore (cf. Hunter 1964: 24-26). The 441 production of cloth for a commercial market spread from 175 Harris to the southern isles, but was slow in coming to [964] Lewis, where the proprietor, Sir James Matheson, provided the people with construction jobs. After Matheson died in 1878, weaving for outside markets began in Lewis in the parish bordering Harris, and the name "Harris Tweed" was used because a market for cloth of this name had already been established. By World War I, weaving for outside markets was being done in all four parishes in Lewis. In 1899 there were 55 looms in Lewis and over 200 in Harris.

COMMUNICATIONS

509 There were, of course, other types of flights before 1948. In
*175 1937, Captain Fresson took the first sick person off the island on
• [743] charter—the beginning of the air-ambulance service so valuable
[205] to the islanders. During World War II, certain RAF mails were flown between Glasgow and Stornoway, on which there were first covers (December 1943, Glasgow/Stornoway; December 1943, Stornoway/Glasgow; and January 1944, Glasgow/Stornoway). The present air services are supplied by BEA and Loganair Ltd. The BEA plane route is Glasgow/Benbecula/Inverness and return. Loganair offer a service Glasgow/Benbecula/Stornoway and return. In recent years this small firm has built up a most valuable inter-island air link.

OVERLAND ROUTES

484 The history of overland communications in the island is a short
*175 one, though it does, like American history, have many characteristic highlights. In early times getting from one place to another
[487] was simply a matter of following well-worn tracks across the moorland, skirting lochsides and marshy lands and just taking the shortest distance possible between starting point and destination.
[499] Considering the length and breadth of the island, it is surprising that it was not until Sir James Matheson's appearance in Lewis that road-making was undertaken with any determination. This activity stemmed largely from the desire to get something in return for the outlay involved in keeping literal death from starvation clear of the doors of the island folk.

491 The report of the Rev James Headrick (prepared for Lord Sea-
499 forth in 1800 and published about 1820) indicated that the provision of roads would be of great benefit to the island. A footnote
*175 in the report (of probable date 1816) urges assistance from Parliament or the Board of Fisheries to complete the road from Stornoway to Loch Roag, which had been begun by Lord Seaforth.
[652] There is a bitter complaint that though the Seaforth property bears a large share in the county assessment, 'not a penny of public money has ever been laid out in Lewis'. Another footnote records that the road from Stornoway to Aignish in the east was made in 1815. No large undertakings followed Mr Headrick's

Queen Victoria and the Prince of Wales, later King Edward VII, contributed handsomely. But that was only one item in a long chapter that will never close.

The most shattering disaster on Lewis shores was the loss of the *Iolaire* on the very last day of the year 1918. Before the New Year's Day of 1919 was a few hours old, over 200 sons and fathers were lying in the death-waters of their drowning, little more than a stone's-throw from their native island. Barely a village on the island was not affected by the sinking of the *Iolaire*, which was bringing soldiers and sailors back from the war to their homes. The subsequent findings of the Court of Inquiry are bald statements which convey nothing of the tragic loss of the cream of an island's male population in a matter of minutes. The jury found that the *Iolaire* went ashore and was wrecked on the rocks inside the 'Beasts of Holm' (outside Stornoway) about 1.55 on the morning of 1 January, resulting in the death of 205 men; that the officers in charge did not exercise sufficient prudence in approaching the harbour; that the boat did not slow down, and that the look-out was not on duty at the time of the accident; that the number of lifeboats, boats and rafts was insufficient for the number of people carried, and that no orders were given by the officers with a view to saving life; and, further, that there was a loss of valuable time between the signals of distress and the arrival of life-saving apparatus in the vicinity of the wreck. The sad affair is still remembered in the In Memoriam columns of the *Stornoway Gazette*.

AIR SERVICES

The people of the Outer Hebrides are among the most air-minded in the world. However, aeroplanes came late to the island. The first visit by an aircraft was in 1928, when Seaplane S1058 landed in Stornoway Harbour. The crew of five were treated to a luncheon by the town's civic heads. In 1932 the seaplane *Flying Cloud* arrived in the town, piloted by Lord Malcolm Douglas Hamilton. Owned by British Flying Boats Limited, it was the first commercial aircraft to land and caused some local talk about air services for the island. In June 1933 a large seven-seater air-

597 621 child may come to spend nights or longer periods of time with them.

476 621 [576] To some extent villagers are still dependent on each other for various kinds of help. It is considered extremely bad manners to refuse labor, a tool, or food to anyone who requests them. If someone refuses to aid another, people say, "What will he do when he needs [443] help?" This attitude has made the island a paradise for the few salesmen who, in the last few prosperous years, have started to visit its communities; villagers find it difficult to say no to anyone who comes to their door with a request, including the request that they buy something.

621 574 844 A woman in childbirth was formerly attended by a local midwife, and kept in bed for two or three weeks. "Other women, both relatives and friends, came and stayed with them at night, fixing them warm tea and milk, whispering bhronag bochd (poor soul), how awful you look..." just as today the neighbors gather at times of illness and death. It is more difficult for neighbors to come [178] [743] to the bedsides of young mothers of today, who are all taken to the hospital in Stornoway to have their babies; but the neighbors manage to visit the hospital, which has no choice but to ignore its rule of only two visitors per bed at a time.

781 273 795 794 [761] 3. Bible vs. Bottle: An islander living on the mainland once observed that the Free Church plays cat and mouse with members of the community who drink heavily. Death is a common event in a community which has a large number of old people, and the theme of death appears repeatedly in sermons and in the conversations of those who have undergone religious conversion. The temporary pleasures of drink are contrasted with the eternal joys awaiting those who have been saved. The "false" friend- 781 794 ships of the drinking situations are contrasted with the more lasting, consistent relations which characterize the clique of the converted. "You have lots of friends when you get converted, and they don't change overnight the way your drinking companions do."

273 [434] [781] "With the drink it's easy to get started and just no be able to stop drinking, especially with the money there is now. Everything's unsteady here except religion."

273 794 733 781 [743] Many of the most deeply religious male members of the church were once heavy drinkers. One villager observ "If a man went to extremes as a sinner, he'll be just as fanatical when he becomes holy. Had it not been for religion, some of them would have landed in Craig Dunain [the mental hospital near Inverness]. The talk is forev on religion. That keeps their mind at rest."

estate, or where a single lodge was bought as a home for retirement, depopulation might not matter. Certain populated parishes, however, were bought as investments by men of comparatively modest means. The principal reasons for his purchase given to me by a retired man, formerly connected with the administration of the Lews estate, were two. Asked if he had found, and expected, steady, remunerative payment of rent, he replied: "Certainly!" Next, in view of Press forecasts of general emigration, I referred to the fact that if large numbers of crofters decided to give a year's legal notice of departure and apply for compensation for improvements, including the erection of a 'white house' (otherwise than by Government aid), the landowner would be faced by heavy liabilities while deprived of income. Had the purchaser no fear of such an eventuality? "Certainly not!" was the reply, "the crofters will stick to their homes for many a long year."

These examples show that, while the defeat, or non-realisation of Leverhulme's schemes, seemed to many outsiders the beginning of a not distant 'end' to the Island community, the Islanders themselves did not contemplate a final exodus. They were quite uncertain what was to come, it is true. Who was not, in those years of discouragement for Scotland and her people, for Wales, for Tyneside and Lancashire? The years of Leverhulme's departure from Lewis and of his death brought bad seasons. In 1924 storms destroyed crops and the peat would not dry. Herring catches and prices, though they had risen a little since 1921–22, had not allowed recovery from the losses sustained. The cessation of Leverhulme's wage-payments meant a gap in income which the Islanders could not fill at home. To relieve poverty in 1924–25, a Highlands and

Islands Distress Fund was raised in the Lowlands. The Committee organising it distributed relief, and purchased seed potatoes, etc. They also drew attention to some important features of Island conditions. Among others was that of the scale of charges for transport of goods and passengers. These charges had risen by from two to four times what they had been.[1] The steerage passengers were poorly provided for; and a later improvement in cabin comfort was not accompanied by improved steerage accommodation. One remembers in particular the suffering of the 'fisher girls'. In good weather the passage home (by day) was bearable; and though the song that 'lifted' as the boat left Kyle for the last lap to Stornoway sank pathetically as the steamboat left the shelter of Skye, voices began to rise again in the shelter of Stornoway Bay, sounding clear as the boat drew in. In bad weather the crowded women suffered sorely. Five hundred might be packed on the deck with little or no shelter, or covered the benches and floor of the steerage, sick and distraught. The Committee pointed out that "the Government increasingly accepted responsibility for the roads of the kingdom", and that sea communications were even more vital than roads to Islanders, for they serve in place of both road and rail. Some action was taken, but charges remained high.

As a result of all these difficulties, many young men

[1] Examples were given of the rise in charges from 1914 to 1924, *e.g.* a web of tweed, Harris to Glasgow, from 1s. to 3s.; a box of lobsters, Harris to London, 4s. 6d. to 11s.; a barrel of herring, Stornoway to Kyle, 1s. to 3s. and so on. Although the rise on larger consignments was less, these were of no benefit to 'small folk'. Typical charges for the export of livestock were: (Lochmaddy, N. Uist, to Oban, or from Harris) for sheep the rise was from 9d. to 2s.; for lambs, 6d. to 2s.; for horses or cows, 5s. to 18s.; for stirks, 2s. 6d. to 11s. 6d. The Committee's report was privately printed.

736

736 DEPENDENCY--incidence of dependency (e.g., orphans, widows, deserted and divorced wives, families of defectives and alcoholics, families of invalids and criminals); attitudes toward dependency; care and support of dependents (e.g., adoption, support by relatives, private charity, public relief); special institutions for dependents (e.g., orphanages); etc. See also:

Treatment of motherless infants 846

But neither is Harris behind in willing men. In December 1962 the trawler *Boston Heron* saw herself on off-lying rocks and broken surf water in a full south-westerly gale. The rock island of Stilamair, off Scalpay Island, gave the stranded crew little hope of help. But six Scalpay men saw the plight of the ship and went out in a small open boat. Three of the trawlermen were saved, one of whom was found clinging exhausted to a rock. The other seven perished before more adequate aid could be brought. For their heroism, these Scalpay men were awarded Vellum Certificates by the RNLI. The attitude of local men to the sea, and the sea's treatment of men, was once summed up by an old Harrisman: 'Our men were brought up in the school that taught them that life was precious and that the soul was priceless.' 502 175*

The formal organisation of sea rescue is found in the Coastguard Stornoway, the headquarters of the Stornoway District. This covers the north-west coast of Scotland from Ardnamurchan, Argyll, to Cailleach Head, the Minches and the associated sea areas, including the Small Isles, Skye and the Outer Hebrides —in all some 800 miles of coastline. The Stornoway station is base for a district officer, a station officer and four coastguardsmen, supported by locally-enrolled residents who form the Auxiliary Coastguard. Stornoway Coastguard is the launching station for the Stornoway and Barra lifeboats, advising when a launch is needed and calling out the boat crew by firing two green maroons. It is also a coastguard liaison station for the GPO Coast Radio Station (CRS) at Oban, and it co-operates with Oban and Wick as a radio-telephone station when lifeboats are launched on service. There is, in addition, liaison between Stornoway station and the RAF, the Royal Navy and Lloyd's: Lloyd's come into the picture when tugs, salvage and shipping information are required. 502 706 [456]

Though there have been many stranger ships and lives lost on and around the island's shores, local tragedies are not lacking. In December 1862 disaster overtook five boats from Port of Ness, out pursuing white fish. A fierce gale sprang up and the fishing-fleet perished, with thirty-one lives. Twenty-four widows, seventy-one orphans and thirty-one other dependents were left destitute, though they obtained some subsequent relief from a fund to which 502 731 175* [736]

7 THE PEOPLE

THOUGH there are a number of large island communities in the British Isles, Harris and Lewis have in particular retained their individual characteristics, mainly because the Minch has acted as a buffer against effective infiltration of alien influences. The relative insularity of the north-west Highlands has enhanced this isolation, to preserve what is probably one of the oldest forms of communal life in Britain. It has some unique characteristics which are evident even in these days of sophisticated civilisation. The basis of life, although today the individual is beginning to show face, is a communal spirit, based on team-work. Work undertaken with the willing help of others is easier, lighter and quicker done: livestock is easier handled in a large controlled flock; boats are best rowed with a crew. And the women, with the same inborn communal spirit, once spun yarn together; waulked or fulled the cloth together; and helped each other in childbirth, child-care and the deaths which affected the community.

Several of these teams eventually merged to form what is now called the crofting township. And, though a township may nowadays number 1,000 people, to keep, if not pull, together is still a priority if the social structure is not to fail. Townships have been called in the past, by understanding writers, 'sociable hamlets' and 'little commonwealths'. Though these are of long standing historically, they are still a dynamic form of social integration of the kind found elsewhere only in working-class districts of cities such as Glasgow and Manchester. This is not to say that one must be 'poor' in order to participate in such a society. In the material world, to be poor is to be without money; in a crofting society, lack of money, although this commodity has tended in recent years to assume for itself an out-of-proportion standing and status, does not necessarily mean destitution; for help to keep the body together is always to hand, though the donor may never be seen or known.

THE PEOPLE

1976 In 1899, the Medical Officer of Health for the Parish of Barvas described the typical Lewis crofter's house of the time. It had "three apartments, two for the family, and a third for the cattle; this new arrangement was the result of the Regulations issued by the Sanitary Inspector for the betterment of the estate. The low thick walls were built of stone, or stone and turf, with a packing of loose earth, and were perennially damp. The roof, composed of a framework of wooden rafters and couples resting on the inner edge of these walls, was covered over with turf divots and straw, bound with ropes of straw, heather or coarse thatching rope, and weighted down with stones. It was never air-or water-tight, and roof water usually soaked into the packing of the walls and thus oozed into the house. Further, only the slightest attention was given to situation and drainage. The floor of the cottage apartment was composed of a pavement of rough stones covered over with clay—and a cold damp floor it was. The cattle apartment had no pavement, so that the manure liquids and slop water percolated into the ground at a faster found their way into neighbouring dwelling houses and even into the drinking wells. Many of the houses were built in clusters and were arranged in rows three deep. Lighting was deficient and the windows, fixed either in walls or roof, were not made to open.

Some houses had a hatched portholes in the roof at the top of the gable wall which might be opened or closed at pleasure; these served for lighting and ventilation at the best of times, though occasionally they were present also at the living end. Draughts coming in through the door and the hatched portholes, meeting in the centre of the middle apartment, helped to keep the air in motion, but the smoke from the fire frequently filled the upper portions of the room and, there still being no chimney or other outlet as a rule, it pervaded the whole atmosphere of the house. A primary point of view such houses had the greatest evil defects: it amazed visiting doctors that infectious diseases were frequent absent. Yet generally speaking the people were healthy, general well-being and immunity from serious disease with those more favourably situated. Tuberculosis was the most prevalent enemy.

In 1879, improving leases were offered to those who were willing

[TEXT CONTINUED ON PAGE 145]

HEALTH AND HOUSING

ing to put their houses into better condition. The leases required, inter alia, that the thatch was not to be stripped off or removed for manurial purposes; that the feu was to be a separate holding; and that the dung was to be removed regularly to a distant dung-heap. A Sanitary Inspector's Report for 1898 noted that "the new houses being erected were following the old traditional pattern. And though the introduction of sanitary requirements did bring real improvements, as late as 1902 it was reported: 'The insanitary houses and the impure water to which the people have long been accustomed, would lead an enquiry to expect a high death-rate. That is not so, however. The island is occasionally visited by epidemics of measles, or whooping-cough, like other parts of the country; and there are sometimes outbreaks of dysentery—a preventable malady—but altogether the general health is good."

The Sanitary Inspector's Report for 1898 described certain water supplies in the island as 'little better than cesspools for surface making'. And five years later the sanitary inspector was 'merely a few holes dug out amongst the arable land next to the houses; and polluted with the manure dissolved of their arable ground; and in some cases communicated with blocked sewage percolating through the soil from their houses.' In 1899 there was no outbreak of typhoid fever in Lewis, but it was thought to be the contaminated stream whose water was used as a drinking-water supply. Improvements in the water supplies were eventually put into effect, with a marked decrease in the ailments which the people had come to expect as normal to their way of life.

The rate of infant mortality was high. The weakling died young. Only the strong survived to attend the innumerable dry-stone roundings. A peculiar form of disease was associated with the island: it attacked a child about the fifth night after its birth and was consequently called the 'fifth night's sickness'. According to medical opinion this was infant lockjaw (*tetanus neonatorum*). The doctor of Lochs in 1892 reported that it was common among the infants of his parish, being most frequently met with in those dwelling houses where sanitation in its most rudimentary form is entirely ignored; where we have to walk to the fireplace in the

HEALTH AND HOUSING

an urgent necessity for the island of Lewis', and a committee was appointed to collect funds, the subscription list being headed by Lady Matheson; for a period of three years donations had come in from all parts of the world. The Lewis cottage hospital was opened on 1 February 1896, starting with only fifteen beds; the number was increased to twenty in 1915. An extension was opened in 1925, and the hospital was provided with a surgeon and an ambulance. Another extension in 1929 has the result of a gift of £3,000 from Mr John Bain, of Chicago, a Lewis son who was President of no less than twenty banks in the Mid-West. The Lewis Sanatorium was started in 1926.

Tuberculosis was at one time in the island's history a disease that caused many deaths and much sorrow. About 1930 an Assistant Medical Officer of Health was appointed, Dr R. Somerville Doig (who died in 1965), who spent his career-life in Lewis stamping out what was called in the island the 'white scourge', he lived long enough to see the introduction of preventive medicine and the decline of the killing and crippling diseases he found on his first years in Lewis.

In dental health, progress has, as in so many areas, been reversed. At one time the island teeth were so well known that their strength and beauty that a film was made by the Army for showing to audiences considered in need of dental-health education. In 1966 the picture had changed: a survey revealed that 95 per cent of Lewis children were in need of dental treatment. The matter was taken up and the tragedy finds hangyrat.

As distinct from the island's general medical services, centred on Stornoway, the psychiatric services are based at Inverness. What was formerly the Inverness District Asylum, now called Craig Dunain Hospital, is the other mental hospital in the Highlands area, with a few long-term beds in the Institution at Lochmaddy; the single general hospital at Stornoway conducts monthly out-patient clinics. Over the area served, the rate of admission to Craig Dunain Hospital is around 9.5 persons per 1,000 of population, compared with a figure of 4.9 for Scotland as a whole. Lewis for Lewis and 2 for Harris.

The drink problem and Lewis's relatively high rate of admissions to mental hospital both stem from the background of the

65

465 / 1465 parts (a weaver's yard is equal to 5 feet, a measure
1465 which derives from the size of the frame once used
1465 to wind wool of yarn). Payment varies according to
the number of colours used in the pattern. A weaver
288 / 288 may average 72 tweeds per week when the work is available,
1465 plus earning more than mill workers. A female mill
1465 worker earns about £11 or £12, and her male counterpart
about £2 more.

288 / 288 Weavers are classed as self-employed, they
1465 do not qualify for unemployment benefit. They may apply
for social security, but must submit to a "means" test,
and the possession of bank savings or other assets
disqualifies them from receiving benefit. The British
workers must pay a weekly sum for "insurance stamps," a
certain number of which makes the workers eligible for
small payments from the government during periods of
illness. Self-employed persons must pay for their own
insurance stamps, whereas employers pay for the stamps
of their workers. A weaver who does not keep up with his
payments of over one pound a week for insurance stamps
must pay the accumulated debt at a later time.

Weavers face other costs. They have looms and behind-the-
winding machines, and pay for lighting, heating, and the
maintenance of all equipment. The preservation of this
enormous status of "self-employed" is related to the

124

288 / 288 The Harris Tweed industry has provided a higher
1465 standard of living, but income from this source is
inconsistent. The standards demanded by the manufacturer
times cannot be met during difficult times. Many-roomed
1465 houses with indoor plumbing are more heavily taxed than
smaller, less modern homes; loans must be repayed;
a car and a television once gotten are difficult to
give up. A weaver must pay for his insurance stamp,
which amounts to over £70 a year; and income tax takes
a large percentage of a person's income, in large lump
sums which are paid twice a year rather than in small
amounts throughout the year. When income arrives,
any constant demand for monetary outlay constitutes a
liability.

In many patterns outside the island concerned with
Highland and Island development, there is a reputation
for "weekly-grabbing." According to one officer quoted,
"The people are too used to getting subsidies. They
tend to sit back and rely on the subsidies, which
make it difficult to develop the places."

"We pay tax," said one weaver. "Why not get back
what we can in subsidy?"

Income tax collectors shake their heads in despair
at the thought of trying to get a true estimate of a
crofter's income, except for jobs such as weaving for

125

651 / 439 which official records are kept by the mills. If you
say jokingly to a fisherman who has brought in a large
catch that he should put some money aside for the
income tax man, he is likely to reply, "He'll have to
463 / 1475 catch me first." A tradesman may be earning large sums
of money doing local work as a skilled specialist at
the same time that he is collecting social security.
A man may move in and out of a number of different jobs,
and never report the income. "Occasional pluralism"
[cf. Brox 1966] rather than economic specialization has
developed as a strategy in various countries along the
North Atlantic fringe, such as Iceland, the Faroes,
northern Norway and Newfoundland, as well as the west
coast and islands of Scotland. In these marginal areas,
income from specialized occupations is, in the long run,
unpredictable and inconsistent.

In times of national economic depression, strikes,
shifts between socialist and conservative governments,
and other crises, crofting provides an alternative
strategy. During the last war, many islanders who had
left the island (including some who had been quite
prosperous in the cities) returned to spend the duration
of the war in the village, glad of the relative security
provided by the relative abundance of food and less strict
rationing. During a huge snow-fall that occurred on

126

The insurance company
157 / 157 said this 1600, and the pubs let him drink half of them
before he even got the money. The house, in which he
continues to live, stands as it was left by the fire,
with walls blackened, blistered and bare.

Tillean Glen

Tillean, named after the owner of a fishing boat on which he used to serve as a crew member, is the 70-year-old head of a croft household. He came from a family of four children and lives with his wife and son. He was not the eldest and but he was his father's favorite. Before his father died he built the house in which he presently stays so that he would have some claim to the croft. The eldest brother was exiling, and upon his return he married a girl with a croft. Tillean Glen made his living from fishing and had a reputation for being good with livestock—and from smuggling and wage labor in Stornoway; he also followed the fishing.

Another brother of Tillean Glen married into another croft in Shawbost, after serving in World War I as a sailor, and a sister married a boy from a neighboring village. The younger brother, Murdo, emigrated to the United States with the second sister, and they lived and worked together in Detroit. Murdo's principal contribution to boundedness was the remittance of money. Individual has a place in a human community; he is given

Fragments of spars and other sundry things lacking in craft and power were picked up and carefully shared. So, after 1919, from the wreckage of the Hebridean Sea, a few pieces were saved of Napier's dream, came to the Islands the final raft of unemployment relief, and the last of the famous long ships.

Some assessment is therefore required. The total amounts of relief distributed before 1931 were comparatively modest; and they certainly succeeded the aims of the crofters' contributions to the Unemployment Insurance Fund. After a couple of months of hard labour at road-mending, harbour-repair, or the like, young men were qualified for "the dole". Furnished with this, they returned to the croft when paid employment gave out, to met in their peat, collect stones for a new house or assist out with a rod for a little fishing from the rocks. All this was done "on the dole"; and such complete legality, so long as their names were duly inscribed at Stornoway Labour Exchange as seeking fresh employment. Not a few prayed that "employment" would not come unconscionably soon, as they would then be legally bound to accept it and to leave the croft, even if only for a part of the money received was urgently needed, the surplus was not squandered, as it might have been in a town. Extra cash, if conserved by buy a loom here, fencing for the garden there, and other things of permanent use. Yet mostly it constituted misappropriation of relief. As a result, though no real fault of their own, young men began to lose independence and self-respect, the great pride of the Islands was undeveloped in years of "depression", and it was peculiarly severe both in industrial Clydeside and the fishing villages of Scotland, and also throughout the "depressed areas" of Northern and Western Britain, of which the Islands form the outermost fringe.

TABLE 3

The multiplication of crofter tenants, and their increasing rents, 1886–1920

	1886	1896	1910	1920
Carinish	17	40	£14	£16
Torrin Obsdale	25	40	£24	£34
South Uisenish	12	30	£12	£18
Upper Carbrooy	20	35	£21	£31
Benmore	12	30	£12	£18
Kinloch Park	20	35	£20	£30

Ardroil	15	30	£18	£28
Leurbost	15	30	£15	£22
Valtos	20	40	£18	£28
Borve	20	40	£20	£30

An equal number, but mainly newcomers to Skye, are teachers and nurses. The remainder are employees of the national and county government, serving as postmistresses and clerks. In addition, an indeterminate number of women, in Portree and in the rural hinterland, but none in Kilmuir or Glenshiel, add to their income by taking in summer visitors. This practice is not strictly legal for the crofters, in as much as it casts doubt on the agricultural valuation or devaluation, but the county government has not attempted to discourage the practice.

Turning to the men of Skye, we find that the largest employer is the county government, with well over 200 men on the payroll as road workers and general labourers. The national government, through the Forestry Commission, has employed another 200 or more men through the Department of Agriculture, as overseers, agricultural workers, and labourers; through the Board of Scotland Inland Revenue, as clerks and officers. If we add the number who work for the nationalized ferry service and the substituted coaster service, we find their chief employer is the state, and that the state is the largest employer in the Islands.

Privately and locally, the largest employer is the county council, which employs about 200 men, mainly on the roads. The remainder are employees of the national and county government, serving as postmistresses and clerks. In addition, an indeterminate number of women, in Portree and in the rural hinterland, but none in Kilmuir or Glenshiel, add to their income by taking in summer visitors. HISTORY

The crofters were in a state of revolt against the accumulation of rents, and the Government was in a state of revolt against their progress to a higher level of acceptance in the social scale. They were in a state of revolt against the landed and industrial authority. Unhappy bosses were created, many being in complete variance with the same or successive crofters, and the Government, which could not for behind with their contribution to the agitation for land reform, through they had perhaps suffered less direct action from landowners than had crofters in the Highlands and southern Islands. But they had their own conditions had destroyed. And an industrial efficiency factor made for deep unrest.

Land Raids, Crofters' Commission, Land Court, and large numbers of Lewis crofters gave evidence before the Napier Commission. This Commission was set up to inquire into the crofters' and cottars' crofting conditions in the Highlands. In setting up relieved a division of a series of Commissions, which, when Liberal Government began, have mitigated the dissatisfaction felt in the more disturbed districts. Under Land Raids, Commission, and Land Court, the crofter was still the crofter. The crofting of the Commission were almost identical with proposals which the crofters had put forward. But not altogether coincide with the requirements of the crofters and their spokesmen. The crofters wanted the Land Court to be the crofting system into that rigid tenure in which agricultural innovation, opportunity for improvement, and the growth of crofting communities are largely lacking. It did give all crofters permanency of tenure, where they had none before, for only after the land they had and compensation for improvements. But the old demand for new smallholdings and enforcement protected with greater insistence and further pressure on high political circles.

In 1886 the Napier Commission and the Crofters Commission visited Lewis and found that poverty was so general in the island that ... Lewis crofters had put forward. The Commission found ... poverty a direct result of the land policy of the proprietors of Stornoway and ... of the system of relief. The Commission found that the ... Lewis crofters had put forward. The Commission found ... The number of persons per family in 1871 was on average 7.5 ... the county rent of £20 on the estate of Sir Rose and Cromarty, ... the county of which Lewis formed a part. Thirty years later, in

many recommendations, and though some road making began in 1891 ... 1891, progress was slow and the rent was high, only 6 miles of ... of road were created, less than a mile for each year. When Sir ... James Matheson bought the island, he found the people ... island, he started with three 45 miles. On his death in 1878 there were more than 200 miles of road in Lewis, with the exception of connecting bridges, he spent £25,593.

In the late autumn of 1882, a great gale swept over the ... and corn crops. This added to the complete failure of the potato harvest, had to distress throughout the Island. At a meeting of the crofters in Stornoway, in December it was resolved that a memorial be forwarded to Sir Charles Dilke, Liberal Leader and Land Reformer. Government resources, or that some forms of public works be ... Memorial. Immediate response was made to this appeal, and ... over, as the matter had been raised, investigations were made and ... eventually the Island Government, which Balfour had created ... Act, 1891, passed into law. It authorized, *inter alia*, the expenditure of a sum of £50,000 for the relief of distress. For lack of this ... proving the road between Carloway and Stornoway, and certain ... Commission found it cheaper to employ a crofter than before, ... patients spread infection. Flight to a tray, air-night ... sufficient, in the case of the Island of Scarp and some and lonely ... often followed. The availability for the first time of planks ... from the market, a sawn timber, enabled the crofters, and ... ably acquaintance at first- or second-hand with Canadian ... wooden houses, may have influenced the choice of wood.

The early 'white' houses, with an attic, lit by skylight, were airtight, for the windows were too often fixed or only opened at the bottom. The door was left open in warm weather, but it was not high enough to allow the escape of the ashes, upon which the cooking was performed and as they did their cooking and baking.

In the interest of health, and especially in its last decade, the 'black house' was being abandoned, not for something better, but for better. The Government-aided houses have

adequate air-space, and windows opening at the top and ... it communal and the Hebrides, with a population of 1,000 ... Hebrides, with a population fluctuating around 500.

744

174 731 434 458 fragments of spars and other needful things lacking on croft and moor were picked up and carefully allotted. So, after 1919, from the wreckage of modern industry borne on the ground-swell of 'Depressions', there came to the Islesfolk the frail raft of unemployment relief, doled out like driftwood long ago.

458 746 Some assessment is therefore required. The total amounts of relief disbursed before 1931 were comparatively bountiful; and they certainly exceeded the sum of [745] the crofters' contributions to the Unemployment Insurance Fund. After a couple of months of wage labour at road-mending, harbour-repair, or the like, young men were qualified for 'the dole'. Furnished with this, they returned to the croft when paid employment gave out, to cart in their peat, collect stones for a new house or saunter out with a rod for a little fishing from the rocks. All this was done 'on the dole', with complete legality, so long as their names were duly inscribed at Stornoway Labour Exchange as seeking fresh employment. Not a few prayed that 'employment' would not come inconveniently soon, as they would then be legally bound to accept it and to leave the croft. No doubt, even if only a part of the money received was urgently needed, the surplus was not squandered, as it might have been in a town. Extra cash, if any, served to buy a loom here, fencing for the garden there, and other things of permanent use. Yet morally it constituted misappropriation of relief. As a result, through no real fault of their own, young men began to lose independence and self-respect. This general problem for youth [361] was widespread in years of 'depression', and it was [184] peculiarly severe both in industrial Clydeside and the fishing villages of Scotland, and also throughout the 'depressed areas' of northern and western Britain, of which the Isles form the outermost fringe.

458 746 which the Isles form the outermost fringe. Particular aspects of the Island's problem were its own.

The application of 'the Means Test' was therefore to the good in the Isles to begin with, whatever was to be said for or against it in towns. Many honest crofters thought the test should have been much more rigidly applied in the [162] Islands. In 1932, after the worst of the depression had passed, there were in Lewis (proper) some 750 registered unemployed men (with only 5 boys), of whom 250 were seamen from the Merchant Service; and the other 500 included dockers and casual labourers of various sorts, many of whom had returned from the cities. The seamen, to take the largest class, constituted one for which relief was thoroughly justified; unemployment benefit was paid to each man until he had been unemployed for over six months. The Public Assistance Committee then gave 'Transitional Payment' after applying the Means Test, in which they took the produce of the croft into consideration. Public Assistance might follow later. Out of 250 cases, soon after the Means Test was applied, there was none in which the Committee assessed the need as equal to the benefit formerly received. In the Lowlands, on the other hand, the real need was usually found to be greater than the 'benefit' paid, and therefore relief could not in fairness be reduced.

There were years when work at sea was not to be had. As one left the Firth of Clyde, by the railroad to the Isles, one could count sometimes a dozen, sometimes a score of good 'tramp' steamers dossed in the Gareloch; and one thought of their crews, good men, but idle and rusting too. At such a time reduced payment to Island seamen with a croft, in place of total payment to town-dwelling seamen without one, effected a saving to the public purse. The

458 746 problem remains that Island seamen may thus continue indefinitely to be crofters receiving partial relief, seamen only in name. Without doubt, part-time work on a croft is socially a lesser evil than prolonged unemployment in a slum or semi-slum. The crofter's family, too, is relatively better reared than that of many a poor seaman in Glasgow, Liverpool or Cardiff. Yet if this were all, it would be no adequate life for a man, while continuing to be an expense [461] to the State. The more satisfactory side of such relief is [311] that the Islanders, when unemployed, turn to building new 'white houses', and either to making small improvements on their crofts, or as in Ness (a progressive village with a high proportion of seamen), to the reclamation of new holdings on 'skinned land'. In all such cases a means test provides against full payment to those who could do without.

458 746 462 To women normally employed in 'gutting', unemployment relief is given only at such time as there is no work during the season when it might be expected, *i.e.* from May or June to December. Gutters from the Island [228] are busiest for the months from June to August on the West and East Coast of Scotland, and again for two months, from October to November, in East Anglia. The number of Lewis women normally employed was over 1500 in a typical season (1930), the earnings averaging £19 each for the summer fishing in Stornoway, and as much again for the gutting in East Anglia. But the demand fell, and by 1932, for instance, some 250 women were obtaining relief, through Stornoway, in early August, the number doubling during the slack months from mid-August.

181 458 746 The tragedy and the danger of any means test are that in effect it asks, not "How prosperous can you become if given help?" but "How poor can you become to qualify

for help?" In one of the Outer Isles, I know of one or two crofters holding fifteen acres of arable, with a share of a good outrun, who have let their stock dwindle and deteriorate, and their crofts lie mostly fallow, though these could support a horse or two, several cows, and fifty sheep. After having found some casual labour, they discovered they could live mostly idle 'on the dole'. Self-respecting neighbours suffer: good families who prefer to be independent of 'Assistance' and to improve their croft and stock, and the outrun too. These find their stock deteriorating for lack of co-operation in breeding, fencing, and other communal duties, and see their crops invaded by weeds, blown from a lazy neighbour's plot. While an idle neighbour benefits by their industry, they themselves are losers.

In another island, a hard-working crofter lost a score of good lambs through 'worrying' by the dogs of an idle neighbour, whose own stock had dwindled to a trifle. He was finally awarded legal compensation; but he found it wiser not to exact it, for the unspoken threat of exaction gave him a hold upon the idle 'dole-drawer'. The worker could still insist that the idler pay his share of the cost of posts and wire for a fence on the outrun, or contribute the minimum hours of labour due for fencing and other statutory tasks in the township. Men like that idler sap the urge to work. They lower communal morality to a semblance of the social code once too commonly seen by Islanders in the domestic service of the upper and middle classes, a code by which chronic idleness was disguised as 'leisure' and conspicuous dependence upon the work of others was honoured as 'independent means'.[1]

[1] A summary of production, and figures of productive and non-productive income, are given in Appendix I.

(c) THE OUTLOOK: 1939–54 AND SINCE

How then can the situation be assessed, as it was before the outbreak of war and since then? By 1939 twenty years had been partly lost; for the after-war years of the 'Leverhulme boom' were followed by discouragement and poverty. During that time one might have hoped for half a generation of reconstruction and progress. On the other hand the sore question of dividing the farms was settled, so bringing raiding to an end. Congestion on the existing crofts is less than it was, owing to this fact, and to the provision of feus. The poverty of many breadwinners who had migrated to the cities first cut down the amounts remitted to their Island dependents, then drove them home. A croft, or even a garden site, and the opportunity of building a good house there made life still worth while, when other employment had failed. Unemployment relief, though tempting some to idleness, gave a respite which many utilised to make a fresh start. As fishing waned, many had taken advantage of the easy beginning offered to learn a new trade—weaving. This has made many feel that the living to be found on the Island is better than alternation of 'wage-earning' with unemployment, in Glasgow or abroad. They believe the situation of the Island community to be hopeful. While the land remains little better than before, many, even of the younger people, still care for the Island life among their own kin. Given a clear lead, these could reorganise themselves, and undertake the developments needed in fishing, weaving and reclamation. The homes are sound, 'good neighbourhood' endures, and given fresh opportunity, the community could awaken to new life.

During and since the war, co-operative marketing was

(c) House-building. — From 1920 to 1940 the Department of Agriculture advanced loans for the erection of 760 new houses and the repair of 220 other houses. This, with the erection or repair of 40 steadings, may be taken as the equivalent of 1000 houses in the 20 years of peace, of which three-fourths were new. Rural building was at its height in the early 'thirties, but 1938 was a typical year. Taking the value of each house as £600 and subtracting half for imported materials, we may assume that for 50 houses built that year the labour given produced an output of £15,000. In addition, some house-building and repair was done without State aid, for which a guess of £15,000 may be made. Such sums may not appear large, but they correspond to the enduring fulfilment of a prime need, a 'real wage', of importance when compared to rents and costs elsewhere. Of the expenditure on house-building in Stornoway burgh during 1938, the value may be assessed as £10,000, of which £9000 was for Local Authority housing. Most of the total was produced by local labour.

APPENDIX I

(iii) *Fishing Industry—Net Output and Earnings*

(*a*) For 1938 the total catches, prices and quantities of fresh cured fish landed in Stornoway District show a value of nearly £100,000 (£98,000) for the herring catch, and of £162,400 for the cured herring. Our problem is to estimate what fraction of these sums may be included in the net output of the Island industry proper. The Fishery Board's *Statistical Tables* and *Annual Report* extract the produce brought in by local boats from the total, separating it from that due to 'strangers', and so permitting a fairly reliable estimate, checked by local enquiry.

Of the herring taken, nearly 80 per cent were caught in the summer fishing, June to August (*Annual Report*, p. 13). The week of maximum local activity in herring fishing for Stornoway District may be taken to be characteristic of this pre-war period (Table 8). There were then 111 steam-boats engaged; and as only five were locally registered (at Stornoway itself), the remaining 106 were strangers. There were also 66 motor-boats engaged and though 81 motor herring-boats are locally

COMMUNICATIONS

sold, one such causing legal history. The chief garage proprietor in the town applied to use for his business a site he had purchased at a road junction near the western end of the town, close to the principal new housing schemes and opposite the main gate leading into the Castle grounds. It was a mistake in planning, and public disapproval began to make itself felt. The Trust, in an effort to redress the situation, sought to distrain the garage proprietor from extended use of the area. The parties went to law, and the case was fought through the courts until, in the House of Lords, the Trust finally lost and had to pay a bill of some £4,000, equivalent to a fine of £4 to £5 from every family in the burgh. The Trust drew its lesson, and since has formulated a more alert and constructive policy.

The town is well served by its shopping centre, with multiple stores jostling for custom with smaller private business concerns. Prosperity for all, however, depends on the well-being of the Harris Tweed industry. If there are recessions, as there have been in the past, the tills rattle spasmodically. Also standing to suffer are others such as the bus companies (who provide the efficient town services and link up Stornoway with the rural areas), the builders and the haulage contractors. In the ever-present climate of unemployment it is the policy of the mills to employ male labour, despite the fact that women would be cheaper. The mills, run by natives or by Lewis-born incomers of the second and third generation, realise a social obligation in recognising that in Lewis the strong tradition is that the man should be the head of the family in every sense. The mills also carry a proportion of surplus labour to offset the unpredictability of those workers who, with crofts to look after, occasionally have to take a day off 'at the peats' or some such activity. This is another of the island's distinctive traditions.

On Cromwell Street is the shop of James MacKenzie & Sons Limited, dealing in hardware, furniture and china. Nothing unusual in that, at first sight: yet it is another unique aspect of life in Lewis, being conducted as a charity for the benefit of, among others, the aged and infirm persons of Stornoway. The business was established in 1830, on its present site. In 1964, the then principal shareholder presented the building and the business as a

STORNOWAY

going concern to a trust which was set up to receive the gift and whose first object is to assist aged and infirm residents in the burgh. In effect, all profits earned by the shop are passed to the trust for distribution to those in need.

Almost half the houses in Stornoway were built by the local authority. The Town Council has never been afraid of rooting out unfit houses. By 1937, under the 1930 Slum Clearance Act, one person in four in the town lived in a council house. The housing schemes, though large, have still that element of community with personality, something often lacking in newly developed areas of other towns and cities. The Council also supports private housing by taking up sites, clearing and servicing them and then selling them to private owners. The rents policy is to have no housing deficit beyond the statutory rate contribution (which works out at between £6,000 and £7,000 per annum). The Council's tenants co-operate with rent collection to a unique degree: collection figures are something like 99 per cent and on occasion 100 per cent. A vigorous housing policy is important to the town, as its population is now over 5,300 and still growing, mainly at the expense of the rural areas. Development plans at present envisage a 1981 population of about 9,100 persons within the parish boundary and including the burgh.

Stornoway is an island town and is an island's town: its rhythms of life are those of the island, regular and timed by nature, but with an added syncopation—the result of an urban outlook. In this context, Gaelic is the language, though English is the lingua franca. Deeper still in the methods used for communication is a kind of patois based on Gaelicised English, Anglicised Gaelic, with some other words that defy investigation into their origin. Many words find their natural forebears in Scots, American and the maritime tongues of Europe, which might be expected in view of Stornoway's importance as a sea-port of significance a century or two ago. The Stornoway language, as spoken by true-born natives, recognisable anywhere by another native, reflects the life of the cosmopolitan, sea-faring people.

Apart from its industrial opportunities, Stornoway has many of the more sophisticated urban facilities that people everywhere seem to crave, particularly with regard to education. The senior

CH. IX ECONOMIC CHANGES: 1750–1919

in Scottish cities, who came forward again in 1888 and in 1925. Of the £33,000 Matheson expended on meal and seed potatoes for relief, about half was repaid in labour by the recipients. Here are the outlays reclassified from the Brand Report (1902, p. xv):

Castle buildings and grounds and shooting lodges			£120,000
Buildings and Land reclamation		£100,000	
Industries and Communications:—			
Chemical Works, for manufacturing paraffin oil from peat	£33,000		
Roads and Bridges	25,000		
Brickworks (from local clay)	6,000		
Patent Slipway, Quays, etc., at Stornoway	10,000		
		74,000	
Other expenditure:—			
Net Losses on Steamers and Mails	£32,000		
Industrial and Other Schools	12,000		
Emigration (2200 persons)	12,000		
Miscellaneous	1,000		
Relief (Meal, etc.), gross outlay	33,000		
		90,000	
Total expenditure, other than on Castle, etc.			264,000
Original Cost of Island			190,000
GRAND TOTAL			£574,000

Thus, of a capital outlay of over half a million pounds, roughly a quarter of a million was spent directly on the development of the estate. The rental in 1844 (exclusive of feu-duties) was nearly £11,000, and this rose to £18,000 within a few years, though it had been reduced to £15,000 at the end of the century. It will be seen that the praise given to Sir James Matheson for his liberal expenditure was well won, if allowance is made for the standards of his class and generation. Yet of the £120,000 he spent upon

COMMUNITY FROM PAST TO PRESENT PT. II

175 the mansion, lodges, and grounds or 'policies', much was
• 747 built and laid out for himself at the time, though part was
423 for reclamation. This contrasts with his provision for those whose homeland he had bought—the sum spent upon his own mansions and grounds being nearly half that spent directly for the good of some 20,000 fellow-Gaels.

175 Matheson was not technically equipped for his chosen
151 task of 'reconstruction'. Nor was he fitted by trade in the East for the leadership of a people accustomed, in
623 spite of dire poverty, to considerable freedom. Ignorant,
175 one gathers, of the language of the people, his choice of a later Factor was hardly a happy one. Tradition in Lewis
623 speaks of this Donald Munro as an 'autocrat', and evidence in 1874 confirms it. In addition to being the Factor for
423 an ageing man and so holding economic sway over the
66 people, he held seventeen public and semi-public offices in the Island, from Justice of the Peace to Captain of the Volunteers, still other offices being held by his clerk! The extent of his sway is also shown by his having served summonses of removal upon fifty-six families on his own authority. As a result of the treatment of the officer sent to serve the summonses, three crofters were tried on a charge of "assault committed on an officer of the law in revenge for having executed his duty". When asked in court if Sir James would not have disapproved of this step and the manner of its execution, Munro replied that it was his practice "never to trouble Sir James with small matters". "Then you consider the eviction of fifty-six families a small matter?" was the retort. These 'Bernera rioters' were found not guilty, they and their neighbours were left in possession, and soon after the Factor demitted
175 office.[1] Lewismen felt the result to be a moral victory,
824

285

565 the nine election districts where a member of the gentry is
559 resident, he is the people's choice. Otherwise, the post
666 passes to a newcomer, especially a minister, if he will accept, a non-crofter of relatively recent arrival, a returned exile, or an eccentric. The Skye delegates to the County Council are similarly elected. The village of Portree and the neighborhood of Glendale are represented by members of the county people; Kilmuir is represented by a minister of the Church of Scotland.

565 The function of the landed gentry emerges even more
559 clearly when non-political leadership is considered. We
• 747 may take the Skye Council of Social Service and the old People's Welfare Committee as examples. The Skye Council of Social Service is dedicated to the promotion of the "general good of the community," and the assistance of the work of statutory authorities and voluntary organizations engaged in improving education, health, and economic conditions. Although the Scottish Council of Social Service claims this is a product of the people of Skye, it was not a spontaneous development. A retired Registrar General for Scotland was responsible for the initial interest. The Scottish Council seems to have stimulated this interest by securing financial assistance in the initial stages and paying 75 percent of the annual expenses. The local organizers were county people, and their success was due in no small way to the efforts of an officer of the Department of Agriculture. Today the "virile leadership and local followership," of which the Scottish Council is wont to speak, is to be found in one clique of the

286

565 landed gentry. The people take relatively little part in any
559 of the activities. Most of the crofters with whom I spoke
• 747 had only the vaguest idea of the work or the achievements of the council, beyond the fact that the council had instituted Skye Week to attract tourists.

The Old People's Welfare Committee was established in the winter of 1953. It provides us with an excellent oppor-
573 tunity to see how things are accomplished on Skye. For several months the clique which is responsible for the Skye Council of Social Service had been thinking that Skye needed some such agency to look after the old people. At length it was decided a public meeting should be held to give the people an opportunity to decide whether or not the need was acute. Each of the county people explained the need, aided by two social workers from Edinburgh. Then, with the assistance of a local minister, the doctor, and the officer from the Department of Agriculture, who aided in establishing the Skye Council, the people were gently led around to their position. A committee of investigation was organized to inquire into the matter in more detail. About a month later a second public meeting was held for the purpose of establishing a permanent Old People's Welfare Committee. Like the initial meeting, it was proceeded by a small conference among the gentry. The decision was that Skye should have a central committee and fourteen local committees. This was unanimously accepted. Now came the problem of who would serve. The first selections were obvious; in each local area the minister, doctor, and district nurse were "elected." When it came to the question

287

565 and no one thought himself capable of running a future meeting.
559 At least reports, the wife of another proprietor was having
• 747 her impression that "It's not as easy as it sounds just to call a public meeting in Glendale," confirmed. While the majority of the crofters thought an Old People's Welfare Committee was a good idea, they had no intention of being instrumental in its organization or in assuming any position which might elevate them above their neighbors. Throughout this chapter, the stress on conformity has been apparent, let us now turn to the problem of social control for a clearer picture of how conformity is enforced and to see how the Sgiathanach handles the deviant.

Social Control

626 Since social control is an important topic, I want to go into a further analysis of the manner in which the group influences the behavior of its members. For the sake of clarity, we must distinguish between social and political
121 control. By social control I mean the informal pressure or spontaneous action which any organized group can muster to exert an influence on its members sufficient to encourage conformity to tradition patterns of behavior. Political control, to me, involves the independent or requested interference of the state, as represented by the police, in any case which involves the enforcement and maintenance of law
671 and order as prescribed by legal enactments. On Skye the
227 laws of the land do not always have the same meaning to the

287

565 of individuals to organize each committee, no one was willing
559 to accept the post without persuasion. In every case where
• 747 there was a resident of the county people in the general vicinity, the man or his wife was chosen. The remaining chairs went to newcomers, especially doctors and teachers or their wives, mainly by default. They were not present. No one on Skye ever overtly seeks a role of responsibility. For the central committee, it was suggested, by a newcomer, that there should be at least two Skye people over sixty to get the point of view of the people who were to be helped. When the committee was finally formed, there was not one native Skye person on it. The chairman was the wife of a local landlord; the four members were another proprietor's wife, a Lowland woman, the minister, and an Austrian woman.

At no time was a vote taken. The person who can be persuaded to accept office is always unanimously "elected." On another occasion someone had made the mistake of nominating
623 two women to fill one post. Rather than put the matter to a vote, the people present "elected" me, as a disinterested participant, to select the woman who would serve.

By the time I left the Misty Isle only one of the local committees had taken a step in the direction of organizing itself. A meeting was called in Waternish where either a returned exile or the minister was to preside. Neither of them would step forward. Again the task fell to one of the county people. She drove up from Portree to take the chair and help the people elect the members of their committee. Her journey was fruitless. Hardly anyone attended the meeting,

The cattle knew their own sheilings; sometimes they came back before milking time and stuck their heads inside. They stood outside the sheiling at night, and that's how you can tell where a sheiling once was, even though the walls have fallen, by the rich green grass. Calves were born during the summer. A hollow was scooped out in the peat, and lined with turf and moss. People had as many as four or five cows. It was like Switzerland, only we didn't have the bells on the cows. There was lots of milk, fresh thick cream and crowdie (clotted sour milk); the old people knew how to make cheese.

"The moor was very eerie at night, with the sound of the birds. There were only a few hours of darkness anyway, and I'm sure we didn't get much sleep, but somehow we were always fresh. It was the air, the moor air is more health-giving. The air is different there. Ill people benefited from the change. Sometimes a person with TB would stay out there all summer. The air is heavy by the sea.

"There was no sense of time the way there is today. If you got lost in the snow or fog, you followed the cows home. You had all summer to take home the peats, to work the croft, to harvest the corn. There wasn't a world, there was only ourselves. That has changed since the war.

centre of the mud floor through tons and tons of decomposing organic matter or manure.'

The island, for all its ills and chills, had a high birth-rate and a low death-rate. Martin Martin (1695) declared: 'It is a general observation of such as live on the sea coast that they are more prolific than any other people whatsoever.' In some areas of the island the birth-rate was as high as 35 per cent with a death-rate of about 12 per cent. The longevity of the islanders is well known, a fact confirmed by a glance any week at the Deaths columns of the *Stornoway Gazette*, regularly recording the decease of octogenarians, nonagenarians and some reaching their century.

In 1795 the island had only one surgeon. In Stornoway, 'Inoculation is performed here with success by the skill and attention of Mr Robert Millar, Surgeon.' Later, another doctor came to Stornoway, who attended to the sick in all parts of the island. By the turn of the century there were resident medical officers in each parish, with five doctors in practice in Stornoway.

Just after the turn of the century, there was a medical club in the north of Harris. This had been formed by the proprietor, Sir Samuel Scott, whose crofters were supposed to pay 5s per annum and cottars 2s 6d; this subscription covered dependents. In return, Scott guaranteed the salary of a medical officer, thus securing the services of a resident doctor in the district. But there was apparently considerable reluctance to call a doctor, whether the patient belonged to the club or not. The salary of the district Medical Officer of Health was £35 per annum, and from the North Harris Club he received some £200. Scott also provided him with a home. Dr Fletcher reported in 1906 that a complete change had taken place in the diet of the people within the memory of the older inhabitants, whose accounts of what they called new diseases and lowered virility he found very interesting. Good, plain wholesome diet 'has been replaced by cheap stuff, of questionable quality and purity. To this change there is another nondescript article which goes by the name of tea, in the use, or rather abuse, of which they are quite intemperate and from which they extract the last dregs by boiling. The result is disastrous to the strongest digestive system.'

In 1892 'a well-equipped medical and surgical hospital was

175 growth followed the increases in potato-growing and fish-
178 ing, in income and food production, and the introduction
434 of vaccination against smallpox, which had formerly taken a heavy toll of child life.[1] This increase found an outlet
(433) in emigration to the Colonies, often led by departing tacks-
(751) men though discouraged at first by the Island lairds. For example, in July 1773, 840 people sailed from Lewis.
175 "Alarmed by this, their master . . . came down from
434 London to treat with the remainder of his tenants. What
167 are the terms asked, think you? 'The land at the old rents, the augmentation paid for three years back to be refunded, and his Factor to be immediately dismissed!'"
(214) Although the *Edinburgh Evening Courant*, from which this quotation is taken, went on to say that it was expected that the demands would be acceded to, or the Island would become a desert, the Factor was retained.

175 The pressure of population can be imagined when the
167 appalling conditions of transport overseas are remembered.
505 A case is known of 700 Gaelic emigrants setting out from the Clyde across the Atlantic in a vessel for which the maximum human cargo of negro slaves permissible was 400. The regulations governing the transport of slaves did not apply to the transport of 'freemen'. In quoting this case, D. F. Macdonald suggests that while it was in the interest of slave-owners that their slaves should arrive in the Plantations alive, it was rather in the interest of manufacturers to discourage emigration so as to keep a supply of labour at home with which to meet their growing demands and fill the gaps due to a high mortality, particularly among workers newly arrived from the country.[2] It would also seem as if it had not been in the interests of landlords to improve passenger regulations at that time,

| FEMALES | | |

71 though the suspected person was not thereby accused of
554 ill will, he would have to make some effort to put it right. 'Cure' might be sought either by counter-malediction on the supposed ill-wisher, known or unknown, or else by prayer that the evil should be spread so widely as to be harmless, as "on all the wild birds of Heaven . . . that it would do them no harm"—a charming touch! (*Carmina*,
82 vol. iii). Prayer was the normal and the best protection, free of any malediction, and was included in general intercession for loved ones. But fears remain—not only in 'distant' isles—both in peace and in the extreme stress of war.

14 A psychotherapist of 1917–18, A. J. Brock, wrote that
55 the "War was not in essence a new thing, the ordinary life of every day being itself a sort of battle".[1] Brock brought the hard-learned psychotherapy of war to bear upon a fresh understanding of the countryman struggling against an environment with which he has got out of tune. Failing in spite of strained effort to get the food and warmth he needs for himself and his 'wife and weans', the peasant may lose happiness in home and village, and faith in the future. "How did primitive people express all this?" asked Brock, noting that the risks and casualties of bad times in the past brought fears and floating pictures comparable to those of 'shell-shocked' patients.

1 In all lands the unity of family life and labour is
6 symbolised in homelier folk-lore by the protective spirit of each homestead. As long as the work is carried on heartily and thriftily the Brownie is pleased. But the people may become negligent, or begin to labour from mercenary motives. The true spirit of the work is then upset and (in all folk-lore) the Brownies begin to give
13]

strongly about this infringement of the traditional norms. 837
Gossip spreads very rapidly. The offenders are said to be 426
"no better than the tinkers." While tinkers are respected [554] [754]
because they have the power of the evil eye, they are not accorded any more prestige than we would give a beggar. All who have any contact with the neighborhood or the village where the deviants live soon know all the details. Since [369]
most of the adulterers on Skye have been in Portree, it adds another brick to the wall which separates the rural neighborhoods and the trade-center village. The offenders normally leave Skye as quickly as possible.

The Sgiathanach cannot be said to have a strong sense 423
of property, or, more correctly, the land is valued as a 421
place of residence and identity not as something to be bought and sold. We have seen that he uses his land communally and that he often will not leave a will for the house, not to mention his land. Even though the state thinks otherwise, he looks upon the natural resources of the island as his for the taking. At the same time, he normally respects the fruits of 421
his neighbor's labor. Any one can cut peat on the moor, but [314]
no one, except an unthinking tourist, would take a piece of turf once it had been cut. In a simlar way, the children are 857
generally well behaved. In the village there is a bit of stone throwing, a little profanity, and uncommonly some drinking on the sly, but rarely do children show any disrespect for the rights of others. One contractor, a Lowlander who came up to Skye to make alterations on the school, was amazed. Skye

175 827 463 [205] Whatever the rationalization, cobbler fathers begot cobbler sons. The present postmaster's grandfather was the first postmaster in Shawbost, and when help is needed in delivering the mail it is the postmaster's first [767] cousins who are likely to help out. As late as the 1950's, the township still had its own undertaker, a man who had learned from his father the art of laying out and dressing the body but who didn't like the job very much and was happy enough to turn it over to an undertaker who traveled from Stornoway.

463 [232] The island has had a veterinarian, based in Stornoway, for the past 30 years or so. Earlier, certain blacksmiths and farmers treated ailing livestock when the crofters [278] [755] needed them. For human ailments, there were many cures by plant and spell.

463 326 The man who was the last village blacksmith died not long ago. His smithy was in the center of the village. [342] His home and smithy were mortared stone buildings with corrugated iron roofs that were once estate houses for the men who worked the experimental farm established by Sir James Matheson in what is now New Shawbost. The blacksmith was also a shopkeeper and butcher. As a 463 326 874 blacksmith, his work was principally shoeing horses and making harrows and peat-cutters, which he did with the aid of one and sometimes two apprentices. One of his

THE GAELIC LANGUAGE

ing, 73 per cent have the language, which has been introduced 197
by immigrant country folk and their descendants.

HEALTH AND HOUSING

Despite the harsh conditions of centuries, the physical health of 175*
the island was good in early times. Epidemics were rare due to 164
isolation, though on occasion smallpox carried away many children. The commonest diseases were fevers, jaundice, dysentery and diarrhoea. Bloodletting (as in many another more advanced community) was the usual cure for fevers and dysentery. For coughs 175* 157
the people took a 'brochan' or soup of roots of nettles and reeds boiled in water with yeast; the meal of a black bean, mixed with boiled milk, was a useful cure for dysentery. Reports describe the 175*
folk as being well-proportioned, free from bodily imperfections and 142
of good stature; healthful and strong-bodied.

But privations, particularly the frequent recurrences of near- 175*
famine, coupled with the primitive housing conditions, began to 164
take their toll. The increasing sickness rate aroused the concern of authority. The most primitive dwellings had but one room 175*
with the cattle at one end and the family at the other. In 1830 242
Seaforth sought at least to put an end to this, ordering that a 231
partition must be erected between beast and man, 'and that more light should be admitted into the dark recesses of their habitation'. This type of one-room dwelling was not confined to the island, 184
being found with many variants throughout the Highlands and Islands area. The old Lewis house was, as a rule, an oblong structure, varying in length according to the means and requirements of the occupier. It had but one door, and frequently had no windows. Chimneys did not find favour, mainly because any open- 354
ing for the escape of smoke from the centrally-sited hearth tended 241
to reduce the quality of soot produced; and soot was regarded as a valuable manurial product. If there was a hole in the roof to admit some light, a small pane of glass was fixed into it: this soon had a coating of soot, and the sole source of light was the doorway—when the door was open. The family and the cattle used the same 231
entrance; and the cows' dung was removed once a year in the springtime.

acceptance of the potato, a much more productive and dependable 161
subsistence item than grain on Skye, made it possible for more 175
people to live on less land. The introduction of a new industry 247
keeping, provided many with employment and freed them from com- 184
plete dependence on a subsistence economy. Vaccination reduced 157
the mortality rate, especially among infants whose chances of 166
reaching maturity and procreating were thus enhanced. Another 511
important factor was the Skyeman's share in the general prosperity of British agriculturalists during the early years of the Industrial Revolution and during the Napoleonic Wars. An 423
especially important factor was the practice of subdividing 493
the land which made early marriage possible, in particular after the installation of the crofting system. Finally, but by no 161
means least significant, there was the persistence of many 175
typical features of the culture in the days of the clan. The 178
sentimental ties of kinship and attachment to the soil had 182
remained.

The population decrease, partially a result of the Skyeman's 161
involvement in the process of commercialization, was primarily 175
a result of a failure to fully adjust to the higher, more 178
heterogeneous socio-economic level. By the end of the second 184
period of the modern epoch, 1845, the people had become hostages to the potato and their own fertility. When the potato failed them, they had nothing to fall back upon, except the generosity of their landlords. The cattle and kelp markets had collapsed at the end of the Wars, and the subdivided land could not produce sufficient grain. The belief of many that the population had over-run the limited local resources was confirmed.

758

758 MEDICAL CARE--regimes and care of sick persons (e.g., diet, rest, isolation); apparatus and paraphernalia of medical care (e.g., clinical thermometers, bed pans); general availability of medical advice, treatment, and care (e.g., organization, finance, services); etc. This category is intended for general information on medical care. For specialized data see relevant categories in 73, 74 and 75. See also:

Gift giving . . . . . 431 Visiting 574

585 For some weeks after returning, the couple goes visiting
198 with a bottle. The scope of visits seems to have narrowed to close relatives unable to attend the wedding, and sometimes the custom is referred to as old-fashioned.

[421] The bride usually mails pieces of bridal cake to
[205] relatives who were unable to attend the wedding.

759 2. Death: At a time of illness or injury, an
574 individual may see persons he has not seen for years. The house is filled with a constant flow of visitors, and the visitors recount every detail of a sick person's
[763] pallor and movement. The room is usually occupied by visitors when a person breathes his last.

763 In the past, work ceased in every house in the
46 surrounding neighborhood when a person died. This no
[178] longer occurs. (The story is told of a weaver who called
[288] a mill in Stornoway to say that he could not finish an urgent tweed because there had been a death in the village, and was told, "You keep on weaving till the weaver dies.") However, dances in the village are
535 cancelled, and the bothan (an isolated hut in which
444 liquor is sold illegally) may close. Outdoor work, such as peat-cutting, which would be widely seen is avoided.

763 Word of the death spreads throughout the village and
[203] beyond within a few hours. From an immense, accumulated inventory, memories of the deceased are brought out,

193 "Then the tweeds got 47
237 going and the barley took too much trouble; so they had
884 no use for the mill."

A 60-year-old woman remembers, "They depended on the
193 potato and fished a lot. I was raised on oatcakes, barley
242 bannocks, and salt herring. There were no vans and no school canteens when I was young; you had to carry your
own 'piece' to school. We had porridge with fresh milk
[264] for breakfast, oatcakes and butter for lunch. Dinner was at 4:00, of potatoes and fish and milk. We had meat maybe once a week. My father poached a lot. We ate the heads
[251] and the roe of the salmon fresh, and salted the rest."

Once among the cleanest, Hebridean teeth now vie with
164 British cities in extent of decay. It is not uncommon for
759 a child in his first year of school to have six teeth pulled by the travelling dentist.

261 Various customs associated with food which exist today
272 reflect the days when fare was meager. Tea-drinking is
[171] omnipresent in Britain, but in the islands it has
272 special significance. The taking of tea constitutes
574 the denouement of a visit, and almost always occurs when
[576] someone steps over someone else's threshold. To refuse tea has some of the connotations of an insult; and to take only tea, without food, is to have a copan falamh (empty cup).

F. The Decline in Self-Sufficiency

175 Until the second world war, when weavers began to
432 earn larger sums of money for their weaving, the
435 township was relatively self-sufficient. The land was
175 more thoroughly cultivated, and the village boasted a
463 number of local specialists. These specializations
[240] were linked with particular family lines. Certain
175 families were blacksmiths; others were undertakers,
463 joiners, cobblers, or midwives. As generations succeeded
592 one another, occupations were not thrown open in the competitive, individualistic way of the mobile city. Certain occupations were seen to be "naturally" linked with particular families. Sometimes it was said that people of a particular family (which might include quite a number of collateral lines) had hereditary characteristics which suited them for particular occupations.

"Taggy was an expert bone-setter. He wasn't a doctor
[159] at all, but he could set bones better than any doctor. And he used to let blood, when people were dizzy with threatening stroke, or had pneumonia. It was in the people. He was a direct descendent, through his mother,
[827] of the Murrays of South Shawbost, the people who had the mill and were the blacksmiths for generations. He got that ability from them."

796 miscarriage occurring before marriage also requires
857 standing even when the child to be baptised was conceived
626 by the couple after marriage. A married man who has
898 impregnated a woman who is not his wife must undergo
[837] this ordeal before he can have his own children baptised.

It is the responsibility of the entire community to ensure that this punishment is carried out. On one occasion, the minister forgot to lecture a couple, and afterwards sent them a note that they would not have to stand; but they insisted, afraid that people would say that they were getting special treatment.

[203] According to one minister, the manse is a kind of
[521] "research center" to which all gossip is reported. Some
[743] ministers use this information in the pulpit, chiding
[194] people and calling attention to wrong-doings in front of the congregation. In contrast, a different attitude exists
[184] in parts of Stornoway, where villagers have approached
• [759] doctors in the maternity ward for information regarding miscarriages and premarital births only to be told that this information is confidential. The ordeal of standing
[178] in church does not exist in Stornoway. In 1971 a person in Shawbost was accidentally exempted from this ordeal and his exemption was seen by some as providing an opportunity to stop what is considered by many to be an archaic custom.

THE PEOPLE

*195 165 164 centre of the mud floor through tons and tons of decomposing organic matter or manure.'

The island, for all its ills and chills, had a high birth-rate and
*195 163 165 a low death-rate. Martin Martin (1695) declared: 'It is a general observation of such as live on the sea coast that they are more prolific than any other people whatsoever.' In some areas of the island the birth-rate was as high as 35 per cent with a death-rate of about 12 per cent. The longevity of the islanders is well known, a fact confirmed by a glance any week at the Deaths columns of the *Stornoway Gazette*, regularly recording the decease of octogenarians, nonagenarians and some reaching their century.

*195 759 [951] In 1795 the island had only one surgeon. In Stornoway, 'Inoculation is performed here with success by the skill and attention of Mr Robert Millar, Surgeon.' Later, another doctor came to Stornoway, who attended to the sick in all parts of the island. By the turn of the century there were resident medical officers in each parish, with five doctors in practice in Stornoway.

*195 759 743 Just after the turn of the century, there was a medical club in the north of Harris. This had been formed by the proprietor, Sir Samuel Scott, whose crofters were supposed to pay 5s per annum and cottars 2s 6d; this subscription covered dependents. In return, Scott guaranteed the salary of a medical officer, thus securing the services of a resident doctor in the district. But there was apparently considerable reluctance to call a doctor, whether
*195 763 423 the patient belonged to the club or not. The salary of the district Medical Officer of Health was £35 per annum, and from the
178 262 North Harris Club he received some £200. Scott also provided him with a home. Dr Fletcher reported in 1906 that a complete change had taken place in the diet of the people within the memory of the older inhabitants, whose accounts of what they called new diseases and lowered virility he found very interesting. Good, plain wholesome diet 'has been replaced by cheap stuff, of
[272] questionable quality and purity. To this change there is another nondescript article which goes by the name of tea, in the outset, or rather abuse, of which they are quite intemperate and from which they extract the last drops by boiling. The result is disastrous to the strongest digestive system.'

*195 743 In 1892 'a well-equipped medical and surgical hospital was

HEALTH AND HOUSING

an urgent necessity for the island of Lewis', and a committee was
appointed to collect funds, the subscription list being headed by 175*
Lady Matheson; for a period of three years donations flowed in 743
from all parts of the world. The Lewis cottage hospital was opened
on 1 February 1896, starting with only fifteen beds; the number
was increased to twenty in 1915. An extension was opened in
1925, and the hospital was provided with a surgeon and an ambulance. Another extension in 1929 was the result of a gift of
£3,000 from Mr John Bain, of Chicago, a Lewis son who was
President of no less than fourteen banks in the Mid-West. The
Lewis Sanatorium was started in 1926.

Tuberculosis was at one time in the island's history a disease
that caused many deaths and much sorrow. About 1930 an Assist- 175*
ant Medical Officer of Health was appointed, Dr R. Stevenson 164
Doig (who died in 1965), who spent his career-life in Lewis stamp- 744
ing out what was called in the island the 'white scourge'; he lived 759
long enough to see the introduction of preventive medicine and 165
the decline of the killing and crippling diseases he found on his first years in Lewis.

In dental health, progress has, as in so many areas, been 164
reversed. At one time the island teeth were so well known for 178
their strength and beauty that a film was made by the Army for showing to audiences considered in need of dental-health education. In 1966 the picture had changed: a survey revealed that 95 per cent of Lewis children were in need of dental treatment. (262)
The mainland addiction to sugary foods has spread. 734

As distinct from the island's general medical services, centred
on Stornoway, the psychiatric services are based at Inverness.
What was formerly the Inverness District Asylum, now called
Craig Dunain Hospital, is the only mental hospital in the Highlands area, with a few long-term beds in the Institution at Lochmaddy; the general hospital at Stornoway conducts monthly outpatient clinics. Over the area served, the rate of admission to
Craig Dunain Hospital is around 3·3 persons per 1,000 of population, compared with a figure of 4·68 for Scotland as a whole, 5·5
for Lewis and 2 for Harris.

The drink problem and Lewis's relatively high rate of admis- 733
sions to mental hospital both stem from the background of the 734
158

CH. V FAMILY, FARM GROUP AND TOWNSHIP

121 by help of oral tradition and of the living witness of con-
194 tinuing usage, we can reconstitute Gaelic life from the
108 view-points of both people and chief. Elsewhere, even in
175 Scotland, only fragments of early life are recorded, in
84 parchments written by the lawyers of landlord and king,
127 and almost always from the privileged side. History is indebted to modern lawyers who have deciphered and published the faded documents of their predecessors. But the very training as solicitor-factors which fitted them for this specialised task, in no way prepared them to view life as seen, experienced and felt by the men and women of the past, or even by the elders or youth of the townships today, with whom they have rarely laboured and whose mother tongue they rarely understand.

(A) THE LABOURS OF MAN AND WIFE, AND THE REWARD

621 We have seen that until the nineteenth century the
632 township in the main was self-contained. Its people grew,
175 reared or caught their food, and also found the raw materials
[833] for their clothing; they built their own shelter, and cut
194 their own firing. As a result, both men and women had
175 each to develop "a wide range of simple skills", in the
462 apt phrase of a Lewisman, Mr. Donald MacLean, M.A. Beyond the co-operative effort within a family, a farm group, or a body of 'fellow-townsmen'—in which each was competent to take a share according to sex and age—
[463] aptitude and family tradition initiated some local division of labour. The resident smith and the 'caird' (usually a wandering craftsman or tinker) appear in the oldest tales
• [759] and in the first rent-rolls. In addition there were honorary tasks. The smith might act as the village surgeon, ready

194 to bleed or to set bones, while some elderly woman would
175 serve as physician and midwife. Spiritual consolation
462 and renewal too could be found, even in the absence of
[463] monk or nun, or of priest, minister or catechist. Enough
• [759] here, that with agriculture and fishing, most crafts, except
[793] metal-work, were practised in every family. The 'range
[593] of skills' was therefore wider and richer in latent art than might be supposed from those needed on a little croft today. Hence the importance of understanding the roles of husbandman and housewife, of "the man and the woman of the house".

194 Their labours through the annual rhythm of the seasons
462 might be classed as efforts for the man and endurance for
221 the women (Fig. 9). Man's muscular strength and free-
[181] dom of limb rouse him to efforts demanded by the thrust and lift of peat-cutting, digging in stony soil, or pushing the foot-plough, step by step obliquely down a rocky slope. In the past an archer's chase of stag, wolf or boar demanded all a man's effort, and courage too, as fishing still does in the stormy north-western seas. With this facing of danger there came a gaiety that sparkled like the crest of a breaking wave. Women's work demanded by its unceasing activity a cheerful endurance, whether at labour on the croft, at corn-grinding, butter-making and peat-carrying, or carding, spinning and weaving; and with every task of day or season came the constant tending of cattle, of menfolk and children.

[539] This allotment of seasonal tasks and skills is neatly put in the proverb, "A man's cow won't yield milk, nor a woman's horse ploughing" (*Cha bhi bainn' aig bo fir, 's cha bhi treabhadh 'an each mnatha*). Yet women have always taken a share of work on the croft—too heavy a share when the men were much away—and the habit of

5: Caird et al. K-3 (1958) 1959 ES10 Highland Scots ES10 Park

beds are now covered by sphagnum moss and heather. Other lazy-beds are permanently in natural pasture; only thirty per cent of the land classified as 'old arable' is now in oats and potatoes. If natural hay is added, one hundred and thirteen acres of crops are taken from an area greater than the so-called old arable; this suggests that the cultivated area was pushed beyond the limits of the old arable (ninety acres) after 1850-52. As in all the fishing townships the area of sown grass is indicational for only four of the fifty-eight operative units actually sow grass. The wintering capacity of the croftis could be greatly increased by the general adoption of the practice of undersowing.

There are forty-three legal crofts in Gravir but nine are sub-let, in every case to relatives. All the crofts are taken up and there is evident pressure of population on the land. In addition to the crofts, there are a further ten cottars, and squatters and lessors, besides the fifteen legal Glengravir crofts (ten operative units) which have no share in the Gravir commons. The common has been encroached on by several feus for Gravir is the functional centre of Park: the Free Church of Scotland and Manse, the doctor, one of the two district nurses and two of the catechistes (assistant ministers) are all located in Gravir.

Gravir and Glengravir thus have fifty-eight legal crofts and fifty-six operative units. Less than half of the crofts with grazing rights are fully stocked and one quarter have under fifty per cent of the stock, including five without any stock. The common pasture of 2,652 acres is in general of poor grazing quality, dominated by the less nutritive species of grass and poorly drained. In 1957 a ten acre plot was fenced and re-seeded: only twelve of the operative units participated in this reclamation work, and the ages of the participants ranged between 27 and 58 years; this is significant as aged tenants are unable to carry out such work. This scheme could be extended annually; if potential participants in the scheme are limited, pasture amelioration is actually [495] numbers; at present the sheep stock is over two hundred per cent of the sheep room, and a ewe and lamb sell for as little as £2·10s to £3·10s, an indication of the consequence of over-stocking. The cattle stock is below the somming and this paucity of cattle is one of the notable changes in the agriculture since the 1930's for at that time as many as six cattle were kept on the larger crofts. The total stock kept in Gravir and Glengravir exceeds the somming by thirty-five per cent.

The great majority of the crofts can certainly not be considered economic units. Judging from the somming of one cow and follower and eight sheep per pound sterling of rent in a township where only seven crofts pay more than £2 rent, they were never intended to be self-supporting agricultural units. The produce of two cows and sixteen sheep, with potatoes, and in former days, here on sale, locally milled by the three Gravir water mills, could scarcely ever have maintained a family. Fishing was the complementary economic activity, and in 1901 no fewer than nineteen boats and eighty-nine fishermen were registered at Gravir. Today, only one boat fishes commercially for lobsters.

If agriculture is singularly unrewarding, weaving occupies six of the males of innovable age and service occupations a further ten males and five females, but neither weaving nor service occupation are sufficiently available or attractive to keep the innovable population in the district. Twelve of the males between fifteen and sixty-four years take seasonal employment and forty-six are in permanent employment forth of Lewis, in all sixty per cent of the potential male resident population.

The economic problem of Gravir, in common with the other 'fishing' townships, became acute after the fishing industry collapsed after 1914; in the bay-day of the fishing most of the men fished all the year round, locally and on the west and east coast of Scotland. Earnings fluctuated but a man might make as much as £80 in a good year or as little as £5 in a poor year. Apart from the sale of young cattle, and wool surplus to home spinning requirements, the fishing earnings constituted the bulk of the croft income. Today, on the basis of the somming, the income of the largest croft including subsidies could only be approximately £150 excluding the amount to be set aside for home consumption of potatoes and milk.

2. Bible vs. Bottle: An islander living on the mainland once observed that the Free Church plays cat and mouse with members of the community who drink heavily. Death is a common event in a community which has a large number of old people, and the theme of death appears repeatedly in sermons and in the conversations of those who have undergone religious conversion. The temporary pleasures of drink are contrasted with the eternal joys awaiting those who have been saved. The "false" friendships of the drinking situations are contrasted with the more lasting, consistent relations which characterize the clique of the converted. "You have lots of friends when you get converted, and they don't change overnight the way your drinking companions do."

"With the drink it's easy to get started and just not be able to stop drinking, especially with the money there is now. Everything's unsteady here except religion."

Many of the most deeply religious male members of the church were once heavy drinkers. One villager observed, "If a man went to extremes as a sinner, he'll be just as fanatical when he becomes holy. Had it not been for religion, some of them would have landed in Craig Dunain [the mental hospital near Inverness]. The talk is forever on religion. That keeps their mind at rest."

*159 781 787 [761] *159 781 [761]

later that these were all people who eventually got the Curam. The only conversion I didn't expect was Norrie Bheag. I saw her one night crying outside the church, and knew her time had come.

"In the dream I was at the very end of the line, only I wasn't wearing a white dress. I was naked, and kept trying to cover myself.

"Not a day passes that I don't think of death. I want to pray, but I don't know who to pray to. I've been going to church regularly now, sort of hoping and sort of being afraid that I'll find the answer. I've read too much, and I met too many kinds of people while I was working in Glasgow. I didn't live near other people from Shawbost when I was in Glasgow. I got to know Jews, tinkers, Catholics, and Jehovah's Witnesses. The world is full of different religions. I believe that you can convert to a religion, from to Buddhism or to Christianity, but not to a church like the Free Church or the Church of Scotland. This place is called Tir an t-soisgeul where the true gospel is preached, but the whole world should be called that."

Ruaridh Dan

*159 288

Ruaridh Dan was married in January and began to work as a warper in the Shawbost mill the following October, just after the end of World War II. He had been weaving

or inquires about a person's plans, he says, "You'll do it tomorrow, then, if spared."

Occasionally, a man's prestige status can be judged by the foretaste the people have of his funeral. This, too, is disturbing for the newcomers who prefer to face death when the time comes. There is one member of the county people who is extremely popular. Many speak of him as a "true Skyeman." One day he was being discussed by a small group of women. After talking about his interest in Skye and what a good man he was, one summed up their estimation by saying, "Aye, what a wonderful funeral he'll have." What higher compliment could there be? The number who attend a person's funeral and, recently, the number who drive to his funeral are indicative of his status. Even though having a car does not give the owner prestige - to the contrary it may give the people cause to wonder where he got his money - to have "friends" with cars does give prestige. When 200 or 300 men join in the funeral procession to carry the body to the grave, all the "people" of the deceased take pride in telling of the "mobs who came."

In death we find one aspect of the crofter's way of life which puzzles the newcomer, especially the government officials, more than anything else. The old people hoard their money. Welfare workers frequently say, "You never know how much they have until they die." There are a few crofters, mainly returned exiles, who are known to have money but continue to live in tumbled down houses. The newcomer says, "They must like to live that way." Quite to the contrary, the Sgristhanach has traditionally prepared for death early in life. Once the first

762

762 SUICIDE--incidence of suicide; motives (e.g., humiliation, thwarted love); common methods (e.g., jumping, drowning, shooting, poison); stereotyped methods (e.g., suttee, hara-kiri); justifications; attitude toward suicides; etc. See also:
Personality disorders . . . . . 158 Punishment of attempted suicides. 692

695 deviants without recourse to the court. Indeed in Kilmuir
627 they do so well that I never heard of any theft. Still, there has been some theft in Glendale. Shortly before each cattle sale the shepherds on the club farm found one or two cattle had disappeared. At first they thought the cattle might have gone over the cliff, but coincidence soon indicated they had a thief in their midst. One of the crofters, a retired Glasgow policeman, took a hand in discovering the guilty party. At length he found out who it was. At the annual meeting several weeks later, he stood up and told the shareholders exactly what he had seen. Here were the facts, in detail. He did not, however, name the guilty person. After he had finished, the crofters calmly asked him to retell several parts of his story, and then there was a period of silence. Finally, the man publicly confessed and expressed repentance. He was not cast out or handed over to the police -- I doubt if the police know of this even now. His humiliation was sufficient punishment.

682 Among such crimes and the forms of social control which
762 they prompt, however, murder is almost unknown, deterred by the tales which tell of being plagued by the man's ghost to the grave, and suicide is extremely rare, with only three cases in many, many years. Much more important, however, is the influence of social control over public behavior.

683 During my stay on Skye, I was struck by the lack of overt
183 aggression. Aggression was an outstanding characteristic of the
157 culture during the days of the clan, as the Crown ruefully

763

763 DYING--omens and predictions of death; notions about dying; recognizing the approach of death; settlement of affairs; assembling of relatives; attempts to postpone death; preparing the patient for death (e.g., removal from dwelling, dressing in mortuary garments, last rites); preparing the funeral equipment (e.g., shroud, coffin); last words and last favors; criteria of death (e.g., coma, cessation of breath or heart action); attempts at revival; reaction to the impact of death (e.g., wailing, flight, self-mutilation); announcement of death; post-mortem examinations; etc. See also:
Deathbed testaments . . . . . 438 Omens 787
Capital punishment 681

585 For some weeks after returning, the couple goes visiting
178 with a bottle. The scope of visits seems to have narrowed to close relatives unable to attend the wedding, and sometimes the custom is referred to as old-fashioned.

[431] The bride usually mails pieces of bridal cake to
[205] relatives who were unable to attend the wedding.

758 2. Death: At a time of illness or injury, an
574 individual may see persons he has not seen for years. The house is filled with a constant flow of visitors, and the visitors recount every detail of a sick person's
763 pallor and movement. The room is usually occupied by visitors when a person breathes his last.

In the past, work ceased in every house in the
763 surrounding neighborhood when a person died. This no
46 longer occurs. (The story is told of a weaver who called
[178] a mill in Stornoway to say that he could not finish an
[288] urgent tweed because there had been a death in the village, and was told, "You keep on weaving till the weaver dies.") However, dances in the village are
[535] cancelled, and the bothan (an isolated hut in which
[444] liquor is sold illegally) may close. Outdoor work, such as peat-cutting, which would be widely seen is avoided.

763 Word of the death spreads throughout the village and
[803] beyond within a few hours. From an immense, accumulated inventory, memories of the deceased are brought out,

763 relived and shared. The person's exact age and the
764 identity of his closest kin are discussed. A van is
574 immediately dispatched to bring benches from the church,
[493] which are set up throughout the house of the deceased, and over the next few days a constant stream of visitors
[431] fills the benches. The visitors bring tea, sugar, biscuits and other provisions for the days and nights of communal trial. The tigh fhaire, "house of watching," as this wake is called, continues until the day of the funeral.

764 In the past, persons sat up all night with the body.
[825] "It took so long to get a coffin. You didn't want to
[198] go in and find half the face eaten away by rats." This custom is dying out, but lights are usually left on in the room in which the coffin is placed. When an all-night wake occurs, the atmosphere is one of relaxed story-telling and the sad laughter of reminiscence.

At least two nights of "waking" usually precede the
764 funeral. During this time, hundreds of villagers attend
574 the tigh fhaire. Grief is expressed throughout the vast
[152] network in which the dead person was enmeshed. On rare occasions when a single night precedes burial, the house is filled to overflowing.

Throughout the day and evening, waves of newcomers enter, and other sitters slip quietly away. Kinswomen of

779 with his spouse. The knight, the first Stewart Earl of
764 Menteith, had died four years after his wife, in 1294.
532 Medieval sculpture was then attaining its height, as this
monument, in spite of the ravages of time, bears witness.
195 The following year, 1295, saw the commencement of "the
three hundred years war" with its repeated destruction
644 of Scottish arts and traditions of peace. Under King
[829] Alexander III, "that Scotland led in luve and law", peace
within the kingdom of Scots allowed a union embracing
[648] Gaelic Christian traditions and Scoto-Norman arts. After
his death this became all but impossible. So far as scholars
181 can tell me, this almost unnoticed monument remains
764 unique in Christendom, indeed in the world.[1] The arts
of Scotland, hitherto in touch with European achievement,
were shattered by invasions, and Gaelic tradition was only
to be maintained by the very poor, whose debtors, for all
time, we have become.

763 At the approach of death God's mercy and peace were
782 sought. Latterly Roman Catholic prayers stressed the
wish for Confession to a priest, followed by Supreme
Unction for the attainment of 'Happy death', *Bas sona.*[2]
[174] In early times confession seems to have been made as
willingly to the 'Soul-friend', followed by Benediction.
When death had come, the mourners sang of sleep and
764 home. In Lewis today funerals are conducted in silence
to the graveside, where the last service is held; but

[113] [1] *A unique medieval tomb at Inchmahome: a cultural link.* (Geddes, 1952.)
[2] It would be of deep interest to compare the attitudes to death found in 'Spiritual Songs' by Protestant Gaels like Buchanan or Grant, with songs on death which, though maybe of post-Reformation date, are of Roman Catholic origin (*e.g.* in Fr. Allan Macdonald's collection, poems on the Day of Judgment, and of Wrath; on age and on death; and on Purgatory: pp. 31, 85, 146; 34, 19, 21; 27). Some have much in common, both by
[19] virtue of the earlier traditions they shared and still more because of parallel trends of Reformation and Counter-Reformation. Cf. *Carmina.*

of Scotland in Portree. Only one girl appeared for instruction. 794
After the significance of her preparation had been fully explained 779
she declined to take the final step. She did not disagree 484
with the minister's view that she was prepared for membership
and communion, but she was afraid of what her friends in the
Free Church and Free Presbyterian Church might say. She was
probably wondering what the middle-aged adherents of her church
might have to say, too. When the Sgiathanach takes his first
Communion, in Glendale, Kilmuir, or Portree, the people must
be able to look up to him.

The second exception to the age-grade requirement rules 626
among the county people. Because of their social position 988
in the community, which rests on the expression of their statuses, 565 794
as roles, as landlords, village and neighborhood representatives
and leaders, and members of the national class system, and
because of their education in England, the county people
attain membership in the church at an early age. Some have
become elders of the church at twenty-one. To subject them
to the control of the crofters would, obviously, be incompati-
ble with their social standing. Although they are all Church [182]
of Scotland, here again religion is a reinforcing factor for
the structure of the society.

Dying, the final act of living, reveals a host of traits 763
which only receive covert expression during an individual's 829
life. While the youth is censured for his spontaneous
pleasures and the adult is criticized for his behavior, the
deceased is always respected. As one woman said, "It is the
one time in a person's life that the people have nothing but

good to say about him." Death is one of the two occasions for 763
an extended family gathering. Indeed, a man's prestige is best 829
seen at his funeral. Without exaggeration, death is the most [546] [564]
significant event of living. It is constantly visualized and
discussed. "Second Sight," the ability to foresee future 763
events, is mainly concerned with the death of one's "people"
and friends. Since the ministers have been striving to wipe
out this belief, it is difficult to get the people to talk
about it, except in retrospect. Still most of the people,
including many of the newcomers, and not a few of the ministers,
continue to believe that some old people,—they are always
old men and women,—are afflicted with this power. There
was an old man in one township who would not go out at dusk
for fear of seeing a funeral, and there was an old woman who
foretold her daughter's death. Lights seen in strange places
also tell of death. Even the sophisticated Sgiathanach who
has been born and raised in Portree sometimes forgets himself.
A current story on the island tells of a "ghost bus." The
headlights suddenly appear behind a driver on the Sligihan
road. For the newcomers this is a fanciful tale, but for
several of the natives it has a meaning, death.

All plans are prefixed with the phrase "if spared." 763
"If spared, we'll shear the sheep on Thursday." "If spared, 195
I'll go down to see my brother soon." Many of the newcomers
are made to feel very uneasy by this habit, which is as much
a form of speech as greeting people with, "It's wet," or,
"It's cold." When a Sgiathanach asks to have something done

or inquires about a person's plans, he says, "You'll do it 763
tomorrow, then, if spared." 195

Occasionally, a man's prestige status can be judged by 764
the foretaste the people have of his funeral. This, too, is 559
disturbing for the newcomers who prefer to face death when
the time comes. There is one member of the county people who
is extremely popular. Many speak of him as a "true Skyeman."
One day he was being discussed by a small group of women.
After talking about his interest in Skye and what a good man
he was, one summed up their estimation by saying, "Aye, what
a wonderful funeral he'll have." What higher compliment could
there be? The number who attend a person's funeral and,
recently, the number who drive to his funeral are indicative
of his status. Even though having a car does not give the [493]
owner prestige - to the contrary it may give the people cause
to wonder where he got his money - to have "friends" with cars
does give prestige. When 200 or 300 men join in the funeral
procession to carry the body to the grave, all the "people"
of the deceased take pride in telling of the "mobs who came."

In death we find one aspect of the crofter's way of life 764
which puzzles the newcomer, especially the government officials, 559
more than anything else. The old people hoard their money.
Welfare workers frequently say, "You never know how much they
have until they die." There are a few crofters, mainly returned
exiles, who are known to have money but continue to live in
tumbled down houses. The newcomer says, "They must like to
live that way." Quite to the contrary, the Sgiathanach has [741]
traditionally prepared for death early in life. Once the first

duty of a wife was to weave her winding sheet. Nor is the cost 764
of burial merely buying a coffin. As at birth and marriage, 559
the people who attend a funeral must have their dram. Just as [829]
they do not want subsidies to begin life, they do not want to
be buried with public assistance. They hoard their money, even
if it is only a few pounds, to assure themselves of a decent
burial. Another thing that disturbs the welfare officers is 763
the determination of the old and infirm to remain on their 186
croft in spite of all efforts to move them to a "Twilight
Home." Some of these people may have returned to Skye for
no other reason than the feeling, "If I could go back to Skye
to die it would be fine." I knew many people who had come to
America as young adults and "liked it fine." Why did they
return? The answer is always the same, "I was getting old, you
know, and began to think of home." This, of course, is another
expression of the sentimental attachment for the land and its
identity with one's "people."

Paradoxically, for a people who are so aware of death 763
and look upon it so significantly, the churches, one and all, 796
have refused to consecrate burial. There are no prayers for [782]
the dead. There is no service for the dying or at the grave
as the body is lowered into the soil. The ritual which accompanies
this final act of living is better described as a rite of
intensification rather than as a passage rite, to adopt the
terminology of Chapple and Coon.[15]

Once the individual dies, his status is fixed for all

[15] Chapple and Coon, Principles of Anthropology, pp. 398-399.

eternity. If he was one of the "elect," he will enjoy eternal 763
life. If he was not one of these venerable old men and women, 554 775
he can expect to suffer eternal damnation. Although baptism 851
is a sacrament and removes original sin, it is only the initial 783
step in the direction of salvation, which election alone confirms. Neither the minister nor any member of the bereaved 764
family offers a prayer. "What more can you do than bury him," 793
one woman asked. An old man said, "They are just as well 782
remembered without praying for them." In a community which is dominated by the old people, and in the crofting neighborhoods where so many of the crofters are very old, death can be expected to disturb the equilibrium of social interaction. In Glendale during November and December of 1953 funeral processions made their way through the glen no less than nine times. The function of the minister is to restore the dis- 793
turbed patterns, both in the family and in the neighborhood 782
(or village). All work stops in the township for three days from the time of death. Some of the cosmopolitans of the 369
village, seeking to justify their deviating behavior, assert 287
that the lazy crofter looks forward to a funeral because it means three days of idleness. In the village, of course, it 369
is no longer possible to bring daily life to a standstill because the villagers serve a wide area. The "people" of the deceased do stop work and close their shops. On the day of the funeral all blinds are drawn until after the procession has passed.

As he would if there were illness in the family, the 793
minister calls on the bereaved family and leads them in family 764

764

764 FUNERAL.--attitude toward the corpse; mortuary toilet (e.g., dressing and decorating the body); laying out in state; preservative techniques (e.g., embalming, desiccation, mummification); determination of time, place, and mode of burial; interval between death and burial (e.g., duration, measures to prevent further deaths, manifestations of grief); vigils and wakes; place of disposal of corpse (e.g., cemetery, ossuary); receptacles (e.g., coffin, canoe, urn, tomb); method of disposal (e.g., abandonment, inhumation, cremation, sea burial, cave burial, tree or scaffold burial); preparation of grave, pyre, or scaffold; transport of corpse to place of disposal; procession to grave; disposition of corpse (e.g., posture, orientation); funerary mounds, monuments, and memorials; burial rites; mortuary sacrifices; disposition of grave goods; roles of relatives at funerals; economic obligations of participants (e.g., fees, contributions); precautions against return of the soul (e.g., silence, disguise, doors of the dead); return from the funeral; purification of participants; etc. See also:

For example, 46
a Widow Catherine lost "one red
195 mare and foal (1l0), one dun cow (13/10), and one dun
427 heifer (11/10)." One family is said to have paid rent
436 by being fiddlers for "the castle" (the home of Sir
551 James Matheson), thus earning the patronymic, "Fiddler." Their income stopped abruptly when the fiddler at the time, a great-grandfather of descendants now living, converted to the Free Church and smashed his instrument.

In 1899 and in 1905 it was noted in the rent ledger that two crofters wanted "first chance of a vacant croft in the township." In the first quarter of the century, 628
a conflict ensued between Shawbost and a neighboring 764
township over the extension of a cemetery; land was too precious to take out of cultivation and give to the dead of another village.

A 65-year-old man recalls, "Men got their living
173 from the land and sea. They kept more cattle when I was
241 young. They used the dung of the cattle to fertilize the
233 soil. The entire croft was used. My father's croft was
229 only 2½ acres, but he worked it well and harvested eight stacks of barley to see us through the year." There were
173 a number of kilns to dry grain, and mills along the streams
243 to grind the barley. The "old Norse mill" which was
252 recently rebuilt by the school children as a school project
251 was in operation from 1920-1934. "Then the tweeds got
847

121 of the township with the larger society, and examines
128 the effect of geographical and social marginality on the boundedness of the township network. Chapter 6 discusses two important networks of social relations within the township.

B. Township as Social Boundary System

632 The township constitutes a relatively firmly bounded
178 system, although its boundaries are weaker than formerly
621 when the township was relatively self-sufficient
476 economically. Township members worked together in small fishing crews, and families relied on each other for help when members of the family were away from the island "at the fishing."

621 Relatives were expected to give priority to helping
476 each other. According to one proverb, "A relative is
602 your best friend." First and second cousins were
539 considered especially close, but knowledge of one's
605 kinsmen extended to at least the fourth generation.

602 Ties of kinship became evident in ceremonies such as
576 funerals and weddings. One Gaelic proverb says, "You
585 know who your relatives are at weddings and funerals."
764 At weddings the onus was on the members of the bridal
539 party to remember their relatives. "You have to sit and calculate who is closely related, and all those

602 people will be doing the same. If they think they're
576 close enough to be invited, they'll be annoyed if you
585 don't include them." At funerals, relatives of the
764 deceased to about third cousins were expected to participate.

621 When a population has lived in a small area for
602 generations, a dense network of kinship develops. This
476 fact, and the importance placed on mutual aid among
571 fellow villagers, fostered the feeling that the network of township members, who ploughed, fished and tended cattle and sheep together, was also a network of kinsmen. "We're all the same people." "It's all one family here." Occupational and kinship spheres of social activity commingled. The importance of neighbors in contrast
539 with relatives was reflected in such proverbs as, "A neighbor close at hand is better than a relative in a distant land."

621 The nuclear family did not, according to Cohen's
594 criteria, constitute a firmly bounded system. Then as
178 now, women preferred the company of their "own kind,"
571 that is, the company of other women. The men worked and spent periods of recreation with other men. Childre
621 spent about as much time in the homes of grandparents,
596 uncles or fellow villagers as they did in their own homes. A 60-year-old woman remembers that it was a

763 relived and shared. The person's exact age and the
764 identity of his closest kin are discussed. A van is
574 immediately dispatched to bring benches from the church,
[493] which are set up throughout the house of the deceased,
and over the next few days a constant stream of visitors
[431] fills the benches. The visitors bring tea, sugar,
biscuits and other provisions for the days and nights
of communal trial. The tigh fhaire, "house of watching,
as this wake is called, continues until the day of the
funeral.

764 In the past, persons sat up all night with the body
[825] "It took so long to get a coffin. You didn't want to
[178] go in and find half the face eaten away by rats." This
custom is dying out, but lights are usually left on in
the room in which the coffin is placed. When an all-nigh
wake occurs, the atmosphere is one of relaxed story-telli
and the sad laughter of reminiscence.

764 At least two nights of "waking" usually precede the
574 funeral. During this time, hundreds of villagers attend
[152] the tigh fhaire. Grief is expressed throughout the vast
network in which the dead person was enmeshed. On rare
occasions when a single night precedes burial, the house
is filled to overflowing.

Throughout the day and evening, waves of newcomers
enter, and other sitters slip quietly away. Kinswomen of

HISTORY

*175 cester College, Oxford University, with an estimated date of 1653,
648 the year in which the English garrison was placed in Lewis. Nothing now remains of that fort built by Crispe's soldiers, though the whole area on the small point of land, present-day Point Street, is redolent of historical atmosphere, despite new buildings.

RELIGIOUS HISTORY

*175 Ecclesiology is a horse of many different colours in the island.
Tradition goes right back to the early stirrings of Christianity in Scotland. Indeed, one of the most important religious sites on the
[346] island is St Columba's at Eye, near Aignish, some seven miles from Stornoway. Though the name might suggest it, there is no proof that the Gaelic abbot visited Lewis. But it is more than likely that a follower of his did so in his name. Part of the church at Eye is Norman, which gives an approximate date of origin, though it is necessary to take some account of the long interval between a development phase in one country and its adoption in another country quite insulated from change, as were the Outer
[173] Isles in medieval times. According to tradition, the church was built on the site of a cell occupied by the Celtic saint Catan, who is believed to have lived in the sixth or seventh century. Possibly this is the same Catan to whom a shrine is dedicated at Mealasta, in Uig, close by which the remains of a nunnery have been found, called by a Gaelic name meaning 'the house of the old black women'.

*175 St Columba's is mentioned in records from 1506, when it is
346 described as a 'rectory'. At present, though in a ruined state, it still shows its former strength of character, both as a building, a place of sanctuary, and a place of worship. It has also been called
[764] the Valhalla of Lewis, for tradition says that some nineteen Chiefs of Siol Torquil, the MacLeods of Lewis, are buried in its grounds. William, the fifth Earl of Seaforth, also found there an uneasy bed beside the enemies of his ancestors, who wrested Lewis from the MacLeods.

Another significant church is St Olaf's, or St Molua's at Eoropie, at the Butt of Lewis. Recorded evidence first indicates the existence of the church in 1630, where it occurs in a report

A HARRIS VIGNETTE

346 Linking the present day firmly with an ancient past is the probably fourteenth-century church of St Clement's, at Rodel. It is an outstanding building, and the only considerable archi-
[333] tectural monument in the Western Isles. Built of rubble, dressed
[353] with schist, and freestone which must have been imported for the purpose, it is cruciform, with nave, choir and two transeptal aisles, the fabric being covered with carvings and sculptured panels. The
*175 first mention of the building is made by Dean Monro, in his
346 account of his tour of the Western Isles, *c* 1549. In the first half

346
341

St Clement's Church, at Rodel, Harris

In the first half
*175 of the sixteenth century it was extensively repaired by Alexander
346 MacLeod of Harris, who died in 1547 and whose remarkable
• [764] tomb it houses. He prepared it nineteen years before he died;
[532] reckoned to be among the finest in Scotland, elaborately wrought, and with Latin inscription, nine sculptured panels cover the rear wall of the alcove, with the recumbent effigy of an armoured warrior with ornamented bascinet and camail lying below. Round-toed sabbatons cover the warrior's feet, which rest on a lizard-like beast, a lion standing guard at head and feet.

A HARRIS VIGNETTE

Other tombs inside the church include that of Mary MacLeod, *175
a bardess of the seventeenth century who was also governess to 346
the young MacLeods at Dunvegan. She was probably the first to 764 •
compose what may be called the 'court' song, in simple words [533]
and in the 'strophic' verse-form of rhythm and assonance enjoyed by all Gaels since her time. Her last elegy was composed to Sir Norman MacLeod of Berneray in 1705.

So far as personal characteristics are concerned, there is a 181
marked difference between the Herrach (Harrisman) and the 197
Leodhasach (Lewisman). Their Gaelic dialects are different, the Harris pronunciation being much softer, with an attractive singing lilt. And Harris Gaelic has fewer words of Norse origin. The main reason for this difference has been a topographical one: before a road was cut, the mountain barrier of north Harris divided the inhabitants of the two parts of the same island, who developed in their own distinctive ways.

The character of the land of Harris has also had much to do 181
with the difference. Harris for the most part is infertile, with great 133
expanses of rock outcrops. The east side of the island is torn in shreds by fiord-like sea-mouths; the west coast is slow-moving, with large expanses of sand and machar-land which look out over the Atlantic breakers rolling in from a sea that is oceanic in appearance and in fact. From early times the Harris folk have *175
had to work hard to scarify their snippets of land to make it fer- 181
tile. Regular increases in population forced them to cultivate land 133
extending up to 500 feet above sea level in some places, in the 241
form of hard-won lazy-beds. After the clearances early last cen- [236]
tury, when the more fertile lands on the west coast were taken over for the formation of sheep farms, the people concentrated on the eastern side of the island, and on some of the higher ground in the west.

On Lord Leverhulme's death in 1925 the ownership of large 423
tracts of Harris passed to absentee landlords. After this, some of [659]
the lands which had been cleared a century earlier were purchased by the Government and broken up into crofts again, enabling some of the indigenous population to come back to make 423
use of the more fertile lands of the west. There are some 550 241
crofts in Harris, with 29 regulated common grazings; the total

NORTH RONA

Though the island is but a great lump of rock, Dean Monro says *175
that in his time an abundance of corn was grown, by delving 281
only, and an abundance of clover-grass for sheep. The island also 231
produced a fine bere-meal which the islanders stuffed into the [427]
skins of sheep and sent, as their rent or tribute, to MacLeod of Lewis, along with mutton and fowls.

Of St Ronan's Chapel, still to be seen and reckoned the oldest 181
Christian building in Britain remaining in its original state, *175
Monro says: 'As the ancients of the country allege, they leave a [346]
spade and a shuil [shovel] when any man dies, and upon the [764] •
morrow find the place of the grave marked with a spade, as they allege.' In 1695 Martin wrote of Rona in 1680:

> The people repeat the Lord's Prayer, Creed, and the Ten Com- [188]
> mandments in the Chapel every Sunday morning. They have [194]
> cows, sheep, barley, oats, and live a harmless life, being perfectly ignorant of most of those vices that abound in the world. They know nothing of money or gold, having no occasion for either; they neither sell nor buy, but only barter for such little things as they want; they covet no wealth, being fully content and satisfied with food and raiment; though at the same time they are very precise in the matter of property among themselves; for none of them will by any means allow his neighbour to fish within his property . . . They concern not themselves about the rest of mankind except the inhabitants in the north part of Lewis. They take [551]
> their surname from the colour of the sky, rainbow, and clouds. [162]
> There are only five families in this small island, and every tenant has his dwelling-house, a barn, a house where their best effects [342]
> are preserved, a house for their cattle, and a porch on each side to keep off the rain or snow. Their houses are built with stone and thatched with straw . . . When any one of them comes to Lewis, which is seldom, they are astonished to see so many people.

Then came tragedy. Somehow, probably off a wreck, a swarm *175
of rats landed on the island and consumed virtually all the food. 731
A few months later, some seamen landed and robbed the islanders [165]
of their only bull. 'These misfortunes and the want of supply [166]
from Lewis for the space of a year occasioned the death of all
that ancient race of people.' Some years afterwards a new colony *175
was sent to the island. In 1796, at the time of the *Old Statistical* 162

CH. VII SPIRITUAL LIFE OF COMMUNITY

776 fellowship. "The Irish Church", a Roman is said to
171 have exclaimed to a Gaelic Catholic in scorn, "has won
no martyr's crown!" "Ireland was named the Isle of
174 Saints not by persecuting but by cherishing God's elect", was the reply. The Celtic Church linked the lands across St. Patrick's Channel; and what was true of Patrick's missionary field seems to have been as true of Celtic Britain, the land of his birth. Kilpatrick on the Roman Wall of Clyde has been claimed as the birthplace of one who was certainly a Cymric Celt by birth and baptism, a Gaul by training, and an Irishman by mission.[1]

771 This closeness of fellowship ranged from personal to
[782] divine relationships in waking or rest, with an intimacy of expression all its own. A prayer for rest begins, "I shall
[181] lie down with God, and God lie down with me. . . ." A simple and universal gesture of love, in which parent, child or lover slips an arm under the loved one's head, is carried into prayer at rest, "the arm of the Father", or
779 of Jesus or Mary, "under my head". This image must
• 764 be the inspiration of one of the loveliest of Christian tombs, preserved by clan loyalty, respect for the dead, distance
532 and later forgetfulness on the priory isle of Inchmahome, where the Highlands meet the Lowlands at the Lake of Menteith. As on a number of medieval monuments, knight and lady are sculptured side by side. But here the two lie each with "an arm under the other's head", the free arm of the knight reaching over to clasp hands

[1] While in Scotland the name Bride is now rare as a Christian name, that of Patrick is still found among Grants, Campbells, Macdonalds and others. It is even commoner than English speakers might suppose, owing to the practice—almost the necessity—of giving an English form to a Gaelic name when it is turned to English speech—as Daniel for Domhnull (Donald), Aeneas for Aonghas (Angus) or Peter for Padhraig (Patrick). Many a Gael in the Lowlands felt obliged to relinquish his baptismal (and ancestral) names, with their link to Celtic Christian tradition.

COMMUNITY FROM PAST TO PRESENT PT. II

779 with his spouse. The knight, the first Stewart Earl of
• 764 Menteith, had died four years after his wife, in 1294.
532 Medieval sculpture was then attaining its height, as this monument, in spite of the ravages of time, bears witness.
175 The following year, 1295, saw the commencement of "the
644 three hundred years war" with its repeated destruction
[829] of Scottish arts and traditions of peace. Under King Alexander III, "that Scotland led in luve and law", peace
[648] within the kingdom of Scots allowed a union embracing Gaelic Christian traditions and Scoto-Norman arts. After
181 his death this became all but impossible. So far as scholars can tell me, this almost unnoticed monument remains
764 unique in Christendom, indeed in the world.[1] The arts of Scotland, hitherto in touch with European achievement, were shattered by invasions, and Gaelic tradition was only to be maintained by the very poor, whose debtors, for all time, we have become.

763 At the approach of death God's mercy and peace were
782 sought. Latterly Roman Catholic prayers stressed the wish for Confession to a priest, followed by Supreme Unction for the attainment of 'Happy death', *Bas sona*.[2]
[174] In early times confession seems to have been made as willingly to the 'Soul-friend', followed by Benediction. When death had come, the mourners sang of sleep and
764 home. In Lewis today funerals are conducted in silence to the graveside, where the last service is held; but

[113] [1] *A unique medieval tomb at Inchmahome: a cultural link.* (Geddes, 1952.)
[2] It would be of deep interest to compare the attitudes to death found in 'Spiritual Songs' by Protestant Gaels like Buchanan or Grant, with songs on death which, though maybe of post-Reformation date, are of Roman Catholic origin (*e.g.* in Fr. Allan Macdonald's collection, poems on the Day of Judgment, and of Wrath; on age and on death; and on Purgatory;
[178] pp. 31, 85, 146; 34, 19, 21; 27). Some have much in common, both by virtue of the earlier traditions they shared and still more because of parallel trends of Reformation and Counter-Reformation. Cf. *Carmina*.

CH. VII SPIRITUAL LIFE OF COMMUNITY

• 764 Carmichael found versions of a mourners' hymn then still remembered as sung at funerals there. "Never could they who had heard it forget the solemnity of the occasion, where all was so natural and beautiful, and nature seemed to join in the feelings of humanity."[1] "I am going with thee to thy home! . . . Thy home of winter." ". . . To thy home of autumn, spring and summer . . . to thine eternal bed, thy perpetual sleep." "I am going home with thee, thou child of my love, To my dear Son of blessing, to the Father of grace."

764 539

Tha mi dol dachaidh leat,
Go do thaigh! go do thaigh!
Tha mi dol dachaidh leat
Go do thaigh geamhraidh . . .

Tha mi dol dachaidh leat,
A leanaibh mo luaidh,
Go Macan nam beannachd,
Go Athair nam buadh.

"The Death Croon", handed down by the Rev. Dr. Kenneth Macleod, leads on from almost the same opening, the Soul-friend singing to the fellow-watchers' refrain.[2] "Sleep, oh love, on thy Mother's bosom, Sleep while she sings soft lullings to thee, The sleep of the Son on Mary's breast. Sleep and put off from thee every woe. . . . Sleep of Jesus's youth . . . life . . . and glory . . . of His love . . . joy . . . and peace. . . . Sleep of the seven virtues . . . the seven moons . . . the seven slumbers upon thee. . . . Dream of Mary and God in her side, Dream of Columba in Isle of Saints, Dream of the Child

[1] *Carmina*, No. 346. The word *Mac*, Son, is here given a tender diminutive form, *Macan*, 'dear Son', as if to complement the infinity of the Father's "achievement, victory or grace".

COMMUNITY FROM PAST TO PRESENT PT. II

• 764 that never aged: Each one of these dreams, dear love, be
539 thine. . . .

The dusk of the Death-sleep is, love, in thine eye,
But softly thou'lt sleep, softly sleep. . . .
In name of the Three in One,
Peace to thy pain,
The Christ is come . . .
Softly sleep, softly sleep. . . .

114 The late Professor Sir J. Arthur Thomson, deeply moved on hearing it sung for the first time, exclaimed, "How profound the civilisation of those who composed and handed down this hymn of farewell!" The Soul-friend and Watchers seem to unfold before us the wide range of human love, and—as they recall the tender relationships of birth, childhood, parenthood and parting—to touch the universal.

107

*175 Death. At death a "likewake" was held. All work in the town-
• 764 ship ceased and the fires were put out. A bowl of salt, to represent the soul, and a bowl of earth, to represent the body, were placed on the chest of the deceased. The room was filled day and night with relatives and friends who jested, sang, spun yarns, fiddled, piped and danced. A bard was present to recite praises for the deceased. The Reformed Kirk tried to stop these irregularities, which were regarded as heathen superstitions, by limiting the guests to near relatives and prescribing sober behavior and the reading of scripture.[100] The result was that for many years religion was absent at funerals. One Englishman found a Highland funeral merrier than an English wedding.[101] Ministers or elders do not seem to have attended funerals anywhere in the Highlands, until around 1700 when "chesting," placing the body in the coffin after being wrapped in a linen sheet or, later, a woolen cloth, under the supervision of a minister or elder became a legal requirement.[102]

Burial was usually on the Sabbath, until 1650. The party, including women who followed wailing to the grave, was well provided with food and whiskey. Fights, resulting in serious injury, were common and not infrequently the coffin was misplaced on the way. Up to about 1700 small cairns (small heaps of stones) were erected at each halting place.[103] The graveyard, or the church when they buried in the church, was approached from the east.

265

605 spouses not too long ago.[23] Perhaps, more than any other
582 factor, it is the tendency of the aged parents to hold on
427 to the croft until they die that is strangling the kinship
593 system. Still the extended family is a strong mutual aid
602 group. Anyone with a recognized degree of kinship is
576 entitled to hospitality. When the exiles return to visit
602 the Misty Isle, they always try to make the rounds of their
574 kinsmen. This is more than a question of not becoming an economic burden on a favorite aunt; they do not want to be guilty of slighting anyone. There is reciprocity here.
[203] In return for food and shelter, the visitor freely gives his kinsman all the news he has gathered about the activities of their distant kin. He acts like a roving reporter, cementi the solidarity of an otherwise fragmented group.

602 The expression given to the degree of consanguinity and
• 764 affinity is revealed most completely at a funeral. As one of the two occasions on which the extended family comes together, the other being a wedding, it reveals a host of significant traits. The first thing I noticed was that although the inavailability of land and the illegality of subdivision enforces neo-local post marital residence, burial is ideally patrilocal. On more than one occasion the steamer came in at night with a body which had been shipped home from Glasgow or
602 Edinburgh for interment in the deceased's neighborhood. This
593 also means that the husband and wife remain integral members of their respective families. The founding of a family of

[23] Norman MacLeod, Reminiscences of a Highland Parish, p.

by a second cousin. The striking thing to realize here is that the nearest surviving relative always knows his obligation and is ready to fulfill it, without question. Fatherless children are buried by either their paternal or maternal uncle. I have not forgotten the existence of women. The simple fact is, women play no part as mourners. Indeed, the rare woman who goes to the grave becomes the subject of lasting gossip.

Fundamentally, the system of kinship is patrilineal. Linguistically, the terms for relatives may be bilateral, and inheritance of possessions other than the name may be matters of small importance, but the patrilineal emphasis remains. The Sgiathanach lives in a man's world. I shall explore this male dominance further in the following chapter. At present, I want to briefly discuss two additional cliques.

Religious and Age-Grade Cliques. Like the members of any society, the Sgiathanach associates most frequently with those who share his interests and attitudes. It is natural, then, for his associates, other than his kinsmen, to be people who attend his church and people of his own age group. We need not explore the nature of these cliques at this time; but we should have some understanding of their function. The religious clique is primarily a mutual aid group. There is reason to believe that this particular group has lost much of its importance of late, with the coming of the welfare state. Many feel that the government pays people to look after the aged and infirm. As far as doing a favor for someone is concerned, few of the same kirk, other than close friends,

or inquires about a person's plans, he says, "You'll do it tomorrow, then, if spared."

Occasionally, a man's prestige status can be judged by the foretaste the people have of his funeral. This, too, is disturbing for the newcomers who prefer to face death when the time comes. There is one member of the county people who is extremely popular. Many speak of him as a "true Skyeman." One day he was being discussed by a small group of women. After talking about his interest in Skye and what a good man he was, one summed up their estimation by saying, "Aye, what a wonderful funeral he'll have." What higher compliment could there be? The number who attend a person's funeral and, recently, the number who drive to his funeral are indicative of his status. Even though having a car does not give the owner prestige - to the contrary it may give the people cause to wonder where he got his money - to have "friends" with cars does give prestige. When 200 or 300 men join in the funeral procession to carry the body to the grave, all the "people" of the deceased take pride in telling of the "mobs who came."

In death we find one aspect of the crofter's way of life which puzzles the newcomer, especially the government officials, more than anything else. The old people hoard their money. Welfare workers frequently say, "You never know how much they have until they die." There are a few crofters, mainly returned exiles, who are known to have money but continue to live in tumbled down houses. The newcomer says, "They must like to live that way." Quite to the contrary, the Sgiathanach has traditionally prepared for death early in life. Once the first

of a wife was to weave her winding sheet. Nor is the cost 764
rial merely buying a coffin. As at birth and marriage, 454
eople who attend a funeral must have their dram. Just as [829]
o not want subsidies to begin life, they do not want to
ried with public assistance. They hoard their money, even
is only a few pounds, to assure themselves of a decent
l. Another thing that disturbs the welfare officers is 763
termination of the old and infirm to remain on their 186
in spite of all efforts to move them to a "Twilight
" Some of these people may have returned to Skye for
er reason than the feeling, "If I could go back to Skye
it would be fine." I knew many people who had come to
a as young adults and "liked it fine." Why did they
? The answer is always the same, "I was getting old, you
and began to think of home." This, of course, is another
sion of the sentimental attachment for the land and its
ty with one's "people."

Paradoxically, for a people who are so aware of death 763
ok upon it so significantly, the churches, one and all, 796
efused to consecrate burial. There are no prayers for [782]
ad. There is no service for the dying or at the grave
body is lowered into the soil. The ritual which accompanies
inal act of living is better described as a rite of
ification rather than as a passage rite, to adopt the
ology of Chapple and Coon.[15]

Once the individual dies, his status is fixed for all

[15]Chapple and Coon, Principles of Anthropology, pp. 398-399.

eternity. If he was one of the "elect," he will enjoy eternal 763
life. If he was not one of these venerable old men and women, 554
he can expect to suffer eternal damnation. Although baptism 775
is a sacrament and removes original sin, it is only the initial [851]
step in the direction of salvation, which election alone con- [783]
firms. Neither the minister nor any member of the bereaved 764
family offers a prayer. "What more can you do than bury him," [793]
one woman asked. An old man said, "They are just as well [782]
remembered without praying for them." In a community which
is dominated by the old people, and in the crofting neighbor-
hoods where so many of the crofters are very old, death can
be expected to disturb the equilibrium of social interaction.
In Glendale during November and December of 1953 funeral
processions made their way through the glen no less than nine
times. The function of the minister is to restore the dis- [793]
turbed patterns, both in the family and in the neighborhood [182]
(or village). All work stops in the township for three days
from the time of death. Some of the cosmopolitans of the [369]
village, seeking to justify their deviating behavior, assert [829]
that the lazy crofter looks forward to a funeral because it
means three days of idleness. In the village, of course, it [369]
is no longer possible to bring daily life to a standstill be-
cause the villagers serve a wide area. The "people" of the
deceased do stop work and close their shops. On the day of the
funeral all blinds are drawn until after the procession has
passed.

As he would if there were illness in the family, the 793
minister calls on the bereaved family and leads them in family 764

worship. If the deceased is a Sgiathanach, the minister will
call every night, if he can. Otherwise, he may call only
once. His participation in family worship helps to refocus
the patterns of interaction within the nuclear family and
within the small circle of "people," "friends," and neighbors
who come to visit and take part. Some sophisticated villagers
take this opportunity to justify their own deviations, such
as going to a concert; for them this is all "a religious ceilidh
with all their psalm singing, praying, and greeting." The
people do not keen, as they do in Ireland, but the women are
seldom dry-eyed. Again the villager may comment that the
minister at least should say a few kind words about the dead,
"just to comfort his family."

On the day of burial a second and more inclusive rite of
intensification is held. On this occasion the function of the
minister, often aided by an elder, is to restore the equilibriu
within the total sphere in which the deceased habitually moved
during his life. If the person had high prestige status, the
ministers of two churches conduct the family worship. All
the "people," "friends," and neighbors, both men and women,
attend. The minister begins with a prayer for the family,
asking God's guidance. This is followed by the singing of a
few verses of psalm by all who have gathered. Next the ministe
reads from Scripture. He concludes with another prayer for
the family. If there are two ministers, or a minister and
an elder present, they alternate in leading the group. If
there are any present who do not "have the Gaelic," they
also alternate between English and Gaelic. We have seen how

764 the deceased or the remaining family assist in preparing
74 endless cups of tea, using the provisions that are
brought by the visitors. The newcomers enter, exchange
greetings, memories, sighs and moral judgements in
rapid whispers. "Oich, oich... that should teach us,
we're all going to go. That's how it was meant to be.
It makes you wonder why we live at all, well, well."
They recall other deaths. "That was a bad death. His
liver was bad, and he turned yellow, then all black...."
2 They weep, circumspectly observe the appearance of the
97 room and its occupants, and speak only in Gaelic, the
language of hearth and heart.

4 The minister usually attends a prayer meeting which
3 is held in the tigh fhaire around midnight of the night
before the funeral, but his presence is not necessary.
The prayer meeting may be conducted by the elders. The
elders may also hold the service which precedes the
burial. The minister may walk for a short distance in
the funeral procession or speak a brief few words at
the graveside, but his role in the community drama is
minimal.

4 At least one person from all households within the
village is expected to go to the tigh fhaire of someone
2 who has died within the village, "to show respect." The
male head of the household is expected to attend the

764 funeral procession in which the coffin is carried for
[621] about half a mile from the house to the waiting hearse.
[692] Over 100 men usually walk in these processions. The
more well-known the person or unexpected the death,
the larger the procession is likely to be. Relatives
[602] of the deceased walk at the head of the procession,
at the head and foot of the coffin, while other villagers
take turns carrying the bier. The pallbearers serve in
relays. Eight men carry the coffin, four on each side,
and are replaced frequently by pairs of men who assume
the rear positions. The two who have been displaced at
the head of the coffin stand outside the line, facing
outward, until the procession has filed past them,
whereupon they join the end of the procession.

764 In the past, coffins were carried for miles from
178 the house to the cemetery. The procession rested period-
273 ically, and the men usually carried an earthenware jug
of whiskey (piggy uisge beatha) "to ward off the cold."
The custom of giving a glass of whiskey to men as they
left the house to carry the coffin was still recently
followed in Skye; and in some areas a funeral is still
evaluated by the amount of whiskey available for consump-
tion ("That was a good funeral"). Tales are told of
coffins buried without bodies.

764 Today coffins are brought to the cemetery in
178 hearse, but the procession still carries the coff
[493] for a half mile or so to the hearse. The women g
outside the house in the biting wind, huddled tog
beginning to sob as the heavy line of dark-coated
slowly-moving men bear part of themselves away.
village on the west side, the women circled the c
as it left the house, chanting, "You are leaving
are leaving us!"

764 Graveyards are maintained by members of the
[767] A cemetery committee collects dues of five shillin
[435] year from all households for the upkeep of the cem
Relatives and neighbors dig the graves of their fe
villagers.

767 In 1911, a funeral society called the West of
Funeral Association was founded with the original
intention of bringing back the bodies of men and w
who had died when they were away from the island "
[435] fishing." Persons from Borve to Berneray pay two
shillings a year to the Association, which at prese
has about L4,000 invested in bonds. A similar asso
exists in other parts of the island. A person may
between the ages of 12 and 40, after which he is no
eligible for membership. A member who has left the
island must continue to send in his dues, or member

767 his family must maintain the payments. Many persons who have settled in cities on the British mainland or abroad are not concerned with retaining membership in the Association, but members of their family who remain within the village usually continue to pay their dues for them. Even if in death, the "exiles" eventually return to home and community.

764 [423] Families buy cemetery plots for as many as six to eight persons. The deceased is buried in an area designated as belonging to his family. He is not buried alone but beside his parents and their unmarried siblings if he is unmarried, or with his spouse. "I wouldn't like the idea of being cremated. I want to be buried with my family." Even though a woman is buried beside her husband, her maiden name is placed on the coffin. Often neighbors have plots near each other.

A special part of the cemetery is reserved for [609] strangers. A "man from out" remains an outsider, even in death.

273 175 651 [556] Excise taxes were first levied on whiskey in 1814, and stills of less than 500-gallon capacity were prohibited. Local, illegal distillation continued for a long time after 1814, and throughout the Highlands and Islands tales are told of "the excise man" and how he was outwitted.

273 175 [166] The Island of Pabbay in the Sound of Harris was evacuated in 1843, supposedly because of illegal distillation that was being carried on there. The ruins of old distilling houses are found throughout Shawbost. Villagers say that these were used in the time of their grandfather or great-grandfather to distill whiskey for occasions such as weddings.

[527] In Shawbost, until recent times whiskey was associated mainly with special ceremonial occasions: the birth of [846] a child, weddings, and wakes. When a baby was born, the father went into town for whiskey to be given to visitors 764 coming to see the baby. Having whiskey at a funeral was 273 so important that many a widow sold her cow to provide it, so that people would not say it was a bad funeral. A custom of sitting up all night in the house of the deceased has stopped, probably in part because a prayer meeting lasting from midnight until 2 a.m. was introduced with the intention, according to one minister, of preventing 273 the wake from becoming too joyful an occasion. Whiskey 175 was abundant at New Year's, and at weddings. "The dance [527] [585]

195 Whatever the rationalization, cobbler fathers begot
821 cobbler sons. The present postmaster's grandfather was
463 the first postmaster in Shawbost, and when help is needed
[205] in delivering the mail it is the postmaster's first
● [767] cousins who are likely to help out. As late as the 1950's,
the township still had its own undertaker, a man who had
learned from his father the art of laying out and dressing
the body but who didn't like the job very much and was
happy enough to turn it over to an undertaker who
traveled from Stornoway.

463 The island has had a veterinarian, based in Stornoway,
[232] for the past 30 years or so. Earlier, certain blacksmiths
and farmers treated ailing livestock when the crofters
[278] needed them. For human ailments, there were many cures
[155] by plant and spell.

463 The man who was the last village blacksmith died
32 not long ago. His smithy was in the center of the village.
[342] His home and smithy were mortared stone buildings with
corrugated iron roofs that were once estate houses for
the men who worked the experimental farm established
by Sir James Matheson in what is now New Shawbost. The
463 blacksmith was also a shopkeeper and butcher. As a
326 blacksmith, his work was principally shoeing horses and
874 making harrows and peat-cutters, which he did with the
aid of one and sometimes two apprentices. One of his

764 Today coffins are brought to the cemetery in a
178 hearse, but the procession still carries the coffin
[493] for a half mile or so to the hearse. The women gather
outside the house in the biting wind, huddled together,
beginning to sob as the heavy line of dark-coated,
slowly-moving men bear part of themselves away. In one
village on the west side, the women circled the coffin
as it left the house, chanting, "You are leaving us, you
are leaving us!"

764 Graveyards are maintained by members of the community.
● [767] A cemetery committee collects dues of five shillings a
[435] year from all households for the upkeep of the cemetery.
Relatives and neighbors dig the graves of their fellow
villagers.

767 In 1911, a funeral society called the West of Lewis
Funeral Association was founded with the original
intention of bringing back the bodies of men and women
who had died when they were away from the island "at the
[435] fishing." Persons from Borve to Berneray pay two
shillings a year to the Association, which at present
has about £4,000 invested in bonds. A similar association
exists in other parts of the island. A person may join
between the ages of 12 and 40, after which he is not
eligible for membership. A member who has left the
island must continue to send in his dues, or members of

● 767 his family must maintain the payments. Many persons who
have settled in cities on the British mainland or
abroad are not concerned with retaining membership in
the Association, but members of their family who remain
within the village usually continue to pay their dues
for them. Even if in death, the "exiles" eventually
return to home and community.

764 Families buy cemetery plots for as many as six to
[423] eight persons. The deceased is buried in an area
designated as belonging to his family. He is not buried
alone but beside his parents and their unmarried siblings
if he is unmarried, or with his spouse. "I wouldn't
like the idea of being cremated. I want to be buried
with my family." Even though a woman is buried beside
her husband, her maiden name is placed on the coffin.
Often neighbors have plots near each other.

A special part of the cemetery is reserved for
[609] strangers. A "man from out" remains an outsider, even
in death.

771

771 GENERAL CHARACTER OF RELIGION--conception of what constitutes religion; differentiation of the sacred and the profane; distinctions drawn between religion and superstition; relation of religion to the unknown and the unpredictable; relative prominence of magical and anthropomorphic elements; evidence of the expression of projective mechanisms in religious beliefs; primary orientation of the religious system (e.g., ancestor worship, nature worship, totemism, ritualism, mysticism, redemptive religion); social and individual role of religion (e.g., services and disservices); incidence of faith, indifference, and skepticism; existence of nonsupernatural ideologies supported with a faith akin to that in religion (e.g., ethical systems, political philosophies); etc. See also:

273 the Lord that his prayers had been answered.") Another
815 bothan was started in an old bus.
[175]

Today only one bothan exists in Shawbost. It is a
[354] small concrete structure, lit by gas and heated with coal, which is burned in an expensive fireplace. Like most bothans, the one entrance faces away from the main road. Unlike most bothans, it has a small window which is curtained but nevertheless reveals whether or not the light is on inside. Most bothans present blank, windowless and doorless faces that give no indication whether or not the building is occupied.

[208] Every three years a poll may be taken within a parish to determine whether the parish should be wet or dry.
[666] After the parish of Uig voted itself "wet," the Doune Braes Hotel was opened in Carloway, only five miles from Shawbost.
[829] One of the arguments for making the parish "wet" was that drinking at the bothans would cease, and men would drink under more controlled circumstances. "The married men usually went home from the bothan at a reasonable hour, but the single men just stayed there talking all night. At the hotel, they have to go home at 10:00."

Despite the opening of the hotel so close to Shawbost, the bothan remained open. The drink was cheaper and the atmosphere less formal. Unlike the bothans in Ness, however,
• [771] the Shawbost bothan was usually open only on Saturday, the

273 one night of the week in which controls are imposed, by
815 the arrival of Sunday when no one is supposed to drink.
• [771] The bothan was occasionally open on Friday night, and on Monday night. ("If there's anything left from Saturday
[221] night, we finish it on Monday.") During the summer of 1971 when the days were long and filled with communal township activities such as peat-cutting, the bothan was open every night of the week. The bothan closed when the man supplying it with drink suddenly died, and has not reopened.

273 Z. Functions of Drinking: If a man decides not to
571 participate in drinking, he is not praised for his self-
156 control or his ability to abstain; rather, people say, "What's the matter with him that he doesn't mix?" A man goes off to the hotel or to a bothan "for a wee nip" or "for a pint" (the pint of beer which serves as a chaser for glasses of straight whiskey). Both phrases are euphemisms for the huge amount of whiskey and beer which must be consumed if a man is to satisfy the canons of social intercourse which obtain. A man can drink alone or, in the company of others, drink very little only at great social cost.

"You can't go in for a casual pint in a place like the bothan because it's a place where people mix, and you're bound to meet old friends you haven't seen for

B. The Bible

1. The Free Church: "A man in my great-grandfather's
• 771 time," said a 65-year-old man, "talked about the great
175 change within his generation, from the days when fanks
178 were held on Sundays to such strict observance on the Sabbath that not even a cow could be tethered."

The first evangelical minister on Lewis came to the
195 parish of Uig in 1824. The Rev. Alexander Macleod belonged
783 to the Church of Scotland, but joined the Free Church when
775 it broke away from the Church of Scotland in the "Disruption" of 1843. When he came in 1824, he found "superstition," "spiritual darkness," and "polluted remains of Popery, since it was the religion in this place...the only notion they had of Christianity (Beaton 1925: 7-8)." The southern
775 isles of the Outer Hebrides are still Catholic, but in the
824 Protestant isles of the north, holidays associated with
184 Catholicism are avoided, and stories are still told of the
778 burning of Protestant martyrs by Catholics. Catholics are disliked "because they believe that they can buy their way out of sin," or that the bread and wine of Communion is really the blood and body of Christ. "A Catholic is anointed with oil and left to die without food or water. We are privileged that we are not like them."

In the Disruption of 1843, about one-third of the
175 people and 39% of the ministers left the established church

871 Education in the local school has included a great
815 deal of religious instruction; in other words, religious
• 771 and educational spheres commingle. Because of the
[466] relative prestige which the teaching profession offers to persons from the island, and because the islands are considered "isolated" by most persons looking for jobs (teaching posts on the island include an added sum which is designated as "isolation payment"), most of the island's teachers are themselves islanders. Education
[554] is one method by which one's position in the community is elevated. The high status derived from having advanced education also reflects favorably on the parents and position of the family. But teachers and others who return to the island are expected not to deviate from island norms in important matters, such as fundamentalist religious beliefs; hence teachers tend to perpetuate fundamentalist religious beliefs within the classroom.

871 Formerly the minister visited the school once each
771 year to examine the children on their catechism, thus
775 testing the state of religious instruction in the school.
178 Several years ago this practice was stopped by the education authorities of the County Council, and the minister now gives a sermon in the school about once a month but is not allowed to examine the children. Many ministers are dissatisfied with the arrangement, as they are afraid that

871 the children might not receive proper religious
• 771 instruction.
182
178

"Family worship" is considered an important part
771 of daily life. Prayers should be said before meals
782 and teas, and the head of the household should read
593 passages from the Bible to the assembled members of the household every morning and evening. The practice of
[178] "reading the books" prevails in households headed by
[572] older men, but is less common among families headed by younger men.

3. The Clique of the Converted: The second network
794 within the religious sphere is a special religious in-
632 group, the clique of the converted (curamach). This
621 clique constitutes a relatively strongly bounded system which to some extent competes with the township boundary system. Owen (Rees 1960) has noted that as persons become more involved with religion in the Protestant Hebrides, they tend to remove themselves from community life.

Intense involvement with the church sometimes conflicts with township activities since people may attend Communions at times when a fank is planned, leaving the work to be done by others. When elders of the church are present at activities, such as fanks, which are otherwise usually boisterous and full of humor, behavior tends to be "properly" restrained.

* 159 wife was religiously converted a few years later. They have no children. Neilie Leoid occasionally goes to the hotel in Carloway for a drink, and enjoys reading adventure stories on Sunday. He is very interested in sheep.

"Smiling made you content to settle down. You had seen it all. After the war many could have easily qualified for civil service jobs, but they didn't bother. They were quite happy to settle down to the weaving. No young person now wants to weave, but I think we were none the worse for it."

Cailean Leobhar

• [771] Cailean Leobhar is a religious skeptic, but he reads the Bible as though it were an encyclopedia that referred to all important events in human history. He reads widely and omnivorously, and often delights in confusing people by jumping from one topic to another.
[829] His people are said to be scholars. "It's in the blood."

"You can find references to all of human history in the Bible, from the creation to present times. Zarathustrianism had a great influence on Christianity. You can see that in the Book when the Jews entered Babylon. We were raised on the Bible; it's the ministers and schoolteachers alike that stamped out the old Celtic

ing but black. The young have found the island a much more kindly place. They have never been forced by circumstances to choose between predestination and despair.'

To take account of matters beyond the material level is inherent in the Gaelic Celt. Celtic poetry and song, legend and folklore, all so alive with fancy and so sympathetic towards the things of nature, reflect the inborn sensitivity and character of the present-day Highlander and Islander. Fiction's caricature of the island-dweller (not only in Harris and Lewis, but in the other islands) has been taken by another society with a different cultural background, with insufficient knowledge of historical facts, as being virtually authentic. The Western Isles have had more than their share of 'observers' who have failed to penetrate to the inner Gael. Only with a knowledge of the background, social, cultural, ethnic, historical and so on, can the 'larger than life' islander be seen in perspective—as a normal human being.

RELIGION

There are few communities in the British Isles which have, since the Christian dawning, so closely integrated religious belief with secular day-to-day living as the Harris and Lewis people. Though many times the religious element in island life foundered in a Sargasso Sea of outright superstition, it has managed to survive to its present-day form which might be described as cathartic in nature. When one attempts to investigate religion and superstition as two separate subjects, one is forced to consider either both as one, or one as complementary to the other. Even in those times during the island's history when materialism was prominent, somewhere in the background religion was acknowledged in one form or another.

As mentioned in Chapter 3, in 1610 Lord Kintail brought Farquhar MacRae, the vicar of Gairloch, to Lewis. The first Earl of Seaforth, who built a church in Stornoway (St Lennan's) was nominally Episcopalian. During the temporary supremacy of Episcopacy in Scotland, there was little disturbance in the Highlands of the Presbyterian organisation. The bishops controlled their dioceses; but the ministers controlled their parishioners. In

The age structure of the Lewis population in 1951 and 1961. The trend shown over the forty years 1861-1901 has strengthened and consolidated, so that the 1961 population is middle-aged

the 1914 war, but some 200 of those who survived the holocaust were lost in the wreck of the *Iolaire* on New Year's morning, 1919—the first morning of the first new year of peace, literally within sight of home. Again, the effect of emigration was a loss, in many small communities, of a full generation. Where religion is strong and thrice-distilled, there tends also to prevail a state of mind which dwells on guilt and, where people are accustomed to ex-

press themselves in terms of religious values and ideas, the fear of having committed unforgivable sin. The normal adjustments, reflections and mental stocktaking of middle life are possibly more readily precipitated towards depression in an emotional people prone to serious thought. This brings of course a concomitant spectrum of problems in an area where in general a man is expected to take a dram and stand it; both nature and nurture are relevant factors. In the words of Cunningham Graham (1899), the medical adviser finds himself 'preaching teetotalism, that is for others, but himself taking his glass of whisky for the reasons which have been so cogently set forth by St Paul the Apostle to the Caledonians.' For those who comment in isolation on a community's indulgence in alcohol, one must quote a Gaelic proverb: '*Tha smuideag fhein an ceann gach foid*'—Every peat-end has its own smoke.

From the earliest times the Western Isles have indeed been regarded as supporting a population with an uncanny predilection for spiritous liquors. To a certain extent the spirits were needed by ill-nourished crofters to keep out the damp and cold when on the moors or at sea; and people in a depressed economic or mental condition will anywhere seek refuge in alcohol or other available drugs—forgetting the old Gaelic proverb 'Better the little fire that will warm than the great fire that will burn.' The evil effects of drinking have certainly at times been serious: in 1869 Sir James Matheson addressed a circular letter of remonstrance to his tenants, indicating that those guilty of misconduct were liable to be deprived of their holdings. In 1920 a vote was taken in Stornoway under the Scottish Temperance Act, with the result that the town went 'dry'; three years later the poll was upheld. Then in 1926, with a majority of 84, Stornoway went 'wet' again.

But the 'drink question' has been given undue prominence and dragged out of its island context. For instance, Stornoway contains all but three of the licensed premises on the island (at Tarbert, Rodel and Carloway) and, as the chief centre for business and pleasure, must naturally attract anyone seeking refreshment.

secondary school, the 'Nicolson', has had since its inception a formidable academic record. Back in 1907 work from the school was included in the educational section of an International Exhibition held in Christchurch, New Zealand: this was appropriate because emigrants from the west Highlands, notably from Harris and Lewis, were among the pioneers of New Zealand education a century ago. In 1957 new extensions were opened, costing about £300,000 and making the school the largest of its kind in the Highlands area. It is co-educational, its primary and junior secondary departments taking only Stornoway children and its senior secondary department catering for those from both Stornoway and rural Lewis. Many board out in the town during the week, returning home at weekends.

In providing social facilities, the town has placed itself in the position of an agent for those things deemed necessary for life, and is a middle-ground between the rural repression of the Free Church and the city abandon of the mainland, with resulting dilemma. The public houses, the cinema, youth clubs, dances and juke boxes are all in direct opposition to the preaching of the Free Church. The result is tension between the town's desire to act as a host for tourists and its wish to fulfil its duty on a religious plane; to instance this, the Stornoway Sabbath is less strict than the Lewis Sabbath. In keeping with the rest of Lewis, social standards are extremely high. Home is the centre of life, as it always was; the sense of community and communal responsibility is there. Divorce is practically unheard of, and the incidence of crime, as such, is extremely low.

to notice the absorption or suppression of rights held in common in 'the North and West', together with the abolition of the duties of fellow-workers to one another. Too frequently they have not troubled to enquire into the former existence of common rights and fellowship duties, the observances of which have so much to teach. Yet to judge from the completeness of the Hebridean evidence, and from wider evidence to be touched upon with reference to Norse and Lowland conditions, suppression caused a profound social and moral revolution.

Indeed, the profound character of that revolution makes it hard to recognise the common origin of features which may differ greatly today. To choose four examples, the long succession from father to son, found from end to end of an Island township, contrasts with a restless movement of farm servants, and even tenant-farmers, all too common until 1939 in Lowland Scotland and parts of Northern England. The ideals held by fellow-workers in Gaelic tradition, of kindly and courteous co-operation, contrast with the avowals of rugged individualism made on many a farm even of the southern Highlands today, and certainly of the Scottish Lowlands and Northern England. Languages have changed as English has advanced during 1500 years: the Lewis crofters' children still speak Gaelic, but children in Stornoway ceased to do so forty or fifty years ago. And in the recorded religious life of Gaelic hamlets far from any priest (or later, minister), the part of revered men and women is very different from the part played in Calvinism by the Minister and the male Elders of the Kirk. All these four contrasts are due to revolutionary changes in home, work, language and religion. Such changes, of which all trace may be lost elsewhere, are traceable from the fullest evidence among the Gael.

CHAPTER VII

THE SPIRITUAL LIFE OF THE COMMUNITY

INTRODUCTION

As in every form of religion rooted in communal life, the sacraments and prayers of the Gael were linked to labour and to the phases of life's cycle. While some of the 'runes' or prayers were essentially personal and others were breathed only in the closest intimacy, many were shared by a group of families: the tried team of the men or women of a joint farm, the people of a neighbourhood and township or wider group. The communities being so small and isolated, their members depended greatly upon themselves and upon one another. As in worship in common, so in healing of body or spirit and in the invocation of grace upon youth, now one, now another might lead in praise and prayer. So, too, the leader of a little team would lead in the dedication of their work, and, when it was completed, be 'the consecrator' of its fruit.

Where no clergy were at hand, neighbours, perforce, practised the saying of one they called their 'foster-brother': that if no more than "two of you agree on earth about anything you pray for, it will be done for you by my Father in heaven. For where two or three have gathered in my name, I am there among them" (Matt.

xviii. 19-20). The worldly wise might think that the spiritual fare of these poor folk must have been lean indeed; while others, having heard much of the Highlanders' 'pagan' superstitions, may think even worse! The evidence from which to judge is found in survivals from a rich lore, and for most readers seen but 'darkly' through prose translations from the poetry of a tongue now known to few.

The richest collection is Alexander Carmichael's *Carmina Gadelica* (*Ortha nan Gaidheal*).[1] Others were made by the Rev. Fr. Allan Macdonald of Eriskay, and by the Rev. Kenneth Macleod with Mrs. M. Kennedy-Fraser in the *Songs of the Hebrides*. Included here are unpublished verses given by crofter-friends in the Isles and others from Fr. Allan Macdonald's collection,[2] hitherto untranslated. What still remains has come down to us only by narrow escapes. One is reminded of 'Father Allan's' early death, after nursing his parishioners through an epidemic; and Carmichael's escape from drowning as "on

[1] *Carmina Gadelica: Ortha Nan Gaedheal.* Hymns and incantations with illustrative notes on words, rites and customs, dying and obsolete: orally collected in the Highlands and Islands of Scotland and translated into English; vols. i and ii (1st ed., 1900; 2nd ed., 1928); vol. iii, 1940; vol. iv, 1941. The last two volumes were edited by the collector's grandson, Prof. James Carmichael Watson, whose death as an Ordinary Seaman in war is mourned by his friends, and has been described as a disaster to the cause of Gaelic, and of humane learning in Scotland. One more volume edited by James C. Watson awaits publication. (In the following, quotations are referred to as from *Carmina*, followed by the number of the rune: Nos. 1-216, vols. i and ii; and Nos. 217-351, vol. iii. Vol. iv contains varied lore.)

[2] Of all these four, the least known is Fr. Allan Macdonald's little collection, *Comh-Chruinneachadh de Laoidhean Spioradail*, Hugh Macdonald, Oban, 1893. It was privately printed, and lacks a translation and table of contents. There could be no finer memorial to this man and the community whose spiritual life he helped to record than a new edition of all its ancient Gaelic 'spiritual songs', with the addition of others he wrote down before his death in 1905, and perhaps, of some of his own poems, notably his famous *Eilean na h-óige*, "Isle of the Young".

a night of black mistiness . . . he waded nearly breast-high" through the dangerous South Ford of Benbecula, "conscious only of the roll and the singing of waters and the rhythm of a poem he had taken down a few hours before"—"The Invocation of the Graces", so nearly lost with him! Much that Carmichael learned was given him under a seal of confidence he never broke, although he mourned the loss this meant. The confidence he inspired—which even those who knew him only in their childhood remember for life—was a source of his quiet, unfailing power.

The following begins with the runes and rites of labour, throughout the day, week and year, on land and sea and at home. Turning to the day of rest and to congregational worship, one must enquire as to the presence of the clergy, and question closely how far the people had access to the Bible throughout the centuries: were they really cut off from its riches, from its essence, as the Reformers and the Evangelicals of last century asserted with such vehemence? One can then turn to the runes and rites which opened the phases of life, from birth to maturity, marriage and parenthood, leading at last to life's close.

But no social inheritance is without its burden. Having told of the foundations of faith, something must be said in the next chapter of the negative or superstitious side of Island belief, of temptations and evils which the people could face, and of others to which they submitted in ignorance. From the evidence of faith and wisdom, or error, one must attempt some evaluation of attainment by single souls and by the community, and of the power and fullness of life in common.

warfare—destroyed its intimate tie with the home, w
peace. The web the women had dyed, spun, woven a
waulked together ceased to be a sacrament when the tart
was proscribed to men except when worn as a uniform w

struck full at the sacramental life of family, neighbour-t
and clan community, in which labour and prayer had b
indissolubly bound.[1]

(c) WORSHIP, CONGREGATIONAL AND PERSONAL: THE BOOK AND THE WORD

Little remains of the tradition of worship in the oratories, chapels or 'temples' whose ruins stud the sh

[1] The collaboration of friends in Lewis may allow mention of the G version of A. Geddes, *The Spirit of the Tartan, a Song Drama* (En Version); *Souvenir Programme and Book of Songs* (Outlook Tower, burgh, 1932). In this the spirit of this labour sequence embodied songs and runes is dramatised in its setting of custom and history. The G version was prepared by the generous labours of James Thomson, Bayble, and the late Duncan Macdonald, M.A., Sandwick, Lewis.

COMMUNITY FROM PAST TO PRESENT PT. II

of the Isles, and in which the people met, though far from any clergy. On the southern mainland most trace of shrines and chapels seems to have been lost, so small are the clays of unknown stone that marked their sites. Lewis was recorded by salaried clergy about the services conducted there; those who approved tended to let well alone. Hence written accounts have come down chiefly from those who were out of touch with rural needs or ignorant of the language spoken in intimacy, and whose education and training had removed them from sympathy.[1] As for those whose private interests, stipend or subservience to patrons bound them to prelates, lord or king, they seldom visited remote congregations.

Nevertheless, fragmentary records have come down, such as those of Martin, who visited St. Kilda in 1697 and described the little church where the people still kept a first brass candle and worshipped together, without the presence of a clergyman. Naturally, the curiosity stimulated by St. Kilda's fabulous isolation led Martin to describe its little community more fully than any other; but strange parallels appear in other, and elsewhere. Thus in lonely North Rona, inhabited by twelve families, Saint Adamnan had been blamed and derided by Reformers, and the new modes in their turn condemned by such outdated priests as severely made their way north from Armagh to Uist, Harris and probably to Lewis. How much more stable must their community's faith have been before the tragic upheavals which began at the Reformation. Some four centuries earlier, the Roman Church supplanted the institutions developed by the early Celtic missionaries from regional and rural growth, by a formal organisation developed upon an imperial and civic model. Lewis's Church was Gaelic, Gaelic, is to be translated, *not Prayers, but "Charms . . . or Impositions . . . of the Gaels"*.[2]

[1] The difficulty of initiation to accurate usages of language is exemplified in Martin's admirable and practical work, the *Dictionary of the Gaelic Language* (Gaelic-English, and English-Gaelic) by Malcolm Macleman, D.D., 1925. This work should be consulted by students of the Gaelic language, particularly in the Western Isles, and it was in the study of the Gaelic language, and of its numerous monumental ages, of living usage, and recorded a generation or so before in the collections cited here, not either absent, or yet there more or less present or debased of two shades of meaning (and the higher). *Ban* "calm, a cure, charm," or charm "Amongst, a beginning (a dedication) curse, charm." or charm "Amongst, a beginning (a dedication) curse, charm." or charm "Amongst, a beginning (a dedication) curse, imposition of any kind . . . Doth . . . prayer in verse—from Latin, *carmen*" *Cuip prayer* (a "Doth" only?) and other vital words. According to this scholarly dictionary, the title of the supposed Scottish collection of Gaelic religious tradition, Lauchlan's Celtic Scots Gaelic (Gaelic, *Carmina Gaedhelica*), is to be translated, not *Prayers*, but "*Charms* . . . or Impositions . . . of the Gaels".

CH. VII SPIRITUAL LIFE OF COMMUNITY

visited the chapel of St. Rona. It was fenced, and was swept every day, suggesting daily worship; and the Lord's Prayer, Creed and Ten Commandments were repeated there every Sunday morning. This led Martin to say that the people had no vices; and indeed the Gael's own prayers insist upon the beauty of virtues rather than on the evil of vices. In Lewis at that time (1697) there were two ministers, one in Stornoway and in Barvas; and the Barvas minister visited Rona yearly. Isolated though they were from their fellow-Lewisians, the Rona folk thus had annual contact with the Reformed Church, such as was lacking even on the main island during periods of stress in Scotland. Invasions, regional destruction and plundered intrigue in the Norsemen or the English Kings, led to, and intensified, internal strife. And in Lewis forty years of warring interregnum had followed the Reformation.[1]

Those and other notes of worship given by Martin, such as those of the Lewisians when touching the at the Flannan Isles, show that the worshippers relied greatly upon themselves and one another. They did so even after their parishes had been formed, and Churches had been blamed and derided by Reformers, and the new modes in their turn condemned by such outdated priests as severely made their way north from Armagh to Uist, Harris and probably to Lewis. How much more stable must their community's faith have been before the tragic upheavals which began at the Reformation. Some four centuries earlier, the Roman Church supplanted the institutions developed by the early Celtic missionaries from regional and rural growth, by a formal organisation developed upon an imperial and civic model. Lewis's Church was Gaelic, shaken faith by undermining the authority of communal traditions and traditions. But the break caused by medieval

COMMUNITY FROM PAST TO PRESENT PT. II

Roman Catholicism was far less complete than that ultimately brought about by Protestantism—Episcopalian or Calvinistic.

At least twenty-five churches, chapels and tiny oratories are named by Martin in Lewis and his list is incomplete (1934, p. 106). Harris and its islets also had their complement of 7 temples [, in addition to the priory church of Rodel. We may perhaps assume that before the Reformation Lewis had a population of some 4000 persons, 800 or more families, and contained some hundreds of oratories in inhabited areas. If so, then one church or chapel, or oratory, was available for every five families, or six or seven farm-groups. Yet only the larger congregations at Eye, Stornoway, Ness or Uig and Rodel would normally be served by clergy; the smaller and smaller congregations would be without, for weeks and months or even years.

When the people were too distant from priests (and later ministers) to hear the Lessons, they handed down the Word orally. The power of retaining memorable thought, even in prose, is still remarkable; and verse facilitates memory. The Gaelic version of the Ten Commandments[1] paraphrased in rhyme are recorded in Fr. Allan Macdonald's little collection, "as given by the God of grace to Moses in the wilderness" (*Na Faisnean*, p. 62). Moses, had he understood Gaelic, would have protested at the omission of the Second Commandment, but no sculptor of Iona, Rodel or Eye would have felt a need for it, being unafraid that a Christian could bow down to a golden calf. Believing, with Solomon, that a craftsman's work is his prayer, the artisan-monks held that an image, if well-executed, though never replica of God's creation, and may even quicken our concept of the Creator

as the days lengthened, the Christmastide, old style, it may be called " The Rune of the World's Light ":

The world, are come the Son of God,
was born a babe, a boy forlorn :
Void of sun, moon or star,
void of body, heart or form.

"Twas Mary Mother lowly kneeled,
and gave the Inmost Being birth;
Darkness and hate were in the manger-hay,
the guiding star rose over earth.

Light on the land, the deep illumed
in the Mystic Mass, the Sacrifice;
Grief was laid and joy was raised,
with priest on the altar, and bending knee.

Light on the hills, light on the plains,
light o'er gray-green sea and firth;
Light for all the world and man,
the hour God's Son came down to earth.

(iii) THE CYCLE OF LIFE

The stages in life's sequence are marked by noble runes, of baptism, initiation in adolescence, betrothal and marriage, childbirth, and the tension and consolation in trials throughout life and, at its close, of farewell. As might be single theme, perhaps of one original poem.[1] Chaste woman: to a child by a parent or elder; to the young and strong by the wise; and by lovers to one another. And in the past, especially at trial, the "soul-friend" associated *—an anam-chara*, a neighbour chosen from lifelong friendship, and therefore of understanding.

At birth a babe was baptised, and in the name of Father, Son and Holy Spirit the nurse placed three drops

COMMUNITY FROM PAST TO PRESENT PT. II

and all was well. . . . " How the trinkets in the water [illegible] mentioned in Christmas, and of which it was known, but that some occult power was at work . . . I am certain."[1] As to the gold, did not the Magi offer the same " magic " at the Nativity? Is a drink of water an amulet physic to cool a fevered system? Is not each Name of the Trinity, breathed by a mother to her daughter in labour in her turn, a Word of tender power and courage: while the slow rhythm of the three Names may calm the wild heart-beat, bring peace, and, as given finally, lull and lead to safe delivery?

Nowhere is there prevailed the concept of God as " encompassing " man, woman or child, old or young, in their weakness. This image is ancient, and is found in the Psalms (16, 12, 32, 121). So Jesus, in the Gospels, gave the Lord's aid might be called upon for another in need of help, or for some mutual assistance. The Gaelic community, unseen, by help of a thing seen, a circle was drawn with the hand round oneself or another, in fear, danger or distress: in both instances, the power of the prayer invoked confidence in sickness and resistance in temptation, and commended and blessed the person or place.

As age approached, its gifts were honoured. For in age, memory, kneaded by labour, is leavened by leisure; the experience wrun on hard and sore, or in group farm and home, can be weighed. And gifts of feeling, sown in childhood and growing through life, mature as grandchildren come in from their herding or play to listen and learn. When manuscripts or books were unobtainable, readings were heard, and the people illiterate, teaching could be

CH. VII SPIRITUAL LIFE OF COMMUNITY

be given by an aged person, who, in his youth, or elder years were the holders of an inheritance of treasures which must be sought from them or be lost for ever. But to be transmitted, the word must remain fixed in the mind. Thus both the faculty of memory and the fruit it bore in an elder's mind brought respect, even veneration. Accuracy in retelling is still immensely valued, but so, too, were thoughtful commentary and poetic enrichment. Respect for elders, though general, was given finally, but personally and by choice.

In Lewis, in the Fifth Commandment runs : " Honour thy parents and hold them in loving regard " (*Sinnsichd dha do phàrantan 'y thair spòs dhaibh*).[1] The commandment was prevailed by the Christian concept of a Holy Family, rather than by that of a patriarchate. This concept took root from the Gospels and spread to the Celtic community, with which it harmonised and which formed fertile ground for this Christian seed. Hence there was no general assumption of the rights of a patriarchal authority at the expense of youth. Where equal honour in due to both parents, and fellowship and equal love and regard with the father. And although the father's home is close at hand while the mother's may be a little distance away, her parents are likely to be the younger and the more active and helpful to their grandchildren, and the influence of all four grandparents fairly balanced.

The patriarchs Abraham, Isaac and Jacob are named in a hymn of the Lews, sung when going up with the flocks and herds to the shieling. Even this may be a Protestant adaptation (*Carmina*). But until the overwhelming weight

COMMUNITY FROM PAST TO PRESENT PT. II

of the Old Testament made itself felt, as in Lewis-and-Harris in the nineteenth century, this narrower patriarchal example hardly affected thought.[1] Rooted in a wider form of family than a patriarchate, and re-venerating a Holy Family and all fellowship, Gaelic society honoured age and parenthood for their inheritance, and childhood and youth for their promise.

Nevertheless, a marked reluctance to hold to the veneration of the Saints of the Gospels and of later history, and also of the legend, especially Bride. Dedications to Bride or " Bridget " are numerous, and Bride's Day, Feb. 1st, is yet her memory has been all but lost in Britain, except in the Isles. Carmichael wrote of Bride and her services " are due to the hearts of the people. She is called " Bride of the white feet . . . of calmness . . . of the kine; . . . mantle of the King of Heaven; . . . woman-helper . . . " I am in the keeping of my Saint Mary : My companion beloved is Bride" (*Carmina*, Nos. 70-71, 163-164). In joy, steadfastness and attainment are generally linked to one notable stage in the life of each " holy companion ", the example of Bride and fellowship with equal love and regard with the father. And although the father's home is close at hand while the mother's may be a little distance away, her parents are likely to be the younger and the more active and helpful to their grandchildren, and the influence of all four grandparents fairly balanced.

The patriarchs Abraham, Isaac and Jacob are named in a hymn of the Lews, sung when going up with the flocks and herds to the shieling. Even this may be a Protestant adaptation (*Carmina*). But until the overwhelming weight

786 fellowship. "The Irish Church"; a Roman is said to
171 have exclaimed to a Gaelic Catholic in scorn, "has you
784 no martyr's crown?" "Ireland was named the Isle of
Saints not by purgecuting but by cherishing God's elect", was the reply. The Celtic Church linked the lands across St. Patrick's Channel; and what was true of Patrick's missionary field seems to have been as true of Celtic Britain, the land of his birth. Kilpatrick on the River Read Wall of Clyde has been claimed as the birthplace of one who was certainly a Cymric Celt by birth and baptism, a Gaul by training, and an Irishman by mission.[1]

This closeness of fellowship ranged from personal to divine relationships in waking or rest, with an intimacy of
782 communion all its own. A prayer for rest begins, "I shall
781 lie down with God, and God lie down with me. . . ." A
simple and universal gesture of love, in which parent, child or close kin or friend put under the loved one's head, is carried into prayer at rest, "the arm of the Father", or
774 of Jesus or Mary, "under my head".[2] This image must
be the inspiration of one of the loveliest of Christian tombs,
764 preserved by clan loyalty, respect for the dead, distance
532 and later forgetfulness on the priory isle of Inchmahome, where the Highlands meet the Lowlands at the Lake of Menteith. As on a number of medieval monuments, knight and lady are sculptured side by side. But here the two lie each with "an arm under the other's head", the free arm of the knight reaching over to clasp hands

[1] While in Scotland the name Bride is now rare as a Christian name, that of Patrick is still found among Crears, Campbells, Macdonalds and others. It is a remarkable fact that English speakers might suppose, owing to the circumstances of its introduction, that giving an English form to a Gaelic name when it is turned to English, is a Celtic custom. Thus Patrick (Irish), Antoni for Anaghus (Antony) or Peter for Padhraig (Patrick). Many a Gael in the Lowlands felt obliged to relinquish his Christian appointment (and ancestral) names, with their link to Celtic Christian tradition.

CH. VII RELIGION AND SOCIAL CUSTOMS

775 testant' and perhaps 'Catholic' too, or sacked by the
769 Kirk's Adventurers, there seems to have been little effort
to build or rebuild the four 'parochе kirkin', one of the
terms of the Royal grant or infeftment of the Lews to Kintail (Seaforth). But the evidence in the previous chapter makes one doubt that the maintenance of Celtic Christianity by the people in their thatched 'temples', in their homes and fields, or at sea, was "a lapse into heathenism". The term had been better applied to the acts of certain chiefs, and of the King and his Adventurers.

Although linked with their traditional faith, the people were intensely aware of their isolation from the great world, and humble as to their own oral learning and religious culture. Moreover, since the arrival of Christianity they believed that God belonged to the Church Catholic. But by the sixteenth century their lords had misappropriated funds, clerical absenteeism was common, and they cannot have been unaware of faults in the Church of Rome. They were the more eager to welcome any cleric who read the revered Scriptures, whether he came as a Calvinist or Episcopalian from Edinburgh or by perilous journey from Armagh, Spain or Rome itself.[1] Living far from the wrest theological controversies and persecutions inflicted for a century after the Jacobite revolt, they reverted a good cleric for his own sake, as they did Macrae and, later, the minister of Barvas (and Martin himself) in lonely North Rona in 1695.

[1] Catholic missions to the Isles in the penal times are described in Compton Mackenzie's *The Book of Barra*, 1958. Martin (1695) refers to some Heriot Hospital students recommended by priests, and to the modesty of their 'Protestant' neighbours because in spite of Roman process, their fishing had been successful! Some of the MacKenzies (Seaforths) in the Lewis had been nominated Roman Catholics until after the Forty-five, notably MacKenzie of Kildun near Stornoway, who gave shelter to Prince Charles in 1746. (W. C. Mackenzie, 1919, pp. 126-130.)

COMMUNITY FROM PAST TO PRESENT PT. II

775 much of Protestantism was a denial of Christianity.
798 Holders of all these forms of Trinitarian belief have united
in condemning Unitarianism as heresy, its earlier African
• 771 form having been stamped out in blood. The 'heterodox'
are held by the orthodox of many Churches to be awaiting eternal torture. To a thoughtful humanist like Sir James Frazer, on the other hand, the belief that one alone by suffering can atone for the sins of others is of the deepest significance, as being an ancient, widespread and "pathetic fallacy". Happily, one finds the greatest tolerance and sympathy where Protestant and Catholic are mixed in the
[795] Highlands. Elsewhere, too, sympathy and reverent enquiry are taking the place of dogmatic assertion.[1] It is in this spirit that we can best understand Gaelic beliefs at their highest, and so distinguish their lowered use—or misuse for selfish ends—from the highest use of sacrament and prayer by the pure of mind and heart.

(6) RELIGION, MAGIC AND SUPERSTITION IN DAILY LIFE

789 Evil ends might be sought by means of the ancient
runes: the power of their poetry and associations could
tempt to perverted use. Carmichael tells how in Uist a malefactor, in terror of the law, went to a needy woman, and by appealing to her pity—and in exchange for a small sum—learned from her an "Invocation for Justice". Strengthened by its rhythm and imagery, and by his own associated belief in its magical power as a charm, he went up boldly in Court, firmly asserted his innocence and got

[1] Cf. the friendly theological arguments between a Roman Presbyterian and a Catholic in Compton Mackenzie's *The Three Beloveds*, 1956, and sketches in Gaelic by J. N. Macleod, *Litrichean Alasdair Sitheas*, Stornoway, 1950.

CH. VII RELIGION AND SOCIAL CUSTOMS

789 away scot-free! Both persons secretly concerned felt that
they had endangered their souls by successfully defeating
justice through their misuse of the invocation. Can one
[783] blame the malefactor for being partly right in both beliefs? The
malefactor's confidence had lent success to perjury, and
perjury by help of prayer was deadly sin.

Now, the perverted use of prayer, as in this case, was clearly understood to be evil-doing; but what of magic and superstitious practices? Much has been written of Highland folk-lore and superstitions.[1] The religion of the past should be distinguished from these. In *The Golden Bough*, Frazer drew a useful distinction between religion and magic. Religion, he wrote, relies upon the propitiation of higher powers—or even, in more primitive forms than Christianity, the propitiation of the forces of nature—while magic is an attempt at direct control of natural forces. Superstition may be defined here as a body of beliefs and practices in which hopes and fears attach themselves to things seen or done, by a multitude of false analogies and by irrational links of effects to supposed causes. Such superstitions are marginal to the main body of belief, worship and conduct which forms religion.

At the same time, the hard-and-fast line can be drawn between folk-lore and religion, where religion is handed on as living word and ritual almost without the aid of writing. This is particularly true where the religion is which we think, that of the Gael, is founded upon self-supporting peasant life' in line with that of the humble, working fourfold Christian Commonwealth native to an outlying district of his own country—and not with the

COMMUNITY FROM PAST TO PRESENT PT. II

121 theology and scholarship of a capital city, even of a city
as small as Jerusalem! It is sometimes forgotten that the
• [783] Old Testament, upon which so much of theology is built, contains folk-lore and magic. Not until this is fully understood in the sense in which early Oriental 'folk' believed it, can it be interpreted, whether as imaginative symbolism or common sense.[1] Much in the orthodox belief of medieval or post-Reformation times was mistaken; yet it formed part of the religion, not the 'superstition' of the stage and period. Theology and philosophy are in constant transformation. Sheltered scholars, priests and leaders of clans may be ill-fated to interpret the religion of a religion which grew from life in field, pasture and at sea, whether in its native land of Galilee and the East or among the Gael. One must live with a people and be one of them, at least for a time, to interpret their inner life. Lastly, no generalisation is true for all members of a community: individuals differ. The same prayer, the same rite, may be used in so different a way by each of two neighbours that its use by one is religious but by the other is superstitious.

114 We have seen that the essence of the lore from which
776 we have quoted is not magical, but religious, in use as in
inspiration. Strangers who had lost the sense of the beauty in the skies mistook a Gael's adoration of God at sunrise for prayer to the sun; when a man unbonneted or a woman knelt in the open, face turned to the rising moon lightening the dark, they confused prayer with worship of the moon itself. Now, in paganism, a belief in nature-spirits is strong: but propitiation is made not to objects such as the sun, moon or stars, but to spirits believed to inhabit

[1] For contemporary record, descriptions of sunsets have appeared in the Stornoway Gazette from the pen of a crofter in retirement, N. Morrison.
[2] *Carmina*, vol. 6, Notes, *Nid Fire*.

CH. VII RELIGION AND SOCIAL CUSTOMS

786 dwell in them—to a sun or moon spirit. If the people once
believed in a 'moon-spirit', nothing is left to show it.
Either the moon is addressed as if she could hear her praise, or—more commonly—"The King of the Elements" or "of life" is thanked for sending her light. The Archangel Michael is associated with the sun's rays; but symbolically in relation to heart and mind, rather than as literal belief. The response to sunrise and sunset was real; and it is not lost among the people, as a watcher may see.[1]

It remains true that pre-Christian rites were re-enacted,
and sometimes must be re-interpreted as being not gone
wrong, and sometimes in mere play. A Lewisman in
[774] Carmichael's hearing spoke of "going between the two
great fires of Beal"[2] (or Bealtainn), his phrase expressing no more than a faded memory. But in Reay, in hard times bordering on famine, a fishing skipper was seen by his
121 small son, supposed to be asleep, to assemble a boat and,
after putting out the fire on the hearth, kindle the *nid fire* by rubbing two pieces of wood vigorously together. Such man then carried a kindling brand back to his home.[1]
121 Was this a religious ritual of human energy, heat and light,
symbolic of forces held to be under Divine control but to be used as they used wind and tide for strenuous effort at the oars? Or was it magic, pure and simple? When men are shaken by failures and the fear of famine, prayer in word and ritual may restore hope for better things—for safety in storm and for fish in abundance as in a miraculous draught—and confidence in their powers for their work. But the same can be true of magic. And neither prayer nor

COMMUNITY FROM PAST TO PRESENT PT. II

121 magic is always efficacious—however desperate the need,
however pure the motives of those who ask. These men
were said to be the most successful fishers in the place;
[788] they were also Elders of the Kirk, who saw no wrong in what they did. They did not inform the minister; but the good man was not a fisherman and did not understand either the mysterious ways of fish or the incitement of a crew!

While this *nid fire* was kindled in all earnestness, a
miming song-dance I have seen in Eriskay in Uist, "The Carlins or Witch-wife of the Mill-dust" (*Cailleach an Muillean*) was down dead and is brought to life again!
[174] Once, perhaps, a half-forgotten ritual, "pity" of the
seasonal fall and resurrection of seed, it is certainly in form and spirit a thing of happy laughter now! Tales were retold by Martin and a seventeenth-century English skipper, of offerings made to a sea-god, Shony, at Europie, Ness, for the sake of seaweed, followed by feasting and drinking
[194] in the chapel there. The story may be true, but the ritual
may record a pre-Christian survival turned to merriment and of no more significance to the people of the time than
[241] the Carlins of the Mill-dust". The prayers for the dead were necessary for agriculture and daily bread are Christian in spirit.

771 When the people were at the mercy of periodic famines,
[773] diseases and sudden death, there were ample grounds for fears. Hence a word must be said of a belief widespread and ancient in the Old World, 'the evil eye' (*droch shuil*).
In the absence of clinical diagnosis, a malady, or a man's fortune to oneself or a valued possession, might cast suspicion on someone present when it occurred; and

[1] Needless to say, Gaelic verse has its moments of coarse freedom like Augustine, orthodox religion, Catholic and Protestant, has overstressed and misunderstood the folk-lore of 'the Fall'—originally, it seems, a legend of fertility and fulfilment! In part as a result of the teaching of the doctrine of the 'Fall', there has arisen an attitude to parenthood which falls short of rational understanding and reverence for human life. If fact be the best guard against superstitious fancy, and if sensibility and tact can inform the first shock of adolescence, then the Gael knew wisdom.

[2] Returning to the main theme, it is clear that primitive religion and folk-lore, in the sense of attempts to find cause and effect, and of the action of 'mind' on 'body' and 'matter'. What are facts to faith may be symbols to science; yet if these symbols prefigure truth, they may outlast the present stage of scientific recognition. Gaelic belief and practice show a recognition of communal as well as individual spirituality; of the depth of consciousness below its upper surface, and its upwelling power; and of the visible world without, in all its beauty, as a gate

[529] ¹ Needless to say, Gaelic verse has its moments of coarse freedom like
paper or fiddler to play for dancing, most of the words are delightful, but a
few are not. A rather 'dirty' chanter-song—a small instrument made
of the lake whose apprenticeship in the cities had not improved his character
—once quoted a coarser jingle to me, only to see little amusement at his song
and some contempt for its singer. He excused himself by saying, "It's
rough . . . it's rough—but it's not dirty"! His excuse sums up the cruder
suggestions of sexual spirits found in Gaelic jingles. One may adapt it as
a general excuse for the cruder folk-lore of the past.

The Churches have given attention to the second chapter of Genesis at the expense of the first. Gaelic spiritual tradition seems to have been singularly unswayed by such confusion of theology, and to have held firmly to the first chapter, in its noble simplicity.

or after it. After 1914–18, the Rector of the Nicolson Institute, Stornoway, proposed village halls for village education and recreation.[1] The scheme was never fully realised except in one township, Sandwick, near Stornoway, owing to the strength of puritanical opposition. In particular, dancing by young folk was condemned as "dancing upon the graves of their brothers". This attitude is breaking down; social standards, in becoming less repressive, may encourage young people to stay.

Broadcasting—a factor of change everywhere—came to the townships as a revolution. Newspapers had already filtered in; but for the first time the Gaelic-speaking home was entered and dominated by an English-speaking voice. It has made itself heard there almost ceaselessly ever since—in broadcast talks, discussions, announcements of news, entertainment, singing and prayers. Only the Sabbath imposes general silence. In the Scottish Home Service great trouble has been taken to meet all tastes at the highest level for each, from 'low-brow' to 'high-brow' and from Clydeside to the Isles. To a thoughtful, selective Island listener the new opportunity for imaginative human contacts and for initiation of all kinds is immense. And the purely Gaelic listener is not forgotten. He welcomes Gaelic song or story; and worship in Gaelic has reached many an elderly person's bedside.

Yet few listeners select: much broadcasting is designed for those whose only picture-galleries are advertisement hoardings and whose only drama and music are to be found at "the Pictures". And through no fault of the B.B.C., the Sports News offers temptations for those in poverty to acquire wealth innocently through luck in a football pool,

[1] W. J. Gibson, "Social Amenities in the Western Isles", *Sociological Rev.* (Jan. 1932).

mainly because there are enough young people to form a strong age grade of their own. The more liberal outlook of the villagers is, however, tempered by the old men.

Religion

The attachment to the past embodied in the social and economic aspects of the culture carries over into the religious life of the Sgiathanach. He is a Presbyterian who continues to worship and view the world within a pattern which characterized the Scots of the sixteenth and seventeenth centuries. The doctrine and theology are derived from the teachings of Calvin as interpreted by John Knox and refined by the Covenanters of the seventeenth century. To the original ethical code a strong measure of influence from the English Puritan movement has been added. The guiding principles are still foreordination and election. The dominant motivating factor is asceticism.

One of the outstanding features of the island today is the large number of churches for such a limited population. To serve the 8,600 people there are 21 churches with ministers and 13 mission stations. A hundred years ago, when the population was almost triple the present number, there were only seven ministers on Skye. The present abundance is the outcome of a series of religious schisms of the past century. There are now four Presbyterian sects. Of all the neighborhoods on Skye, only Glendale is religiously homogeneous.

there was famine. To supplement the diet, the men fished for 175*
domestic use. There were no specialists. Each man was a
subsistence farmer, who bred a few head of cattle to meet his
rent and provide dairy products, grew some grain for his family,
and fished.

Trade with the Lowlands was established by the chief and
his tacksmen. The droving industry, the overland marches of
cattle from the Island to the market centers, provided the
chief's only source of income, from which he paid the taxes
assessed by the Crown and provided the clansmen with meal in
bad years. There was also a less well organized trade in
minor local produce and imports carried on with the Lowlands.

The Religion of the Clansmen

175* 771 794 795

Very little is known about the religious aspect of the
culture during the days of the clan beyond the knowledge that
the people passed through several changes in common with the
rest of Scotland.[83] During the years of Norse occupation they
worshipped under a tribal religion known as the Culdees Church,
a secular order with a married priesthood and hereditary abbots.
By the time Skye had become a part of Scotland, and the old
Culdees Church had been replaced by Roman Catholicism.[84] In

both the Highlands and the Lowlands politics and religion 175*
became completely intertwined. In the latter half of the 771 794
kingdom it began as a support for the crown and a force for 795
peaceful and orderly government, but the church became the
prey of self-seeking prelates.[85] On Skye hardly anything was
known of the abuses of the Roman Church. There was no scope
for two ruling powers in the small communities. The priests,
faithful to their heritage and loyal to chief and clan, minis-
tered to the clansmen while their contemporaries elsewhere in
Europe were guilty of neglect and corruptness. Nevertheless,
the Reformation, 1560, gradually influenced the Sgiathanach.
There was an important difference between the acceptance of
the reformed kirk in the Lowlands and on Skye. In the Lowlands
Presbyterianism, in particular its emphasis on individualism,
suited the needs and aspirations of the people, and they welcomed
reform. In the Highlands the Catholic faith was extinguished
by a lack of priests.[86] Although the old faith was regarded
as an amalgam of paganism, a cult of the saints, and meaningless
formalism, practically all the reformed kirk could do, in the
face of strong opposition, was to expel the priests, or make
sure that no new priests found entry.

While the Scots were prepared to fight the Stuart king of
Scotland and England in 1638 and on several other occasions,
culminating in the Glorious Revolution in 1688, for their

121 to the world within. Above all, harmony of relations, at
• 771 every stage of life, in man and woman, was felt to pre-
181 figure relations with the Divine. The religious poetry of which the Gael were the creators and heirs, promoted courage and calm. True, its very power could lead to superstitious respect for mere forms of words, debased as 'magical' charms. Such misuse was 'superstitious', being false in itself and falling short of the clearest thought, the highest aspiration, of the time and the community. Worse still, use with evil intent could concentrate ill-will and evoke mutual fears. Yet at its best, thought was clearer, less confused, than is commonly imagined. To the aspiration and attainment of the Gael—in congregation or solitude, in meditation or labour, in love and faith or in works—the fragments of their oral heritage bear witness.

(c) LITERACY AND EVANGELISM: 'THE MEN' AND THE DISRUPTION

175 From before 1680 "a school for the gentlemen's sons
178 and daughters" was open in Stornoway. Latin and
871 English were taught, and a century later even Greek had been added, as recorded by W. J. Gibson, for many years Rector of Stornoway's high school, the Nicolson Institute, in his *Education in Scotland*, 1912 (chap. v). Particularly towards the end of the eighteenth century, the Gaelic School Society and other bodies, like the Society for the Propagation of Christian Knowledge, sent out schoolmasters to teach the reading of the Scriptures. Industrial schools were set up at the same time by Lady Seaforth, to teach spinning
[671] by the wheel, replacing the slow distaff. It was not till nearly a century later that teaching of English was widely taken advantage of — partly by the compulsion of the

Education Act of 1872, for the people "did not want to give their children wings to leave them".[1]

The reading of Gaelic progressed fairly rapidly after 1800, in order that the Bible might be read. By 1833 something like one in three or four of the population, or more than half of the younger people, could read Gaelic. The Hon. Mrs. Stewart-Mackenzie of Seaforth, it seems, had a 'warm sympathy' both with teaching to read the Scriptures and with evangelical preaching. The coming to Lewis in 1824 of the first evangelical minister, the Rev. Alexander MacLeod, an Assynt man, is described in his memoir in a striking volume, *Disruption Worthies of the Highlands*, edited by J. Greig (1877).

"At the distance of more than half a century it is not easy to form a conception of the religious and moral condition of Lewis previous to the year 1824. The present writer has heard a still living minister of the Free Church, who is a native of Uig, declare publicly that only two or three copies of the Bible could be found within the wide extent of the parish, and that he himself travelled a journey in search of a copy of the blessed book, and all in vain. . . . The densest intellectual and spiritual darkness held universal sway. Notwithstanding the pleasing features that characterise Highlanders, even in their most primitive condition, this state of things could not fail to be attended with baleful fruits. Despite their constitutional warmth of heart and loyalty of nature, unbending fidelity to what they esteemed to be honour, and their unbounded kindness and hospitality, many gross vices were found commingling in the characters and lives of the Lewis people. For, however strange it may appear, at the first prayer-meeting

[1] Quotations to this effect, dating from the *Old Statistical Account* until 1883, are given in the Brand Report of 1902.

which Mr. Macleod attempted to hold at Uig, one of the former elders actually offered a request that a wreck should be cast ashore in the neighbourhood;[1] while another elder, referring to the death of our Lord as a misfortune, used strong expressions of deprecation of its having at all occurred.[2] . . . The reason is easily furnished; the Lewis ministry was not evangelical. Moderatism held the land in sole possession. . . . Nor did it act merely in a negative indifferentist manner. Moderatism contained in itself elements of positive distaste to Gospel truth, and enmity towards gracious influences and experience. As a matter of course, it was perfectly compatible with this system to grant toleration to superstitions and superstitious observances, which had been handed down through the Dark Ages of Popery from the still darker ages of Druidical idolatry. Acts of adoration, having for their object the heavenly bodies, were common. It is scarcely necessary to state that family worship was unknown among the people, and even at the manse. For although the public ordinances were dispensed as a matter of form, they exerted no practical influence upon the conduct. They rather tended to lull more profoundly asleep by imparting and maintaining a feeling of security to the poor dark benighted souls who participated in them."

People did come to church "in tolerable numbers" from the very outset of Mr. Macleod's ministry, but "Here for the first time was a preacher who showed by his whole

[1] Shipwreck was still thought of as an 'act of God', and a dire 'misfortune'. Not only is there no hint of deliberate wrecking ever taking place, as on some other British coasts, but abundant record of aid to the shipwrecked and respect for their property in the absence of the skipper and crew. (Martin, 1695; and later.)

[2] According to Evangelical theory the punishment of guilty and innocent alike was part of the Divine plan. How different this, from the faith of the Islanders till then!

saint, a character so eminently Christ-like",[1] and to his intimate beliefs, doctrine and wide influence. The same Highland roots and deep charity characterised Dr. Norman Macleod, author of the popular classic, *The Friend of the Gael* (*Caraid nan Gaidheal*).

If a student of community ventures upon an interpretation of theology, it is because, to him, any attempt to understand "the relations of God to mankind" must take account of men's relations to one another. Ideas are transformed by human experience during economic and social revolutions, and in their turn they transform society. To make contact with reality, theology must regard mankind: it must be integrated with sociology. Because of its close bond with communal life, the religious spirit, recorded in Gaelic lore, was jarred, almost overwhelmed, when community was shaken to its foundations by the commercial, agricultural and industrial revolution. Happily, the value of communal Christianity has been acknowledged both by Roman Catholics—notably (among Gaels) by the Rev. Allan Macdonald of Eriskay—and by Protestants.[2] In the Scottish Presbyterian Church today, the movement which seems most deeply aware of the need for a new society has acknowledged its debt to communal tradition where this has been best maintained, that is, in the Isles. Seeking to aid Christian endeavour, international and national, this movement has turned for inspiration to Iona. In Iona, of which the noble cathedral belongs to the Church of Scotland but is open for service to all denominations, Presbyterians have found a new symbol.

[1] Canon Vaughan, cited by the Rev. Norman Maclean (*Scotsman*, 21st Aug. 1943).

[2] "The Church should interpret the Love of God by a flaming zeal for the redress of the social order." (The Very Rev. Prof. John Baillie, Moderator of the Church of Scotland, at St. Andrews, 1943.)

"The Iona Community is a Brotherhood of men within the Church of Scotland seeking to find the implications of the Kingdom of God for modern society. During the summer months they worship, work and live together on Iona, rebuilding the ruined Abbey on a co-operative basis. Half the Brotherhood are young clergy pledged to work for two years in the difficult places of the cities (after three months in Iona), emphasising the place of the Church in the New Community that is emerging in the world. The other half are skilled artisans who desire to express their labour as a ministry within the Priesthood of all Believers and create—in the building—a microcosmic witness of how labouring is transformed when seen as a Sacrament. The Brotherhood is based on Reformation principles. Several members of the Community are married. At present the artisans return to the ordinary labour market in the winter time."[1]

In the Iona Community, theology is linked to communal labour and the re-shaping of society; and its symbolic centre, Iona, is more than a literary name, or a historic ruin, to those who have set about rebuilding its cathedral tower, cloister and surrounding dwellings. Continuity is exemplified in its leader, the Rev. George F. Macleod, a descendant of Dr. Norman Macleod, the friend of McLeod Campbell. The significance of this Community to the theme of this chapter lies in the endeavour of its members to learn, by help of ancient native ways, new ways of Christian life in their own land. The attempt to link industrial Scotland, and lands beyond, to the Gaelic West, is a notable recognition of what Celtic Christianity, maintained and renewed by communal tradition, has yet to give the world.

121 181 771 had learned that the spiritual sanctions of the township's activities were not yet dead. Legal recognition of the township's social economy would have encouraged constructive action in common. Communal responsibility, not merely private morality, would have had to be upheld. As it was, the people's acts of charity or justice modified the growing individualism of tenure and economic relationships. But with township duties to perform and a high standard of office to fulfil, the congregations could have maintained a common purpose; religion would have retained a deeper social meaning, binding neighbours as one. It is true that divisions rent the Island communities, as a result of the Evangelical reaction both from the lay patronage of the Moderates and their easy-going tolerance. Protestantism broke with the communal religion of the past and emphasised individual salvation, faith and doctrine, at the cost of schism. Hence, it appears less able to aid the renewal of the township than Catholicism, with its greater emphasis upon corporate unity, mutual aid and Christian works in common. Yet, if men of the township had been chosen to bear communal responsibility, then, 'living the life', would they not have re-learned 'the doctrine'? Ministers did not share in common responsibility, it is true, nor do they now. The Established Clergy dwelt apart upon their glebes, and the Evangelicals are housed in the village, but without a croft or a share of the scatt and a common grazing. Yet in youth as the sons of crofters, and after ordination also, they might have learned from chosen Elders.

000 Altogether, for reasons not only temporal but spiritual, the township with its elected officers should have won recognition. Given the responsibility which those who knew it believed it could still fulfil, the crofters' relations

178 476 44 (654) [228] (654) developed through the township Grazing Committees by the Scottish Agricultural Organisation Society and its associated Crofters' Agency. Lime and fertilisers were purchased, and wool and other products sold, co-operatively. The co-operative marketing of lobsters, taking advantage of fluctuating London prices, has led to the reconstruction of ponds for storage. By these and other means, government assistance is utilised but not squandered; earlier initiative in agricultural organisation is reinforced; and communal tradition is revived, linked to personal responsibility through the crofters' lifelong knowledge of one another.

178 288 [829] As to the future, all agreed that unless the Harris Tweed industry flourished, with work at reasonable wages, the villages would be abandoned by the young, perhaps with no return such as hitherto on 'retirement'. Many young people are content with life in the townships, provided they can get a living there, though not all, for they are somewhat divided; and work elsewhere, even in the mills of Stornoway, is a counter-attraction.

178 592 538 Social life is undergoing changes which operate both for and against the retention of the young. On one hand, household interchange of conversation, song and story, the *ceilidh*, has declined. On the other hand, one found that, as regards religious prohibitions, and in spite of the nervous tension expressed in 'Revivals', the young have 178 771 577 [535] won greater freedom. Near one village a Nissen hut, handed over to the Home Guard, was also used by young people for monthly dances. When I asked a young crofter invalided from the Navy whether the Elders of the Kirk made no protest, he replied that they had, but had to give it up: "They see that we won't stand for it"! This would have been unthinkable during the First World War,

795 but still more to their repeated justification in the name
• 771 of the Lord 'God'. 'God' the universal (*Elohim*) came
[776] to be identified with the tribal god Jahveh or Yahweh,
000 altered, late in Jewish history, to "the LORD God", the term still used in Bibles. The war cry of the Jewish tribes, as they swept in from the desert or tightened their hold upon citizens and cultivators, was that of many wild wanderers, before and since, who have cried upon their God of Battles, upon Jahveh, or Allah. Magnificent in its affirmations of righteousness, the Old Testament can be terrible in its denials of pity.

795 The Bible (literally *Biblia*, the Books) reflects the search
771 of a people through centuries towards the idea of God;
but the tragedy of the Bible, or rather of its historic misuse,
538 came with the acceptance of all 'Scripture' as equal in inspiration and truth. The early and the late were accepted together, the mixed or false with the true. The custom of seeking Divine guidance by simply opening a page of 'the blessed Book'—that is, any text on any page of any one of its books—was an example of such acceptance; and it
[175] was only possible for the literate. In Lewis, Macfarlane records the custom, practised by 'The Men', late in the nineteenth century.

175 Reading came late to the Islanders, but its effects were
as direct as among the Puritans or Covenanters at an earlier
178 period. The people, whose hearts had long since been
771 wrung with pity at the Crucifixion and who were steeped
[538] in reverence for the Gospels, became 'changed' indeed.
[212] Once their minds had been crushed by the Old Testament's massive weight, the 'change' was reinforced by the vision of a world to come, limned by fevered imagination
[795] in the New Testament's finale, the Apocalypse. The 'change' was brought by Evangelicals who had themselves

(E) SOCIAL CUSTOMS IN CHANGE

178 In spite of 'the wrath to come', life had to go on, work
181 be done, and natural affection find an outlet in youth.
How could the women waulk the cloth without a chorus
183 to keep their beating hands in time? Songs had to be allowed by the sternest for this work in common. In a land where marriage was not an affair of dowries, but chiefly of love choice among the young folk, the old courting customs could not wholly be denied. Curiously enough, drinking was not severely looked upon by Scots rural Evangelists; in one story in the Old Testament, it is not the drunkard, but his mocker whom the Lord punished! In a city, a drunk man is a prey to thieves and harpies; but in a township none will do him harm. But today there are Evangelical ministers who think that drink should be frowned on at weddings and *ceilidhs*, while song and dance might be tolerated.

175 Not all the people gave in willingly to the severity of
• 771 the new creed. In Uig there is a cave, the 'Piper's Cave',
795 to which a crofter was wont to resort on dark nights, his
183 pipes in his oxter, when the wind blew *from* the manse and out to sea! Ultimately the least willing were forced to give in, first, by the appalling threat of the refusal of communion, and secondly, by denunciation from the pulpit
(178) and the ostracism of the Elders. Much was destroyed that can never be recovered now, and many a fine heart saddened or broken. It was the most intimate expression of their lives, their religious lore, which suffered most.[1]

178 Yet something remains, preserved by the good sense,
181

[1] Carmichael gives an infinitely pathetic account of a conversation in a home in Ness about 1880–85. *Carmina*, pp. xxvii–xxxii.

manner that he had in hand business of eternal moment to his hearers. That business was to warn them of the wrath to come, which impended over unpardoned Christless sinners, and to proclaim the way of escape by the open door of a crucified and risen Saviour. Not more than two months had elapsed since Mr. Macleod's admission when the 'stupid attention' and vacant stare passed into the wistful anxious listening, the suffused eye, the tender subdued manner, and in some cases the heart-wringing enquiry, 'What must I do to be saved?'

"For something like two years this minister 'refused to dispense the Lord's Supper'. . . . A very early effect of his work was the extinction of various worldly and pernicious customs and amusements to which the people had been previously addicted, and the substitution of meetings for prayer, diets of catechising, day and evening schools, family worship, and other spiritual exercises in their room. Many at the outset felt greatly aggrieved at the new order of things. Meanwhile the Lord stood by his servant, and the word mightily prevailed against all opposition. Incredible efforts were made by earnest souls in all parts of the island to be present at the preaching of the Word, even on ordinary Sabbaths." By 1828 "the whole island seemed to be moved by one powerful spiritual impulse" and 9000 people flocked from all parts to the Uig communion. "When the memorable 18th of May 1843 dawned"—that of the Disruption—"no part of the country was readier to rally round the banner then displayed, because of the truth, than the island of Lewis almost to a man." It was "an unspeakable relief to the ministers' spirits to escape by one decided step at once from the bondage of State control and the chilling atmosphere of Moderatism. . . . Even where evangelical preach-

175 ing was lacking, and the minister of the parish remained
771 in the Establishment, the popular movement inclined
793 unanimously towards the cause of the suffering and protesting Church of Scotland, with the exception of a small handful of people in Stornoway."

794 The part of elder folk in religious life continued to be
796 important, but in new ways. Masculine influence now dominated the family and the congregation. The 'Men' in
178 the Highlands were Elders of the Church who often spoke as lay preachers and who rose to speak on 'Question Day'—that is on the Friday of the Communion Services, which extended, and still do, from Thursday, the Fast Day, to Monday, the Thanksgiving Day. The presiding minister, after opening devotions, invited any Elder of the Parish to rise and propose the Question; the Elder having read a text from Scripture, would say he wished to hear the 'marks' of the true Believer, drawn from the text. After the minister had himself "opened out the text", he would name visiting Elders, calling upon them in turn to speak. One by one, each would rise and give his picture of the real Christian in terms of the qualities suggested by the text. "And so the hour sped under the pleasing and helpful variety of a dozen speakers or more. The 'Men' spoke out of rich experience. . . . 'Question Day' was a self-searching season, when every hearer examined his heart by the 'marks' adduced . . . and as this went on there was a sweet glow on the face of the Congregation as the presiding Minister summed up and closed the holy Convocation." [1]

175 The 'Men' had long been a recognised Order in the
178 Highlands, and their foundation is traced to Thomas Hog,
794 the famous minister of Killearn, "born in Tain in the

[1] Rev. N. C. Macfarlane, *The 'Men' in the Lewis* (1924).

State were in the wrong: the people were with God and, most of all when they suffered, God was with them! The sense of liberation brought to the Highlanders and Islesmen encouraged them to press their claim to the land they worked, strengthening the agrarian movement of 1880–86. The moral victory of 1843 contributed to legal victory in 1886.

The influence of Evangelism continued for some time at fever heat. "Even down to the present time (1877) there are tokens of the gracious working of the Spirit on men's minds, although it is a day of small things compared with the past and, in the case of some, a day of stumbling and instability. How humbling to behold the first reaction in favour of worldly and Erastian [1] principles, manifesting itself on the spot where the gospel banner was first unfurled in Lewis! But there is a God that judgeth in the earth, and his time to vindicate his cause shall come. 'Offences must come, but woe unto that man by whom they shall come!'" [2]

What comment can be made on this? One shudders at first, to hear of 'gross vices' among the people, only to find that by these 'vices' was meant fidelity to the religious past. It may seem strange that Highlanders such as these writers on the 'Disruption Worthies', who were almost as proud of Columba as of the Covenanters, were blinded to the enduring values in Columban tradition. They were certainly unable to foresee the effects of their preaching.

[1] 'Erastianism' is the doctrine of the supremacy of the State in ecclesiastical causes, a term which came into use in Britain in the seventeenth century. Actually the problem is one which Erastus, 1524–83, nowhere entered upon; none the less, the name is established, and it denotes a major issue of principles.

[2] J. Greig (ed.), *Disruption Worthies of the Highlands* (1877).

795 The Evangelicals, so insistent in condemning the beliefs
•771 and worship of ancient Christianity as 'vice' and 'superstition', comparatively rarely condemned words and rites designed to bring punishment upon a person believed to have wronged one—that is upon a person one hated! Of such was the practice, widespread in the Old World, of moulding a clay figure representing the person to be harmed, and either sticking pins into it, exposing it to fire, or leaving it in a stream, with a prayer that as the figure wasted away so would the object of hatred. An educated Lewisman I knew, Dr. Norman Morrison, stated that an aunt of his own performed this rite. No doubt she persuaded herself that if the desired injury took place, natural or Divine law was at work and she herself was therefore
[178] innocent or actually just. What is striking is that in the twentieth century, long after the healing beauty and Christian calm of runes and rites had been banished and the healthy laughter of gay custom silenced, this pre-Christian rite of ill-will had lived on. One hardly knows whom to pity the more: the hated, for the fear they would feel if they knew the rite was at work, or the hater. The extreme Evangelicals made so little appeal to reason based on fact, that the irrational element in superstition was not firmly
[829] replaced by a sane, scientific outlook. Indeed 'science' was condemned as 'unbelief'. The constant evocation of wrath, anger and "the punishment of just and unjust" played havoc with the emotions.

Those brought up on the precepts of Presbyterianism —especially in its milder forms—and familiar from infancy with a selection of Old Testament readings, can hardly appreciate the shock to a sensitive heart of first hearing
[776] the whole of the Old Testament read Book by Book. The shock is due not only to the acts of vengeance or massacre,

can be seen. In common with the rest of Scotland up to the time of the French Revolution, the Skye ministers were abandoning their emotional approach in favor of mild methods of persuasion.[14] The rigor of Presbyterianism was succumbing before the philosophical enlightenment of the Deist.[15] At the same time religion on Skye contrasted with Lowland practices. It was religion based on inward conviction rather than on doctrinal dogma. The ministers were too far removed from Edinburgh to become involved in the heated debates and dissensions within the General Assembly which were creating opposing groups of theologians and, frequently, resulting in secession movements.[16] The people had no serious predilection for any specific articles of faith, and the landlords and many of the tacksmen were only nominal Presbyterians.[17]

As the proprietors and the tacksmen withdrew, the status of the ministers was augmented. They were more than spiritual leaders and moral guardians. They were descended from tacksmen, were often themselves tacksmen, and were frequently married to the daughters of tacksmen. They controlled education and administered the poor funds. But in many cases they seem to have been less concerned with the ministry than with their farms.[18]

The process to be observed in the religious facet of the culture during the second period is conservatism. Itinerant missionaries, catechists, and a religious brotherhood known as the "Men" supplemented the regular clergy. As the Revival grew strong, the "Men," as tenacious defenders of the evangelical cause, began to wage an anti-clerical campaign.[44] They usually remained within the Church, opposing any separatist movement, but they drew a sharp distinction between the Church and her ministers. To be a convert of the "Men" meant to dissociate oneself from the death dealing moderate ministers," who were said to have had more interest in their farms than in their congregations.[45] The "Men" conceived their function to be one of delivering powerful testimonies of evangelical truth.[46] They rebuked and constantly reminded the people of their religious duties. They made Sabbatarianism an observable test of religious obedience, separating the respectable Christians from the godless. Prayer meetings were held at which the "Men" engaged in short, earnest prayers, and exhorted the people to read their Bibles and partake in family worship.

The growing influence of the Revival did not leave the clergy unmoved. At least two arose to recreate the spirit of vital religion and revive emotional enthusiasm in their congregations.[47] It was no accident that these ministers should

appear in the parishes of Bracadale and Snizort. Bracadale had already seen the beginnings of the final stage in commercialization; Snizort had been sold piecemeal to new landlords.

Evangelical Presbyterianism created a new pattern of social and religious life on Skye. It gave the culture a new focus to replace the dead clan system. Much of the form of religious worship and behavior characteristic of the Island today was established during this Revival Movement. The "Men" became the foremost members of the community. An esoteric religous hierarchy evolved. There were the unfortunate few who were in a state of saving grace and acceptable at Communion, and the eminent "Men," the aged, venerable spiritual laity.[48]

The Revival, unlike many nativistic movements, neither held out the promise of cultural regeneration nor offered the dream of prosperity. To the contrary, the attack against the folk culture characteristic of the late seventeenth and early eighteenth centuries was renewed with vigor. While religious enthusiasm grew, social life beyond a family level was restricted. Perhaps, the years of destitution and the ever present threat of famine had made hospitality a luxury which few could afford. Perhaps, it was no longer possible for the people to provide whiskey and food for large numbers at a funeral or a wedding. The local ministers assert that the changes were due to the activities of the "Men." It would seem that the "Men" were

[48]MacInnes, op. cit., p. 211.

agents for what have been called "rites of intensification."[49] They restored the equilibrium of interaction by creating new behavior patterns. This was probably particularly true during the famine, when the people's relatives and friends were dying and emigrating in large numbers. While the ceilidh, an evening of spinning folk tales, singing, and dancing, was condemned, and the children of parents who would not conform to the dictates of one minister and the "Men" were refused baptism, prayer meetings and other church services were providing emotional outlets.[50]

Like the Welsh,[51] the Skye crofters found the Bible retold much of their own past history and their present difficulties. As the "Men" preached from Scripture and interpreted the meaning, often using allegorical interpretations, of the Word, the people became familiar with a story which was strikingly similar to their own. The present social and economic conditions were but a presage of the coming dissolution. It was all there in the Old Testament, in the books of Judges, Kings, Chronicles, Psalms, and Prophets. The omen was all the more vivid because the transgressors in the Bible lived a life much like the crofters. Both the ancient peoples and the Skyemen had a pastoral economy, a patrilineal family structure,

alien to their heritage. There was little local need for roads and steamships, but they were paving the way for the final stage in commercialization, the conversion of the island into sheep farms.

The record suggests that the culture was suffering from disorganization and the society had been threatened by disintegration. The Revival, which began at the close of the initial period, became full blown. This movement confirms what the record suggests. A new pattern of social behavior and religious life came into being. The traditional secular patterns of interaction were being replaced by patterns of sacred interaction. New values, new statuses, and new roles were evolving to give religious sanction to the old patterns. The result was an esoteric religious hierarchy. The religious leaders, both the "Men" and the ministers, were coming from the people rather than the old hereditary families who had been closely related to the gentry. Religion replaced the clan as the focus for the culture. The similarity of the story unfolded in the Bible and the past and present conditions of the crofters made the presage of the coming dissolution vivid. By the end of the period, dissension within the Church had become a significant factor and was paving the way for individual secession. The third period of the modern era was to witness more than a social and economic transformation; there was to be religious schism.

wealth, rose above the indigent crofters and cottars.

These changes had a pronounced effect on the culture and the population. Economic hardship and evictions prompted emigration, forced many men and women to seek seasonal work away from home, and led to a reduction in the marriage rate. Crofting which had already become part-time agriculture now was a spare-time pursuit. The Sgiathanach was dependent on money, on the wider economy, for the satisfaction of most of his needs. The croft was providing no more than a few potatoes for the table and some oats for the cattle, the crofter's only export. Still, no landless working force appeared. Portree had grown and there was a woolen mill, but there does not seem to have been any marked movement into the village by the crofters.

While much of what was meaningful to the people was being lost, the religious Revival continued. The conservatism of the "Men" became an official policy of a new church. The emotional approach of the ministers and the "Men," who were now elders in the church, and the emotionalism of the large outdoor meetings functioned to restore the social disequilibrium. Although the extended family, township, and nuclear family suffered from instability, the people found intelligible roles within the religious sphere of activity. Their religion was reinforcing their way of life. The abhorrence of much of the old culture was accompanied by a strengthening of many traits which reaffirmed the desirable status values. The culture found a new focus in congregational religion and was able to maintain a continuity while the content changed.

In 1951 the population stood at 1,094. There has been a slight shift from the rural areas to the village, but it can hardly be regarded as significant. For one thing, the 1951 figure included an unknown number of workers on the hydro-electric scheme. Then, too, it included children from the Outer Isles who attend school in Portree, not to mention the very large number of newcomers, teachers, government employees, shopkeepers, management personnel in the stores and banks, and tradesmen, to give only a few examples.

The trend toward religious conservatism continued in the fourth period. During the closing years of the preceding period, the Free Church attempted to modify her theology and polity. The old trend toward relaxing the rigor of Presbyterianism, in accordance with the feelings of the other dissenting denominations in Scotland in order to pave the way for union, was renewed by the passing of a Declaratory Act which stated that the Free Church does not teach and does not regard the Confession of Faith as teaching the foreordination of men to death (eternal damnation) irrespective of their sin. Further, that while the Gospel is the ordinary means of salvation, it does not follow that all who die in infancy are lost. The elders, the lay kirk officers, of Skye protested violently.[88] It was popery to make the Church the judge of spiritual affairs. More important, it threatened their prestige status, which had been sanctioned by the interpretation of the religious ethic. In several parishes the elders threatened to withdraw from

[88] The Free Presbyterian Church, History of the Free Presbyterian Church of Scotland, 1893-1933 (Glasgow: H. Adshead and Son, 1933), pp. 96-130.

Communion, and when they were backed by a few dissenting ministers, schism gave rise to the Free Presbyterian Church. The first congregation of the new church was a Skye congregation.

In no small way the threatened disorganization of the culture and the suggested social disintegration at the end of the "Clearances" played a role in the acceptance of the Free Presbyterian Church. This situation, I suggest, created a need to reaffirm the religious sanction of the desirable features of the culture. Since the Church of Scotland minister in Waternish was jailed for inciting the crofters to stand up for their rights,[89] without adding any people to his congregation, the new schism must have been a reaffirmation of the religious focus for the culture.

The acceptance, however, was neither uniform nor immediate. There was, in fact, a religious and social upheaval.[90] In Glendale, a strong Free Church area and a neighborhood which required the presence of military troops to restore order, family ties and friendships were broken in the controversy over which church manifested the true religion. In Staffin and the Braes, also areas marked by the need for police protection, the same pattern was repeated. The experiences of one Church of Scotland minister over the years following the schism, led him to make a rather unusual statement for a man who became one of the foremost ministers in Scotland: "The

[89] Norman MacLean, Set Free, pp. 52-54.

[90] Ibid., pp. 148-212.

people of the Island must have had a premonition of the calamity that was befalling them when they resisted the coming of Presbyterianism with all their might."[91] For him, the form of religion which splits up communities, divides families, and breaks villages into fragments can scarcely be regarded as Christian. Over the years, however, the battle has been won by one church or the other, as in Glendale where the Free Presbyterian Church is the only kirk, or the battle scars have been forgotten.

Unions of the churches replaced the former tendency toward disruption. In 1901 the Free Church joined the United Presbyterian Church, and in 1929 the United Free Church joined the Church of Scotland. On both occasions there were ministers who refused to become a part of either united church, and people who were reluctant to join new congregations. In Kilmuir, for example, the Free Church congregation split. Some joined the Church of Scotland, while others remained true to their sect. Although all the churches on the island are similar in outlook and to the uninvolved observer their differences are unimportant, doctrinal differences have remained important to the people. Nevertheless, the common tradition of conservatism, standing in opposition to the increasing impingements of the outside world, has been the paramount factor in reinforcing the values of the people. I repeat, the culture has maintained continuity through religion.

[91] Ibid., p. 212.

crofting districts. Shops, schools, inns, and churches increased in numbers, but they have not clustered to form a village nucleus. In more recent years the county has tried to stimulate village growth by building houses at a few centers. Someday they may succeed in altering the settlement pattern.

As a consequence of the increasing integration of the Gaelic within the national scene, government regulations have expanded and have come to be enforceable by a local police. Government services too have increased in scope. Many of the traditional functions of the family and the local group are now functions of an ever increasing number of government employees. Nevertheless, the traditional statuses of the members of the group have persisted and social control has not been reduced in favor of action by the state.

The class structure has changed several times. It has oscillated between a leveling of socio-economic differentiation and a growing polarity of status. At present there is no local class structure beyond the old polarity of landed gentry and crofters. Those who fall between these groups are ranked on prestige values of long standing. Even though many of the intermediate group would be working or middle class if they lived elsewhere in Britain, on Skye personal factors play a more important role in determining prestige than socio-economic differences. Leadership and political power remain in the hands of the gentry.

If the foregoing material suggests that there is evidence on Skye for Redfield's concepts of disorganization

The religion of the Sgiathanach may also be regarded as the logical outcome of a movement which began two centuries ago when the all inclusive bonds of kinship and affection were replaced with tenets introduced from the wider contractual society. This movement, as we know, bore its first fruits over a hundred years ago. The people themselves turned from the ministers who were supporting symbols and values no longer meaningful to the crofters. They embraced the preachers of a dynamic gospel as a means of consolation in their distress. Thus, the religious pattern derived elsewhere and superimposed on the Sgiathanach has been refined with logic and vigor. It has become the one insurmountable barrier to assimilation with Great Britain. No less than four times religious schism has demonstrated the essential unchangeableness of their religion. The process has been carried on with such dedication and success that it now disturbs the unsympathetic laity and the clergy of the Church of Scotland no less than the resistance of the people to Presbyterianism did in the remote past.

We saw in Chapter IV how an understanding of the religious history of Skye is indispensible for the comprehension of the larger problem, the means by which the culture has maintained continuity. In Chapter V and again in Chapter VI we saw how this continuity has been preserved. We have at last come to the point at which we can ask why has there been continuity. The following analysis is concerned with the sanctions of the Presbyterian ethic, particularly as it affects the social structure, religious behavior, and the roles of the ministers and the religious laity in the

The Role of Religion on the Croft

As the prestige of the old people and the control of the family-head elders over the social activities of the people has persisted with religious sanction, the status of the father within the nuclear family has been reinforced by the religious expression of his role. As we know, the older inter-family patterns of economic cooperation have been disturbed by the changes stemming from the process of commercialization. This has not disturbed the position of the father as the source of authority and discipline. He continues to play a basic role in establishing the tempo of interaction within the home, the township, neighborhood, and community. He decides who will do the work and when. He determines in what social activities his wife and children will participate, always, of course, ultimately guided by the venerable old men. His status is confirmed at baptism, when he is judged, and it is commonly reaffirmed every day in the home. For the majority of crofters, though by no means all of any sect, the day begins with the saying of grace before breakfast and the returning of thanks after breakfast. The same pattern is repeated at the taking of any food, including a cup of tea. The form of grace may be used to cast light on the religious outlook of the Sgiathanach: "Gracious God, we have sinned against Thee, and are unworthy of Thy mercy; pardon our sins, and bless these mercies for our use, and help us to eat and drink to Thy glory, for Christ's sake. Amen."

In many homes breakfast is followed by family worship. The father begins with a blessing, a prayer on behalf of his family, and then leads the family in the singing of a few verses of psalm. Next he reads from Scripture, apologizing to the visitor because his Bible is not an English version, and comments on the meaning of the passage. He concludes with a prayer. If the morning worship has been omitted, he holds an evening service. Some crofters have family worship both morning and night. When the father is away, his wife or his eldest son conducts the worship. Religious devotion on Skye, then, is more than Sabbath church attendance and attendance at weekly prayer meetings.

The Role of Religion in Township, Neighborhood, and Village

I did not attempt to devise a socio-metric scale to determine the affiliation of members and adherents of the several churches in either Glendale, Kilmuir or Portree. The former disunity and conflicts which divided families, both nuclear and consanguineal, townships, neighborhoods, and the village stemmed from abandonment of traditional religious affiliation rather than from attachment to an established sect which happened to differ from the denomination of one's kinsman or neighbor. Today sectarian hostility is no longer prevalent among the people. The Sgiathanach only chaffs his neighbor in friendly sally and repartee, about his only slightly different sectarian views. They refer to each other's sect by nicknames. The Church of Scotland is the "Established Church." The

"elect" are predominantly newcomers and the elders are either members of the landed gentry or newcomers. I was rather amazed one day when a Skyewoman told me, "the 'Wee-Frees' and 'Seceders' are no better than the Mohemmedans giving gifts to idols," when they sent food to the manse for the minister's guests at the Communion. Over in Bracadale the custom is also losing its importance, except in the Free Presbyterian Church, and the fellowship meeting has been abandoned in the United Free Church because of the reluctance of the members to engage in public displays, either at Communions or at prayer meetings. The custom of visiting has entirely disappeared in Sleat and Strath. One of the ministers ascribed this to the isolation of the two parishes from the rest of the island and from each other. Certainly the Sgiathanach on the south end of the island seldom locks to Portree and the northern crofter hardly ever goes to Sleat, but this does not explain why people from the mainland will go to Bracadale, by-passing Strath.

The vitality of religion can over-ride considerations of family and friendship if a Sgiathanach deviates from the accepted norm. We may recall the young girl who stole church funds and was ostracized by her "people" and the whole community. Let us consider another example. Marriage vows, as we know, are held to be sacred on Skye. Divorce is all but unknown and separation is uncommon. To be precise there are four known cases of separation. Nevertheless, if a husband or wife were to break a taboo, it is expected that the offend would be cast out. Forgiveness is not compatible with a

and individualization, there is little, if any, reason to speak of secularization. Many of the existing features of the culture can only be understood when viewed from the perspective of the religious aspect. Certainly, the state church has been weakened by schism and rational practices have replaced superstitious rites and beliefs, but this has not produced a secular society. The religious patterns have reinforced the traditional culture, or those parts of it which were considered worth preserving, by giving the culture a suprasocial sanction.[93] Religion has bolstered the status values, especially those of the father in the family and the old men in the community. Religion has provided many of the occasions at which the people come together to find solidarity and security. Finally, religion has provided the focus for the culture. Although the factors of cultural change have led to modifications in the culture's content, there has been continuity. For a more complete understanding of how Skye has readapted to the higher level of socio-cultural organization and preserved its distinctiveness, I shall devote the remainder of the present study to an analysis of the contemporary culture.

---

[93] After writing the above account, I discovered that Arthur Geddes, a geographer at Edinburgh University, has recently discussed some of the evidence for cultural continuity on the Isle of Lewis and Harris, one of the Outer Hebrides. Although he takes important notice of the all-pervading influence of religion in the lives of the Hebrideans, past and present, I feel he overlooks the function of religion as an agent for maintaining cultural continuity. See Arthur Geddes, The Isle of Lewis and Harris: A Study in British Community (Edinburgh: Edinburgh University Press, 1955). A, [See 1: Geddes, this file--Analyst]

The crofters of northern Skye are dependent upon the village for the goods of the shopkeepers and the services of the tradesmen. Several times a week food vans from Portree, or from a national concern with headquarters in Portree, call at the crofts. Twice a week a shopping bus brings the men and women into the village from Glendale, and there is a daily bus service from Kilmuir. For the nearby neighborhoods, the village is of religious importance. If the crofters do not come into the village to go to church, the local ministers go out to serve them. They also send their children to school in Portree. Few of the crofters take an active part in the formal social life of the village, but for all who come in on business there is an opportunity for men to stop by at a pub to have a chat with friends and women to get together in a tea room for a bit of gossip. Then too, for many it is an occasion to visit kinsmen who have left the croft. Nevertheless, despite its functional importance, the village has remained something alien and apart for the crofter. Despite the bonds of friendship and kinship and mutual economic dependence, there is antagonism between the rural dweller and village resident.

Part of the crofter's hostility stems from the religious ethos. On at least one occasion, Portree has been described by a minister as being almost as wicked as Sodom and Gomarrah.[25] In the eyes of the majority of the clergy, the village contains the "synagogues of Satin" from which flow the poisons of

---

[25] Rees, Life in a Welsh Countryside, pp. 128-129.

orality. For these reasons, among others, the crofters 369
k down on the villagers. As one man said, "The crofters 829
nk we all went to Hell long ago." In part the suspicion 771
distrust of the villager has grown from the attitude of 369
villager toward the crofter. 829

Many of the villagers not only look upon the crofters
narrow minded and bigoted but they resent the presence of
crofters on economic grounds. A few representative statements
l indicate their views. "The crofters always have their hand
." "They're aye wantin'. They want water, electricity,
ds, and all sorts of things, and they don't pay a copper
them." There is a foundation for these attitudes. The
ase "rich man, the government" has become a common saying
the island. The crofter has become accustomed to having
government pay f o r a large part of the cost of his
se, draining his land, and bringing in water and electricity
well as building roads and piers. Many have come to think
there is no end to the obligations of the government.
e was one man, for example, whose roof was leaking. Even
gh the house was his, crofters it will be remembered own
r homes, he reported it to his landlord, the Department
griculture. Three weeks later, when one of the officers
out to see him, the roof was still leaking. No, he did
see why he should fix it. "Let the government do it."
ive another example, in Kilmuir one night there was a
ussion about reeds in the grazing land. "We have reeds
he square mile," said one fellow, "the government should

CHAPTER VII

THE ISLANDERS' RELIGION

Synopsis

The strength and vitality of religion on the Isle of 771
Skye, and all along the West Coast of Scotland, has been an 182
outstanding characteristic of the culture for well over a
century. It is no less distinctive of the culture today
than the crofting system and the socio-economic way of life
which crofting embodies. Moreover, the religious patterns
not only reflect a continuity of culture in themselves,
but the religious aspect has provided the means by which
the culture, as an integrated whole, has been able to
maintain a genuine continuity. Here on the very fringe [795]
of Western Europe in one of the few remaining outposts of
the Gael, Calvinism, as interpreted by John Knox and Andrew
Melville, as refined by the Scottish Covenanters, and as
modified by the influence of the English Puritans in the
sixteenth and seventeenth centuries, stands as one of the
few examples of marginal intensity in Western Civilization.

Until the nineteenth century religion was an indomitable acculturating influence. A new code of ethics, morals, and behavior was superimposed on the old. As the influence of the traditional leaders declined, the scope of the

ministers increased. The church became the most powerful 771
institution in the Hebrides. In the nineteenth century the 182
pattern of religious expression gradually changed. Although
the acculturative process was still carried on, the approach
became negative in regards to many aspects of life. The [798]
realization that the old folk beliefs had not been stamped
out led to a renewed attack on all aspects of the culture
which showed the slightest taint of pagan or Catholic belief.
At the same time, conservatism became the underlying principle
in Presbyterian practice. The ministers and their congregations
were carried back to the persecution of the Covenanters under
the Stuart kings, back to the days of Knox, and back to the
very beginnings of Christianity. This conservatism has reinforced much of the religiously desirable fabric of the culture.
Change or compromise has become unthinkable for the majority.

Various interpretations of the present day religion
can be attempted. It has been characterized as "moribund
theology," a spurious movement wrongly equated with Calvinism
and no longer "en rapport with the mind of the twentieth
century," by one minister of the Church of Scotland.[1] This
reflects the view that the Highlanders' religion has been a
form of "black Presbyterianism."[2] Others are wont to write
of the "tyranny of religion" which has driven away the youth
and destroyed social life, except the art of conversation.[3]

efficacious. Amulets were still worn as charms.

175* 771 794 795

Even more important, religion was still intertwined with the structure of the clan. The ministers were said to be negligent, either afraid of or sympathetic with local sentiments, in their duty, by the evangelicals who waged an uncompromising hostility to the old folk culture which tied the people to the past.[91] It could hardly have been otherwise. The ministers were tacksmen; they were married to daughters of tacksmen, and their children married into tacksmen's families.[92] The chief or a cadet of the clan met with the minister and his elders, the lay kirk officers who were probably tacksmen, when a kirk session was held, and the chief enforced their decisions by his "irresistible authority."[93] Thus, the influence of clan brotherhood pervaded every aspect of the culture. There still was no room for two independent leaders. The people could not have lost toleration for differing faiths. Episcopal, Catholic, and Presbyterian families lived together without rupture. Religious fervor could have broken the clan. To see how the old and the new blended, let us turn to the life cycle.

iritual independence, the Skyemen stood stoutly behind their 175
vine right kings who tried to modify the church in the 771
rection of Anglicanism. It was not until after Presbyterianism 79
l been replaced by Episcopacy that the Reformation reached
ve, and it was not until after the Glorious Revolution that
mmunion was celebrated in the Presbyterian form.[87] Even so,
required using the well worn trick of inviting the clan
efs to dinner on board ship and then arresting them to make
m agree to support the clergy and the discipline of the
formed kirk.[88] As late as 1700 the people had not shown any
the religious fervor which had ripped the Lowlands asunder.
Sgiathanach, although nominally converted from Catholicism,
apathetic to the slight differences between Episcopacy
Presbyterianism. Revolution and Restoration made little
ference. The ministers, who were hereditary, remained, and
e succeeded by their sons.[89] Catholic and pagan rituals
sisted. At the close of the seventeenth century, Christmas,
d Friday, Easter, and St. Michael's Day were still observed.[90]
y had been dropped from the Scots' calendar more than a
dred years before. The holy wells were still believed

Religion has done more to keep the Gaelic language 771 alive than any of the numerous outside agencies dedicated 191 to the preservation of the language, such as An Comunn 186 Gaidhealach, a national organization which sponsors a series 575 of local, regional, and national programs in an attempt to maintain and stimulate an interest in the Highlands and their songs and stories. Except in Portree and at Dunvegan, church 191 services are mostly conducted in Gaelic. The newcomer who 794 wishes to attend church services in the crofting areas, and he had better, must either learn Gaelic or be content with the few words the minister may speak in English for his benefit if the minister is aware of the presence of someone who does not "have the Gaelic." Some might feel that this is rude since most Skyemen are bi-lingual, but the crofter seems to think quicker in his own tongue. Many crofters' 871 children learn English only when they begin to attend school or pick it up from an older sibling who is going to school. Family worship is almost always in Gaelic, unless there is 782 a visitor. We have already seen that the family worship at the time of death is in Gaelic or in Gaelic and English. Again we have a parallel with Wales, in that Welsh has been mainly preserved through religion.[19]

Making Gaelic the language of their religion has, 191 however, led to several problems. It has weakened township 771 solidarity on occasion. There are many isolated townships 621 beyond the reach of a minister. In one of these remote

[19] Ibid., p. 129

glens a family, newcomers to Skye, prevailed on the local 191 school teacher to hold a Sabbath school for the children. 771 The local missionary objected. If they were going to have 621 Sabbath school, it should be in Gaelic. His prestige and control over the population secured his position. The children of the people who originated and organized the program were excluded because they did not "have the Gaelic."

Another problem which is beginning to stem from the 191 use of Gaelic as the language of religion is the difficulty 793 of securing a minister. Traditionally, it was an ideal to 183 send a son to study for the ministry. This ideal remains, 874 but in the last few years only one young man from Skye has shown a desire to become a minister. Indeed, the majority of ministers on Skye are not Skyemen. I believe the only minister who serves his own neighborhood, the neighborhood in which he was born and raised, is the Free Presbyterian minister in Glendale. It is becoming more and more difficult to fill charges as they go vacant. Each year several Highland charges are changed from "Gaelic essential" to "Gaelic preferred." If we go beyond the role 121 of religion as it orders human relationships, through its 771 more formal aspects, and consider the influence of religion 626 on the secular behavior of the Sgiathanach, we can come 178 closer to an understanding of why the youth are slowly turning away. At the same time we shall be able to round out our picture of the expression given to the Presbyterian ethic on Skye.

The man who seeks sensory pleasures and finds enjoyme mundane recreation is believed to be spiritually un- enlightened. It seems almost an anticlimax to add th social life is restricted.

Beyond the Highlands and, indeed, within the H in certain prosperous areas, where poverty has not be a factor of such importance that it requires religiou sanction, the Church of Scotland has endeavored to fi room within the church for recreational activities, e pecially for the youth. As in America, the church fe a responsibility to the youth which requires a combina of religion and recreation if the citizens of the comm are to be well-rounded adults. Youth programs and you clubs, young adult groups, and social circles for the men and women are an essential part of church work. I an organizational sense, the Church of Scotland on Sky has, at the most, a Woman's Guild which meets once a m to hear a lecture on a topic [illegible]n as missionary work i India, and which holds an occasional sale of work to r the church debt or buy the minister an electric tea ko to keep in his vestry; and a choir, which meets once a for rehearsal. It is, as I have said before, not the all policy of the church which determines the activiti in which the people participate or which they reject. elders are the prime movers. Were the youth in Kilmui anyone under thirty, instead of anyone under forty, the control of the aged might not be as strong as it is. I

control of the "elect" crofters. They, are the "elect," 796
and their status is independent of the control of the vener- 565
able old men. 626 554

Summary

Whereas the culture of the Sgiathanach was oriented 771
around the clan system in the remote past and was intelli- [178]
gible only by an awareness of the all-pervasive influence
of the clan, today congregational religion provides the
focus for the culture. If we are to understand the Sgiathanach [121]
we must fathom his religion, that is, the interpretation
which he has given to Calvinism. Moreover, this highly 182
integrated and systematized aspect of his culture has pro- 771
vided the means for preserving cultural continuity. Economics
and social organization aid us in recognizing how cultural
continuity has been maintained. Religion puts at our finger
tips the how and the why.

The basic status values have held good because religion 771
has sanctioned them. The old men of the neighborhood have 554
been successful in sustaining their statuses and habits 183 626
through their position in the esoteric religious hierarchy.
By holding the father responsible for the spiritual welfare [593]
of his family, and judging a man's spiritual enlightenment
on his renunciation of mundane pleasures as well as his
knowledge of religious tenets, the elders exercise judicial
and authoritarian functions. At the same time, the status [593]
of the father within the family is strengthened. After a

man is no longer concerned with the necessity of having his 771
children baptized, the venerable old men, the family-head 554
elders, prolong their social control by sitting in judgment 183 626
on those who seek salvation. The strength of age controls [178]
is indicated by the continued ability of the elders to resist
all attempts to introduce secular innovations to the crofting
neighborhoods. Even in Portree the majority of the people
are under the watchful eyes of the old men.

Many of the meaningful patterns of interaction are 771
religious. The rites of passage function to augment social 182
control, restore disturbed equilibriums, and establish new 626
ascribed statuses. The rites of intensification, including
those associated with death, function to restore disturbed
patterns of interaction in the family, nuclear and extended,
and the larger social groups and to establish meaningful
relationships when large congregations gather for the
celebration of communion. Religion for the majority is not 771
merely dependent on attending church on the Sabbath and [782]
attending Wednesday night prayer meetings. Every day of
the week begins with a prayer and ends with family worship.
All social activity outside the home is ideally limited to [52]
the church, and the church is never used for mundane activity.
Only in Portree are there a number of social activities to [369]
tempt the people. Kilmuir has no more than a Crofters' [575]
Club for men, and Glendale has no social activities, unless
one would include the annual meeting of the share holders
in the farm.

390

else the spouse is likely to lose status. 626 684

The most powerful of all agents for social control are 626
the old men of the neighborhood. Through their position in 882
the church, a religious sanction for their prestige status, [794]
they enforce conformity to the norms of behavior which religion has sanctioned either positively or negatively. No one, nor any group, has been successful in questioning the right of these venerable men to maintain their habits and statuses which have been preserved over the generations. The baptism of a man's children and his own salvation depends on acceptance of the authority of the elders, for they will be his judges.

As far as the contemporary scene is concerned, there 182
is no anomie. The content of the culture has been greatly 178
modified, but the form, the underlying distinctive pattern, has been preserved. We are dealing with a single tradition in which the norms of behavior and the sanctions for them have remained common and clear. This is all the more striking because there have been periods in which cultural and social disintegration threatened to overwhelm the Sgiathanach. This brings us back to the role of religion in preserving cultural continuity.

Loomis and Beegle have employed Durkheim's theory to 171
analyze the growth and spread of fundamentalist religious 182
sects in contemporary United States.[16] They conclude: "It 771
is no mere coincidence that various types of emotional 786
religious sects are now among the most rapidly expanding 781

---

[16] Loomis and Beegle, Rural Social Systems, pp. 401-407.

religious groups." As a result of urbanization almost all 171
rural areas have experienced the pangs of social mobility and 182
few have escaped unscathed from a clash with the economic 771
forces which impinge from the outside. This predisposes the 786
people to the appeal of an emotional religion, revivalism. 781
Frequently, the sect becomes uncompromising and rejects the
outside world in an attempt to bolster group security. The
sequence of events on Skye enables me to add that the sect
can also reject a great deal of the former content of the
culture. Be that as it may, the authors show how emotional [571]
religious movements restore or replace meaningful patterns
of interaction among groups whose social systems have deteri-
orated. Revivalism is a counter agent for anomie.

The first period of social and cultural disequilibrium 175
which the Sgiathanach experienced may be placed in the first 178
half of the nineteenth century, with a climax around 1840. 771
To paraphrase Loomis and Beegle, it was no mere coincidence 786
that an emotional religious movement should have appeared and 182
found so many converts. The closing years of the eighteenth
century had witnessed numerous changes in the content of the
culture and the collapse of the old social heirarchy. While
these events doubtlessly had an influence on all levels of
the society, it was not until the turn of the century that
they broke forth upon the masses. Within a decade a revival
had reached effective proportions. This was a time of estate
reorganization. The tacksmen, the traditional leaders, were
quickly disappearing. The runrig farm was being abolished.
Sheep were beginning to replace men in one parish (Bracadale).

Although asceticism, epitomized in Sabbatarianism, 771 785 182 is a marked characteristic of the expression of the Presbyterian ethic, it is not completely negative. It is one of the means for sustaining cultural continuity. Religion has centered on the home and family. It has preserved the Gaelic. There have been significant changes [178] in the content of the culture, but by using asceticism as an observable test of spiritual enlightenment the limitations of the socio-economic life have been sanctioned. The form, the basic configuration, of the culture is still recognizable.

that the clan ceased to provide a focus for the culture almost 178 two centuries ago, the reader may ask how can a culture without 182 a focus find continuity, how can a culture without a central 614 theme, something around which to orient itself, achieve integration? Religion provides the answer. Congregational religion [771] has taken the place of the clan.

The acceptance of the new religious focus curtailed 178 many traits and complexes characteristic of the old culture. 182 This is why the older folktales, songs and superstitions, the 771 festive celebrations held at times of birth, baptism, marriage, and death, the traditional social patterns of visiting, and all frivolous activities were abandoned or modified. In a time of acute distress the Sgiathanach turned to religion as a means of consolation. His religion required circumspect behavior. Perhaps, the sheer impossibility of supporting the traditional forms of social interaction had forced a change in cultural content when the religious leaders placed these forms under censure. I have suggested that religion did no more than sanction poverty. This much is certain: religion provided the means for the culture to maintain its continued distinctiveness. The Scots of the Presbyterian image of the days of Knox, of [795] the times of the Covenanters, and the year of the Glorious Revolution continue to exert their influence on the Sgiathanach. While the ministers and the venerable old men of the laity stamped out all practices which they considered pagan or Catholic, as well as modifying the social aspect of the culture, the process was not completely negative. The religious expression

377

sanctioned the qualities which had given the people their 178 182 771 characteristic strength of character.

The churches of Skye made conservatism an official policy in 1843, and in 1892 reaffirmed this policy. For well over 100 years religion has had a strength and vitality which has enabled the Skyeman to pass through times of extreme distress, not to mention chronic economic deficiencies. Among 182 559 the most important religious sanctions are those which reinforce 771 the status values of the culture. The father's status in the 593 nuclear family was reaffirmed at a time when his socio-economic importance was declining. He has been held responsible for the spiritual welfare of his wife and children. The prestige 182 559 of the old men, the family-head elders, and their control over 771 the neighborhood group was similarly bolstered by making them 888 the judges of a man's spiritual enlightenment. Spiritual enlightenment is weighed on a scale which will not balance unless a person's religious knowledge is matched by conformity to the ways the old men think a man should behave. Again we 182 are not dealing with a completely negative attitude. In the 771 [187] place of frivolous amusements, religion has offered highly emotional, spiritual patterns of behavior. Religion has pre- [191] served the Gaelic language by using it in formal worship and within the home for family worship. In these and other ways religion has indeed enabled the culture to achieve a reorientation and maintain its continuity.

How similar Skye is to the Old Order Amish in this respect.[3]

---

[3]Kollmorgen, Culture of a Contemporary Rural Community: The Older Order Amish of Lancaster County, Pennsylvania.

378

Both have remained devoted to the old tradition which is 182 epitomized by their religion. Further, they are each bound 771 together by a common language and vocation and by strong ties of consanguinity and affinity. Moreover, the Sgiathanach [184] and the Amish have similarly rejected the deviant. On Skye [167] emigration has affected all levels of social organization, the conjugal family, the extended family, the township, the neighborhood and village, and the community. Still the Amish and the Skyemen have maintained social and cultural integration. Standing in a contrasting position is the town of Landaff, New Hampshire.[4] Although Skye and Landaff have experienced similar trends, including an original ecological adaptation, disturbance resulting from population pressure, an unsuccessful attempt to meet the crisis through commercialization, and a chronic high rate of emigration, especially by the youth, Landaff has been described as an example of social instability and cultural disintegration.[5] The farmer of Landaff remained only as long as his interests were compatible with those of his neighbors, and local opportunities existed to satisfy his ambitions. He had no attachment for the land to offset the inadequacies of persistent economic limitations. He abandoned the associations which had supported the community by giving the group a sense of security.

Like European peasants in general the Skye crofter has lost his former self-sufficiency and political autonomy, but he has retained a strong attachment for the land and its

---

[4]MacLeish and Young, Culture of a Contemporary Rural Community: Landaff, New Hampshire.

[5]Ibid., pp. 113-117

We know these and the other changes of this period. Significantly, 175
however, there was no simple correlation of revivalism and 178
population change. The Revival began during a time of population 182
growth and emigration; it reached effective proportions during 771
a period when emigration seems to have almost stopped; and it 786
found its culmination during years marked by destitution and the beginning of depopulation. No purpose will be served by repeating what I have already said about the nature of the changes which accompanied the coming of the dynamic, evangelical message. It is sufficient to emphasize that the ministers and the Men reinforced the desirable fabric of the culture and gave the culture a new focus.

The second period of anomie on Skye is less well marked. It appeared at the end of the "Clearances." Again destitution gripped the island. Although the vital, emotional religion had enabled the people to bear the hardships of the "Clearances" without overt resistance, they now openly defied the landlords and the state. More than a series of government commissions and committees came to Skye. A still more intense religion loomed on the horizon to reaffirm the focus of the culture. Once again it was no mere coincidence that the new church should have found ready acceptance by the people in the areas of greatest unrest, the areas which required the presence of police and Royal Marines. It was a fact of no little significance that the new denomination should have been founded on the Isle of Skye, the area of greatest unrest in all the Highlands.

Whatever signs there were of social or cultural dis- 175
organization, or threatened disintegration, in the nineteenth 178
century they have disappeared. Steward's theory that folk 182
societies do not entirely disappear but are rather modified 771
by way of a readaptation to the higher level of socio-cultural 786
organization of which they become a part is borne out by the 121
evidence from the Isle of Skye.[17] At the same time, on the basis of events in the culture history of the Sgiathanach, I would qualify his theory by introducing a new condition. Isolated, relatively simple, kinship oriented societies and cultures which must achieve a reintegration if they are to preserve their continuity readapt, not only to the higher socio-cultural level, but also to the older way of life.

In conclusion, I regard Skye as a community which has 178
maintained a continuity of culture despite marked population 182
change. The continued distinctiveness has been made possible [161]
by a reintegration of the culture and a restoration of the [571]
network of relationships which make for harmonious living together. As in any socio-cultural group which has passed through periods of threatened disintegration, the joints of repair may be weak. Conflicts are tending to appear. The crofter, who has refused to fully adapt to commercialism, is seasonally faced with a variety and succession of tasks which no agriculturalist in the wider society would tolerate. There is the desire of the youth, who are too few in numbers to form a sodality, for a share in the mundane pleasures of

773

773 MYTHOLOGY--cosmogony (e.g., theories and accounts of the creation of the world and of man); mythical epochs (e.g., golden age, age of the gods, age of animals); cataclysms (e.g., mythical floods and conflagrations); culture myths (e.g., accounts of a culture hero, mythical explanations of culture traits); myths about the origin of evil and death; nature myths; totemic myths; theogonic myths; ancestor myths; etc. For texts of myths see 539. See also:
Historical traditions 173

175 earth shone, The wave shone on the shore; The deer of
796 the mountain steep shone. . . ."[1]
533 "The Christ Child's Lullaby" is a lovely carol narrat-
175 ing the Christmas tale. Legend tells that it was sung by
796 'Mary-Mother' herself to an unwanted stepchild lost on the moors, where his stepmother found him in the arms
533 of Mary, who sang as she lulled him. The stepmother
773 cherished this song with the lost child, henceforth loved as her own.[2] The poetry of the Gael, like the odes of Greece and the Psalms of the Hebrews, is luminous with the vision of mountains, land and sea, reflecting a light within that of sun or moon, and sonorous with the rhythm of wave, tide and season which are "of all ages and to all time,
[181] *gach linn gu brath*". Its adoration is full of nature and of humanity, yet it soars above mere nature worship or anthropomorphism.

175 While Christmas, more than any, was a festival of
796 leisure, others were closely linked to labour. The festival dates of Candlemas or Lent, of Saint Bride's, Saint Patrick's or Lady Day, marked the stages of spring's coming and the duties they brought. Summer came in at Beltane—held in May, though the word included other dates connected with spring fire; and on St. John's Day

113 [1] Donald Macdonald, M.A., MS. essay for the Royal Scot. Geog. Society.
[2] A short version is published in the *Songs of the Hebrides*, vol. i. A translator may choose from its 29 stanzas—though all are true to the Gospel and worth translation. Of the simple choral variant of the air (as published) Fr. Allan Macdonald told Miss Amy Murray his grief that it had superseded the melodic variety given to the Lullaby when sung by one singer at a time (*Celtic Review*, 1905–6). From three variants noted from oral singing one can arrange a melodic sequence. To pass from a major variant (set to stanzas on Jesus's mother, the shepherds and the 'kings') to minor variants (set to the tale of Herod's evil deeds) restores much of the dramatic intensity of this noble carol. Only deep feeling for the Gospels could create and maintain, without written help, so full a version of the words and variety of associated melody. (The complete words, *Taladh Chriosta*, are in Fr. Allan Macdonald's collection, p. 7.)

175 As recorded by Carswell (and Martin), this prayer,
226 after calling upon the Trinity, tells that the Three-in-One,
788 ever living, guided Clan Israel through the Red Sea,
brought Jonah to land from the belly of the great ocean
• 773 beast, and led Paul and his companions from the torment
of the sea; after these three stanzas it closes with a general
supplication. As heard by Carmichael three centuries after
Carswell, the first three stanzas are identical, but they are
[539] followed by the culmination. Recalling the hour "when
the storm poured on the Sea of Galilee . . .", the poem
goes on, "Be Thou, King of the elements, seated at our
helm, And lead us in peace to our voyage's end. . . ."
It is significant that the Reformation Liturgy includes the
story of Clan Israel's flight from their enemy whose
drowning forms the climax of the tale, and the absurd
miracle of the whale—a late interpolation in the con-
vincing original Hebrew poem on Jonah's voyage,[1]—but
that it omits the Christian climax, of the storm allayed by
Christ, the Helmsman of peace.

[539] Another fishers' rune (No. 120) concludes, "To whom
trembles the voice of the wind? To whom become tranquil
strait and ocean? To Jesus Christ, Chief of each saint,
Son of Mary, Root of Victory." These blessings, though
they refer to the Old Testament, dwell lovingly on the New.
Their thought is of the fishermen friends, Peter, Andrew
and John, of the Baptist and of Christ's mother, of Saint
Martin and later apostles to the Gael, and the Archangels,
and of Christ, Rock of rocks (*Carraig Ail*), and the Trinity.
226 These bring strength in danger, peace after strife with the
778 elements, remembrance of the poor, and fellowship to the
crews. Peace and strength pervade the "Dawn Prayer of

[1] R. G. Moulton, *Modern Reader's Bible* (reissue, 1925, pp. 1423-1424; cf. Note to Matt. xii. 40, p. 1696).

175 widowed mother and her family, working in farm and town-
771 ship, sending merriment at Christmas, and comforting
776 sorrow at Easter or All Souls. And even as He had told the
Disciples to heal by faith, so, they thought, had He bidden
them. Who could have told the people, in their ignorance,
that in a later age they would suffer for this faith?

175 Thus upon the Lessons read in church (or out of doors)
771 and cherished as the root and stock of faith, there were
grafted three types of native shoot. These were the para-
78 phrases, the meditations or commentaries, and the parables
538 or legends. The paraphrases should need no justification
here, in so far as the four Gospels are each incomplete and
complementary—the Celtic clergy may have known the
fragments of a fifth; these 'fulfilled' the older Law and
the Prophets. Of the meditations, few would be censured
by a Protestant or Catholic theologian on points on which
both would agree; points of disagreement in the medita-
tions hardly concerned them. (Cf. in the Rev. Allan Mac-
donald's collection, "Thoughts on Death", *Smaointean
air a' Bhas*, or *Carmina*, No. 7, and many more.) As a
theologian might criticise the parables, legends or marginal
tales of which so many were told in medieval Christendom,
a word should be said of these.

771 Legends were told of the appearance of Saints to be-
lievers, such as that of "The Christ-Child's Lullaby", and
• 773 of the life of the Holy family. The Gaelic sense of parable
was strong (*Carmina*, vol. ii, Notes, *Caim*). In these legends
was expressed what the people themselves would have felt
and thought in joy or suffering. Legitimately, a preacher
suggests a motive or circumstance to bridge the gap in a
Bible record; the people did the same. When reverently
retold, some suggested circumstance would in time grow
to be a legend taking a place close to the Gospel story. A

771 single example may be given; so far as I know, it is un-
• 773 recorded. I learned it in South Uist, where Catholic and
Protestant mingle in tolerance and sympathy; it had been
[125] told by an old woman, a Catholic, to a young neighbour, a
[795] Protestant fisherman's son, later a minister.[1]

The story takes place after the Crucifixion. It may be
539 remembered that in the Gospels not a word is said of Jesus's
771 mother after His farewell to her from the Cross (John,
xix. 26). He—or she—who first conceived the legend may
have asked, would not a mother visit the tomb of the son
she had just lost? And surely she who at His birth had
cried, "My soul magnifies the Lord . . . my Saviour",
would be the first to seek Him out after His death? The
legend tells that, on the second day of the Entombment,
Mary, Jesus's mother, in an agony of mourning and sus-
pense, visited the tomb of her son, calling upon Him with
many an endearing name. From the tomb He answered
that she would be consoled, for He would arise. And He
told her that because of the depth of her love, of all forms
of human love a mother's would be accounted the highest
for ever after.

771 The Gael had fused the grandeur of the Old Testament
538 with the hope and humanity of the New; for them the
light of dawn on sea and snow awoke the light within. A
[788] last example is taken from two fragments forming part of
a single theme, perhaps of one original poem.[2] Chanted

[113] [1] It is interesting to compare this quiet legend with the late Roman (and Episcopalian) "Apostles' Creed", apparently based on the vivid story in the *Gospel of Bartholomew*: after Christ "was crucified, dead, and buried, He descended into hell" (hades). Montagu R. James (translator), *The Apocryphal New Testament*, 1924.

[2] *Carmina Gadelica*, 201, 197. No translation can be perfect, and Carmichael offers alternatives: line 6, "*Ti nan dul*, Being of life", or "of the elements"; l. 13, "light on the plain" or "the land", *fearann*. The last line is intimate and simple: "The hour (or era) God's Son came in (among us)," a *steach*, as into a dwelling.

888 be given by ear and learning come by heart. Hence elder
538 were the holders of an inheritance of treasures which mus
be sought from them or be lost for ever. But to be trans
mitted, the word must remain alive in the mind. Thu
both the faculty of memory and the fruit it bore in a
elder's mind brought respect, even veneration. Accurac
in retelling is still immensely valued, but so, too, wer
thoughtful commentary and poetic enrichment. Respec
for elders, though general, was not given blindly, bu
personally and by choice.

888 As handed down, the Fifth Commandment runs
771 "Honour thy parents and hold them in loving regard"
(*Striochd dha do pharantan 's thoir speis dhaibh*).[1] Th
562 community was pervaded by the Christian concept of
Holy Family, rather than by that of a patriarchate. Thi
concept took root from the first missions to the Celti
community, with which it harmonised and which forme
fertile ground for this Christian seed. Hence there wa
no general assertion of paternal, still less of patriarchal
authority at the expense of youth. Where equal honou
is due to both parents, the mother finds equal duty an
regard with the father. And although the father's hom
is close at hand while the mother's may be a little distanc
away, her parents are likely to be the younger and th
more active and helpful to their grandchildren, and th
influence of all four grandparents fairly balanced.

[184] The patriarchs Abraham, Isaac and Jacob are name
in a hymn of the Lews, sung when going up with the flock
• 773 and herds to the shielings; even this may be a Presbyteria
